The ultimate resource of foreign policy by which the nation imposes its will upon its enemies in defense of its honor, its safety and its existence. The armed forces of the Nation are the means by which the national policies are supported and en-

forced. The strength of the Navy to be maintained during peace or mobilized for war is a matter of policy for which the Government (the President and Congress) is responsible. The Navy Department is responsible for advising the Government as to the strength of the Navy and the extent of the naval bases and industrial establishments which will be required to enforce our foreign policies.

The Navy Department is responsible for the efficiency of the Navy so far, and only so far, as efficiency can be attained with the appropriations granted by Congress.

A Navy cannot be built and trained in a year or two years, and only the foresight necessary to provide for the construction and maintenance of a navy adequate to its future task is of the utmost importance.

Proper management consists not only in dealing with events as they come, but in foreseeing and forestalling events. Money expended in building and maintaining a Navy larger than required to enforce our foreign policies, is extravagance; but the expenditure of less than required for a Navy strong enough to enforce our policies, is folly, for failure to make adequate preparation beforehand causes the waste of millions when war is eventually forced upon us.

The difference of opinion as to what constitutes an adequate Navy can be traced to our lack of definite foreign policy, which difference of opinion are the cause of much of the discussion as to appropriations which takes place annually before the Congressional Naval Committees.

The remedy for this condition lies outside of the Navy Department, and is vital to the question at issue.

Those responsible for the foreign policy of the United States should definitely inform the War and Navy Departments as to the policies of the United States which the Army and Navy are required to enforce.

If the Government must plan for the future, they must be foresighted, and in such policies should be notified to the War and Navy Departments at once.

The future can be foreseen only in proportion as we know the conditions and the laws of nature. As our knowledge of both is imperfect we can anticipate the future only approximately for a short time, but enough can be done to be of the greatest value in preparing the armed forces for the work which they will be required to perform.

Efficient management adopts definite and correct ideals and aims to obtain them resolutely and courageously. Until the Navy is provided with a definite ideal in the form of a definite statement of the foreign policies of the United States which it is to be prepared to enforce, the management of the Navy can not formulate definite programs and war plans except on hypotheses as to the foreign policy of the United States.

The next most serious detriment to efficient preparation is the organization of the Navy Department. The laws and regulations under which the Navy was operating during the war, and is operating to-day, are unsatisfactory. Under the present regulations:

(a) The General Board is charged with devising measures and plans for the effective preparation and maintenance of the fleet in war.

(b) The Chief of Naval Operations is responsible for the preparation and readiness of plans for the use of the fleet in war.

(c) The General Board is charged with the preparation of plans for a campaign.

(h) The Chief of Naval Operations is responsible for the operation of the fleet.

The Chief of Naval Operations has no authority to coordinate the work of the bureaus whose business it is to supply and maintain material and personnel. The General Board has no executive functions.

Under such regulations coordination of the various officers, bureaus and bureaus can be obtained only by voluntary coordination through the civilian secretary.

So long as the present organization exists the maximum efficiency either in preparation for war, in the conduct of war, or in economic development of the Navy in peace, can not be obtained.

In the present organization responsibility for the readiness of the Navy for war can not be placed anywhere but with the Secretary of the Navy, who, under the present organization, must coordinate the offices, boards, and bureaus.

Every dollar spent on our Navy should be spent with a view to the accomplishment of a definite plan of preparation for war. The Navy is built for war, and unless the Chief of Naval Operations, under the Secretary of the Navy, is held responsible for the preparation, readiness, completeness, and effectiveness of plans for national defense, including plans for the development of the Navy, plans for its maintenance and plans for its use, and is given power under the Secretary of the Navy to exercise supervision through the bureaus, boards, and offices, over all naval activities, the maximum efficiency can not be attained.

In my opinion, the faulty organization of the Navy Department and the absence of definite foreign policy, except that of strict neutrality, were the primary causes of failure to prepare the entire Navy for war.

definite policies and plans were definitely settled upon, after was appropriated, and after the bureaus voluntarily coordinated with the Chief of Naval Operations, the work was pushed with and vigor. The accomplishments were excellent. But our preparation did no doubt delay our assistance to the allies rural time, and if such conditions regarding our preparation exist in the future they may result in disaster.

statement also includes criticisms of another nature, namely, was not kept informed of policies nor properly consulted with the operations in the western Atlantic. As an example, the to consult me before ordering Rear Admiral Gleaves to organize the first troop escort operation.

my opinion, authority was so centralized in the department that led in the neglect of the principle of "due subdivision of labor and centralization of responsibility." Centralized control over and general plans is sound, but centralized control over details tion most often results in loss of efficiency.

stresses my statement, Mr. Chairman.

CHAIRMAN. Very well. The committee will now stand adjourned until 10 o'clock to-morrow morning; and will you appear before the committee again at that time, Admiral?

ADMIRAL MAYO. Yes, Mr. Chairman.

The documents submitted by Admiral Mayo in the course of his examination and marked "A" to "L," respectively, are here printed in the record as follows:)

JUNE 1, 1916.

~~Active~~ Atlantic Fleet (active):

Wyoming (fleet flagship).

Yankton (tender).

~~First Division~~

~~Second Division~~

~~Fifth Division~~

Minnesota (flag of division commander).

Massachusetts

South Carolina.

Tennessee

~~Sixth Division~~

New York (flag of division commander).

Delaware

Oklahoma.

Texas

~~Seventh Division~~

~~Fourth Division~~

Florida (flag of division commander).

New Hampshire.

Vermont

~~Eighth Division~~

Arkansas (flag of commander battleship squadrons and Eighth Division).

Kansas

Nevada

~~Ninth Division~~

Memphis (flag of squadron commander).

Alabama

Mississippi.

Indiana

Kentucky

Michigan

Marquette.

Missouri.

Nebraska

North Carolina.

Cruiser squadron—Continued.

Prairie.

Sacramento.

Salem (in reserve acting as receiving ship at Boston).

Wheeling.

Destroyer flotillas:

Birmingham (flag of commander of flotillas).

Third flotilla—

Melville (tender).

Fifth division—

O'Brien.

Fanning.

Jarvis.

Jenkins.

Paulding.

Warrington.

Sixth division—

Wadsworth.

Cassin.

Cummings.

Ericsson.

McDougal.

Winslow.

Seventh Division—

Balch.

Aylwin.

Benham.

Cushing.

McCall.

Nicholson.

Eighth Division—

Conyngham.

Duncan.

Jacob Jones.

Porter.

Tucker.

Wainwright.

Operating with reduced complement:**First Flotilla—**

Panther (tender).

First Division—

Smith.

Flusser.

Lamson.

Preston.

Reid.

Second Division—

Walker.

Monagha .

Perkins.

Roe.

Sterrett.

Terry.

Second Flotilla—

Dixie (tender).

Third Division—

Drayton.

Henley.

Mayrant (out of commission).

Perker.

Patterson.

Fourth Division—

Jouett.

Ammen.

Beale.

Burrows.

Downes (in ordinary).

Trippe (in ordinary).

with reduced complement—Continued.

1st Division—

Columbia (flotilla flag).

Fulton (tender).

Macdonough (tender).

Warden (tender).

2nd Division—

Charlton (tender).

Western (tender).

Potomac (tender).

(1) Ammunition on board. All ships have their allowance of ammunition except that the following ships are short 410 rounds of 3-inch antiaircraft ammunition: *Connecticut*, *Michigan*, *South Carolina*, *Texas*, *Oklahoma*, *Delaware*, *Pennsylvania*, *Wyoming*, *Nevada*, and the following ships have no antiaircraft ammunition: *New York*, *Florida*, *Utah*.

(2) All ships present with the flag are practically full of fuel, varying from 70 per cent of capacity for the *Delaware* to 97 per cent for the *Pennsylvania*.

(3) Condition of ordnance material of all the ships is satisfactory with the minor exceptions:

(a) *New York*, *Florida*, *Utah* have no antiaircraft guns.

(b) *Oklahoma* and *Nevada* have about 50 per cent searchlight equipment.

(c) *Connecticut* 7-inch battery has fired an average of 160 rounds.

(d) *Wyoming* 12-inch battery has fired an average of 45 rounds.

(4) Condition of propelling plant. The condition of the propelling plant of all ships is satisfactory with the following exceptions: (a) *Connecticut*, one main propulsion pump out of commission. Can operate indefinitely with other.

(b) *Oklahoma*, defective brick work in boilers. Can operate indefinitely.

(c) *Utah*, one astern turbine stripped. Can operate indefinitely.

(5) Condition of hull. The condition of the hull of all vessels is satisfactory except the exception of the *Oklahoma*, *Pennsylvania*, and *Nevada*, each of which has a structural weakness in the overhang of the stern, but all can operate indefinitely.

(6) Provisions on board. All ships are practically full of fresh provisions and 70 per cent full of nonperishable provisions.

(7) Stores on board. All ships have about 75 per cent capacity of naval account stock and clothing and small store stock.

(B) Ships not present with the flag: *Arkansas*, *Arizona*.

The *Arkansas* is in satisfactory condition under all seven of the headings mentioned in paragraph 4 of reference (a), except:

(a) Under item (1) she is short 410 rounds of 3-inch antiaircraft ammunition.

(b) Under item (4) one backing turbine is stripped, but not to the extent of preventing her from operating with the fleet indefinitely. The *Arkansas* is expected to join the fleet to-morrow.

The *Arizona* has the following deficiencies of material, which will prevent her from operating with the fleet immediately:

(1) Short 410 rounds 3-inch antiaircraft ammunition.

(2) Has a small supply of fuel on board.

(3) Fifty per cent searchlight equipment.

(4) Stripped turbines, now being repaired at the New York yard.

(5) Structural weakness of the overhang of the stern.

It is estimated that she will be materially ready to join the fleet about March 1, 1917.

2. From the above it will be seen that all ships of the battleship force, except the *Arizona*, are practically ready for immediate war service so far as their material condition is concerned.

D. W. CONGER

GUANTANAMO BAY, CUBA, February 4, 1917.

From: Commander destroyer force.

To: Commander in chief.

Subject: Readiness for war service, destroyer force.

Reference: (a) Commander in chief file 842, of February 3, 1917.

Inclosures: (2).

1. There are forwarded herewith, in compliance with reference (a), reports as follows:

(A) Ships present with the flag.

(B) Ships not present with the flag.

ALBERT GLENN

CATEGORY A.—SHIPS PRESENT WITH FLAG.

SUBJECT NO. 2.—FUEL ON BOARD IN TERMS OF CAPACITY.

Seattle, filled to capacity.

Flotilla 1: *Panther*, estimated 60 per cent.

Flotilla 1, Division 1: None present.

Flotilla 1, Division 2: None present.

Flotilla 2: *Dixie*, 90 per cent.

Flotilla 2, Division 3: None present.

Division 4: Cummings, filled to capacity; Jarvis, estimated 60 per cent; held to capacity; Fanning, 30 per cent.
Division 5: Cassin, filled to capacity; Drayton, 60 per cent (schedule to over trial: Feb. 4; will refuel to capacity within 2 hours after return).
Division 6: Balch, Aylwin, Parker, filled to capacity; Duncan, 60 per cent to hold full power trial Feb. 4; will refuel to capacity within 2 hours
Division 7: Ericsson, O'Brien, Winslow, filled to capacity; Cushing, 50 per cent (scheduled to hold-full power trial Feb. 4; will refuel within two hours after return).
Division 8: Conyngham, 60 per cent; Tucker, Wadsworth, Wainwright, to capacity.
Division 9: Davis, Wilkes, filled to capacity.

| | Wilkes..... | Do. |

... thrown out of line by heavy seas, needs additional bracing; job orders for this has been sent to Bureau of Ordnance at the various navy yards.

SUBJECT NO. 4.—CONDITION OF PROPELLING PLANT.

... One boiler temporarily out of commission awaiting receipt of parts.

FLOTILLA 1, DIVISION 1.

... in very good; ready for service.

FLOTILLA 1, DIVISION 2.

...

FLOTILLA 2.

... Auxiliary feed pumps old and worn. No. 2 boiler furnaces ... Davis is ready for service.

FLOTILLA 2, DIVISION 3.

...

FLOTILLA 2, DIVISION 4.

Cummings.—Excellent except for maneuvering valve which is erratic and leaks badly. New valve being made by New York navy yard. Can put in service pending completion of valve.

Jarvis.—Condenser tubes thin. Estimated life of condensers six months for service operating from a home base. Not ready for distant service. Condensers, condition good.

McCall.—Fair. Hole in crank case of circulating pump engine. Can be repaired by force repair ship after which *McCall* will be ready for service.

Fanning.—Very good. Ready for service insofar as machinery is concerned.

FLOTILLA 2, DIVISION 5.

Cassin.—Maneuvering valve leaks badly. New valve being made by New York, N. Y., otherwise condition excellent. *Cassin* ready for service on receipt of new valve.

Drayton.—Very good. Center and starboard shaft slightly out of alignment but not sufficiently to interfere with movements of ship. Ready for service.

FLOTILLA 3, DIVISION 6.

Balch.—Very good; ready for service.

Aylwin.—Very good; ready for service.

Parker.—Excellent; ready for service.

Duncan.—The *Duncan* has proved to be constitutionally weak in the past. A continuous succession of defects has been encountered. Starboard main air pump a cracked steam cylinder head which has been patched, but which should be replaced before the vessel is sent on distant service. It is considered that the *Duncan* is in better condition than at any time in the past and with the exception of the air pump she is ready for distant service. In the meantime she is in condition to operate from a home base.

FLOTILLA 3, DIVISION 7.

Ericsson.—Excellent. Top casing of circulating pump turbine cracked and leaking. No trouble is anticipated but as a matter of precaution a new top casing should be provided before the vessel is sent on foreign service.

O'Brien.—Very good; ready for service.

Cushing.—Poor. Rotors of both main engines have excessive fore and aft clearance due to weak or improperly secured thrust supports. Fifteen blades in the low stage of the port engine have been removed, but it is not considered that this will affect her availability. Thrust horseshoes on starboard engine require replacement. All possible work within the resources of the force is being prosecuted to get the *Cushing* in condition for service. Work should be completed and trial run made by February 12. If the work now being done does not entirely eliminate the defects which have been experienced, the *Cushing* should be sent to a navy yard for overhaul and strengthening of the main engine thrust arrangement.

McDougal.—Evaporator shells require renewal, otherwise condition good. New shells should be installed before vessel is sent on distant work.

Nicholson.—Very good. There is an outstanding order on two boiler safes to alter them from ball seat to 45° angle seat, but it is not considered that this will interfere with the availability of the *Nicholson*.

Winslow.—Excellent; ready for service.

FLOTILLA 3, DIVISION 8.

Conyngham.—The last row of rotor blades in the second stage of the low pressure main engine, the first two rows of rotor blades in the third stage, and the rows of fixed blades in the third stage have been removed on account of wear. This engine has been cleaned out and reassembled and will hold the trial run on February 4. If no further weakness develops it is considered that the *Conyngham* can operate at moderate speeds with but slight reduction in economy. It is considered unsafe to operate at high speeds and it is recommended that this engine be repaired as soon as the necessary material can be assembled.

Tucker.—Very good; ready for service.

Wadsworth.—Excellent; ready for service.

... —Very good. Minor troubles with main augmenter condensers, but control of the ship's force. Ready for service.

...Excellent. Has had some trouble in the past with leaky main condenser but believed to be under control by the ship's force. Ready for service.

FLOTILLA 3, DIVISION 9.

Excellent The air pumps, fuel-oil service pumps and booster pumps have no trouble with their model valves. This can easily be remedied and new valves can be made.

Ammunition on board in terms of allowance.

| Organization | Ship. | Terms of allowance. |

| | Duncan..... | 66½ | | Davis..... |
| | Parker..... | 66½ | | Wilkes..... |

¹ Dixie will issue sufficient stores to the destroyers to bring their capacity to about 80 to 85. Dixie will then have only about 10 to 15 per cent of maximum stock.

FLOTILLA 3, DIVISION 9.

Wilkes.—The evaporators of the *Wilkes* are of insufficient capacity. Under conditions of water consumption and with a full supply of water, the *Wilkes* can operate to the extent of her cruising radius. The insufficient capacity of the however, renders her continuous operation under all conditions uncertain. proceeding on distant service new evaporators should be installed. In the meantime the *Wilkes* may be considered ready for service.

No information available concerning the *Salem* and *Chester*.

The above-noted defects, except those which have occurred since leaving navy have been made the subject of special report or request for repairs.

SUBJECT NO. 5—CONDITION OF HULL, ETC.

The hull and hull fittings of all vessels with the flag are in condition for active with the possible exception of the *Fanning*, which may have suffered injury from grounding on February 3, 1917.

As far as can be determined at present time, *Fanning* has sustained no injuries.

¹ Training gear easily thrown out of line by heavy seas, needs additional bracing; job order authorized by the bureau for this at the various navy yards.

SUBJECT NO. 4.—CONDITION OF PROPELLING PLANT.

Flotilla 1, division 1.

Smith—L. P. casing has crack in top and bottom flanges. Starboard L. P. casing distorted. Engines have been operating satisfactorily for several months. Safety valves leak, but it is believed that they will be corrected by the ship's force. The *Smith* is ready for service out of a home base for distant service.

Reid—Undergoing overhaul at the navy yard, Charleston, S. C. The completion is February 12. Upon completion of authorized work, the ship should be in excellent condition and ready for service.

Preston—Oil pumps (lubricating) require complete overhauling. Considers general overhaul of auxiliary machinery and rebricking of the *Preston* can be put in very good condition by a navy yard in thirty

days. Blowers are badly worn and although they can be operated they cannot stand up under continuous or high speed cruising. New blowers are ordered to be delivered at the navy yard, Charleston, S. C., March 1. The *Preston* in condition for service will require the installation of new alignment of the center shaft, overhauling of the starboard air circulating engine and several minor items which have been previously noted. The *Preston* is capable of operating at moderate speeds for several

days. Undergoing overhaul at the navy yard, Charleston, S. C. Assigned completion February 21, 1917. Progress of work indicates that this date should be met. Upon completion of authorized work the *Reid* should be in very good condition and ready for service.

Flotilla 1, division 2.

Walker—Undergoing extensive overhaul at the navy yard, Norfolk, Va. Work is concentrating efforts on other ships and nonarrival of material. Completion unknown, but probably not before April 1, 1917. Upon completion of authorized work the *Walker* should be in very good condition and ready for service.

Reid—Minor troubles under control of the ship's force. Fifteen to twenty days at a navy yard for minor overhaul and repairs will be necessary to put the ship in condition for service.

Reid—Undergoing extensive overhaul at the navy yard, Charleston, S. C. Completion, February 21, 1917. Should be in excellent condition and ready for service.

Reid—Undergoing overhaul at the navy yard, Charleston, S. C. It is believed the authorized completion is by March 1, 1917. The *Reid* should then be in very good condition and ready for service.

Reid—Ready for service from a home base. Minor overhaul necessary to put the ship in condition.

Reid—Undergoing extensive overhaul at the navy yard, Charleston, S. C. Date of completion upon delivery of forced-draft blowers, probably about March 1. Steps are taken to expedite delivery. Upon completion of authorized work the *Reid* should then be in very good condition and ready for service.

Flotilla 2, division 3.

Warrington—Water drums of all boilers have developed a characteristic pitting. The installation of struts in the drums has been authorized and should be done before the *Warrington* can be considered ready for high speed cruising. She also requires repairs to furnace walls, re-aligning of main shafts and overhaul of port main circulating pump. When this work is undertaken the *Warrington* may be considered in readiness for service.

Beale—Engines unreliable; new engines are being built. Minor repairs are being made. The *Beale* may be considered ready for very light service until the new engines are installed.

Beale—Undergoing extensive repairs to boilers at the navy yard, Philadelphia, Pa. Completion uncertain. When repairs are completed, *Beale* should be in very good condition.

Patterson. Boilers have the characteristic of pitting found in water drums of this type. She can not be considered in condition for extended or high cruising until struts are installed or drums renewed, but until this work is under way she can do light duty. Otherwise in excellent condition.

Mayrant. Out of commission, awaiting installation of new main engines, it is understood, will not be completed until spring.

Flotilla 2, division 4.

Ammen. At navy yard, Philadelphia, Pa., undergoing overhaul. Date of completion April 14, 1917. On completion of authorized repairs, *Ammen* should be in good condition and ready for service.

Burrows. Good. Ready for service.

Flotilla 2, division 5.

Jouett. All of the *Jouett's* water drums are cracked and have been repaired. Steam pressure reduced to 200 pounds. New drums are being purchased; delivery indefinite. Center tail shaft bent and new one authorized. The ship is ready for light duty until arrival of new drums, the installation of which, together with the center tail shaft, will place her in good condition.

Trippe. In good condition; ready for service.

Jenkins. Now undergoing overhaul at the navy yard, Boston. Assigned date of completion, February 11, 1917. The completion of authorized work will place *Jenkins* in very good condition.

Paulding. Now undergoing overhaul at the navy yard, Philadelphia, Pa. Assigned date of completion, March 14, 1917. The completion of this work will place *Paulding* in very good condition and ready for service.

Flotilla 3.

Birmingham. Now at navy yard, New York, N. Y., for extensive overhaul. It is believed that the amount of work to be done on the *Birmingham* can be materially shortened and the ship placed in readiness for service within less than 30 days.

Melville. Excellent; ready for service.

Flotilla 3, division 6.

Benham. At navy yard, Norfolk, Va., undergoing repairs to both the main engines and minor overhaul. Date of completion, February 15, 1917. Completion of authorized work will place *Benham* in very good condition.

Duquesne. Undergoing overhaul and awaiting installation of new main engines at navy yard, Philadelphia, Pa. It is understood that no date of completion has been set.

Flotilla 3, division 7.

All vessels are present.

Flotilla 3, division 8.

Jacob Jones. Undergoing repairs or alterations prescribed by the board of inspection and survey in order to enable the ship to make her contract speed. Estimated date of completion, 5th to 10th of February, 1917. The *Jacob Jones* is ready for service except for her inability, by a small margin, to make full speed.

Flotilla 3, division 9.

Rowan. Excellent. Ready for service. Now at Pensacola, Fla; scheduled for acceptance trials on February 5, 1917.

Sampson. Excellent. Undergoing hull repairs, navy yard, New York, N. Y. Probable date of completion 10th to 12th of February, 1917. Due at Pensacola, Fla, on completion of repairs for final acceptance trials. Ready for service.

Allen. Recently commissioned. No reports of derangements have been received and it is believed that she is in excellent condition.

Shaw. Uncompleted.

FLAG COLUMBIA.

UNITED STATES FLEET,
U. S. S. "PENNSYLVANIA," FLAGSHIP,
Base 2, April 9, 1917.

From: Commander in chief.

To: Secretary of the Navy (Operations).

Subject: Organization of fleet after mobilization; questions re.

References: (a) Department's mobilization plan, March 21, 1917; (b) OPNAV dispatch 18005, April.

1. Reference (a) especially paragraph 2, gives the organization of "The fleet" for war.

2. I have interpreted this to mean that upon receipt of reference (b):

(a) The following force was established under my command: United States fleet— Battleship force, scout force, cruiser force, patrol force, destroyer force, submarine force, mine force, train.

(b) The following forces were established not under my command: Coast divisions— Atlantic coast division, Pacific coast auxiliaries, Philippine divisions, naval districts (Government vessels).

3. Paragraph 6 of reference (a) states that the rendezvous for Pacific coast auxiliaries and Philippine divisions is "as directed by commander in chief."

4. My present orders and my appointment by the President as Admiral designate me as commander in chief, United States Atlantic Fleet.

5. Decision is requested as to:

(c) Correctness of paragraph 2 above.

(d) The commander of the Scout Force.

(e) Present status of Admiral Caperton and Admiral Knight.

(f) Officer referred to in paragraph 3 above.

(g) Status of Coast Divisions.

(h) Status of Mexican patrol.

(i) Whether "United States Fleet" is the proper designation for the force listed in 2 (a) and, if so, whether any further authority than the order to mobilize is necessary for me to assume the title "Commander in Chief United States Fleet," or if my present orders and appointment from the President are sufficient authority.

H. T. MAYO.

APRIL 14, 1917.

From: The Secretary of the Navy.

To: Commander in Chief, United States Atlantic Fleet.

(Copies to commanders in chief Pacific Fleet and Asiatic Fleet.)

Subject: Organization of fleet after mobilization.

Reference: (a) Your 1445, April 9, 1917.

1. The "commander in chief, United States Atlantic Fleet" shall continue to be the title of the officer commanding the United States Fleet in the Atlantic.

2. The forces and units of the forces enumerated in paragraph 2 (a) of reference (a), are under the command of the commander in chief, United States Atlantic Fleet when they are operating in the Atlantic but not at other times, unless specially so ordered.

3. The forces enumerated under paragraph 2 (b) of reference (a) are not under the command of the commander in chief United States Atlantic Fleet except as provided for in the Naval Regulations.

4. The commanders in chief of the Pacific and Asiatic stations will continue to exercise command in their respective areas over vessels of the fleet within these areas until otherwise ordered.

5. Command of the Atlantic Coast Division will be decided upon at a later date. At present this division is not available for any service.

6. The Mexican patrol is under the direction of the Navy Department, but assigned to assist and cooperate with the fourth patrol squadron in patrol work.

7. The fleet operating in the Atlantic shall be named the "United States Atlantic Fleet."

JOSEPHUS DANIELS.

UNITED STATES ATLANTIC FLEET,
U. S. S. "PENNSYLVANIA," FLAGSHIP,
Base 2, May 5, 1917.

From: Commander in Chief.

To: Chief of Naval Operations.

Subject: Status of work on battleships, divisions 5, 6, 7, and 8.

1. The material conditions of battleships of divisions 5, 6, 7, and 8, when they left the navy yards in January last for the winter's drills and exercises, was, in general, good, although all had some uncompleted authorized work at the time of departure. This was reported in detail in correspondence forwarded to the department by the commander in chief's first indorsement, file 124, of February 27, 1917. Requests for additional work have been submitted by all these vessels from time to time since leaving the navy yards, but except in some few cases—*Arkansas* turbine work, for example—no special report of this additional work has been made to the department.

2. Relative to the uncompleted work when the battleships went south, the commander in chief in his letter file 124 of March 13, 1917, in reply to the department's radio 14112, March, stated that no work was necessary in the immediate future, but that if the vessels were to put in condition for war service at some indefinite future date, certain work was required, as was specifically mentioned in the letter above referred to. The commander in chief in this letter also invited the department's attention to a previous comment on the material readiness of the fleet as follows: "In case of mobilization, or war, the commander in chief assumes that the department, from its fuller knowledge of conditions, will determine the policy to be followed, whether the fleet is to be first put in the best material condition or whether all ships which can possibly keep the sea are to do so from the time of mobilization."

3. The commander in chief is without definite information as to the department's policy regarding material matters, and therefore considers it necessary to present certain facts to the department for consideration.

4. Under normal conditions the vessels referred to would have gone to their home yards for docking and work during the period April 15 to May 15 and some of them would have remained for a longer period for more extensive work. So far only the *Oklahoma* and *Nevada* have been sent to a navy yard since the fleet's return from Cuban waters, both to Norfolk on March 29, where the *Nevada* remained until April 24, and the *Oklahoma* is to remain until June 9. Arrangements have also been made, as reported in commander in chief's letter, file 1566, of May 4, 1917, for docking certain battleships at Norfolk commencing May 6, and instructions have been received from the department to undertake certain work on the *Pennsylvania* at Norfolk during the period June 4 to June 30. No instructions relative to work on other vessels of battleship divisions 5, 6, 7, and 8 have been received by the commander in chief.

5. It is evident that battleships are not expected to "keep the sea," or to do any cruising outside inclosed waters for sometime to come, but what may be required of them in future is problematical. While the vessels mentioned can continue based in Chesapeake Bay or inclosed waters, or could operate near our coasts, if necessary, without any work being done at navy yards, they are, in general, not now in proper material condition to permit them to operate indefinitely from some foreign base. Such operation may not be required, but conditions may demand just that. All vessels should not go to the navy yards at once, nor should any vessel be sent to a navy yard unless the yard is fully prepared to undertake all authorized work. If, however, action is deferred, and a demand is made later for one or more divisions of battleships, they would necessarily be sent to navy yards, and there would be a congestion of work and delay in readiness for service that could be avoided if they are sent in now from time to time as the yards can handle the work.

6. If there was an actual emergency immediately existing, the vessels are able to meet it, but to send them away from the Atlantic coast to operate for an indefinite period is not, in their present condition, advisable. To send any vessel away with her auxiliary machinery, hull, or engine, or with any of her fittings or appliances in any but the best condition, would be a mistake, as breakdowns after arrival, even if within the capacity of the ship's force to make good, would impair efficiency at a time when it should be highest. There is hardly a vessel in the four divisions mentioned, however, that is not now without a number of items of authorized work on each vessel, which while not requiring any immediate action, can not be made good under present conditions. Material conditions will not improve even, as is hardly possible, should they get no worse. Except for training the personnel, there is at present no demand for these battleships; there may be a demand for them as fighting units later on. Now, while there is a favorable opportunity, they should be put in the very best material condition.

7. Without going into minute details of outstanding items of work certain items will be specifically brought to the department's attention as requiring action before the vessels concerned can be considered ready for any service:

Pennsylvania: Subdivision of after torpedo room and stiffening of stern. Installation of two remaining antiaircraft guns.

Arizona: Replacing of four-bladed propellers with three-bladed propellers or such other action as may be found necessary after further trials to reduce the present excessive vibration.

Wyoming: Straightening anchor engine crank shaft; providing stowage for anti-aircraft ammunition, installation of engine revolution telegraph systems.

Arkansas: Repair of starboard H. P. A. turbine; examination and repair as necessary of other turbines; installation of engine revolution telegraph systems.

New York: Installation of antiaircraft guns.

Texas: General overhaul of main engines, including truing up bearing surface of six crosshead slippers; rebabbitting 14 horse-shoe thrust collars and truing up and grinding both H. P. piston rods and renewing packing.

Florida: Installation of antiaircraft guns; installation of new bake ovens; renew and reline salt-water piping in various locations; repair all Waterbury variable-speed gear motors for gun elevating; turn down and true up commutators of main turbo generators numbers 1 and 3.

Utah: Installation of antiaircraft guns; installation of new bake ovens; overhaul all deck winches; overhaul steering engine; overhaul both boat cranes; overhaul and realign elevating system of both guns of No. 5 turret; make new shells for both L. P. evaporators. Repair H. P. C. turbine; blading of main turbines, reported very dirty, S. M. H. P. and both L. P. turbines have not been opened since the fall of 1914.

Connecticut: Overhaul 8-inch cross connecting gear; take up lost motion in 7-inch battery. Install new cast-steel sea chest after starboard ash chute; overhaul air compressor; scrape in all lower brasses of main engine bearings.

Michigan: Overhaul both boat cranes; overhaul anchor windlass.

South Carolina: Overhaul both boat cranes; renew 12 elements in mainmast; overhaul flushing system; reblade, renozzle and rebalance Nos. 2 and 4 generators.

Nevada: Install turret training control gear for left side all turrets now being manufactured at Norfolk, probably ready for installation about June 1, will require about 12 days to install. Ship now has no duplicate turret training control.

Oklahoma: All work will probably be completed during present stay Norfolk.

Delaware: No items of immediate importance.

North Dakota: (This vessel did not accompany the fleet south, is now in division 7.) New main engines, installation of director firing, etc.

8. In view of the above the commander in chief recommends that the department decide without delay, upon a policy by which work on the battleships may be taken in hand at earliest practicable date.

H. T. MAYO.

UNITED STATES ATLANTIC FLEET,
U. S. S. PENNSYLVANIA, FLAGSHIP,
Base 2, May 9, 1917.

From: Commander in Chief.

To: Chief of Naval Operations.

Subject: Submarine trap nets, recommendations regarding.

Inclosures: Three.

1. The inclosures contain information of the submarine trap nets and obstructions as developed by the British Navy and of the experience of the United States mine force with the trap net at Cape Henry.

2. From the British experience augmented by that of the mine force, it is apparent that:

(a) Submarine trap nets to be efficient must be made very much heavier than those at present in place in United States waters.

(b) The sections of such nets should not exceed 600 feet and that the moorings must be very heavy.

(c) The work of planting such nets requires careful, skillful work and that such work can be efficiently performed only under favorable weather conditions.

(d) Each net requires extensive patrolling and repair.

(e) It has been estimated that a period of two months would be required to plant a proper net defense of New York.

(f) To adequately protect the naval bases and commerce.

(7) The mine force of the Atlantic Fleet has been engaged for over a month in fabricating and planting trap nets at Chesapeake entrance, Hampton Roads, and at base 2.

3. The mine force is an integral part of the fleet and as such must be retained near the main fleet base to perform its allotted share of the work in the defense of the fleet. The commander in chief considers that planting of submarine trap nets, except as part of the local defense of the fleet base, is not the legitimate duty of the mine force.

4. In view of the additional security furnished to the fleet by the nets at Cape Henry and Hampton Roads, this work has been considered in line with the policy expressed above, but the use of the mine force to plant nets, which furnish no additional security to the fleet, is contrary to such policy and is strongly disapproved.

5. As the activities of this Nation in the war become more and more marked the danger of attack by enemy submarine on this coast becomes greater. The entire available mine force, and, in fact, a greatly augmented mine force should be constantly at the disposal of the commander in chief for mine sweeping and other operations for local defense.

6. In order to expedite the placing of Chesapeake Bay in a moderate state of security, the present net must be extended from the Middle Ground to the shoal near Fisherman's Island. As yet (May 4) no definite orders have been received by commandant to place this additional section, nor have orders been issued to purchase the required material.

7. The commander in chief most strongly recommends that the mine force be considered unavailable for work in connection with submarine trap nets, except in the immediate vicinity of the fleet base.

8. Should the department approve a change of fleet base to Long Island Sound, in order to obtain a greater maneuvering area inside of net defenses, the commander in chief considers that the mine force may be considered available for planting the submarine trap-net defenses in that area.

H. T. MAYO.

JULY 10, 1917.

From: Commander in Chief.

To: Chief of Naval Operations (material).

Subject: Repairs to battleships of divisions 5, 6, 7, 8. *San Francisco* and *Montana*.

Reference: (a) Department's letter No. 28754—18:29 of June 18, 1917; (b) Department's letter No. 22820—161 of July 19, 1917.

1. In accordance with paragraph 5 of reference (a) and paragraph 2 of reference (b), the following schedule of arrival of ships at yards has been prepared and is submitted for the department's approval:

| Ship. | Time required (days). | At yard ready for work. | Yard to complete— |
|-----------------------------------------|-----------------------|-------------------------|-------------------|
| Navy yard, Portsmouth: | | | |
| <i>San Francisco</i> ¹ | 45 | July 23 | Sept. 10 |
| <i>Montana</i> ² | 48 | July 20 | Do. |
| Navy yard, Boston: | | | |
| <i>Delaware</i> | 25 | July 23 | Aug. 18 |
| Navy yard, New York: | | | |
| <i>New York</i> | 30 | July 5 | Aug. 6 |
| <i>Wyoming</i> | 25 | Aug. 1 | Aug. 27 |
| <i>Texas</i> | 30 | Aug. 22 | Sept. 23 |
| Navy yard, Philadelphia: | | | |
| <i>South Carolina</i> | 25 | Aug. 6 | Sept. 1 |
| <i>Connecticut</i> ³ | 25 | Aug. 30 | Sept. 25 |
| <i>Michigan</i> | 25 | July 16 | Aug. 11 |
| Navy yard, Norfolk: | | | |
| <i>Florida</i> | 35 | Aug. 6 | Sept. 13 |

¹ *San Francisco*; Requires 35 days in dock for shaft work and upon completion this work could, if necessary, leave the yard, although it is highly desirable that she remain for 10 days additional to complete authorized work.

² *Montana*; The estimated time for the *Montana* is that required for installation of aeroplane launching equipment to complete all authorized work on the vessel, including fire control installations, will require 68 days, attention is invited to commanding in chief's first indorsement, file 2717, of July 10, 1917, forwarding commanding officer *Montana*'s letter.

³ *Connecticut*; Has an outstanding job order covering installation of new generators. It is understood that these are to be delivered about August 15. If the vessel is to have the new generators installed during her stay at the yard 20 days additional will be required, making her stay at the yard from August 30 to October 16.

2. It will be noted that the schedule does not include the *North Dakota*, *Arkansas*, *Oklahoma*, *Nevada*, or *Arizona*. Reference (a) states that instructions as to the *North Dakota* would be issued later. As far as can be ascertained from information now available, there are about 35 days' work required on the *North Dakota* for necessary repairs, fire-control changes, etc. It is believed; in view of the amount of work in hand at New York, that it will be preferable for the *North Dakota* to repair at Boston.

Arkansas: The Bureau of Steam Engineering's radio 15425, June, states that purchase of new high-pressure astern rotor drums would be recommended, and that no extensive turbine repairs would be done on the *Arkansas* until new drums were ready for installation. Norfolk yard estimates 60 days required for the turbine work, during which time all outstanding work on the vessel can be completed. There is no information at present available as to when new rotor drums will be available, and it is therefore impracticable to set a date for the *Arkansas* to arrive at the yard.

Oklahoma and *Nevada*: Norfolk yard estimates 50 days required for the installation of the new forced-draft blowers on these vessels. Recent information obtained from the industrial manager as to the status of piping required for this installation is that the Bureau of Steam Engineering has arranged for a partial delivery within from four to six weeks' time, but that no satisfactory arrangements have so far been made for the remainder of the piping, which is principally 6 inches in diameter. Until a definite date for receipt of this piping material can be assured, it is impracticable to set any date for these vessels to go to the yard for work.

Arizona: The *Arizona* is now at the New York yard for about a 10-day stay, and will not require, as far as known, any navy yard work in the near future.

3. It will be noted from the schedule forwarded that work on all battleships of divisions 5, 6, 7, and 8 except *Arkansas*, *Oklahoma*, and *Nevada* will have been completed prior to October 1. If possible to obtain material required for these three vessels prior to August 1, 1917, it is believed that work on them can also be completed by this date. To do this, however, it will be necessary to send either the *Oklahoma* or *Nevada* to some yard other than Norfolk, probably New York, as Norfolk will be unable with the men available to undertake the forced-draft blower work on both ships at the same time.

H. T. MAYO.

1. *General description of report.*—(a) The report herewith rendered is intended to cover, in general terms, the scope of the information gained, observations made, and impressions received by the commander in chief and by members of his staff while in England and France. Detailed report of information, observations, and data are submitted herewith and as separate papers.

(b) This report is presented under the following general headings:

1. General Description of Report.
2. General Instructions from Navy Department.
3. General Attitude of British and French Governments.
4. The International Naval Conference in London on September 4-5, 1917.
5. General Impressions Regarding Conditions in British Admiralty.
6. General Impressions Regarding the Grand Fleet.
7. General Impressions Regarding Coastal Commands.

8. General Impressions of Naval Conditions in France.
9. General Impressions of Naval Conditions in Italy.
10. General Impressions of U. S. Naval Forces in European Waters.
11. General Impressions of Political, Economic and Moral Conditions Among the Allies.
12. General Impressions Regarding the Northern Neutrals.
13. Notes on the General Naval Situation.
14. Notes on the Submarine Situation.
15. General Notes on the Convoy System and the Shipping Situation.
16. Notes on the Blockade.
17. General Notes on Aviation Matters.
18. Comment on Proposed Future Policy, including Future Mining Policy.
19. The Fuel Oil Situation in Europe.
20. Other Matters reported on.
21. General Recommendations.
22. General Results of Visit.

2. *General Instructions from Navy Department.*—(a) The instructions received from the Navy Department as to the purpose and object of the visit to England and France were not in definite and concrete form, but were readily to be inferred from the substance of conversations with the President, the Secretary of the Navy and the Chief of Naval Operations, supplemented by memoranda from the Chief of Naval Operations and his assistants. A summary based on the above-mentioned conversations and memoranda was made (while en route to England) in order to enable definite inquiries to be made to the governments concerned.

3. The summary was of the following general character. It will be noted that the principal matters of inquiry were understood to be for the purpose of getting more closely in touch with—

1. What has been done—historical—in order that knowledge of original plans and modifications thereof together with their elements of success or failures might enable the present situation to be understood and proposals for future operations to be appreciated.

2. What is being done—present situation—following history of naval plans and operations up to present time, showing underlying causes of plans and operations now in force—the part that the United States plays in present plans and operations—the present naval strength and resources of the Allies and of the enemy—the situation in the several areas of operation, e. g., the North Sea, the Helgoland Bight, the Skagerak, the Baltic Sea, the English Channel, the Dunkirk-Zeebrugge district, the Mediterranean Sea, the Adriatic Sea, etc.

3. What is to be done—future operations—following the history of plans and operations in their evolution and development to the present time. What new plans and operations are proposed and for what reason? What part are the several Allies and the United States expected to take? What are allied and enemy building programs?

4. Particular inquiry into the antisubmarine measures underway and proposed, as being the field of endeavor requiring immediate attention—assistance desired from the United States.

5. The aircraft situation, particularly with regard to construction underway and proposed—and wherein the United States can assist to the best advantage for all concerned.

6. The shipping situation, in so far as it bears on the "communications" of the Allies.

7. The transfer of United States troops to France, in so far as the available number will have effect on the outcome of the war and particularly with regard to the shipping necessary not only for transport of troops but chiefly for the upkeep and supply of the troops after their arrival in France.

8. Certain inquiries in the matters of seeking for trade, the employment of oilers belonging to private companies, and the rumored transfer of men of war after the war.

9. An international naval conference which the United States had requested the British Government to arrange for.

10. Later additions to the purposes of the visit appeared in dispatches from the Navy Department in regard to Norway entering the war on the side of the Allies and certain inquiries regarding the possible capture of Russian capital ships by the enemy.

11. General impressions regarding political, economic, and morale conditions in the allied countries, in so far as such conditions have bearing on the general military-naval situation.

3. *General attitude of British and French Governments.*—(a) It appears fitting to record at the outset that the reception on the part of the British Government was all

that could be desired. The files and records of the Admiralty were thrown open and there was constant evidence of cordial and hearty intention to give full information and explanation in regard to plans, operations, and material.

(b) Visits to the Grand Fleet at Rosyth, Harwich, and Portsmouth took place, as well as a visit to Dunkirk followed by observation of a bombardment at Ostend. Several officers of the party accompanied Grand Fleet detachment in a reconnaissance toward Helgoland Bight, and two officers accompanied the Grand Fleet during its change of base from Rosyth to Scapa Flow.

(c) The official entertainment in England included accommodations for the party at the Carlton Hotel up to the time of departure for France. There was a dinner given by the Admiralty to the commander in chief and his staff. There was also a luncheon given by the Admiralty to the representatives (and their staffs) from the several governments to the International Naval Conference held on September 4-5, 1917. In addition to numerous conferences at the Admiralty with Sir Eric Geddes (First Lord of the Admiralty) and with Admiral Sir John Jellicoe (First Sea Lord), the commander in chief had an interview with Mr. David Lloyd-George (Prime Minister), and had a private audience of His Majesty King George.

(d) The reception of the commander in chief and his party in France was marked by the most cordial expressions of appreciation for the friendly feeling between France and the United States, of appreciation of help already given, and of grateful anticipation of the assistance which the United States is preparing to render to the Allies.

(e) The commander in chief and staff had the opportunity of visiting Brest and St. Nazaire, and also of making a trip through the region from which the enemy retreated last spring, approaching to within a couple of miles of the present front.

(f) The official entertainment in France included accommodations at the Hotel Crillon during the stay of the party in Paris. There was a luncheon given by M. Painleve, Premier, and a dinner given by M. Chaumet, Minister of Marine. The commander in chief had luncheon with Gen. Petain, commanding French forces in the field, at his headquarters in Compiègne and had an interview with Vice Admiral Du Bon, Chief of Naval Staff.

(g) The commander in chief had an interview with Maj. Gen. Pershing, United States Army, the substance of which will be transmitted in separate correspondence.

(h) The commander in chief and staff proceeded to Queenstown where they heard of, and noted with pleasure, the excellent work being done by the 35 destroyers and 2 destroyer tenders now operating out of that port on escort-of-convoy duty, under the immediate orders of Vice Admiral Sir Lewis Bayly, R. N.

4. *The International Naval Conference in London on September 4-5, 1917.*—(a) A report has already been made on the proceedings of this conference; it is now supplemented by a copy of the "official minutes" which appear herewith as reference (a) and inclosure A.

(b) Attention is invited to the fact that answers (to be addressed to the British Government) are expected in regard to—

(1) Old battleships and cruisers available for use in a proposed operation to effect the blocking of German harbors.

(2) Additional cruisers, perhaps even old battleships, for service as escorts to merchant ship convoys.

5. *General impressions regarding conditions in British Admiralty.*—(a) There is little doubt that the British Admiralty is at a loss when asked for the history of the war to date. Reports of operations are so isolated and scattered and without system that there is not available any comprehensive record of original plans, the governing reasons therefor, and the degree of success or failure in each case. The inevitable inference is that the war has been carried on from day to day and not according to any comprehensive policy to serve as a guide to plans looking to the effective coordination and cooperation of effort against the enemy.

(b) It is apparent that, despite the so-called war-staff arrangements put into effect in the Admiralty during the past three years, until very recently there has been no planning section, nor was there any definite body of men charged with the function of looking ahead, or even of looking back to see wherein lay the causes or success or failure, nor any means of furnishing the heads of the Admiralty with analyses and summaries of past operations in order that decisions as to continuing old operations or undertaking new ones might be reached with a due sense of "perspective," both as to past operations and as to the coordination of new operations in a general plan.

(c) The statement of present Admiralty policy, originally dated July, 1917, now revised to 17 September, 1917 (reference (b) and inclosure B), is not really a statement of policy but rather a summary of current activities. That these activities are based on an underlying idea of the defensive may readily be inferred from the leading words in the subparagraphs of paragraph one of the paper referred to, namely, "protection,"

prevention," "protection," "resistance." See also references (h) (i) (j) and inclosures H, I, J.

(d) The statement of proposed future Admiralty policy dated September 17, 1917 (reference (e) and inclosure C), indicates growing appreciation of the necessity for more energetic offensive measures against the submarine in the way of preventing his egress from the North Sea.

(e) While the development of the submarine menace has been gradual and the measures undertaken to meet it have had to be evolved and applied to new developments as they appeared, the present dispersion of allied naval effort against the submarine menace has reached large dimensions and the actual offensive against the submarine has suffered through the accumulation of large numbers of vessels to carry out protective measures. The number of vessels engaged in protective (defensive) effort includes practically the entire British Navy in northern waters except the Grand Fleet, many of whose destroyers and other small craft are also engaged in protective work.

(f) Referring again to the proposed plan of future antisubmarine operations in the North Sea (reference (c) and inclosure C), it appears that it may be necessary to withdraw some vessels engaged in protective work in order to make the offensive effective. However, the effectiveness of the offensive should be cumulative thus enabling perhaps nearly all of the available vessels gradually to be diverted from the protective (defensive) to the offensive.

6. *General impressions regarding the Grand Fleet.*—(a) The Grand Fleet appears now, after three years' experience in war, including the Battle of Jutland to be in good material condition, ready for all likely operations, and of very good morale.

(b) The probable operating conditions have been studied and arrangements made to make the best possible use of the fleet. Plans and detailed instructions are complete and voluminous and have been conceived and framed for probable operations in the North Sea only, with the view that the situation in the North Sea is the only one requiring present consideration, as it involves the encounter of the two major opposing fleets.

7. *General impressions regarding coastal commands.*—(a) The coastal commands in Great Britain (of which Harwich, Portsmouth, Dover-Dunkirk, and Queenstown were visited) are all very well organized and efficiently handled up to the limit of available vessels, material and personnel.

(b) The activities at coastal stations include training of personnel, aerodromes, bases for submarines, trawlers, destroyers, motor craft, mystery ships, etc., and the direction of traffic and of patrol and convoy operations.

8. *General impressions of naval conditions in France.*—(a) At the outbreak of war naval activities in dockyards and arsenals were either allowed to lapse or diverted to the production of matériel for the Army, with the result that no vessels other than small low-powered craft can now be constructed.

(b) The French main fleet is based on Corfu in readiness to operate against the Austrian fleet, should opportunity occur, with or without the cooperation of the Italian fleet.

(c) The personnel of the French navy appears to be in as relatively a depleted state as the matériel, having been largely diverted to operations on land, chiefly in the defense of Belgium. There is a proposal (mentioned in report of International Naval Conference, Reference (a) and Inclosure A) to man cruisers for escort-of-convoy duty with personnel from the older battleships, provided the United States will replace the said older battleships in their duties (in the eastern Mediterranean).

(d) French naval views are strongly inclined to the offensive, especially against the submarine menace, and every effort to this end is being made that the conditions of matériel and personnel will permit.

9. *General impressions of naval conditions in Italy.*—(a) Italian naval views regarding the part that the Italian navy can take in allied naval operations is well indicated both in the report of a naval conference held in Paris on July 25-27, 1917, and in the report of the recent naval conference held in London on September 4-5, 1917.

(b) There is an evident reluctance to undertake any cooperate measures which might result in losses which would affect popular opinion in Italy. This reluctance extends even to the question of proper guarding of the hundred or so British drifters which maintain a drifter-net barrage in the Straits of Otranto.

(c) The Italians are understood to have 34 destroyers available, to which the French have added 10 for service in the Italian fleet. The Austrians are reported to have 22 destroyers available.

10. *General impressions of United States naval forces in European waters.*—(a) The Queenstown force, consisting of 35 destroyers and 2 destroyer tenders (*Melville* and *Dirie*) are almost wholly employed in the convoy system under the orders of Vice Admiral Sir Lewis Bayly. *Royal Navy*, commander in Queenstown.

(b) This force is in good matériel, personnel, and operating condition; the morale is excellent. Admiral Bayly appears to be much pleased with their work, which requires much time at sea and constant exercise of seamanship, navigation, and judgment.

(c) The Brest force is hampered in its operations by general unsuitability of the available vessels for high-seas work and by lack of organization and of general plans to serve as a guide in carrying out the necessary work; there is also difficulty in effecting even minor repairs and upkeep.

(d) The forces at Gibraltar and at Bordeaux were not visited owing to lack of time but are understood to be accomplishing all that can be expected of the number of vessels now available.

(e) The present aviation force is nearing the completion of its training and is due to receive a marked increase of personnel, after which it is expected that active employment may be begun.

(f) The operations in the air have reached such magnitude and are of such great importance that there can be little doubt that assistance in personnel and matériel for air service will be the most rapid as well as the most useful way of reenforcing the Allies both by land and by sea.

11. *General impressions regarding political, economic, and moral conditions among the Allies.*—(a) The following observations are general and are mentioned only with a view to consideration of all the varied elements that affect the military-naval situation.

(b) Great Britain: (1) The Government in power appears to hope that it may not be called upon to impose restrictive or other positive measures, and to endeavor to avoid such measures until they can no longer be avoided, with the result that this procrastination has had the regrettable effect that when the Government is obliged to act there is likely to be serious opposition; whereas, if a directing policy had been carried out from the beginning, the people would undoubtedly have acquiesced and approved in the belief that the measures introduced were essential to the proper conduct and outcome of the war. Illustrations of conditions indicated are principally found in the labor situation, in which strikes occur repeatedly, and in the reluctance to introduce a general rationing system, though shortage of sugar has finally developed to such a degree that sugar rationing has recently had to be put into force.

(2) The labor question is serious, especially with regard to shipbuilding, and it is proposed to withdraw 80,000 men from the army to return to their work in shipyards. Personnel for the air services is becoming scarce and of poor quality, while naval personnel is apparently expanded to the limit of available men.

(3) The morale in general is good, subject to above remarks regarding labor.

(c) France: (1) The Government in power in France is beset with labor troubles which are emphasized by the fact that M. Thomas, the chief labor leader, has declined a portfolio in the recently formed ministry of M. Painlevé.

(2) There is a shortage of coal in France which causes great concern, in view of the possible moral effect of the privations about to be endured in the coming winter. France seems to be fairly well off as regards food, except that there are now two meatless days a week. Personnel is depleted except as boys become of draft age; especially is this the case in regard to naval personnel, for the army has the preference, due to the relatively greater need.

(3) The morale is now very good; though greatly reduced last spring after the huge losses attending the French spring offensive, the entry of the United States into the war and success in retaining the ground won has served, in the course of time, to restore the morale to the extent that it now appears to largely depend on getting through the coming winter without serious suffering on account of the shortage of coal.

(d) Italy: (1) The Government in power is apparently unwilling to risk anything at sea on account of effect of possible losses on public opinion, which may indicate an unsatisfactory attitude of the people toward the war.

(2) The coal shortage in Italy is serious; so much so that it is reported that people are being transferred in large numbers from the north to the south of Italy. Shortage also exists in regard to raw materials for the manufacture of munitions, aircraft, and shipping.

(3) The state of the morale of the Italian Army is indicated by their operations against Trieste, but the same test applied to the Italian Navy does not indicate an encouraging state of affairs. The attitude of the Government, which apparently is apprehensive of the effect of naval reverses, at least, may be taken to indicate that popular opinion is not united and needs careful handling.

(e) Russia: (1) The political, economic, and moral conditions are bad, as is well known, but they can hardly fail to improve provided a strong Government succeeds in control.

(2) It can not be again said that all the troubles that usually exist between allied countries engaged in military operations are present among the Allies in some degree. There is believed to exist suspicion and even jealousy of the dominant political and naval power, and the growing military power of Great Britain. All the countries involved undoubtedly give present consideration to probable future arrangements which will take place on completion of the war, with the result that there is a tendency to suspect motives and that proposals for cooperation and coordination are approached with reserve.

3. The only country whose motives and aims in the war are unquestioned appears to be the United States, whose influence can probably be brought to bear to clear up existing doubts and resultant friction to the end that real and full cooperation and coordination may produce the result that can be attained and is so much desired—the complete victory of the Allies.

12. *General impressions regarding the northern neutrals.*—(a) The following observations are general and are mentioned for the purpose of covering all matters that affect the military naval situation. The chief and almost the only characteristic of the attitude of Holland, Denmark, Norway, and Sweden is their common desire and intention to remain neutral as long as it is possible for them to do so.

b. Holland has an army of about 600,000 men now kept under observation by a German force, estimated to be at least 200,000 men. Holland's entry into the war on the side of the enemy would therefore bring at least some half million men against the Allies, would enable the enemy to use Dutch ports as bases for submarine and destroyer operations and thus seriously increase the difficulties of the Allies. The entry of Holland into the war on the side of the Allies is unlikely, as Holland has but to contemplate the fate of Belgium and of Roumania and to regard how little assistance the Allies can give her. All of which sums up in the determination of Holland to remain neutral if she possibly can.

c. Denmark has neither army nor navy to enable her to resist vigorously, as Holland does, infringements of her neutrality by the enemy. Her entry into the war on the side of the enemy is unlikely in view of the feeling regarding Schleswig-Holstein, while her entry into the war on the side of the Allies would mean that she would quickly be overrun and subdued, as assistance from the Allies is not to be expected. Denmark has no seaports on the North Sea coast which can be made of use as outposts against the enemy.

(d) Norway is apparently willing to enter the war on the side of the Allies but has no army nor navy of consequence, so that she might well be a hindrance rather than a help, especially in view of her openness to attack by Sweden, whose army is vastly superior and whose navy is relatively much better. The chief reason for consideration of Norway lies in her coastal frontage on the North Sea and the Skagerrak, with the numerous harbors which would be useful as bases and outposts for operations against the enemy. But Norway can not protect herself, is apprehensive of attack by the enemy, and would require military assistance which the Allies are not prepared to furnish.

e. Sweden has a proenemy government and ruling class supplemented by the Conservative party recently in power. The Socialist party, which is large and powerful, is determined that Sweden shall continue her neutral status. The Liberal party is apparently friendly to the Allies, or rather anti-German. The balance of power is against the pro-Allies, and it is likely that Sweden will remain neutral in order to continue to receive the huge war profits which are of benefit to the entire people. The revolution in Russia has relieved Swedish apprehensions of aggressions from that quarter and has thus reduced the tendency to join the war on the side of the enemy, if at all.

(f) See details in reference (g) and inclosure "G."

13. *Notes on the general naval situation.*—(a) Apparently the naval plans of the Allies have been in most general terms. Great Britain to control the North Sea and Channel; France her west coast and the French Mediterranean coast; Italy, assisted as necessary by France, to control the Adriatic; British forces based on Gibraltar, Malta, Alexandria assisting in the Mediterranean. Recently the Japanese have given assistance in the Mediterranean, having there 1 cruiser and 12 destroyers. United States forces are operating from Queenstown, Brest, and Gibraltar.

(b) (1) It is apparent, from conversation with officers attached to the Operations Division, that up to the present there has been no definite naval plans. So far as can be learned, there has been no statement of British Naval policy previous to that issued by the Admiralty in July, 1917, which is in reality a defense of what was being done and not a real statement of policy.

(2) The defensive nature of this so-called policy is plainly indicated by the paragraph stating the objects to be attained by naval power; the leading words of the

four subparagraphs which state these objects are: (1) Protection, (2) Prevention, (3) Protection, (4) Resistance.

(3) All of these objects and many more would be obtained by the destruction of German naval power.

(c) (1) In the first month of the war the offensive policy was much more pronounced than at present. The British Fleet was in fact undergoing a test mobilization when the probability of war became evident. The forces were maintained in a mobilized condition and therefore began the war in a most advantageous state.

(2) The disposition of the fleet was made with a view to opposing the movement of the enemy forces out of the North Sea. The main battle fleet was based on the North of Scotland but kept the sea almost continuously. A second battle force was based in the south of England to prevent the passage of any forces of less strength than the high sea fleet through the channel. The armored and light cruisers were continually on scouting duty in the North Sea. The British submarines were stationed in the Helgoland Bight with a view to attacking the German fleet if it came out. No mines were laid in Helgoland Bight by the British during this phase.

(3) The frequent attacks on British cruisers by German submarines, especially the catastrophe in which the *Hogue*, *Cressey*, and *Aboukir* were lost, caused a change in plan as follows:

(4) The main fleet was withdrawn from continuous service underway and placed in a base adequately protected from submarines. The heavier cruisers were withdrawn from scouting work and their place taken by light cruisers and destroyers. The mining of Helgoland Bight was begun. The development of the auxiliary services of mine sweeping and patrol was made more rapid.

(5) The present operations are merely developments of this plan. The fleet is ready and anxious to fight a major action, but it is only sent to sea as a fleet when the German fleet is out or thought to be coming out, or occasionally for exercises. The various divisions of the fleet are often underway for target practice, etc.

(d) See references (h), (i), (j), and inclosures "H", "I", "J."

14. *Notes on the submarine situation.*—(a) The increase in the number of patrol vessels and mine sweepers has been brought about in the endeavor to combat the successful operations by enemy submarines, especially mine-laying submarines.

(b) The convoy system was developed with the hope of reducing the submarine sinkings. By concentrating the shipping into convoys it was hoped to reduce the chances of the submarines sighting merchant vessels; to guard against raiders by ocean escorts; and to guard against submarines by destroyer escort within the submarine danger zone.

(c) (1) Mining operations in Helgoland Bight have been quite extensive, the main object being the destruction of submarines. The mine fields seem to have been laid at widely separated periods of time and without a general plan. In view of the difficulties attendant upon locating the exact position of a mine field planted out of sight of land, it has been necessary to leave gaps of about six miles between fields in order to avoid chances of striking their previously planted fields.

(2) The difficulties of effective mining have been accentuated in the North Sea by bad weather and the great rise and fall of tide.

(3) Mines laid at such depth as to be effective at high water are as a rule plainly visible from Zeppelins at low water. The ineffectiveness of mine fields which can not be defended has been repeatedly demonstrated.

(4) It is generally conceded that a mine field is only effective when the surface can be guarded against mine sweepers, which in reality means against the enemy's main fleet as a support. This condition can be changed only by the development of nonsweepable mines. Until nonsweepable mines are a demonstrated success it should be accepted as a principle that no effective mine barrage can be maintained in a position where the power of the whole fleet can not be developed in its defense.

(d) The channel was closed by net barrage but due to strong tides and heavy weather and the nature of the bottom (sandstone, poor holding ground) this net barrage has never been efficient. Mines and mine-nets have also been used in the Straits of Dover, but the German U-B and U-C boats based upon Ostende and Zeebrugge seem to pass the barrage at will. The U-boats do not use the channel.

(e) (1) The most successful operations against enemy submarines have been carried out by British submarines and decoy ships. The submarine against submarine will probably prove effective in the future though the German submarines, due to the excellence of the optical instruments, have a decided advantage and undoubtedly sink more British boats than are lost by themselves. However, this system has proved quite successful and is being pursued as vigorously as possible. The decoy ship has accounted for more submarines than any other measure. However, the enemy submarines are becoming very wary and it is doubtful if in the future they will obtain such good results.

(2) The most recent developments in antisubmarine devices are the hydrophones and aircraft (planes and kite balloons). Eight shore stations fitted with hydrophones are in operation and several "hunting flotillas" have been organized which rely on the hydrophone as their initial means of detection.

(3) "Hunting groups" of destroyers carrying kite balloons have also been in operation and it is felt that the development of this plan may, during the summer months especially, yield valuable results. In any attempt to block the North Sea by patrol or mine barrage this type of operation should be developed to the utmost.

(4) Several coastal air stations have been completed and many others are contemplated. Seaplanes and airplanes operate from these bases in patrolling the sea. When submarines are sighted the planes endeavor to bomb them. It is doubtful if much positive damage has been done by these bombs, but upon several occasions ships have been saved by the submarine being forced to dive to avoid bombs from aircraft.

(5) A circling torpedo has been devised and has passed satisfactory tests. So far as known none have as yet been issued to the service.

(f) (1) The submarine is by far the most serious menace to ultimate Allied victory. At the present rate of destruction (500,000 tons of shipping a month), it is estimated that by October, 1918, the Allies will be constructing shipping at a rate which will be above the losses. This does not necessarily mean a victory, for if the war goes on that length of time without the suppression of the submarine the restriction upon food and fuel may reduce the will to win of the population of Italy, France, and Great Britain, to such an extent as to force these Governments into a compromise peace.

(2) It seems essential that operations to reduce the efficiency of the submarine must be devised. The German nation is basing its hope of victory on the success of the submarine. A powerful offensive against this type will effectually raise the morale of the Allies and lower that of the Central Powers. Therefore, even if the conditions point of the failure of the submarine campaign in the distant future it must be recognized that in waiting for that time there is grave danger of the failure of the morale of some of the Allied nations.

(3) The season of the year is not propitious for offensive operations against submarines, so at present all energies must be bent to operations in defense of commerce and equally, if not more important, to the preparation for offensive operations during the period from April to October 1918, at which time the restrictions will be the greatest, and the conditions for offensive operations the most advantageous.

(4) In order to adequately prepare for this offensive, plans must be made immediately and every effort exerted to make the operation a success. The preparation of material and equipment of ships require much time, and unless a plan is decided upon the spring will find the Allies unprepared to take advantage of the favorable conditions.

(5) In view of the impracticability of offensive operations against the enemy submarines or their bases at this season of the year, the first consideration should be given to the improvement of existing plans and a study of the modifications that may be required due to possible operations of cruising submarines, raiders and battle cruisers, against the convoys.

(g) See details in reference (f) and inclosure "F."

15. *General notes on the convoy system and the shipping situation.*—(a) (1) The principal antisubmarine effort is to-day being exerted in escorting convoys through the submarine danger zone in the Atlantic and North Sea and Channel. A convoy system will soon be in operation in the Mediterranean.

(2) The reduction in the per cent of losses of vessels in convoy has given rise to hopes that the adoption of the convoy system by all ocean-going vessels will reduce the submarine menace below the danger point.

(3) Such an assumption is dangerous without more experience than has been had as yet, and as the convoy system had only been in operation during the latter months of the fair weather of summer the difficulties attendant upon operations in the gales of winter and the fogs of fall and spring must be carefully considered.

(4) The convoy system is strategically defensive though tactically offensive. This offensive is merely a counter attack. Such operations on land are never decisive and unless coupled with strategically offensive operations are more than apt to fail on the sea. Convoy operations can not win the war. They may, if successful, prevent defeat. Unless the navies of the Allies forces are satisfied to let the armies or political conditions settle the war a more offensive plan is essential.

(b) (1) From present prospects the decision on land is far distant. The people of the European nations at war are war weary, the losses on land are enormous. Unless the Navy can unmistakably check the submarine menace the war is apt to be decided by political or labor conditions.

(2) National morale is to-day the vital point, and the effect on allied morale or a successful check to the submarine would be to raise it beyond any possibility of breaking. Likewise this would so reduce the enemy's chances of winning the war that the morale of the Central Powers would be likely to break.

(c) The convoy system should be regarded merely as a defensive operation carried on while preparing for an offensive. Such an attitude does not prevent thoroughness in carrying out the operation and in order that it may be successful in its rôle, it requires careful study to anticipate the changed conditions of the winter and the possible operations which may be conducted by the Central Powers to break up the system.

(d) (1) The convoy system requires the assembly of from 15 to 20 vessels, most of which are run on a schedule of one every eight days. Assuming that on the average there is a delay of two days in and two days out in a round trip, and that the average time for a round trip is five days, it will be seen at once that this is equivalent to a reduction in shipping of 8 per cent. In addition to this there is the congestion of ports, due to arrival and departure of large groups of ships practically simultaneously, which reduces the rapidity of discharge and loading.

(2) In order to make up for the loss in tonnage due to controlled sailings, it is necessary to attain the highest efficiency of employment of all ocean-going merchant tonnage. In order to accomplish this it is essential that all merchant shipping be controlled as to route, ports, and cargo by the Government, and that the Government representatives coordinate their efforts with the corresponding representatives of the Allies.

(3) An instance will indicate where the savings can be made. There are about 40 ships a month trading from the southeast coast of South America direct to the United States. Most of these ships are American or neutral, operating on an American time charter. This trade is no doubt profitable, but it is doubtful if it is essential to the conduct of the war.

(4) The United States and the Allies must consider carefully what peace-time trade can be dispensed with to meet the very serious shipping situation now before us.

(5) The efficient employment of such shipping as is available for the transportation of materials essential to the conduct of the war offers one of the most promising fields for reducing the actual shortage of shipping.

(e) Defense of convoys against raiders.

(1) The means at the disposal of the enemy with which to attack the convoys are—

1. U-boats;
2. *Deutschland* type of submarine cruisers;
3. Raiders (armed merchant ships);
4. Cruisers;
5. Battle cruisers.

(2) It appears that the system of protection for convoys now in operation is efficient so far as the resources available permit. The losses of vessels in convoy to the losses of vessels not in convoy is at present about 1 to 20. Of course the greater safety of the submarine in attacking vessels not under escort leads to a prevalence of this form of attack; and undoubtedly when all vessels are in convoy the proportion of ships sunk will not decrease in the above ratio.

(f) (1) The merchant captains state that in the bad weather of winter it will be impossible for ships in ballast to operate in convoys, so it seems that the proportion of shipping in convoy can never (for the next few months) exceed 50 per cent.

(2) The dispersion of convoys and the difficulty of maintaining position in convoy during fogs and gales will seriously reduce the efficiency of this system during the winter.

(3) The bad weather and long nights will, however, seriously reduce the efficiency of the submarine and it is believed that the rate of sinkings from U-boats will remain practically constant.

(g) (1) The introduction of the cruising submarine with its long radius of action will move the submarine menace further from the coast of Europe and thus necessitate more extensive destroyer escort operations. At present the force available does not permit this extension but as the number of submarines of this type is limited (probably six) this disadvantage must be accepted.

(2) This type of submarine is fitted with one or two guns 5.9 inches in caliber and is designed to use this gun as its primary weapon. The system of ocean escort is a partial answer to this form of attack.

(h) (1) The raider and cruiser menace are similar and can be considered together. It is quite possible that the raiders or cruisers so employed would have a battery of 6-inch guns and therefore the ocean escorts should be vessels with batteries not less than 6 inches.

(2) In view of the difficulty that would be experienced by one cruiser in guarding a convoy of 15 or 20 ships against a raider of equal speed, it seems that the enemy will use fast ships and those of merchant ship type with sufficient speed being rare, they probably will be cruisers.

(3) The enemy cruisers, however, have rather short radius of action and consequently could not operate long on the main trade routes unless they could obtain fuel from ships engaged in unneutral service. In view of this fact particular investigation of all ships not sailing in convoy should be made and coal cargoes should be traced to destination. Vessels with cargo of fuel should be made to travel in convoy.

(4) The threat from raiders or cruisers could best be met by increasing the number of ocean escorts with each convoy, but due to lack of suitable vessels this is an impossibility unless escort by battleships is adopted.

(i) (1) The most serious threat is that by enemy battle cruisers. If one of these vessels accompanied by a fast supply ship, and preceded by a submarine scouting force could get to sea, the possible damage that could be done would be enormous.

(2) Very serious thought must be given to this possibility and the secret service of the Allies should be directed to ascertain information indicating that any such arrangements are in preparation or even contemplated.

(j) See details in Reference (f) and inclosure F.

16. *Notes on the blockade.*—(a) The so-called blockade has been in operation since the early days of the war and has been conducted with a straight-forward and direct intention to allow no contraband to reach the enemy. Contraband has, during the progress of the war, been expanded in scope of meaning until it now includes practically all material of every description and is applied not only to goods of enemy destination but that might serve to release other goods to the enemy.

(b) Direct delivery of goods to the enemy was practically stopped early in the war in so far as concerned shipments from all the world except the four "northern neutrals." Leakage through those countries, either direct or indirect, has been checked if not stopped by restrictions on imports into the countries concerned. In all cases pressure of some kind, but chiefly economic, has been brought to bear to cause neutrals to deny export to the enemy. This pressure has taken the form of so-called rationing of neutrals in manufactures, in raw materials, and in fodder and foodstuffs and has extended to the denial of bunker coal to ships and of exports coal to the countries concerned unless certain requirements were complied with.

(c) The action of the United States in restricting exports to the "northern neutrals" is very welcome in adding to the efficiency of the blockade and exerting increasing pressure on the countries concerned to so conduct their affairs that the enemy may profit as little as possible.

(d) These matters are set forth at length in reference (f) inclosure "F."

17. *General notes on aviation matters.*—(a) The British have two air services—the Royal Flying Corps of the army and the Royal Naval Air Service—both of which are fully up to their work to the limit of personnel and material available, but the quality of personnel for increasing the number of active machines and for replacing casualties is said to be falling off.

(b) The French now have one course of air service supply and two operating branches of which the army branch has the preference in men and in material over the navy branch. Personnel suitable for air-service work is depleted and material is limited.

(c) Assistance in air service must, in France at least, include both personnel and material and the fact must not be lost sight of that large numbers of upkeep personnel are needed to keep the machines in shape so that the flyers may operate to best advantage.

(d) Material should take the form of complete machines which should not be shipped in the assembled condition on account of space thus occupied and needed for other cargo on account of the scarcity of shipping. Arrangements must be made to assemble the "knocked-down" machines after their delivery in France.

(e) Personnel should have their preliminary schooling in the United States before crossing to France, where a greater part of their flying education should take place under the competent instructions available there and in touch with actual flying conditions.

(f) It is understood that the United States will establish numerous aeronautic stations on the coast of France, presumably for antisubmarine work of a protective nature. The application of all possible antisubmarine measures to the development of the offensive is so important that it would be a mistake to consider that these coastal aeronautic stations have accomplished their task when in operation to patrol coastal areas. The coastal stations should be training areas for personnel destined to be used in offensive operations, thus incidentally providing for coastal defense as long as it may be considered necessary. It is deemed particularly important that this differentiation of purpose be clearly understood.

18. *Comment on proposed future policy, including future mining policy.* (*Reference (c) and inclosure C*).—(a) The striking feature of the proposed future policy of the British Admiralty is the final open recognition and conviction that the submarine menace is vital and that present antisubmarine measures are inadequate to cope with it.

(b) It is recommended that immediate and careful consideration be given to the reference mentioned above in connection with the proposed "mine barrage across the North Sea." (References (d) (e) and inclosures D F.) This is the most promising plan for coping with the submarine menace that has yet been developed. The time required to prepare the necessary material is so great and the arrangements for instituting and maintaining the barrage require such careful working out, that the earliest possible decision should be arrived at and the intentions of the United States made known to the British Government, in order that preparations may be begun and carried forward with all dispatch as soon as an agreement shall have been reached.

(c) While a greater degree of foresight in the earlier stages of the war might well have enabled measures to be undertaken looking to the direct offensive against the enemy navy in its bases both in Germany and in Belgium, the situation to-day is such that attempts "to dig them out of their holes," "destroy the hornet's nest," etc., would involve such complicated and difficult operations including the employment of practically all the allied navies and exposing them to extreme risk of grave disaster should any large part of the complex operation miscarry, that such plans can not be considered in any degree advisable nor even practicable.

(d) The enemy fleet can only be fought when he chooses to come out of his bases. Measures to force him out of his bases are not available from a naval point of view, except in so far as the contemplated antisubmarine offensive or perhaps future bombing raids via the air may make it appear to him that he has no other alternative to final destruction, defeat, or capture.

19. *The fuel-oil situation in Europe.*—The fuel-oil situation in Europe is always a source of anxiety, as at present, and the British Admiralty is extremely desirous that a just and equitable basis for pooling oil-tanker tonnage may be arrived at. It is understood that representatives of the British Government are now in the United States in connection with these matters.

20. *Other matters reported on.*—Separate reports will be made on the following matters:

- (a) Requests for assistance made by the Allies.
- (b) British shipbuilding programs.
- (c) The shipping situation.
- (d) British gunnery methods and fire-control material.
- (e) British radio methods and material.
- (f) Grand Fleet battle orders, etc.
- (g) Etc., etc.

21. *General recommendations.*—(a) The military-naval situation among the Allies is such that it is strongly recommended that the United States make the earliest possible decision as to what forms and extent the assistance to be given shall take and then proceed to exert every effort to expedite the production, dispatch, and employment of such assistance. Too much stress can not be laid on the importance of the time element.

(b) It is further recommended that time be not lost in attempting greater development or improvement of material which has already reached a fairly satisfactory state of development abroad, but that all energy be directed to reproducing such satisfactory material at the maximum possible rate.

22. *General results of visit.*—(a) There is every reason to believe that the visit of the commander in chief and his staff to England and to France was heartily welcomed and greatly appreciated as evidence of the earnest desire of the United States to get as closely as possible in touch with the situation and problems that confront the Allies. It is further believed that the Governments represented at the International Naval Conference in London on September 4 to 5, 1917, likewise welcomed and appreciated the participation of United States representatives in the discussions and in the conclusions of the conference.

(b) It is considered that better understanding and appreciation of aims and views must be a result of the visit and that the personal contact with the officials of the British Admiralty, with the commander in chief and officers of the grand fleet and with the officials of the French ministry of marine, as well as with the representatives of the several governments at the conference above mentioned, has done much to make the participation of the United States in the war seem more real and the assistance which the United States is capable of rendering much more tangible.

(c) The visit was of very great individual professional profit to the commander in chief and to the members of his staff, as well as of collective profit to the staff as a whole.

(d) There is recommended for consideration the matter of the United States maintaining in the operations division of the British Admiralty and in the flagship of the commander in chief of the grand fleet one or more officers of high rank and of suitable attainments to keep in intimate touch with operations both underway and contemplated. Such officers should return to Washington after a short period (when replaced by officers sent over for similar duty so that continuous touch may be kept) in order to acquaint the Navy Department fully and in detail with the situation in the field of actual operations. Such an arrangement would insure a constant and invaluable exchange of information and ideas regarding operations which could not fail greatly to promote better cooperation and coordination of effort. There would seem to be no reason why the above-proposed liaison system should not be extended, if desired, to the sending of British officers to the Navy Department and to the Atlantic Fleet, and further, to a similar interchange of officers with the French and other allied ministries of marine and principal fleets. It is known that the British Admiralty, at least, would be very glad to have liaison arrangements put into force.

H. T. MAYO.

SECRETARY OF THE NAVY (Operations).

[File 8012. Confidential.]

UNITED STATES ATLANTIC FLEET,
THE COMMANDER IN CHIEF,
PASSAGE, LIVERPOOL TO NEW YORK,
S. S. "ST. LOUIS," *October 11, 1917.*

From: Commander in Chief, United States Atlantic Fleet.

To: Secretary of the Navy (Operations).

Subject: Specific requests for assistance from the several allied powers.

References:

- (a) Report of international naval conference in London on September 4 to 5, 1917, extracts, inclosures A.
- (b) Memorandum from first sea lord of British Admiralty, dated September 22, 1917, inclosures B.
- (c) Memorandum of requests from France, inclosures C.
- (d) Memorandum of requests from Italy, inclosures D.
- (e) Memorandum of requests from Russia, inclosures E.

1. The following summary of specific requests for assistance from the United States made by the several allied powers is assembled from references and from notes the made in inter with Government representatives.

2. It is recommended that immediate and careful consideration be given to these requests and that decision or views in the premises be communicated to the several Governments concerned as soon as possible in order that the necessary arrangements for cooperation and coordination of assistance to be rendered may be made, as in practically all cases the time element is of very great importance.

3. Not only should there be the least possible delay in replying to the several requests in order that the Governments concerned may plan accordingly, but where material assistance is involved, care should be taken to concentrate effort on the production of material already found even fairly satisfactory for the purpose intended rather than to institute research and experimental work for development of new apparatus or for the improvement of existing apparatus, thus causing delays in production which would operate to markedly reduce, and perhaps even to nullify, the value of the assistance rendered.

4. The summary of requests is arranged as follows:

- (A) Requests made during international naval conference in London, September 4-5, 1917, inclosure A.
- (B) Requests made by Great Britain, inclosure B.
- (C) Requests made by France, inclosure C.
- (D) Requests made by Italy, inclosure D.
- (E) Requests made by Russia, inclosure E.

5. The commander in chief has made no written recommendation regarding these several requests, but is prepared to discuss them and to explain the points that were presented in connection with them when they were made.

H. T. MAYO.

Requests made by Allies during naval conferences:

The following points for consideration by the Navy Department came up during the international naval conference in London, September 4-5, 1917.

1. The question of a close offensive in German waters.

(a) The conference agreed that the question should be carefully considered by the Allies, and that they should indicate in due course to the British Admiralty the contribution of old war ships (for sinking in blocking German channels), which they would be prepared to provide if such operation was considered practicable.

(b) The suggested contribution from the United States Navy was 12 battleships and 8 cruisers.

2. (a) In considering the question of a mine barrage it was stated that the British shortage of skilled personnel (especially fitters) required for the assembly of mines, limited their output.

(b) The United States and Italian representatives undertook to ascertain how far their respective countries could assist in supplying the deficiency.

3. The conference agreed that the convoy of all craft, including neutrals in the service of the Allies, would require additional ocean escort vessels, and the various representatives agreed to ascertain what further cruisers or old battleships their respective nations could assign to this service.

4. (a) The questions of—I, concerted measures for preventing the establishment of enemy submarine bases overseas; and, II, the development of a wireless warning system and intelligence center in the Azores, were referred to a committee formed from representatives present.

(b) The report of the committee, adopted by the conference, was as follows:

(i) That the respective admiralties and ministries of marine should communicate with their colonial ministers and ask for instruction to be given to their colonies and overseas possessions to keep supervision over all harbors and anchorages to gain intelligence of German submarines or suspicious vessels.

(ii) That steps should be taken to insure close cooperation between allied ministers in neutral countries to make such representations as will insure adequate action to prevent submarines or suspicious vessels being succored or allowed to make use of territorial waters.

(iii) That the question of fitting certain ships in convoys with powerful W T to pass messages should receive consideration whenever convoys should be established, having particular regard to the difficulty of receiving W/T intelligence from vessels attacked off the coast of South America and in the South Atlantic generally.

(iv) That, with the permission of the Portuguese Government—

(a) A United States naval force should be based in the Azores.

(b) A British intelligence center should be established in the Azores.

(c) British directional W/T stations should be established in the Azores.

(d) A British long-distance W/T station should be established in the Azores for the war.

NOTE.—Any British units would work under the general direction of the United States senior naval officer.

5. Vice Admiral Cusani read a statement from which the following is a quotation:

(a) "Besides the various active cooperation by armed forces, there is another field in which the United States can bring to us a welcome, a precious, and I would say a most needed contribution, that is in giving us those supplies and materials of which we and our other allies are short for making ships, machinery, and munitions of war."

(b) We would welcome any declaration from the American delegation to that effect, and we would be then on a firmer ground, so far as Italy is concerned, to bring this conference to useful conclusions.

(c) He had before him a list of the material required, and emphasizing the delay which his government experienced in obtaining the delivery of important orders already placed in the United States.

(d) Admiral May undertook to make representations to his Government with a view to securing an expeditious delivery of the orders referred to. As regards further material help, he professed himself unable to give any undertaking, and suggested that the correct procedure would be for the Italian Government to make representations to the United States Government through the usual channel.

6. Previous to the conference, the First Lord of the Admiralty, in conversation with Admiral Mayo, invited attention to the fact that Great Britain had not commandeered any shipping under construction for any of the Allies, and intimated that he hoped the United States would not commandeer any shipping building in the United States for Great Britain.

REQUESTS MADE BY GREAT BRITAIN FOR FURTHER ASSISTANCE DESIRED FROM THE UNITED STATES.

Memorandum from First Sea Lord.

The further assistance desired from the United States from available forces or resources is as follows:

1. Four coal-burning battleships of the dreadnought type to replace three or four Grand Fleet dreadnought battleships which it is desired to send to foreign waters to relieve older battleships which are being paid off for want of personnel.
2. An increase in the number of destroyers, in order to enlarge the convoy system and to provide better protection for each convoy.
3. An increase in the number of convoy cruisers for the same reason.
4. An increase in the number of patrol craft, tugs, etc., for antisubmarine work.
5. The rapid building of merchant ships.
6. The supply of a large number of mines for the proposed barrage between Scotland and Norway, and assistance toward laying them by the provision of United States mine-laying vessels.

Notes: As regards (1), the increase in the number of destroyers during the war has forced us to pay off the older capital ships to provide trained personnel for the light cruisers, flotilla leaders, and destroyers. This policy must still continue, as officers and crews will be required during the next 18 months for the 19 light cruisers, 12 flotilla leaders and 119 destroyers now in various stages of construction. Should the United States Government see fit to send over four coal-burning dreadnoughts, they would be attached to the Grand Fleet and form an integral portion of it, working together as a division of a battle squadron; (2) the United States destroyers are more suitable for convoy work on the western approaches to Great Britain than British destroyers, owing to their size and greater radius of action. Any increase possible in this direction would enable more British destroyers to be used in the North Sea to operate offensively against enemy submarines; (3) an increase in the number of convoy cruisers would enable the number of convoys to be increased, or, alternatively, the number of merchant ships in each convoy could be reduced and better control and protection be assured; (4) the proposed barrage of mines between Scotland and Norway will entail the provision of large numbers of patrol vessels. Any assistance from the United States in this respect will be most welcome either to cooperate in patrolling the barrage, or, alternatively, to release British patrol vessels for this purpose.

Naval staff (D. C. N. S.), September 22, 1917.

7. Note with regard to mines: (a) It is considered essential that mines used in a barrage where patrol craft are numerous, should become inoperative upon breaking away from their moorings; (b) the British Admiralty desires to know what type of sinker can be used with the United States mines.

8. Fuel-oil situation: (a) the situation with regard to fuel oil is still unsatisfactory. The amount on hand for naval use is approximately 600,000 tons. Of this possibly as much as 150,000 tons will not be available at the particular point where it is required. This leaves a real available supply of approximately 450,000 tons; (b) the normal monthly consumption under the present conditions of operation (the fleet practically immobilized) is 225,000 tons; (c) the amount on hand available is therefore approximately two months supply; (d) the greatest efficiency in oil supply can only be obtained by pooling the tonnage of the large oil companies and controlling their sailings by a joint committee representing the United States and Great Britain.

Requests made by France:

1. During the time the commander in chief was in France conferences were held with Maj. Gen. Pershing, United States Army, Vice Admiral DuBon, Chief of Staff of the French Army, and with officers of the United States Navy on duty in France.

2. At the suggestion of Lord Derby and Gen. Murray, Gen. Pershing had already cabled to the United States suggesting that he proceed to London for a conference with British authorities and Admiral Mayo, to fully consider all of the demands which will be made upon shipping in order to supply the United States Army and the necessities of the allied nations. He had received an answer to the effect that the President did not consider such conference advisable as the United States Shipping Board was confident that they would be able to supply the United States Army with United States ships only.

3. In view of the above, after general conversation in regard to the great demands that would be made to support the Army, and in the belief that it is quite possible that the magnitude of these demands now, and in the future, may not be fully realized at home, it was agreed both Gen. Pershing and Admiral Mayo would recommend early and serious consideration, and that the question of supplying United States colliers, either naval or otherwise, for transporting English coal to France for the use

of the United States Army would be taken up at once. The amount of coal required by the United States Army is estimated as 80,000 tons per month.

4. During a conference at the Hotel Crillon, Paris, Admiral Du Bon submitted the following points for consideration: (a) That Gen. Pershing confer with Admiral Mayo and arrive at a definite conclusion as to the ports to be used in connection with the transportation of troops, and the proportion of troops to be sent to each port, and that Admiral Mayo should take back the general scheme to the United States; (b) he further recommended that as the larger ships can not go to French ports for landing troops without great difficulty, that the utilization of Liverpool and Southampton be considered, and further that the troops be transported from the above places to Cherbourg, so as not to interfere with the British cross-channel transportation; (c) he requested that the ships that are being constructed in the United States for the French and have been commandeered by the United States, be released for the use of the French Government for military purposes; (d) the question of transportation of coal from England for the French fleet at Corfu is most important as the general shortage of coal is most marked; (e) the French Navy is very short of enlisted personnel. The French have some cruisers laid up in ordinary for want of men and the French Government is willing to turn these cruisers over to the Allies for any purpose desired, if men can be provided; (f) it was suggested that several French battleships could be replaced by predreadnaughts of the United States fleet and the crews of the French battleships thus relieved, could be used to man these cruisers; (g) the question of aviation assistance was mentioned, but full reports on this subject have been submitted by the officers detailed for this special branch; (h) Admiral Du Bon presented a memorandum concerning assistance desired in adding to the efficiency of the ports of debarkation of the Army. The principal points are: (1) The French Marine has bought in the United States, some three months ago, 15 patrol and tug boats, and with these boats expects to strengthen the services of dredging the ports of Brest, St. Nazaire, and Pauillac; (2) for 8 of these vessels the transfer of flag and the ratification of sale has been obtained, but they are kept in America for repairs; (3) for the 7 others the transfer of flag and the ratification of sale are not yet realized; (4) assistance in lessening the delay caused by the necessary formalities, and in hastening the repairs would be very much appreciated; (5) even with this reinforcement, the means at the disposal of the French will not permit the gathering; (6) in order to maintain each of these ports at its maximum efficiency dredging vessels from the United States are required in each port.

5. (a) The French Government is much concerned lest the necessary arrangements for the transport, disembarkation, and upkeep of United States troops should be underestimated in any degree with the result that the number of United States troops available for service in France in the spring and summer of 1918 might fall materially below the estimates; (b) at numerous interviews both French and British representatives repeatedly referred to and emphasized the seriousness of the situation that might ensue if, for any reason, the United States should be unable to forward troops to France in the numbers now expected, and, especially, if the necessary supplies for United States troops in France should be insufficient whether on account of underestimate, lack of shipping, or of shipping losses, thus throwing even for a time the burden of supply on the limited resources of France; (c) it is very apparent that real fear exists lest the shortage of coal in France during the coming winter should have an injurious effect on the morale of the country. In this connection attention is invited to the advisability, and even necessity, that the needs of the United States troops in coal shall not be allowed to increase the embarrassment which the coal shortage in France may bring about; (d) powerful tugs of seagoing type are needed at the ports of debarkation of United States troops and supplies in France. These tugs should be armed, and when not engaged in debarkation work could be usefully employed in salvage work or even on patrol. Two such tugs should be sent to St. Nazaire as soon as possible, to be followed by others for Brest and Pauillac as rapidly as they become available.

(d) REQUESTS MADE BY ITALY.

CARLTON HOTEL,
London, England, September 8, 1917.

From: Commander in chief.

To: Secretary of the Navy (Operations).

Subject: Italian Government; request for expeditious delivery of material.

Reference: (a) Letter from Rear Admiral Cusani-Visconti, Italian naval representative at international naval conference.

Inclosure: (1).

1. The reference (inclosure) is forwarded for consideration.

2. The Italian naval representative at the international naval conference desired to bring up the question of material to Italy. It was deemed advisable not to discuss

his matter in conference, and it was promised that a request of the Italian Government could be duly presented to the Navy Department. The reference (inclosure) is the Italian presentation of the matter in question.

H. T. MAYO.

LONDON, September 6, 1917.

DEAR ADMIRAL MAYO: With reference to our conversation regarding the supply of material to Italy, I beg to inclose herewith a detailed list of those materials which are particularly needed by the Italian Navy, for the most urgent and immediate requirements.

In order to partly replace the heavy loss of tonnage, caused by enemy submarines, it will be necessary to Italy to obtain some cargo boats, of from four to five thousand tons, to be employed in the coal transport, the deficiency of which is now becoming alarming.

I shall be extremely obliged for any good work you will use toward obtaining from the United States Government that the material already asked for, or now being asked, may be sent to Italy as soon as possible.

Please accept, my dear Admiral, with kindest regards, my personal and cordial salutations.

Yours, sincerely,

CUSANI-VISCONTI.

LIST OF THE MATERIALS AND MACHINERY BEING ORDERED IN THE UNITED STATES BY
THE ITALIAN MINISTRY OF MARINE.

Nine thousand tons of steel sections and plates for shipbuilding (part in mild steel and part in high-tensile steel); 6,000 tons of steel sections and plates for shipbuilding (part in mild steel and part in high-tensile steel), 1,000 tons per month; 50 motor launches from Messrs. the "Elco" (submarine chasers); 36 "Standard" motors with 18 auxiliary sets; 60 "Sterling" motors for motor launches. Spare parts for "Standard" and "Sterling" motors.

Probable requirements.—Special steels for motor-launch motors and aviation motors (being built by the Fiat, Isotta-Fraschini); tool steel; boiler tubes; semi-Diesel motors, of reliable types; machine tool for new works; cargo boats (from 4,000 to 5,000 tons).

(c) REQUESTS MADE BY RUSSIA.

1. No specific requests for assistance from the United States were made by Russia, but indirect assistance would undoubtedly result from the increase of United States vessels operating with the British Navy, thus enabling additional British vessels to be sent to cover the approaches to the White Sea.

ALLIED NAVAL CONFERENCE.

Sir Eric Geddes, on behalf of the British Government, having offered a welcome to the representatives of the navies of the powers united against Germany, reminded them that the conference was called at the suggestion of the United States Government.

Admiral Mayo explained that he came with no definite instructions, but with the desire to learn how the United States Navy could best assist and cooperate with the allied navies, particularly in dealing with the submarine menace, which his Government regarded especially serious at the present time. He also emphasized his conviction of the value of personal intercourse between officers of his own and the allied navies.

[Secret. Allied naval conference. Sept. 4, 1917.]

AGENDA AND CONCLUSIONS.

Item 1. *The question of a close offensive in German waters.*—Admiral Jellicoe made a statement in full of an offensive which might be taken by the Allies in German waters.

After discussion on the various aspects of the matter and the which it would be necessary to take in order to insure its the conference agreed that the question should be carefully sidered by the Allies, and that they should indicate in due co the British Admiralty the contribution of old warships which would be prepared to provide, the possibility of embarking a proposed operation being dependent upon the supply of the of ships indicated by Admiral Jellicoe.

Admiral Jellicoe suggested that the required number of might be supplied as follows:

| | Battleships. | |
|--------------------|--------------|--|
| British..... | 18 | |
| French..... | 5 | |
| Italian..... | 2 | |
| Japanese..... | 2 | |
| United States..... | 12 | |
| Total..... | 40 | |

Item 2. The alternative of a mine or net barrage either in German waters or afield.—Admiral Jellicoe put forward as an alternative to a close offensive in waters, the suggestion that the activity of the German submarines might be re by the laying of an effective mine field or mine net barrage. If such an were undertaken, he proposed that it should take the form of:

(a) An efficient mine barrage so as to completely shut in the North Sea operation necessitated the provision of at least 100,000 mines, which would available for some considerable time.

(b) He had considered the question of a barrage of mine nets, which was sidered to be impracticable by him.

In the view of the conference it was felt that alternative (a) could not be taken until an adequate supply of mines of a satisfactory type was secured. the adoption of alternative (a), an improvement and extension of the present of minefields was desirable and the conference agreed that a barrage of mine was impracticable.

In this connection the British shortage of skilled personnel (especially required for the assembly of mines was noted, and the Allies undertook to c how far they could assist in supplying the deficiency.

Item 3. Offensive measures against enemy submarines in the North Sea.—The of the best offensive measures which should, as far as possible, be taken against submarines in the North Sea was discussed at length. It was agreed that the desirable were: (a) To attack the submarine bases; (b) to mine the submarine effectively; and (c) to attack the submarines at sea. And it was felt that measures should be amplified as far as possible on the lines explained in de Admiral Jellicoe, which received the general concurrence of the conference.

Item 4. Measures to deal with enemy submarine cruisers of large radius of action the high seas.—Admiral Jellicoe put forward for the consideration of the com the following measures which might be taken to deal with enemy submarine with a large radius of action on the high seas:

(1) The use of decoy ships, working in concert with submarines, for de action.

(2) Concerted measures for preventing the establishment of enemy sub bases overseas.

(3) The convoy of all craft, including friendly neutrals as far as possible.

(4) The development of a wireless warning system and an intelligence cen the Azores. -

Item 1 would require additional cruisers, and the conference decided the Allies should see whether they could provide cruisers or old battleships purpose.

Items 2 and 4 were referred to a committee consisting of Admiral Oliver, Hall, Admiral Salaun, Lieut. Rottiacob, Capt. Twining—Capt. lieut. de C Portugese naval attaché, being invited to join them—it being agreed that their should be adopted as embodying the view of the conference.

Item 5. Establishment of convoys universally for outward and homeward trade and minimization necessary.—Admiral Jellicoe made a statement on the general convoy situation and the conference agreed to accept it as embodying its views. The question of additional cruisers for convoy work to be further considered by the Allies at the next opportunity.

Item 6. Establishment of convoy system in Mediterranean. Necessity for this system in order to insure adequate supply of coal to Italy and to economize tonnage.—After this question had been discussed at some length, it was referred to a committee composed of Rear Admiral A. L. Duff, C. B. (chairman); Vice Admiral de Bon; Rear Admiral Maun; Rear Admiral Majishiro Funakishil; Capt. Massimiliano Lovatelli; to consider and bring up a report at the conference. The report having been duly presented, it was, after consideration by the conference, approved and adopted.

It was also decided that the Allied council sitting at Malta on the general question of trade protection in the Mediterranean should be informed that the International Naval Conference in London the council wishes to know that the conference regarded it of the utmost importance that in their deliberations the necessity of economizing tonnage by avoidance of delays should be constantly borne in mind. This matter was agreed to be of prime importance and it was proposed to discuss it further at the next meeting after the reports of the Malta Council were received.

Item 7. The laying of the Otranto barrage and its defense by Allied destroyers—Aircraft and submarine patrol for the barrage.—Admiral Jellicoe having explained the present situation with regard to the laying of the *Otranto* barrage and having drawn attention to the unprotected condition of the net drifters, stated that a protective force composed of six destroyers constantly on patrol duty at night was necessary. Of this Great Britain is prepared to provide the number required to maintain or patrol three, and asked that the Italian naval authorities should provide the exchange necessary to maintain the other three.

Vice Admiral Cusani-Visconti promised that he would consider the point referred to by Admiral Jellicoe and would take steps to ascertain from headquarters whether three destroyers could be provided by the Italian Navy.

Vice Admiral de Bon stated that the French Ministry of Marine would have no objection to some of the French destroyers allotted to Italy being used for this work, in conjunction with the Italian destroyers.

Item 8. Offensive measures in the Adriatic against enemy bases.—Vice Admiral Cusani-Visconti was invited to state his views as to a possible offensive against the Austrian naval forces located in the Adriatic, it being suggested that an operation having for its object the occupation of the island of Curzola might be successfully undertaken, and if this were carried through beneficial results would accrue to the Allies. It was further suggested that bombing operations by aircraft might be carried out against the Austrian submarine bases in the Adriatic.

Vice Admiral Cusani-Visconti explained the present situation and the difficulties involved in the occupation of Curzola, and stated that this proposal had been considered in the earlier stages of the war. He explained the bombing operations that had already been carried out against Austrian bases and referred to the Anglo-Italian operation of this nature which had just been attempted.

The question of an attack on Durazzo was also discussed.

Item 9. Assistance by allied fleet in the protection of Archangel route and White Sea in submarine attack.—At the request of Rear Admiral Kedroff this matter was considered by the conference. He urged the importance of the immediate provision of protective forces in the Kola Inlet, as he anticipated that the Germans would keep their submarines on the White Sea route for a longer period this autumn than they did last year, because Russia had just established a new naval base at Kola Bay open during the whole winter and connected with Petrograd by a new railway line. He asked whether Great Britain could not supply 12 armed trawlers for the purpose.

Admiral Jellicoe, whilst giving expression to the desire of Great Britain to render all the assistance in their power in dealing with the position which Rear Admiral Kedroff anticipated would occur, stated that owing to the shortage of the number of armed trawlers available we could not hold out hope that Great Britain would be able to provide the force for which Rear Admiral Kedroff asked.

Admiral Jellicoe expressed doubt as to whether the anticipation voiced by Rear Admiral Kedroff as to the German submarines remaining in the White Sea for a longer period than was the case last year would be realized, but undertook to consider what could be done to meet the requirements which had been indicated by Rear Admiral Kedroff.

Item 10. Assistance to Italy by the United States of America in the direction of supplying material.—Vice Admiral Cusani-Visconti asked that this subject might be

discussed by the conference. He had before him a list of the material required and emphasized the delay which his Government experienced in obtaining the delivery of important orders already placed in the United States. He hoped that Admiral May might help his Government to overcome these delays. He gave in detail the main requirements of the Italian Navy.

Admiral Mayo undertook to make representations to his Government with a view to securing an expeditious delivery of the orders referred to. As regards further material help, he professed himself unable to give any undertaking, and suggested that the correct procedure would be for the Italian Government to make representations to the United States Government through the usual channel.

Arising out of the discussion upon this matter, the question of the provision of United States or British destroyers for the Mediterranean was discussed, and Admiral Jellicoe stated that if the United States destroyer program resulted in relief of British destroyers from the duties upon which they were at present engaged, further British destroyers would no doubt be sent to the Mediterranean for antisubmarine work or trade protection.

CONCLUSIONS OF SUBCOMMITTEE.

Agreed.—(1) That the respective admiralties and ministries of marine should communicate with the colonial ministers and ask for instructions to be given to their colonies and oversea possessions to keep supervision over all harbors and anchorages to gain intelligence of German submarines or suspicious vessels.

(2) That steps be taken to insure cooperation between allied ministers in neutral countries to make such representations as will insure adequate steps being taken to prevent submarines or suspicious vessels being succored or allowed to make use of territorial waters.

(3) That the following steps be taken as regards the Azores, the Portuguese Government being first asked permission: (i) A United States naval force to be based in the Azores; (ii) a British intelligence center to be established; (iii) British directional W-T stations to be established; (iv) British long distance W-T stations to be established for the war.

British units to work under the general direction of the United States senior naval officer.

The French representative brought up the question of the difficulty of receiving W-T intelligence from vessels attacked by submarines in the South Atlantic, and more particularly off the coast of South America.

It was agreed that question of fitting certain ships in convoys with powerful W.-T. to pass messages should receive consideration whenever convoys should be established.

AGENDA (SECRET).

1. The question of close offensive in German waters.
2. The alternative of a mine or net barrage either in German waters or further afield.
3. Offensive measures against enemy submarines in the North Sea.
4. Measures to deal with enemy submarine cruisers of long radius of action on the high seas.
5. Establishment of convoys universally for outward and homeward trade and organization necessary.
6. Establishment of convoy system in Mediterranean. Necessity for this system in order to insure adequate supply of coal to Italy and to economize tonnage.
7. The laying of the Otranto barrage and its defense by allied destroyers, aircraft, and submarine patrol for the barrage.
8. Offensive measures in the Adriatic against enemy bases.

AGENDA (5TH SEPTEMBER).

1. Report of committee appointed by conference to consider questions arising out of item No. 6, on the agenda of September 4.
2. The laying of the Otranto barrage and its defense by allied destroyers. Aircraft and submarine patrol for the barrage.
3. Offensive measures in the Adriatic against enemy bases.
4. Assistance to Italy by United States Army in the direction of supply material.
5. Assistance by allied fleets in the protection of the Archangel route and White Sea against submarine attack.

UNITED STATES ATLANTIC FLEET,
U. S. S. "PENNSYLVANIA," FLAGSHIP,
December 17, 1917.

From: Commander in Chief.
To: Secretary of the Navy.
Subject: Annual report; July 1, 1916, to July 1, 1917.
Reference: (a) Naval Instructions 916 (4).

1. The following report of the commander in chief Atlantic Fleet is submitted for the fiscal year 1917.

2. Due to war conditions it has not been considered advisable to go into detail in this report, as much of the data which might be included would be of possible use to the enemy as indicating the methods and principles followed in preparing the fleet for battle. Full detailed reports of all matters mentioned will be found in the department's files.

3. Since the declaration of war on April 6, 1917, the activities of the fleet have been recorded in the war diary which, it is assumed, will take the place of the annual report.

ORGANIZATION.

4. On July 1, 1916, the fleet consisted of the following forces: Battleship force, cruiser force, destroyer force, submarine force, mine force, train, reserve force.

5. The general principle which actuated the commander in chief during the period preceding the war was a proper coordinating of the various forces comprising the fleet, so that the fleet should be in a true sense of the word a "fleet" and not a collection of more or less independent forces. To accomplish this end the commander in chief endeavored to instill into the fleet a proper realization of the importance of "decentralization of authority" and "initiative of the subordinate." The principle was followed of passing down the chain of command the handling of all details to the lowest link in the chain which could properly handle them, and, on the other hand, gathering in and coordinating into the high command the control of all policies and matters of major importance from all the units of the fleet.

6. In carrying out this policy the commander in chief with the full support of the department and of the Chief of Naval Operations and it is believed that mobilization found the fleet and the department working in the closest cooperation.

7. Upon mobilization certain changes in organization became necessary, due to the general and special situations arising from the declaration of war, but the fleet has been able to assimilate new units and a greatly increased number of ships and personnel without undue strain on the organization.

8. As indicating the general policies followed by the commander in chief in preparing the fleet for war, the following extracts are quoted from the Fleet Regulations:

"SECTION II.—GENERAL FLEET POLICIES.

"4. The mission of the fleet is to maintain itself in a state of readiness for war, which indicates not only material readiness but also the readiness of personnel to operate the material.

"5. All vessels of the fleet must be as nearly selfsustaining as possible and shall endeavor to reduce work to be done at a navy yard to a minimum.

"6. No recommendations or arrangements shall be made which tend toward limitation or restriction of the mobility of the fleet or of the component parts thereof.

"7. Vessels in commission in reserve or with reduced complements shall be maintained and shall operate on a cruising basis as far as practicable.

"8. All work done in the fleet and all training of the fleet or of its component parts shall be carried on according to a prearranged plan, which should, in general, cover employment for at least one week ahead.

"9. (a) It is expected and required that all persons in the fleet shall conduct affairs in accordance with the Naval Regulations and Naval Instructions, which are not only orders and instructions but also guides to standard practice and hence aids to uniformity, coordination and cooperation.

"(b) The same is true of these regulations and instructions, the Gunnery Instructions 1913, the Ship and Gun Drills, the Infantry Drill Regulations, etc.

"10. Since the organization, both of the fleet and within the ship, is arranged on a 'group and leader' basis, consideration shall be given to this fact in the management of affairs not only in regard to operations but also in matters of administration.

"11. For purposes of training and in order to impress upon force and other subordinate commanders their proper responsibilities and authority, endeavor shall be made to issue orders and instructions which, as far as practicable, are stated in definite terms as to the results desired but in general terms as to the manner of execution.

"12. The general methods of exercising supervision on the part of superior commanders shall be: (1) Giving careful attention to results attained; (2) giving careful attention to inspections, reports of employment, reports of readiness, etc. (see chapter re Inspections, etc.); (3) taking steps to correct defective execution and faulty practice."

COMMUNICATIONS.

9. In the training and development of the fleet the vital need for most efficient communications has been shown in exercising both command and administration.

10. The communication system throughout the fleet has been standardized, and strategic and tactical exercises held have impressed all officers with the necessity for making every effort to increase the efficiency of all communications.

11. Complete cooperation with the shore establishment has been had and mobilization did not develop any defects in the principles of the communication system, but every effort will be made to continue improvement along all lines.

12. *Visual signaling.*—To improve the efficiency of visual signaling the commander in chief has recommended the establishment of a separate signal branch similar to the radio branch, with proper warrant ranks and ratings.

13. *Radio material.*—Minor improvements in radio standard plans and apparatus have been made for all classes of vessels during the past year. The most important improvements have been in the development of the radio compass and the improvement and increase in numbers of ships long-range arc transmitters. Due to the increasing numbers of naval vessels in active service, it will soon become necessary to increase the number of communications by radio which can be carried on simultaneously without interference. Development work on apparatus which will accomplish this has already been started.

14. *Radio personnel.*—Radio personnel has improved steadily during the past year in both efficiency and numbers. The battleship force has greatly assisted in supplying personnel for ships which have been added to the fleet since the outbreak of war by maintaining large classes under intensive instruction on all battleships. The increase in the number of radio gunners will soon provide one for each capital ship of the first line.

15. *Radio organization and operation.*—The fact that our radio organization is sound and that its development has been for use in war is shown by the small number of changes found necessary in going from a peace to a war basis.

16. A new system of handling routine radio traffic has been developed and put into use which makes much more time available for radio drills.

TACTICAL AND STRATEGICAL TRAINING.

17. The maximum amount of time available was devoted to tactical and strategical exercises.

18. The first series of tactical exercises for the year was held during the week July 10-14, 1916.

19. These exercises indicated the necessity of continued training. The practical difficulties of continued operations, of unfavorable weather conditions, of communication in code and cipher, of assembling forces at night or in foggy weather, brought home to all the vast difference between actual maneuvers at sea and the theoretical maneuvers of the game board.

20. The second series of tactical exercises was held August 11-15, 1916.

21. In many respects the second series of exercises showed improvement in the handling of tactical situations. The conditions due to low visibility were particularly trying. While continual bad weather somewhat reduces the value of the exercises, it emphasizes the necessity of continued training to meet these disturbing conditions. The exercises with the submarines were particularly valuable to that force.

22. The third series of tactical exercises was held December 13-19, 1916.

23. The exercises started with a review of the fleet by the Secretary of the Navy, in Hampton Roads. The commander in chief and several force and division commanders were absent from the fleet, being on temporary duty in Washington in connection with the selection board.

24. These exercises were conducted in inclement weather conditions, low visibility, rain and sleet. The small number of vessels available reduced to a considerable extent the value of the exercises, but the experience gained by those who participated made the exercises well worth while.

25. These exercises showed again that the clothing of officers and men had not been designed for winter weather and emphasized the need of special winter clothing.

26. A fourth series of tactical exercises was conducted while the fleet was enroute from San Domingo City to Port au Prince, Haiti.

27. This series consisted of two night attacks by the destroyer force on the battleship force and one simulated major engagement. The work of the destroyers was much more effective than during the exercises held during the summer.

28. The major engagement emphasized the necessity for rapid deployment into battle formation from cruising formation and the serious disadvantage of funnel smoke interference with gunnery.

29. It is believed that the success of these tactical exercises have aroused a lively interest in this subject and that a continuation of such exercises whenever opportunity exists is the best means of developing tactical skill and of developing battle instructions.

30. From August 20 to 26, 1916, department strategic maneuver No. 3 was carried out utilizing all available forces afloat, and the Atlantic coast shore establishment including the Navy Department.

31. These strategic maneuvers on a large scale which originate with the department are extremely valuable. The use of the reserve force as a defending fleet gave it valuable experience. This practice should be continued in time of peace in order to test out the material condition of the reserve force and to furnish training to additional officers and men.

32. Strategic exercises were also held during the passage of the fleet from home yards to its winter base at Guantanamo.

33. The first exercise was conducted during weather which was detrimental to efficient scouting by destroyers. Frequently the maximum speed of such craft did not exceed 15 knots, but again indicated the necessity for scouting vessels of sufficient size and power to maintain a high speed in a moderate sea.

34. Strategical and tactical exercises are of the greatest importance in the development of the fleet for war and the policy of conducting such exercises upon every possible occasion will be continued.

GUNNERY.

35. Upon the completion of the gunnery year, 1916-17, the country had been at war three months, and the fleet had been operating under war conditions since about the 6th of February and many of the exercises prescribed by the Orders for Gunnery Exercises, 1916-17 had to be delayed or were held under modified conditions.

36. Notwithstanding the many interruptions in the schedule and the conditions under which the exercises were necessarily held steady progress in the ability and confidence of the personnel to prepare for, maintain, and control the fire of the different batteries under varying conditions was made.

37. At the beginning of the gunnery year in July, 1916, the system of training which had produced satisfactory results in the battleship force during the gunnery year of 1915-16 was put into effect on all vessels of the fleet, and when diplomatic relations with Germany were broken off in February, 1916, it was unnecessary to make many changes in the prescribed system. Details of the system have been fully covered in special reports to the department, which have been published in the Reports of Practices. Very full reports have been submitted on this subject as it is considered that future progress depends on a careful study of the work of the past.

38. At the time of the entry of this country into the war, the fleet was finishing the prescribed gunnery exercises. The demands for experienced personnel to place in full commission old ships and to commission new ships had to be met by the active fleet to a large extent, and the withdrawal of many men and officers necessarily reduced the gunnery efficiency of a large part of the fleet. The situation was realized to be one of necessity and every effort has been made to maintain efficiency of the ships to as great a degree as possible.

39. Facilities for conducting gunnery exercises were provided at various points along the Atlantic coast in order that vessels might conduct the exercises according to the prescribed methods as closely as possible. The facilities should be extended in order that all vessels should carry on systematic exercises.

40. Beginning in March the demands for crews as armed guards of merchant ships began and in the early part of April it was necessary to have the battleships conduct an intensive form of training to provide the crews. This training is considered to have had a very beneficial effect upon the morale of the battleships as it added a great deal of interest during a time when many officers and men were being transferred.

41. The spirit and efficiency with which the officers and men of the fleet met the demands for experienced personnel, not only for crews for armed guards but also for other purposes, was particularly gratifying to the commander in chief and reflects great credit on the officers and men concerned.

42. Generally speaking, the material condition of the batteries is satisfactory, though it has become apparent that certain very radical alterations must be made in

the design of the ammunition supply of certain of the battleships. The material questions have been taken up in the usual manner and have been and are being given constant consideration. No effort should be spared to expedite the completion of all authorized and contemplated changes as it is realized that steady progress in efficiency can not be made if ships are continually undergoing repairs and alterations.

43. Available information as a result of the naval engagements of the present war have been considered and studied with a view to taking advantage of them in determining the proper forms of gunnery exercises. The Orders for Gunnery Exercises, 1917-18, were prepared by the department in conference with officers of the fleet and it is considered that they present representative types of exercises which should be held during the war in order to insure a satisfactory degree of gunnery efficiency.

MATERIAL UPKEEP.

44. Constant effort has been made to make the fleet materially self-sustaining, and it is believed much has been accomplished in this direction. This is due to increased tool equipment on the part of the ships and tenders, more permanent attendance with the fleet of tenders and repair ships, the presence of a second repair ship with the fleet during the last six months of the year, and especially to the fuller realization on the part of all concerned of the importance and necessity of keeping ships away from navy yards.

45. Operating schedules for all forces of the fleet have provided frequent and adequate periods for material upkeep and machinery overhaul, and as far as practicable these have not been interfered with.

46. The commander in chief has emphasized in every way possible his belief that ships should not go to navy yards for work unless it is absolutely necessary; that no ships should go to a navy yard until the yard has all material ready and is fully prepared to carry out expeditiously the authorized work; and that ships away from the flag for necessary yard work should rejoin at the earliest possible time.

47. By allowing suitable periods for machinery overhaul, there should, aside from casualties and major alterations, be no necessity for ships that have been overhauled at navy yards to go to yards, other than for the semiannual dockings of about a week or 10 days at a time, for a period of, say, two years. After that length of time in active service a ship should be given an opportunity for a comprehensive and thorough examination and repair. No fixed time can be allowed for this as it will depend on conditions existing at the time.

48. As far as possible alterations should be deferred until the refit period.

49. Since early in February the fleet has been operating under war conditions, but no serious material defects have occurred. There have been a number of casualties during the year, but except for the total loss of the *Memphis* at San Domingo City, Santo Domingo, all material damage resulting from casualties has been made good or arrangements have been made for effecting early repairs.

50. When the fleet went south, early in January, the material condition was, in general, very good. There was, however, more or less outstanding work on nearly every vessel. Much of this was accomplished by the ship's force, assisted by repair ships and tenders.

51. The material condition of battleships of the active fleet when they returned from the winter's work was very good, and except for docking and routing work, no battleship of the active force has had to go to a navy yard for repair work. Advantage has been taken, however, of favorable opportunities to send in three battleships from the active fleet, for desirable alterations and necessary repairs, and a schedule is now being prepared by which other battleships of the fleet can have work, primarily alterations necessary for war efficiency, undertaken at the navy yards.

52. A number of destroyers operating with the fleet developed machinery troubles during the year and the casualties due to service under war conditions were more numerous than ordinarily. All defects have, however, been made good and necessary repairs effected so that the end of the year finds the destroyer force and its tenders in a generally excellent material condition.

53. No special comment is necessary on the material condition of vessels of the cruiser and gunboat classes, submarines, or vessels attached to the train. In general, these vessels are in a reasonably satisfactory material condition. Full information as to their condition is contained in the detailed reports that have been submitted to the department from time to time and in the semiannual reports submitted by force commanders.

SUPPLY.

54. Supply has been satisfactorily maintained during the year, and relations between the fleet and various bureaus and offices of the department in regard to supply have been most satisfactory. The functions of the train have been gradually extended

until now it handles practically all supply matters, keeping the commander in chief advised. This procedure is very satisfactory. It accomplishes the desired results, and the commander in chief is not hampered with many details of supply, while being in possession of all the necessary information.

55. During the latter part of the year the *Bridge*, supply ship, was added to the fleet and is at present on her first service. She will no doubt be of great value and will increase the efficiency of the supply service of the fleet.

56. Additional oil-carrying vessels have been attached to the fleet—the *Maumee* and *Cuyama*.

57. There is great need in the fleet for extra seagoing tugs for use of commander train, especially during gunnery exercises.

PERSONNEL.

58. The situation as regards enlisted personnel showed no improvement in the beginning of this fiscal year over that reported in the last annual report. Large numbers of vacancies existed in all ships, especially in the artificer, engineer, and special branches. This left barely enough men in these branches for operation and naturally had its effect upon upkeep of machinery and material generally. It also necessitated frequent changes in personnel, as labor conditions throughout the country enticed men from reenlistment, and their places had to be filled by men from other ships. These changes in ships' personnel would undoubtedly have affected adversely the efficiency of the fleet had there not been a full appreciation of the situation and extra effort on the part of both officers and men.

59. Schools for the instruction of machinists' mates were established in the fleet repair ships, but the effect was not felt until the close of the year.

60. The necessity recommended in former reports for increased complements of ships was recognized and the enlisted strength of the Navy increased by the act of August 29, 1916. Unfortunately, recruiting continued slow, and the fleet did not feel the effects of this increase until relations with Germany became strained.

61. Boards were convened to recommend standard organizations and complements for the various classes of vessels in the fleet, and these without exception recommended that complements be increased.

62. With the beginning of the war the personnel situation took on an entirely new aspect. Large numbers of men have been sent to the ships of the fleet for training and the fleet has become practically the only source of supply for the men of experience who form the nuclei of crews of new ships fitting out and for men comprising the large number of crews of armed merchant ships. At the same time every effort has been made to maintain the highest practicable military efficiency.

DISCIPLINE.

63. The discipline of the fleet for the past year has been good. The action of Congress in authorizing force commanders to order general courts-martial has produced excellent results. The declaration of a state of war which necessitated trial by general court-martial for such offenses as absence over leave has resulted in a large increase in the number of general courts, but considering the largely augmented force involved the percentage is small.

SANITATION AND HEALTH.

64. The general health of the fleet personnel has been excellent during the year, with the exception of the continuation of measles, German measles, mumps, scarlet fever, and chicken pox among the nonimmunes. These diseases increased markedly during the last quarter and became a matter of grave concern when cerebrospinal fever appeared in the drafts from the Great Lakes Training Station. This increase can be accounted for by a number of factors, namely, their unusual prevalence in all parts of the United States during this period, rapid recruiting and marked increase in the size of the Navy after the declaration of war, the necessity for transferring recruits to the fleet without the usual detention and weeding-out at the training stations and overcrowding both at these stations and on some of the older ships of the fleet.

65. At the end of the year all these diseases, except mumps, have markedly decreased owing to a correction of most of the causes above mentioned and a diminution of the susceptible human material.

66. Except for the time lost during necessary quarantine and fumigation, the incidence of the various diseases has practically not interfered with the drills and exercises and general military efficiency of the fleet.

67. The hospital ship *Solace* has rendered valuable service during the year. She has remained with the fleet continuously, except for necessary absences or docking, repairs, coaling, and transfer of patients. During the last quarter she became frequently overcrowded with cases of contagious diseases and was obliged to perform also the function of an ambulance ship and transport her surplus cases to naval hospitals.

ATHLETICS.

68. Athletics were considerably interfered with during the year due to conditions under which the fleet was operating.

69. In the summer of 1916 at Newport the citizens of that city were most helpful in extending the facilities of the city to the fleet.

70. During the winter cruise there was not much opportunity for athletics, due to the location of the fleet base during the greater part of the time.

71. After mobilization the Navy League was most helpful in assisting the fleet to provide facilities for athletics and amusement at the new fleet base.

72. The commander in chief considers that the encouragement of athletics is most important in maintaining the morale of the fleet, particularly when leave and liberty must be restricted due to war conditions.

UNITED STATES ATLANTIC FLEET,
U. S. S. "PENNSYLVANIA," FLAGSHIP,
Base 2, February 2, 1918.

Secret.

From: Commander in Chief.
To: Secretary of the Navy (Operations).
Subject: Estimate of the situation with regard to the efficient development of the operations of the Atlantic Fleet.

1. In view of the fact that practically all of the vessels of the Atlantic Fleet available for service, except the battleship forces, less battleship division 9, are or soon will be employed in active operations against the enemy and of the possibility that the remainder of battleship force 2 may soon be so engaged, it has been considered necessary to estimate the situation to determine what if any changes in the existing conditions can be made in order to increase the efficiency of contemplated operations and of possible future operations.

THE PRESENT SITUATION.

2. The present situation must be considered in two parts, namely:

- (a) The situation in Europe.
- (b) The situation in home waters.

THE SITUATION IN EUROPE.

3. The task forces of the Atlantic Fleet now operating in European waters comprise the following vessels of the fleet:

- (1) All available destroyers.
- (2) Battleship division 9.
- (3) All vessels of the patrol force except the American patrol detachment.
- (4) All available yachts suitable for escort or patrol duty, except those assigned to the American patrol detachment.
- (5) All submarines at present available for duty abroad.
- (6) All available trawlers suitable for mine sweeping at sea.
- (7) In addition to these combatant vessels there are numerous tenders, repair ships, and cargo ships operating abroad.

4. Orders have been issued for the mine force to prepare for distant service and it will soon be operating in European waters.

5. The forces in European waters are to operate as follows:

(a) Battleship division 9 and such other battleship units as may be assigned to service abroad, are to cooperate with the British Grand Fleet or the high seas forces of some other of the allied countries.

(b) The mine force is to cooperate with the British Navy in planting a deep-sea mine barrage.

(c) The remainder of the combatant vessels to operate as one task force in operations against enemy submarines and in the protection of transports and trade.

(d) In addition to the operations by forces of the fleet there are aviation forces which will operate against enemy submarines from bases on the coast of Great Britain and France.

6. The four types of operations mentioned in the paragraph above, divide into two general classes as follows:

(1) The operations of battleships in cooperation with the British fleet and operations of the mine force are distinctly high sea operations.

(2) The operations of the force engaged in antisubmarine operations for the protection of transports and trade, and of the aviation forces operating from base shore, are essentially of the nature of coastal or district operations.

7. This distinction between these two general classes of operations has been thoroughly recognized abroad. The high sea force—the fleet—operates under the command in chief, while the forces engaged in antisubmarine operations in the protection of trade operate under command of district commanders. Cooperation between forces of different districts is accomplished by fixed policies or orders from the Admiralty.

8. The high sea operations of the Atlantic Fleet in European waters is in an early stage of development. It is believed, however, that the future development of operations of this fleet lies primarily in offensive high seas operations in cooperation with the British Grand Fleet.

9. The operations of that portion of the fleet engaged in antisubmarine operations for the defense of transports and trade has reached a state of development such that the methods of conducting operations; the systems of communication; and the considerations governing the cooperation with the allied forces is practically standardized.

10. Another condition which does not directly affect the operations of the fleet but which is necessarily considered in an estimate of the situation, is the need for a representative of the Office of Naval Operations and naval attaché at London.

THE SITUATION IN HOME WATERS.

11. The conditions existing in home waters are:

(a) At base 2 with the flag are the battleships available for service except the ship Division 9.

The policies of the commander in chief, are the necessary instructions, concerning the operations of this type of vessel are complete except such changes as may be found necessary to insure efficient cooperation with allied forces, which cannot now be made due to insufficient information and plans for such cooperation.

(b) The remainder of the forces operating on or from the United States Atlantic coast are comprised in the following:

(1) Cruiser force.

(2) Transport force.

(3) Submarine force.

(4) American patrol detachment.

(5) Mine force.

(6) Train.

(7) Vessels under extensive overhaul or newly commissioned.

12. The cruiser and transport forces are operating independently of direct command by the commander in chief; in most cases under direct orders from the Office of Naval Operations. These operations have been standardized and instructions to govern their activities have been issued by the force commander.

13. The submarine force is in part, engaged abroad as a detachment of the fleet, and part on this coast as an independent detachment whose mission is "To train personnel for service in new vessels which may operate against the enemy." The conditions of training are such that cooperation in cooperation with the battleship forces is impracticable.

14. The American Patrol Detachment is operating in the Caribbean Sea and Gulf of Mexico. The primary duty of this force so far has been the examination of possible enemy submarine bases and as an assistance to diplomacy in Central America and Mexico. The operations of this force have for the most part been carried out under orders direct from the Office of Naval Operations. The future operations of this detachment will probably be the same unless enemy submarines appear on this coast, in which case this detachment would probably be assigned to duty in connection with naval district forces.

15. The mine force, although still on this coast, is preparing for distant service and its operations have been previously discussed.

16. Most of the vessels of the train have been detached for service abroad. At present there remains at the fleet base only the *Vestal*. One collier and two transport ships are operating for the battleship forces, but one of these has just been detached upon for temporary service abroad. This situation makes the value of the fleet commander practically negligible.

vessels under extensive overhaul and newly commissioned except battleships have little time to train before being sent abroad. Such time will be sufficient only to shake down to develop individual efficiency.

CONCLUSION AS TO THE SITUATION.

Following analysis of the situation in Europe and in home waters indicates

are two distinct types of operations in progress in European waters in which the Atlantic Fleet are engaged: (1) high sea operations; (2) anti-submarine operations for the protection of transports and trade.

is an important duty to be performed as the representative of the Office of Naval Operations and as naval attaché at London.

active command by the commander in chief, or direct supervision by him of those units of the fleet based on and operating from the United States coast, is not now essential to their efficient development in accordance with their respective missions.

THE MISSION.

mission adopted is: "To insure maximum efficiency in the command and control of the task forces of the Atlantic Fleet engaged in operations against

the preceding analysis of the situation the conclusion was reached that the operations must be performed in Europe to insure efficiency in the present operations of the Fleet and in the development of future operations in cooperation with the forces of the Allies:

command of the forces engaged in high-sea operations.

command of the force of the Fleet engaged in antisubmarine operations for the protection of transports and trade.

representative of the Office of Naval Operations and naval attaché at London.

HIGH-SEA OPERATIONS.

operations of Battleship Division 9 and of such other battleships as may be sent to service abroad, and of the mine force, are essentially high-sea operations in a manner allied to the operations of the force now engaged in antisubmarine operations for the protection of transports and trade.

effective cooperation of the forces engaged in antisubmarine operations is advanced by the presence of the commander of that force in Europe or in proximity to the arrival of any of his force. His proximity to the force engaged in operations were to be coordinated and to the Admiralty in London, and for such operations were formulated, permitted him to make detailed plans for cooperation and insured its effectiveness with the least possible delay.

the cooperation of high-sea forces likewise should be developed. and of much wider scope, much more complicated, and the failure in such operations would be attended by much more serious results.

future developments of the operation of the Atlantic Fleet in European waters are to lie primarily along the line of offensive high sea operations. If the English and Channel mine barrages are effective, the submarine menace to our trade will be reduced, and much of the force now engaged in anti-submarine operations will become available for high sea operations. It is considered that an effective mine barrage will lead to offensive high sea operations by itself. If the mine barrage is not effective it may become necessary to carry out requiring offensive high sea operations against the enemy submarine

position expressed above is confirmed by the mission assigned by the department to the vessels of battleship force 2—"To maintain themselves in instant readiness for battle."

mission can be accomplished under present conditions if cooperation with the British fleet is implied, but it should be thoroughly understood that there are no plans for cooperation with any allied navy in high sea operations. Efficient operations will require many changes in the methods of maneuvering, signaling, etc., etc., and until such plans are made effective cooperation is impossible.

commander in chief has endeavored to make the tactics employed by the fleet similar in principle to those employed by the British Grand Fleet, and future cooperation in view, but the detailed plans for combined operations which would be required for effective cooperation do not exist. T

6. The four types of operations mentioned in the paragraph above, divide logically into two general classes as follows:

(1) The operations of battleships in cooperation with the British fleet and the operations of the mine force are distinctly high sea operations.

(2) The operations of the force engaged in antisubmarine operations for the protection of transports and trade, and of the aviation forces operating from bases on shore, are essentially of the nature of coastal or district operations.

7. This distinction between these two general classes of operations has been thoroughly recognized abroad. The high sea force—the fleet—operates under the commander in chief, while the forces engaged in antisubmarine operations in defense of trade operate under command of district commanders. Cooperation between forces of different districts is accomplished by fixed policies or orders from the Admiralty.

8. The high sea operations of the Atlantic Fleet in European waters is in an early stage of development. It is believed, however, that the future development of the operations of this fleet lies primarily in offensive high seas operations in cooperation with the British Grand Fleet.

9. The operations of that portion of the fleet engaged in antisubmarine operations for the defense of transports and trade has reached a state of development such that the methods of conducting operations; the systems of communication; and the considerations governing the cooperation with the allied forces is practically standardized.

10. Another condition which does not directly affect the operations of the fleet but which is necessarily considered in an estimate of the situation, is the necessity for a representative of the Office of Naval Operations and naval attaché at London.

THE SITUATION IN HOME WATERS.

11. The conditions existing in home waters are:

(a) At base 2 with the flag are the battleships available for service except Battleship Division 9.

The policies of the commander in chief, are the necessary instructions, concerning the operations of this type of vessel are complete except such changes as may be found necessary to insure efficient cooperation with allied forces, which changes can not now be made due to insufficient information and plans for such cooperation.

(b) The remainder of the forces operating on or from the United States Atlantic coast are comprised in the following:

- (1) Cruiser force.
- (2) Transport force.
- (3) Submarine force.
- (4) American patrol detachment.
- (5) Mine force.
- (6) Train.
- (7) Vessels under extensive overhaul or newly commissioned.

12. The cruiser and transport forces are operating independently of direct command by the commander in chief; in most cases under direct orders from the office of naval operations. These operations have been standardized and instructions to govern their activities have been issued by the force commander.

13. The submarine force is in part, engaged abroad as a detachment of the force engaged in antisubmarine operations, and part on this coast as an independent detachment whose mission is "To train personnel for service in new vessels that may operate against the enemy." The conditions of training are such that operations in cooperation with the battleship forces is impracticable.

14. The American Patrol Detachment is operating in the Caribbean Sea and Gulf of Mexico. The primary duty of this force so far has been the examination of possible enemy submarine bases and as an assistance to diplomacy in Central America and Mexico. The operations of this force have for the most part been carried on under orders direct from the Office of Naval Operations. The future operations of this detachment will probably be the same unless enemy submarines appear on this coast, in which case this detachment would probably be assigned to duty in connection with naval district forces.

15. The mine force, although still on this coast, is preparing for distant service, and its operations have been previously discussed.

16. Most of the vessels of the train have been detached for service abroad. At present there remains at the fleet base only the *Vestal*. One collier and two supply ships are operating for the battleship forces, but one of these has just been called upon for temporary service abroad. This situation makes the value of the train commander practically negligible.

17. The vessels under extensive overhaul and newly commissioned except battleships, will probably have little time to train before being sent abroad. Such time as is allowed will be sufficient only to shake down to develop individual efficiency.

CONCLUSION AS TO THE SITUATION.

18. The preceding analysis of the situation in Europe and in home waters indicates that:

(a) There are two distinct types of operations in progress in European waters in which the forces of the Atlantic Fleet are engaged: (1) high sea operations; (2) anti-submarine operations for the protection of transports and trade.

(b) There is an important duty to be performed as the representative of the Office of Naval Operations and as naval attaché at London.

(c) That active command by the commander in chief, or direct supervision by him over the operations of those units of the fleet based on and operating from the United States Atlantic coast, is not now essential to their efficient development in accordance with their respective missions.

THE MISSION.

19. The mission adopted is: "To insure maximum efficiency in the command and administration of the task forces of the Atlantic Fleet engaged in operations against the enemy."

20. In the preceding analysis of the situation the conclusion was reached that the following functions must be performed in Europe to insure efficiency in the present operations of the Fleet and in the development of future operations in cooperation with the naval forces of the Allies:

(a) Command of the forces engaged in high-sea operations.

(b) Command of the force of the Fleet engaged in antisubmarine operations for the protection of the transports and trade.

(c) Representative of the Office of Naval Operations and naval attaché at London.

HIGH-SEA OPERATIONS.

21. The operations of Battleship Division 9 and of such other battleships as may be assigned to service abroad, and of the mine force, are essentially high-sea operations and are in no manner allied to the operations of the force now engaged in antisubmarine operations for the protection of transports and trade.

22. The effective cooperation of the forces engaged in antisubmarine operations was materially advanced by the presence of the commander of that force in Europe for some time previous to the arrival of any of his force. His proximity to the force with which such operations were to be coordinated and to the Admiralty in London, where the plans for such operations were formulated, permitted him to make detailed plans for such cooperation and insured its effectiveness with the least possible delay.

23. Plans for the cooperation of high-sea forces likewise should be developed. Such plans are of much wider scope, much more complicated, and the failure in such cooperation would be attended by much more serious results.

24. The future developments of the operation of the Atlantic Fleet in European waters is believed to lie primarily along the line of offensive high sea operations. If the North Sea and Channel mine barrages are effective, the submarine menace to transports and trade will be reduced, and much of the force now engaged in anti-submarine operations will become available for high sea operations. It is considered probable that an effective mine barrage will lead to offensive high sea operations by the German fleet. If the mine barrage is not effective it may become necessary to adopt a policy requiring offensive high sea operations against the enemy submarine bases.

25. The opinion expressed above is confirmed by the mission assigned by the department to the vessels of battleship force 2—"To maintain themselves in instant readiness for battle."

26. This mission can be accomplished under present conditions if cooperation with allied forces is not implied, but it should be thoroughly understood that there are no accepted plans for cooperation with any allied navy in high sea operations. Efficient cooperation will require many changes in the methods of maneuvering, signaling, radio procedure, etc., and until such plans are made effective cooperation is impossible.

27. The commander in chief has endeavored to make the tactics employed by the battleship forces similar in principle to those employed by the British Grand Fleet, with the idea of future cooperation in view, but the detailed plans for combined operations which would be required for effective cooperation do not exist. The

duty of formulating these plans can be performed only by the officer who is to direct and supervise the operations of the high sea forces, and can only be accomplished from a location in Europe in proximity to the force with which such operations are to be coordinated, and within reasonable distance of London where plans for allied naval operations are formulated.

28. In view of the facts expressed above it appears that the mission of the commander in chief—"To prepare the fleet for, and to successfully conduct war"—can only be advanced toward accomplishment by a change in the present conditions, such that he will be in position to plan for the cooperation of the high sea forces with those of the allied navies.

29. The development of the high sea operations should be directed and supervised by the officer whose position and experience best fits him for this duty. Such officer should be the commander in chief of the fleet. Personal considerations should not be permitted to interfere with the selection of the officer under whom such development is to take place, and this selection should be made immediately.

ANTISUBMARINE OPERATIONS FOR THE PROTECTION OF TRANSPORTS AND TRADE.

30. The detachments of the force engaged in these operations are based at Queens-town, on the French coast, at Gibraltar, and at the Azores. The aviation detachments will operate from bases on the coasts of Great Britain and France.

31. The operations of this force are primarily antisubmarine operations, and although the destroyers of this force operate well at sea, the distribution of the force, the nature of their employment, and the nature of command required makes these operations essentially coastal operations. This fact is recognized by the British and French admiralties, and similar forces of these navies are under command of district commanders. The cooperation of the forces of several districts are governed by fixed policies or by orders from the respective admiralties. Forces engaged in this type of operations are distinct from high sea forces except in the immediate vicinity of the fleet bases.

32. Efficiency in this type of operations requires an organization similar to that of the naval districts of the United States, and it is believed that the present organization of this force is of this character. The exercise of command by its commander should be governed by the same principles as would govern the control of district forces by the Navy Department.

33. The relations between this force and the commander in chief should remain as at present prescribed by Operations letter 20392-640 of July 2, 1917, but it should be recognized that when the commander in chief is in European waters he has authority, in case of emergency, to divert such part of this force as may be required for offensive operations with the high sea force, for which diversion the commander in chief would assume full responsibility.

34. The preceding consideration of the duties and organization of the forces engaged in antisubmarine operations for the protection of transports and trade indicates that no change is necessary or desirable.

REPRESENTATIVE OF THE OFFICE OF NAVAL OPERATIONS AND NAVAL ATTACHÉ.

35. A consideration of the functions of the representative of the Office of Naval Operations at the Admiralty in London is required in this estimate only in order that the relations between this officer and the commanders of naval forces operating abroad may be carefully considered in order to avoid misunderstandings. The functions of a naval attaché are well defined and do not conflict with those of commanders of forces.

36. The status of this representative appears to be that of an assistant to the chief of naval operations to whom has been delegated the authority to communicate direct with the British Admiralty and with forces operating abroad. At present this last is simplified by the dual capacity of this officer as commander of United States naval forces operating in European waters and as representative of the Office of Naval Operations in London.

37. It should be recognized that the function of the representative of the Office of Naval Operations is distinct from that of the naval forces, and there appears to be no probability of misunderstandings so long as this distinction is kept in mind.

38. The necessity for such a representative is apparent and a change in the functions of this officer, or even in the personality of this officer, would not be conducive to efficiency.

CONCLUSION.

39. In order to insure the efficient development of the operations of the Atlantic Fleet in European waters, it is necessary to recognize three distinct functions to be exercised aboard by high ranking officers of the United States Navy:

(a) Command of forces engaged in high sea operations. This function undoubtedly belongs to the commander in chief of the fleet.

(b) Command of the forces engaged in antisubmarine operations for the protection of transports and trade.

(c) Representative of the Office of Naval Operations and naval attaché at London.

(Functions (b) and (c) are now being performed by Vice Admiral Sims.)

40. The commander in chief should perform the following:

(1) Supervise the development and cooperation of the forces engaged in high sea operations, and assist in the formulation of plans for future high sea operations.

(2) In cooperation with the British commander in chief, make plans for the cooperation of such high-sea forces as may be available for such operations.

(3) Direct such changes in the present methods of conducting operations, of radio procedure, signaling, etc., as may be required to facilitate immediate cooperation by the battleships and such other types of vessels as may later become available for high-sea operations.

(4) Assume active command of the United States forces cooperating with the British Grand Fleet or other allied high-sea force when the strength of the United States force reaches that of a squadron.

(5) Assume active command of any independent high-sea operation to be performed by United States vessels of more than one type.

41. The commander of the forces engaged in coastal operations should conduct the operations of that force in identically the same manner as it is being conducted now. The only change in the status of the commander of this force would be that battleship division 9, now assigned to his force, and the supervision of plans concerning the operations of the mine force now under his jurisdiction would be transferred to the jurisdiction of the commander in chief.

42. The representative of the Office of Naval Operations should conduct the functions of that office exactly the same as it is being conducted at present. He should be permitted to address to the force commanders such communications as would normally be addressed to commanders of fleet forces by the Office of Naval Operations without reference to the commander in chief, except that orders should not be sent direct to forces engaged in high-sea operations unless they are repetitions of orders received from the Office of Naval Operations in Washington, in which case copies should be sent to the commander in chief.

43. Questions of policy affecting the general conduct of operations or the particular operations of the high-sea forces should be referred to the commander in chief for his recommendation before action is taken by the representative of the Office of Naval Operations in London.

44. The only difficulty to be anticipated in home waters is the necessity for the administration of forces remaining there. This can best be met by assigning the senior vice admiral in home waters as "senior officer in home waters" and delegating to him authority to act for the commander in chief in matters pertaining to forces in home waters.

DECISIONS.

45 (a) The commander in chief should proceed immediately to his present flagship, to a base in proximity to the British Grand Fleet, and within reasonable distance of London.

(b) The force in European waters at present engaged in antisubmarine operations for the protection of transports and trade should continue its operations under existing conditions.

(c) Battleship division 9 and the mine force should be assigned as task forces of the fleet, independent of the force engaged in antisubmarine operations.

(d) Designate the senior vice admiral in home waters as "senior officer home waters," and delegate to him authority to act for the commander in chief in matters pertaining to forces in home waters.

(e) The representative of the Office of Naval Operations to conduct the functions of that office exactly the same as it is being conducted now. He should be authorized to send direct to task-force commanders such communication as would ordinarily be addressed to the commander of a fleet force by the Office of Naval Operations without reference to the commander in chief, except that orders to forces engaged in high-sea

operations should not be issued except when they are repetitions from the Office of Naval Operations in Washington, in which case copies should be furnished to the commander in chief.

46. Approval of the decisions reached in this estimate of the situation is requested.

H. T. MAYO,
Admiral United States Navy.

[Secret.]

UNITED STATES ATLANTIC FLEET,
U. S. S. "PENNSYLVANIA," FLAGSHIP,
Base Two, April 12, 1918.

From: Commander in chief.

To: Secretary of the Navy (Operations).

Subject: Developments and operations of battleship forces of the Atlantic Fleet.

Reference: (a) C. in C. Secret File, February 2, 1918, subject: "Estimate of the situation with regard to the efficient development of the operations of the Atlantic Fleet."

1. In February, 1918, the commander in chief submitted reference (a), in which the following decisions were reached:

(a) The commander in chief should proceed immediately in his present flagship to a base in proximity to the British Grand Fleet, and within reasonable distance of London.

(b) The force in European waters at present engaged in antisubmarine operations for the protection of transports and trade should continue its operations under existing conditions.

(c) Battleship division 9 and the mine force should be assigned as task forces of the fleet, independent of the force engaged in antisubmarine operations.

(d) Designate the senior vice admiral in home waters as "Senior officer home waters" and delegate to him authority to act for the commander in chief in matters pertaining to forces in home waters.

(e) The representative of the Office of Naval Operations to conduct the functions of that office exactly the same as it is being conducted now. He should be authorized to send direct to task force commanders such communications as would ordinarily be addressed to the commander of a fleet force by the Office of Naval Operations without reference to the commander in chief, except that orders to forces engaged in high-seas operations should not be issued except when they are repetitions from the Office of Naval Operations in Washington, in which case copies should be furnished to the commander in chief.

2. The request for the approval of the decisions reached in this estimate are hereby renewed and enlarged. The general situation in Europe to-day is similar to that existing at the time when the estimate of the situation of reference (a) was made, except that the military situation is more serious and the terrific intensity of the German military effort indicates what is generally conceded—that Germany's maximum effort is to be exerted this summer.

3. It is reasonable to suppose that this tremendous military effort will be accompanied by a similar naval effort. An estimate of how this naval effort may develop should be carefully made and consideration given to the desirability of supporting the present allied naval forces in European waters by United States battleship forces.

4. It would be a serious mistake to consider that the German Navy has acknowledged defeat. The German Navy is jealous of its reputation and skill and it may be considered a certainty that Germany will never acknowledge defeat without making at least one more effort to gain at least a partial control of the sea.

5. The initiative of the German nation in the development of material for use in war has been superior to that of the Allies and it is not unreasonable to suppose that when the German Fleet again accepts an engagement that the British Grand Fleet will be subjected to attack by weapons of new inventions or old ones greatly developed.

6. The inventions which may be developed for practical use are: (a) The torpedo plane, (b) antitorpedo protection, (c) gas shells.

7. The torpedo plane: The torpedo plane has been long advocated as an auxiliary of naval warfare. Reports indicate that it has been successfully used by the Germans during the past summer against merchant ships in the North Sea. The British Admiralty has ordered 100 such planes for the service of the British Grand Fleet. It is more than probable that in the next major naval engagement the torpedo plane will play an important part provided suitable means for transportation can be developed or the action should take place in or near waters adjacent to German territory or to alien territory now occupied by Germany.

8. Antitorpedo protection: The fact that many German ships which have been torpedoed have succeeded in returning to port may indicate that some additional protection against torpedoes has been devised. It has been reported that nearly all stores have been removed from the German ships other than those required for a short cruise. It has been reported also that the crews usually reside in barracks and take on board with them only such necessities as are required for use during the short cruises they make.

9. The reduction in weight thus made has probably been equalized by additional watertight bulkheads, blisters, etc., with a view to protection against torpedoes. The exact value of such protection can not be estimated but it is logical to suppose that ships so fitted can withstand torpedoes to a greater extent than can the British or United States battleships which, by the nature of their service, require large storerooms and fuel capacity.

10. Gas shells: This term is used in its broadest sense to apply to all forms of gas attack. It is well known that the gas shells used by the Germans in land warfare are successful and it can be demonstrated that a gas element can be inserted in naval armor-piercing shell without loss of penetration or fragmentation. It is only reasonable to suppose that the next major naval action will find the gas shell in evidence and in addition to the gas shell possibly smoke boxes producing gas clouds of material size and density.

11. The above developments of naval weapons and ship protection may reasonably be expected and the initiative of the German nation in technical and military development makes it probable that when such development is satisfactory the German Fleet will again attempt to secure command of the sea.

12. Possible plan: In formulating a plan of action one of the first considerations should be to determine—

(a) Which of the weapons possessed will be the most effective against the enemy.

(b) Which weapon possessed by the enemy will be most effective against our own force.

The weapons which may be considered available are: (a) The gun, (b) the torpedo, (c) the mine.

Considering these weapons from the point of view of the German and assuming that the developments above have been perfected by them, the analysis of the above questions is as follows:

Past experience in action with the British fleet has demonstrated that:

(a) With regard to gunfire (1) the German Navy is slightly superior in the ability to hit in the early stages of an engagement; (2) that this superiority does not exist long; (3) that the German guns are too small caliber; (4) that the superiority of the British fleet in numbers of ships and guns and superior size of guns makes a gun action of long duration disadvantageous to the German Navy.

(b) With regard to torpedoes (1) German torpedoes are probably better than British torpedoes; (2) that due to excessive use of torpedoes in submarines German torpedo personnel is better than British; (3) that the number of submarines which can be made available in any chosen locality at a chosen time is superior to the number of British submarines which could be concentrated after the information was obtained by them; (4) that at present the development of the torpedo plans by the German Navy is much superior to the British; (5) that the torpedo protection afforded ships of the German Navy is superior to that of the British.

(c) The mine: The Germans are undoubtedly aware of the development of the mine by the Allies and of the contemplated mine barrages. They realize that surface control of the area to be mined is a necessity. Therefore to prevent the further development of the mine barrage a victory on the surface of the sea is essential.

13. The above conclusions, briefly summarized, are as follows:

(a) In order to prevent the development of the mine barrage, which may defeat their submarine campaign, a victory over the British Grand Fleet is essential.

(b) The inferiority of the German high seas fleet makes an action in which gunfire plays the major part disadvantageous.

(c) An action in which the torpedo plays the major part would be advantageous to the German Navy.

How can an action in which the torpedo will play the major part be developed?

In order to develop an action in which the torpedo is to play a major part, the following must be available:

The high sea fleet.

Maximum number of submarines.

Maximum number of destroyers.

Maximum number of torpedo planes.

(b) Seek engagement with the British grand fleet in the vicinity of the German bases at Zeebrugge and Ostend, in which case poison gas and torpedo planes will play an important part in the engagement.

9. In view of the above the commander in chief believes that the following should be adopted as the mission of the Atlantic Fleet:

(1) To guard all troop and mercantile trans-Atlantic convoys against German or Austrian raiders of any type (including submarines) or strength.

(2) To support the British grand fleet against any attempt of the German high-sea fleet to gain temporary control of the British Channel.

10. An estimate of the situation has been prepared with the above as a mission. A copy of the estimate is inclosed.

11. As a result of this estimate of the situation the following decisions were arrived at:

(1) To assign to the commander in chief Atlantic Fleet the mission of guarding all trans-Atlantic convoys against raiders.

(2) To base the superdreadnaughts *Pennsylvania*, *Arizona*, *Utah*, *Oklahoma*, *Nevada* (*Mississippi*, *New Mexico*, and *Idaho*, when ready) at Brest.

(3) To base the seven armored cruisers at Bremerhaven as scouts and eastern-ocean escorts.

(4) To base *North Dakota* and *Delaware* on home coasts, Halifax or Guantanamo, as detail plans may indicate best.

(5) To use *South Carolina*, *Michigan*, and 6 *Minnesota* type as ocean escorts for troop convoys.

(6) To base 5 *Georgia* type on home coast.

(7) The commander in chief to assume direct control over any offensive operations.

(8) To base squadron 1 and division A on home coast and operate them as training units.

H. T. MAYO.

Secret:

AUGUST 10, 1918.

File.

From: Commander in chief.

To: Secretary of the Navy (Operations).

Subject: An estimate of the naval situation in the Atlantic Ocean.

References: (a) C-in-C. secret file 211, February 2, 1918, subject "Estimate of the situation regard to the efficient development of the operations of the Atlantic Fleet"; (b) C-in-C. secret file, April 12, 1918, subject: "Development and operations of battleship forces of the Atlantic Fleet."

MISSION.

1. The adopted mission of the Atlantic Fleet is:

"(1) To guard all troop and mercantile trans-Atlantic convoys against German or Austrian raiders of any type or strength. (2) to support the British Grand Fleet against any attempt of the German High Sea Fleet to gain temporary control of the English Channel."

ENEMY STRENGTH, DISPOSITION, AND PROBABLE INTENTIONS.

2. The naval forces at the disposal of the enemy may be considered as limited to those of Germany, as the Austrian forces should be contained by the combined fleets of Italy and France.

3. These forces are organized in two main forces: (a) The High Sea Fleet; (b) the submarine forces engaged in attacks on merchant shipping and transports.

THE HIGH SEA FLEET.

4. The German High Sea Fleet is inferior to the reinforced British Grand Fleet to the extent of about one-half. This inferiority precludes much danger of an attack by the high sea fleet under normal conditions. It is therefore necessary to consider what developments could be made that might be considered to put the High Sea Fleet in condition to warrant such an engagement.

5. The only developments in naval warfare which might be considered to offset the superiority of the Grand Fleet which are known are poison gas and the torpedo plane. There is little doubt but that the next naval engagement in which the High Sea Fleet takes part will find the employment of these weapons.

6. The possibility of the German High Sea Fleet using these weapons, and the conditions under which an engagement with the British Grand Fleet might be sought,

have been discussed at some length in reference (b). In this previous estimate the conclusion was reached that the German High Sea Fleet might seek an engagement with the British Grand Fleet in the vicinity of the German bases at Zeebrugge and Ostend. Mine fields so placed as to let in the path of the Grand Fleet in a southward movement have been located.

7. A campaign of this nature, in conjunction with naval raids in the Channel, or a military raid on the coast of England, might, if made in conjunction with a strong military offensive against the northern part of the battle line of the western front, assume a very threatening nature, and if even partially successful could be used to bolster up the morale of the Teutonic peoples during the coming winter.

8. In view of the possibility of such a campaign, the commander in chief, in reference (b), recommended that all United States superdreadnaughts should be sent to European waters to support the British Grand Fleet.

9. That such a campaign has not yet taken place indicates that the above conclusion was wrong; or, that the enemy is not yet prepared for such an attack; or, that some more promising plan (from his point of view) is being developed. The logical time for such a campaign is in cooperation with a strong military offensive against the northern part of the western front, and it can not be considered that such an opportunity will be overlooked.

10. The fact that his campaign has not yet taken place does not change the previous decision that all United States superdreadnaughts should be based in European waters for the support of the British Grand Fleet, but the development of the cruiser submarine; the lateness of the season of the year, and the improbability of a successful military offensive by the German armies on the western front during the remainder of the season favorable to military operations, may be found to modify the decision to some extent.

CONCLUSION REGARDING THE GERMAN HIGH SEA FLEET.

11. The unfavorable turn of the military situation, from the German point of view, will probably prevent a successful military offensive against the northern part of the western front during the remainder of this year. The results of an attempt by the German High Sea Fleet could hardly be such as to insure German control of the sea against the remaining naval forces of the Allies. Such a campaign could not be justified except in conjunction with a strong military offensive, in which case interference with cross-channel transportation, which might accrue from temporary control of the channel, might offer adequate returns. It may be reasonably concluded that no such campaign will be attempted, although the possibility of such a campaign must not be lost sight of, and the disposition of the United States forces, superdreadnaughts and destroyers suitable for a major fleet action, must be such as to offer a chance to support the British Grand Fleet in case of such a campaign, and to prevent the German Navy from gaining even a temporary control of the English Channel.

THE ENEMY SUBMARINE FORCES ENGAGED IN DESTRUCTION OF COMMERCE AND TRANSPORTATION.

12. The results of the enemy submarine campaign against commerce and transports have undoubtedly been disappointing to them, and with the increase in the anti-submarine craft, and more efficient weapons for use against submarines, it is practically assured that the result of the war can no longer be considered to depend upon losses by submarine operations.

13. The tonnage available for the transportation of troops is, however, not much greater than absolutely necessary for the prosecution of the war, and a large part of the building program of both the United States and the Allies is composed of vessels which will not be suitable for troop transportation.

14. Antisubmarine operations can not therefore be replaced, but must be pressed with greater vigor due to the increased area in which this type of craft is now operating.

15. The development of the cruiser submarine has so increased the area of the submarine operations that destroyer escort for troops convoys throughout the entire trans-Atlantic voyage is desirable. Destroyer escort for merchant convoys throughout the entire voyage is also desirable, but on account of the number of destroyers required, not, as yet, practicable.

CONCLUSION REGARDING ENEMY SUBMARINE ACTIVITIES.

16. Although the efficiency of the enemy's submarine campaign is decreasing, and the construction of new tonnage is such as to practically insure adequate available tonnage for the transportation of supplies to the allied armies and nations, the tonnage available for transport of troops is no greater than that required for success.

17. The development of the cruiser submarine has greatly increased the area in which vessels are subject to submarine attack.

18. Successful operations against transports carrying United States troops will be especially valuable to the enemy in raising his morale.

19. Every endeavor should be exerted to prevent successful submarine operations by the enemy, but in view of the greater moral effect of successful operations against our transports, the greatest stress should be placed upon the protection of all troop convoys.

OTHER TYPE OF OPERATIONS WHICH MIGHT BE ATTEMPTED.

20. Outside of the two types of operations which have been discussed above, there appears to be but one other general type of operations which might offer success, namely, extensive raiding operations against transports and merchant ships, using surface craft alone or in combination with submarine craft.

21. Considering first operations surface craft alone, we may say that there are four types of vessels to be considered: (a) Converted merchant shipping, (b) light or protected cruisers, (c) major ships, and (d) destroyers.

22. (a) Converted merchant shipping: This type has, except in the North Sea, been the only type of raider employed since the destruction of the German light cruisers so employed in the early part of the war. The advantage of this type lies in their harmless appearance and in the possibility of disguise. The disadvantage lies in their low speed and inferior fighting power.

23. Converted merchant shipping may be employed but the fighting power of such craft would not be sufficient to overcome the usual ocean escort, and consequently are not to be feared as a decisive factor.

24. (b) Light and unprotected cruisers: Vessels of these types have a real value in major action with the fleet and the use of such ships as raiders would indicate that an attempt to fight a major action with the British Grand Fleet has been abandoned. These types have the advantage of speed and fighting power, as compared to merchant raiders, but are without the latter's advantage of disguise. The fighting power of these vessels is inadequate to the destruction of the average ocean escort, and their fuel capacity is not sufficient to give them a great radius of action.

25. Vessels of these types would experience more difficulty in gaining the sea than would merchant shipping, because their character would at once become evident. They have insufficient fighting strength to force their way through the light forces that might be encountered. Their one advantage is speed. Because of their inferior power, however, attacks by either of these types can not in all probability, result in such serious losses as to affect the successful issue of the war.

26. (c) Major ships: In this class are included battleships and battle cruisers. Vessels of either of these types would experience considerable difficulty in getting to sea unobserved, but due to their strength would be able to fight their way through the observation forces. After gaining the sea they would be difficult to locate, and due to their strength as compared to most ocean escorts would be able to attack advantageously any convoys of merchant ships or transports that might be encountered, unless the ocean escort is greatly strengthened.

27. The great disadvantage in the use of this type for raiding is the danger that they will be cut off from their bases and be sunk by superior forces, or that they will become derelict through the exhaustion of their fuel. The disaster which might be brought upon a convoy of troop ships by an encounter with a vessel of this type, and the great influence upon the morale that a successful operation of this nature might have upon the Teutonic peoples, make the consideration of this type of operation most necessary.

28. The great superiority of the Allies in major ships can not be employed more advantageously than by assuring the safety of transports carrying United States troops to France.

29. (d) Destroyers: This type have not been used in raiding expeditions except in the North Sea. The limited radius of action and the inferior fighting capacity of the German destroyer compared to the modern British or United States destroyer will probably prevent their use in the Atlantic, though raids in the channel are possible. Such raids in the channel could in all probability be successfully countered by the British without assistance from our destroyers.

COMBINED OPERATIONS OF SURFACE CRAFT AND SUBMARINES.

30. The development of the cruiser submarine affords the enemy a type of vessel particularly adapted to scouting operations. If submarines do not attack, their presence can not be readily detected and, although their radio could be heard, it would

to keep such a vessel from tracking a convoy, particularly before the arrival of the escort.

Additional smaller submarines previously directed to the positions in which the cruiser expected to fuel would operate as a scouting force during such training was in progress.

The combined operation has many advantages and appears to be the most practicable, provided the battle cruisers can get to sea.

CONCLUSIONS WITH REGARD TO RAIDERS IN THE ATLANTIC.

The possibility of successful operations against convoys of troop ships appears a principal menace to the successful prosecution of the war by the Allies, and no vessel that can be successfully employed to insure their safety should be spared.

The possible operations of the German Navy against which the United States must prepare are:

1. Submarine operations against transports and merchant shipping.

2. Surface operations by all types of surface craft, but primarily by major ships and merchant ships.

3. An attempt of the German High Sea Fleet to gain temporary control of the English Channel with a view to forcing the British Grand Fleet to fight a decisive battle at a point selected by the Germans.

STATUS OF OUR OWN FORCES—STRENGTH, DISPOSITION, AND COURSE OF ACTION OPEN TO US.

The disposition of the forces of the Atlantic Fleet at present is based upon a plan which, to some extent, has been governed by a consideration of all types of operations of the enemy considered in the preceding paragraph. Such changes as are deemed necessary are due to the changed conditions which were met in the consideration of the general situation from which the present disposition of the Atlantic Fleet was adopted.

The present policy with regard to the antisubmarine forces of the Atlantic Fleet and the disposition of these forces appears to be efficient. No change in the disposition of these forces is recommended, except that, in view of the possibility of raiders, or from a temporary control of the English Channel by the German High Sea Fleet, it should be constantly kept in mind that when and where the antisubmarine forces should be withdrawn from antisubmarine escort to engage in surface fleet operations.

The British Grand Fleet has been reinforced by battleship division 9, which is considered insufficient in case the German High Sea Fleet should bring the Grand Fleet to action in a position, and at a place, chosen by the Germans. It is anticipated in case of a major action the Germans will be supported by submarines and torpedo planes.

The reinforcement of the British Grand Fleet is considered desirable, but in the event of raiders passing out of the English Channel a strategic concentration of forces is considered sufficient. The disposition of the remaining dreadnoughts of the Atlantic Fleet should therefore be such as to insure the maximum effectiveness against raiders while maintaining a strategic concentration with the British Grand Fleet.

The disposition of the Atlantic Fleet may be enumerated as follows:

1. *Delaware* and *Delaware*

2. Battleship force 1, including division 5.

3. *Delaware*

4. The forces should be used in such manner as to afford the greatest protection to troopships and merchant ships.

5. The disposition of forces should therefore be based upon the following:

1. The dreadnoughts are to be based where they will be strategically concentrated with the British Grand Fleet in the event of a major action near the eastern end of the English Channel.

2. The *Delaware* and *North Dakota* to be based with the superdreadnoughts or where it may appear desirable.

3. The superdreadnought battleships to be based and operated in the manner most effective for the protection of trans-Atlantic convoys against surface raiders.

4. The *Delaware* to be based and operated in the manner most efficient for the protection of trans-Atlantic convoys against surface raiders.

CONSIDERATION OF BASES SUITABLE FOR DREADNAUGHTS AND THE NATURE OF THEIR OPERATIONS.

42. The probable locality of a major engagement is considered to be the vicinity of the German bases at Zeebrugge and Ostend. Action in this vicinity could be forced upon the British Grand Fleet by a naval raid in the Channel or by a military raid on the coast of England, in the vicinity of London.

43. In the following consideration of bases, Kentish Knock has been considered as the probable locality of such a major fleet action.

44. The distance from Kentish Knock to Rosyth is about 390 miles. To be strategically concentrated with the British Grand Fleet, the base of the United States superdreadnaughts must be within this distance of Kentish Knock.

45. Within 390 miles of Kentish Knock there are not suitable bases except the channel ports and Brest. The channel ports of both Great Britain and France are overcrowded now, and the basing of a squadron of dreadnaughts on any of these ports would probably seriously interfere with cross-channel traffic. The Brest roads are 360 miles from Kentish Knock and from all data at hand appear to offer a satisfactory base.

46. In case the British Grand Fleet is based at Scapa, the distance of our base from Kentish Knock can be increased without destroying the strategic concentration. This increase in distance furnishes no additional bases for consideration except Berehaven. Berehaven lacks many of the advantages of Brest as regards questions of communication, supply, and fuel, and in the event of operations against battle cruiser raiders in the channel is not so well situated as Brest.

47. In the further consideration of a plan for the accomplishment of the mission of the fleet it will be assumed that the superdreadnaughts are to base on Brest.

ENEMY RAIDING OPERATIONS.

48. Provisions adequate for the protection of our transports against operations by the battle cruisers should be sufficient to afford protection against surface raiders of other types.

ENEMY FORCES—DISPOSITION AND PROBABLE INTENTIONS.

49. The enemy may use any types of surface craft as raiders. If, however, battleships or battle cruisers are based, the number will probably not be large, whereas if merchant cruisers or light cruisers are used it is quite probable that the number of raiders out at once will be as large as they may deem advisable.

50. All enemy vessels of types suitable for use as raiders are based on the home coast of Germany.

51. There are two avenues of escape to the Atlantic Ocean from the North Sea:

- (a) Round the north of Scotland.
- (b) Through the English Channel.

52. (a) Has the advantages of—

- (1) More sea room.
- (2) Avoids British torpedo craft bases.
- (3) Norwegian territorial waters can be used to assist in avoiding mines.
- (4) Longer period of darkness in each day.
- (5) More chance of evasion.

(a) Has the disadvantages of—

- (1) Leading nearer to main bases of British Grand Fleet.
- (2) Being farthest from the probable convoy routes.
- (3) Being the obvious way.

(b) Has the advantages of—

(1) Surface craft of equal power will not be met unless the United States dreadnaughts are based on the vicinity of the English Channel.

(2) Nearest way to the transport routes.

(3) Least obvious way.

(b) Has the disadvantage of—

- (1) Greater danger from mines.
- (2) Greater danger from torpedo crafts.
- (3) More likelihood of being sighted.
- (4) Fewer hours of darkness.

54. There does not seem to be much choice between the two routes. The greater danger in the passage of the English Channel, is the danger from mines. Undoubtedly the German vessels are fitted with paravanes and in addition to those, high speed sweeps carried by destroyers would undoubtedly be used to sweep up the mines. The

battle cruiser would no doubt be screened also by a strong screen of destroyers and light cruisers in sufficient strength to fight off any British forces of light vessels based in the vicinity of the channel.

55. In case of an attempt to pass north about, the battle cruisers will attempt to take full advantage of darkness and fog. It is quite possible that the German High Sea Fleet might make a demonstration in the vicinity of the British coast in order to draw the British battle cruisers and destroyers away from the northern area during the passage of the battle cruiser.

56. In view of the probability that the first attempt of this nature will be the most successful, it is quite within the probabilities that attempts to pass out by both routes may be made simultaneously.

57. The German High Sea Fleet may be expected to make demonstrations against the British coast during the period that the battle cruisers are out, in order to prevent the detachment of British battle cruisers to participate in antiraid operations.

58. As a force of at least six battle cruisers would be required to have a chance of success in running down the enemy battle cruiser, it is extremely doubtful if the British Grand Fleet would be willing to sacrifice that strength to hunting raiders.

59. The cruising radius of the latest German battle cruisers is sufficient to permit them to reach the West Indies at a speed of 20 knots after steaming 24 hours at 25 knots during their escape. They would still have about 15 per cent of their fuel capacity remaining.

60. The problem of logistics would be a most serious one with them and the logical course appears to be to fit out one or more of their larger merchant ships to act as tender and collier.

61. There are available for this:

- (a) The *Imperator*, 52,000 tons, 25 knots speed.
- (b) The *Columbus*, 40,000 tons, 21½ knots speed, and possibly—
- (c) The *Hindenburg*, 40,000 tons, 21½ knots speed, which vessel was building in 1916.

OWN FORCES, DISPOSITION AND COURSE OF ACTION.

62. Our forces would consist of:

- (a) Eight superdreadnoughts, based on Brest.
- (b) *North Dakota* and *Delaware*.
- (c) Two *Michigan* type, six *Minnesota* type.
- (d) Five *Georgia* type.
- (e) Seven armored cruisers.
- (f) Squadron one battleship force, and division A assigned to training and coast defense.

63. There are two courses of action:

- (a) Strictly defensive.
- (b) Strictly offensive.

64. Course (a) is by far the simplest and would consist in supporting the ocean escorts by dreadnoughts whenever it is considered that an enemy battle cruiser may be out.

This course would lead eventually to a permanent escort of dreadnoughts for all convoys of troop ships, but would not prevent the destruction of a perhaps vital amount of shipping not under such escort. It would permit the freedom of the sea to the enemy battle cruiser.

65. Course (b) would be to operate defensively with regard to the one or two troop convoys nearest Europe and offensively with the remaining dreadnaughts and such destroyers and other vessels as might be available, to run down this raider. It is quite true that battleships can not overtake a battle cruiser, but constant pursuit would prevent the battle cruiser stopping to fuel and consequently soon exhaust her fuel supply.

66. In case of a passage through the Channel, the dreadnaughts and such destroyers as might be available should be able to intercept and defeat or drive back the battle cruiser before she cleared the western end of the Channel.

67. A battle cruiser gaining the sea north about will be more difficult to locate and scouts and destroyers will be required to assist the dreadnaughts.

68. The vessels of our Navy most suitable for this are the armored cruisers. It is recognized that they are of inferior speed and power to a battle cruiser, but such a vessel on a raiding expedition would not desire to expend fuel in chasing down scouts. She would not know into what she was being led and would be wary about following a scout.

69. By substituting the *South Carolina* and *Michigan* and six *Minnesota* type for the armored cruisers as ocean escorts, these cruisers can be made available for scouting and, if necessary, relieving the ocean escorts on the eastern end of the voyage.

70. The *North Dakota* and *Delaware* could be based on Halifax or Guantanamo or on the home coast. Their primary duty being to guard the western Atlantic against battle cruiser operations against the coast and to prevent such vessels from fueling in the western Atlantic if they are tracked to this vicinity.

71. The five *Georgia* type would assist the *North Dakota* and *Delaware* in defense of the coast. The radius of action of these vessels is probably insufficient to permit their efficient use as ocean escorts.

DECISIONS.

72. (1) To assign to the commander in chief Atlantic Fleet the mission of guarding all trans-Atlantic convoys against raiders.

(2) To base the superdreadnoughts *Pennsylvania*, *Arizona*, *Utah*, *Oklahoma*, *Nevada* (*Mississippi*, *New Mexico*, and *Idaho* when ready) at Brest.

(3) To base the seven armored cruisers at Berehaven as scouts and eastern ocean escorts.

(4) To base *North Dakota* and *Delaware* on home coast, Halifax or Guantanamo, as detail plans may indicate best.

(5) To use *South Carolina*, *Michigan*, and *Minnesota* type as ocean escorts and troop convoys.

(6) To base five *Georgia* type on home coast.

(7) The commander in chief to assume direct control over offensive antiraid operations.

(8) To base squadron one and division A on home coast and operate them as training units.

[Secret.]

UNITED STATES ATLANTIC FLEET,
U. S. "PENNSYLVANIA," FLAGSHIP,
June 17, 1918.

From: Commander in chief, Atlantic Fleet.

To: Secretary of the Navy (Operations).

Subject: Visit of inspection and observation to Atlantic Fleet in European waters.

References:

(a) C-in-C letter file 1445, 13 June, 1917, to Sec. Navy (Op.) re "Status of naval forces operating in the Atlantic."

(b) CNO let. file 28754-20:46, 9 July, 1917, to C-in-C in reply to reference (a);

(c) CNO letter file 20392-648, 2 July, 1917, to commander United States naval forces operating in European waters re "Assignment of United States naval forces operating in European waters to Atlantic Fleet"—an inclosure with reference (b).

(d) CNO let. file 29392-649, 3 July, 1917, to commander convoy operations in the Atlantic re "Forces engaged in convoy operations in the Atlantic attached to the Atlantic Fleet"—an inclosure with reference (b).

(e) Art. 1652 Navy Regulations, Paris (b), (c), (d).

(f) Art. 901 Naval Instructions.

(g) C-in-C let. file 8010, 11 Oct., 1917, re "General report on visit to England and France in August-September, 1917."

Inclosures: 4—Copies of references (a), B (b), (c), and (d).

1. References (a), (b), (c), (d) define the status of all forces operating in the Atlantic generally as attached to the Atlantic Fleet, and specifically the forces operating in European waters and those engaged in convoy operations in the Atlantic.

2. references (e) and (f) deal with the duties of a commander in chief in regard to maintaining familiarity with the condition and employment and general readiness of his command.

3. The commander in chief, during his visit to England and France in the late summer of 1917, was able to comply in some measure with the requirements of references (e) and (f) in regard to those parts of the Atlantic Fleet which were then in European waters. Report to the department thereon was included in reference (g).

4. The report made in Reference (g) also includes notes and memoranda in regard to naval conditions in England and France, derived from observation and from personal contact with officers of the British Grand Fleet, of the British Admiralty, and of the French Ministry of Marine.

5. The information gained by the commander in chief in 1917 from direct contact with the allied naval administration and forces engaged in active operations furnished reliable data for the modification of the general operating conditions of the Atlantic Fleet to conform with the experience gained by the allied navies during three years of war, and notably assisted in the introduction of the new system of tactics for the handling of battleships, and also contributed largely to a comprehension of the con-

itions—all of which matters have rendered the Atlantic Fleet more nearly ready to cooperate with the allied navies in general and with the British Navy in particular.

6. About nine months have now elapsed since the commander in chief returned from Europe. During that time that part of the Atlantic Fleet operating in European waters has been greatly increased, notably in the case of battleships division 9 (60 battle squadron of the British Grand Fleet) and of the mine force.

7. It is believed that the benefits to be gained from a visit of inspection and observation by the commander in chief are even greater than from the trip in 1917, on account of the clearer understanding of allied aims and methods acquired from study of the information in hand and the consequent readiness to acquire further and more definite information along more advanced and more detailed lines. It is further believed that advantage should be taken of the opportunity to learn, under the most favorable conditions, and at first hand, from those who have the accumulated experience afforded by nearly four years of war—an opportunity which will probably never again be presented to us.

8. The commander in chief has therefore to recommend and to request that he and certain members of his staff be ordered to proceed to Europe for a visit of inspection and observation. In this connection, attention is invited to the following conditions:

a. The *Arkansas* has been ordered to prepare for distant service; i. e., to join battleships division 9.

b. The assignment of flag officers of the Atlantic Fleet in home waters to duty on the selection board, which is soon to meet, and the lack of destroyers to operate at sea with the fleet while enemy submarines are working on the Atlantic coast will largely restrict the battleship forces to ship and division work in inclosed waters for some weeks.

c. The departure of the *Arkansas* deprives the commander battleship force 2 of a suitable flagship, as the *New Mexico* will not be ready for sea for some time.

d. The *Pennsylvania* is due to go to the navy yard for several weeks' authorized work, and there is no relief fleet flagship.

9. The absence of the commander in chief in Europe during the months of July and August can readily be arranged for along the following lines:

a. That the commander in chief and party take passage to Europe in the *Arkansas*.

b. That commander battleship force 2 (second in command Atlantic Fleet) transfer to the *Pennsylvania* to handle the Atlantic Fleet during the absence of the commander in chief.

c. That the *Pennsylvania* go for navy-yard work after similar work has been completed on the *Arizona*, by which time the *New Mexico* may be expected to be ready for sea.

H. T. MAYO.

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, June 22, 1918.

Secret.

To: Commander in chief, United States Atlantic Fleet.

Subject: Visit of inspection and observation to Atlantic Fleet in European waters.

Reference: (a) Letter from commander in chief to Secretary of the Navy, dated June 17, 1918.

1. The department approves in general the recommendation of the commander in chief as contained in reference (a). The department, however, does not approve the departure of the commander in chief prior to the completion of the duties of the selection board. Your plans should contemplate departure as soon as possible after the work of this board has been completed.

W. S. BENSON.

MEMORANDUM RE INSPECTION AND OBSERVATION TRIP TO EUROPEAN WATERS.

1. The proposed inspection of the forces of the Atlantic Fleet now operating in European waters should cover the following:

Great Britain: Headquarters, United States naval forces, operating in European waters. London; mine force and mine-force bases; battleship division 9; destroyers based on Queenstown; air stations.

France: Force based on Brest; air stations: force based on St. Nazaire; force based on Bordeaux; force based on Gibraltar; force based on Azores.

NOTE.—This is in no sense to be considered as an inspection of shore stations except in so far as the activities at these stations are intimately connected with the operations of the forces afloat: i. e., the fleet.

2. This trip of the commander in chief of the Atlantic Fleet and a portion of his staff has for its aims:

(a) An inspection of the forces of the Atlantic Fleet now operating in European waters, with a view to familiarizing the commander in chief with the operations of these forces and with the conditions existing within these forces. This inspection will furnish the commander in chief with adequate information upon which to base such suggestions and recommendations regarding operations, personnel, and material as may appear pertinent.

(b) To obtain first-hand information of the methods of operation of these forces, and of the methods of operation of the allied navies, in order that the training and preparation of the forces of the Atlantic Fleet now in home waters, which may soon be employed abroad, may be such as to insure early efficient cooperation with our forces now in Europe, or with any allied forces.

3. The principal points upon which information of our own forces should be obtained are:

(a) What type of operations are being conducted, and what efficiency has been attained by the force in the performance of these operations. If a high state of efficiency has not been attained, what is the reason for the lack of efficiency.

(b) What is the organization most suitable for the performance of the type of operations in progress, and how, if at all, can the organization be improved.

(c) In what manner can the material available be used to greater advantage, or in what manner can the material be improved.

(d) In what respects can the methods of communication or the material means of communication be improved.

(e) What changes in the methods of training and preparation of the forces in home waters will increase the efficiency of units upon their arrival in European waters.

4. With regard to the operations of the allied forces.

It is desirable to obtain as much knowledge of the methods of operation of the various types of vessels as possible. It is impossible for officers on active duty with vessels in European waters to give sufficient time to the study of this important matter except in so far as the type of vessel to which they are attached is concerned. Such officers are unfamiliar with the progress that has been made in the Atlantic Fleet in home waters during their absence. Especially valuable is the experience to be gained in the British Grand Fleet, and in the British forces operating from Harwich and Dover. Such an opportunity to learn the practices of forces which have been engaged in active operations of war for a period of four years may never again be presented and full advantage should be taken of this opportunity.

5. Vice Admiral Sims has pointed out in his weekly reports the desirability of enlarging the staff of Rear Admiral Rodman and of assigning officers to duty with the British forces operating from Harwich and Dover, in order to take advantage of this opportunity. It is considered that this request should be complied with, if practicable, in order that the United States Navy may profit to the greatest extent possible from the opportunities presented. The greatest amount of information can be obtained in a short time and the most immediate good be derived from the information so obtained by permitting members of the staff of the commander in chief, who have been selected for their knowledge of various features of naval activities, and who are constantly in touch with the developments of these activities at home, to visit and observe the operations of these British forces.

6. These officers, all of whom were abroad with the commander in chief last year are sufficiently in touch with the British practices to be able to determine what changes have been made during the past year; how these changes affect the practices in our own forces in home waters; and to inquire intelligently into the details and procedures which were new to them last year. It is believed that the information that can be obtained by these officers, who are experts in their respective lines and who are familiar with the present practices at home and with previous British practices, will be most valuable to the forces of the Atlantic Fleet in home waters in preparing such forces for active cooperation with Allied naval forces.

7. Due to the fact that during the commander in chief's trip last year much of the time abroad was consumed in necessary conferences and observation trips to British and French bases, not much opportunity was offered to obtain the desired detailed knowledge of operations that was so much desired. As a result of this trip, however, many improvements were made in the tactics of the fleet, in signalling, in gunnery, and in communications. The trip was of great value to the commander in chief in familiarizing him with the actual conditions abroad, and in indicating the lines of

and should be pursued by the forces in home waters in order to insure cooperation with the forces abroad.

Both direct or indirect, of the commander in chief's trip last year, the crews have been trained with a view to joint operations with the British particularly along the following lines:

TACTICS.

Use of cruising formations. (Fleet S. O. No. 2.)
Use of battle instructions. (Fleet S. O. No. 2.)

GUNNERY.

Use of rules for distribution of gunfire.
Use of conditions of readiness for action similar to British practices.
Importance of concentration emphasized.

COMMUNICATIONS.

Use of radio procedure.
Use of contact reports.
Use of radio and signalling material.
Use code and signal section.

RELATION OF BATTLESHIP SIGNAL FORCES IN BRITISH SIGNALS.

So that the commander in chief may profit by the knowledge and advice it is necessary that these officers keep up to date in the developments constantly taking place, especially in the war zone. It is believed that, familiarity with our present practices and with previous British practices, and the information which will be invaluable to our forces in home waters, in some instances, convey information which will be useful to our allies in Europe.

Under the above, the commander in chief desires to have the following members of his staff accompany him to Europe: Capt. O. P. Jackson, United States Navy, chief of staff; Commander W. S. Pye, United States Navy, war plans intelligence officer; Commander D. C. Bingham, United States Navy, training officer; Lieut. Commander A. B. Cook, United States Navy, flag secretary; Lieut. Commander Leigh Noves, United States Navy, flag secretary; Lieut. Commander H. W. McCormack, United States Navy, flag secretary. Only one of these officers, the flag lieutenant, will have the nature of a personal staff.

At 4 p. m. the subcommittee adjourned until to-morrow, (at March 31, 1920, at 10 o'clock a. m.)

NAVAL INVESTIGATION.

WEDNESDAY, MARCH 31, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS.
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 o'clock in room 235, Senate office Building, Senator Frederick Hale presiding.

Present: Senators Hale (chairman), Keyes, and Trammell.

THE CHAIRMAN. The committee will come to order. Admiral Mayo, will you continue?

TESTIMONY OF REAR ADMIRAL H. T. MAYO--Resumed.

Admiral Mayo. Mr. Chairman, before any questions are asked may I make a slight correction of my testimony?

THE CHAIRMAN. Yes.

Admiral Mayo. I would like to insert on page 19, after line 7, "and this subject was never again mentioned."

I want to insert on page 72, after line 4, "In December, 1917, I agreed with the department to have one officer of my staff on duty in Washington at all times in order that I might be kept better advised of conditions, plans, and operations."

THE CHAIRMAN. Senator Trammell, have you any question?

Senator Trammell. I have not any questions to ask the Admiral.

THE CHAIRMAN. As I have stated several times in this hearing, members of the committee are not to decide differences between the Navy or between officers of the Navy and officials of the War Department, and if mistakes have been made in the course of the operation of the Navy, we want to see what we can do to rectifying those mistakes for the future.

What final summary you stated:

The Navy is provided with a definite ideal in the form of a definite statement of the policy of the United States which it is to be prepared to enforce, the Navy can not formulate building programs and war plans except in accordance with the foreign policy of the United States.

And you state:

That regulations under which the Navy was operating during the war and which are unsatisfactory.

On account of the great position that you occupied during the war and on account of your great knowledge of naval matters in the committee would like to have you, at some future time, make a statement about the foreign policy of the country as it relates to the Navy, and also to state in what particulars the

organization of the Navy was faulty and to suggest some general plan for remedying the faults in the organization, and we shall call on you at some time in the near future to give us a statement about these matters.

Admiral MAYO. Can you give me an idea, Mr. Chairman, as to what length of time I will have in order to get that out? That is a thing that requires thought and consultation and coordination of ideas,

The CHAIRMAN. We will give you as much time as you want.

Admiral MAYO. Very well, sir; I will go at it.

The CHAIRMAN. I think that is all, Admiral. We have no further matters, and you are excused.

TESTIMONY OF REAR ADMIRAL BRADLEY A. FISKE.

(The witness was sworn by the chairman.)

The CHAIRMAN. Admiral Fiske, will you state to the committee what duties you performed from the opening of the World War in 1914 down to the date of the armistice?

Admiral FISKE. I was aid for Operations in 1914. I had been aid for Operations for about a year. I have a statement here which goes into the history of it, more or less.

The CHAIRMAN. You were aid for Operations in 1914?

Admiral FISKE. In 1914.

The CHAIRMAN. And for one year thereafter?

Admiral FISKE. I had been aid for Operations since February, 1913.

The CHAIRMAN. Yes. Now, Admiral, can you make a statement to the committee about matters connected with the operations of the Navy?

Admiral FISKE. I have a statement prepared, Mr. Senator, which goes back to the time when I was aid for Operations, a year or so before the war began in 1914.

The CHAIRMAN. On all matters pertinent to this investigation?

Admiral FISKE. Yes, sir. The first portion of this, the first three or four pages, may seem not pertinent, but they are. It is the groundwork on which what I say afterwards is based.

The CHAIRMAN. Very well.

Admiral FISKE. While captain I was a member of the General Board from August, 1910, till August, 1911. During all except the first three or four months of that time I was in charge of the war plans section of the General Board, and responsible for the preparation and readiness of the war plans of the Navy under Admiral Dewey. On taking charge I was surprised to find that the war plans were extremely meager, and did not embody, it seemed to me, even 1 per cent of what war plans should embody. During the eight or nine months that I was in charge of them I did what I could to make them more full and complete; but as I had only two assistants, and we all had other work to do, and as I had had no experience or training in making war plans, I made no appreciable headway.

As there is some misunderstanding about what a war plan is, I beg leave to state that a war plan is a plan prepared in peace for the purpose of enabling a navy or army to start very quickly on any given line of conduct immediately after war is declared, by deciding on that line of conduct before war actually begins and by arranging all

in advance. If anyone will read history carefully, he will find all the highly successful campaigns of the great commanders began so quickly after war had been declared that their opponents were taken by surprise, and that the plans had been so well worked out in advance that very few if any mistakes were made.

No man to realize the necessity in modern times for the highly complicated and detailed war plans that the complexity of modern warfare demands was Moltke. Moltke set the pace that all other commanders have had to follow since, under penalty of being defeated in battle. The penalty is so great, the number of lines of action so many, the amount of detail so enormous that a war plan at the present time, even a naval war plan, would fill a bushel basket.

A large part of the bulk of the war plan would be not so much the plan itself as the details for carrying it out; just as the general plan of a house or building which one wishes to erect may be shown on a single sheet of paper, while the detail plans which a builder needs to actually to build the house may cover many sheets.

The general plan which may be called the strategic plan, simply states, usually briefly, the line of conduct decided on. For

example, if we were to send a naval force to attack Mozambique, it would state the more routes that are to be taken, and which route will be taken under certain conditions. It also prescribes the amount of force, how it will be divided up, and the numbers and the kinds of vessels which it will be composed. This general plan is usually decided after what we call chart maneuvers and war games have been

carried out and decisions have been reached as to what the general lines of action. The main features of the war plan are decided on, the details of how to carry it out are worked out thoroughly; such as the providing of fuel and food and ammunition. In all cases where sufficient time is allowed certain kinds of vessels, and equipments are constructed.

When sufficient time has been allowed after the coming of war had been declared, and if this time has been utilized to the best advantage, the various units of personnel and equipment will be waiting in readiness for the instant of the declaration of war. When the decision is finally made, and the news sent by radio telegraph to the fleet and other units, they can start to fulfill their mission immediately. I am told that the British fleet started in less than an hour after the declaration of war.

In order to prepare suitable plans of war, the Germans found out long ago what a large body of officers experienced in making such plans was required. To this body of officers the name given in Germany is planning division. No planning division was started in the United States until August 1, 1918. I beg leave to place in the record a paper called "Organization of the Office of Naval Operations."

The planning division in the office of naval operations then was organized, as will be noted on page 7 of this organization plan, not separated from administrative work.

The plan referred to is here printed in full in the record, as

ORGANIZATION OF THE OFFICE OF NAVAL OPERATIONS, AUGUST 1, 1918.

Any officer on duty in the Office of Naval Operations or who reports for duty must familiarize himself with the details of this organization.

W. S. BENSON.

ORGANIZATION OF OFFICE OF NAVAL OPERATIONS.

1. The duties of the Chief of Naval Operations as head of this office are defined by regulations as follows:

"There shall be a Chief of Naval Operations who shall be an officer on the active list of the Navy appointed by the President, by and with the advice and consent of the Senate, from among the officers of the line of the Navy, not below the grade of captain, for a period of four years, who shall, under the direction of the Secretary of the Navy, be charged with the operations of the fleet and with the preparation and readiness of plans for its use in war." (Act Mar. 3, 1915; N. R. 103 (1).)

ASSISTANT CHIEF OF NAVAL OPERATIONS.

2. For administrative purposes an officer of suitable rank and experience will be designated as assistant to the Chief of Naval Operations, and he shall hold the same relation to the heads of the divisions as an executive officer of a ship holds to the head of departments on board ship. The assistant to the Chief of Naval Operations shall not attempt to administer the details of any division.

All questions of policy and questions involving the formation of plans, or a change in plans, should first be taken up with the assistant to the Chief of Naval Operations by the head of the division concerned.

DIVISIONS OF THE OFFICE OF NAVAL OPERATIONS.

3. The primary functions of the Office of Naval Operations are:

(1) Preparation of plans and policies, and (2) operating the forces of the Navy.

The actual planning work will be carried on by the Plans Division, and the actual operations of forces will be administered under the supervision of the Chief of Naval Operations or of the assistant Chief of Naval Operations under the administrative caption "Operating forces." The other activities of the office are administered through the following divisions: Intelligence Division, Material Division, Naval Districts Division, Aviation Division, Communication Division, Gunnery Exercises and Engineering Performances Division, and Files and Records Division.

4. The heads of these divisions are authorized to administer the details of their respective divisions by direction of the Chief of Naval Operations. This delegated authority covers only the administration of approved policies and plans. The heads of divisions shall lay before the Chief of Naval Operations, in concise form, for his consideration and approval, all questions requiring his decision or involving a change in policy or plans, using their discretion as to which are of sufficient importance to first be referred to the Planning Division. The above divisions of the Office of Naval Operations exist to obtain effective administration, and the heads of the various divisions must not be allowed to overlook the fact that the final responsibility rests upon the Chief of Naval Operations, who desires and must have, at all times, a comprehensive knowledge of the activities of the several divisions.

5. Heads of divisions will submit, at regular intervals, or from time to time, as may be found most suitable, such condensed statements as will most readily enable the Chief of Naval Operations to keep intimately in touch with their activities, plans, and progress. Such information will be merely supplementary to frequent conferences with heads of divisions. In order to conserve time, conferences should be arranged through the aid to the Chief of Naval Operations or with one of his assistants.

6. The organization of the several divisions is and shall be in accordance with the approved diagrammatic plan. No additions or changes will be made in any part of this organization without the written approval of the Chief of Naval Operations. With any proposed changes, a diagram shall be submitted showing wherein the change will affect the present organization, or, if new work, where it will link with the present organization.

7. In addition to the divisions of the office, an officer of or above the rank of lieutenant commander will be designated as senior aid to the Chief of Naval Operations. Additional officers will be ordered as aids or as assistants to the aids to the Chief of Naval Operations as may be required. In addition to the duties prescribed by regulations for an aid, the senior aid to the Chief of Naval Operations will have general supervision of all rooms and office space assigned to the office; will handle all correspondence relative to officers' records and officers' orders, and other naval personnel correspondence, and will generally assist, under the assistant to the Chief of Naval Operations, in the organization of the office and the coordination of the work of the several divisions of the office with bureaus and with other departments, unless a special representative is designated.

8. The complement of officers and clerical assistants shall be in accordance with the plan above mentioned. This shall be the "allowed complement" from which the "actual complement" may vary under the same conditions as hold in a ship's organization.

9. To explain the method of handling a subject involving the various divisions, the following may be taken as an illustration:

Certain conditions are known to exist, let us suppose, through information obtained from force commanders and detailed information obtained through Naval Intelligence. The information, with the objects to be obtained, is sent to the Planning Division. The Planning Division makes a study of the subject and calls a meeting of a certain plans committee. This committee deliberates on the information at hand and on the mission. It then prepares definite recommendations of what it proposes in order to insure the success of the mission. The matter is then taken up with the Chief of Naval Operations, and if approved by him (or the Secretary if required) is referred to Material Division, Aviation Division, and (or) Districts Division according to the requirements. These divisions proceed with the preparation of the material and personnel which may be necessary to make the approved plan effective.

Everything having been provided, and everything being in readiness for making the plan effective, the operating orders are issued (by the Division of Operating Forces) and the plan is put into effect so far as movements are concerned and forces are handled under the direction of the Chief of Naval Operations or the Assistant Chief of Naval Operations.

ORGANIZATION OF DIVISIONS.

10. *Intelligence Division (Office of Naval Intelligence).*—The Intelligence Division is charged with the collection of information for the department and for other naval activities which require it. It publishes and disseminates such information to the Navy and to Government officials requiring it. It cooperates with the other executive departments of the Government in discovering and bringing to justice persons engaged in activities against the United States. It directs all naval attaches abroad, and is the official channel of communication for all foreign naval attaches in the United States.

It is the duty of the Office of Naval Intelligence to keep in close touch with all naval activities, both in and out of the Navy Department. The office handles all classes of information excepting purely operating information, which is usually (and should always) be forwarded by the senior officer present direct to the Chief of Naval Operations. Such information is under the cognizance of the Division of Operating Forces.

11. *Planning Division.*—The organization of the Planning Division is, in general, as follows:

It will be composed of a body of selected men who shall have had special training, particularly in war staff work. It may not be practicable to separate entirely the Planning Division from certain administrative work, but the administrative work assigned to the personnel of this division must be as little as the allowance of commissioned personnel in the other divisions of the office will permit. The administrative heads of all divisions of the Office of Naval Operations are ex officio members of the Planning Division. It will not, however, be necessary for the heads of the divisions to sit on the various plans committees, except on matters in which they are interested. The plans committees shall be ordered for the considerations of various classes of papers. There shall be a permanent committee consisting of the assistant to the Chief of Naval Operations, the heads of all divisions and the officers of the Planning Division.

The Chief of Naval Operations, or assistant to the Chief of Naval Operations, may name other committees for the consideration of various classes of papers and they may, at their discretion, call special plans committee meetings, the members of which may be selected by them. The personnel of special plans committees do not necessarily form a part of the Office of Naval Operations, but may be designated in addition to other duties which they are performing. The officer in the Office of Operations who is most vitally concerned in any plans under consideration by a plans committee should sit with the committee which is considering that particular plan, and he, in his administrative capacity, should be the follow-up man on the committee for that particular plan.

12. The Planning Division is organized for the purpose of deliberating upon all changes of policy and all proposed plans of operations which come before the department. Questions involving a change on policy, and those questions upon which a definite policy has not yet been determined, must be referred by the division concerned, with appropriate remarks and all necessary papers, to the Planning Division

for consideration before being presented to the Chief of Naval Operations for decision. The action of the Planning Division or of any subcommittee thereof shall be clearly expressed in proper official form, as briefly as may be consistent with the subject in hand, and signed by all officers who have taken part in the deliberation. The Planning Division shall keep a careful record of all action taken by it as a body and by all plans committees.

13. The Planning Division and plans committees' decisions are in no sense final and shall never be considered as the basis for action until approved by the Chief of Naval Operations. The function of the Planning Division is purely deliberative and not executive or administrative, except as pointed out above.

14. *Material division.*—It will be noted from the diagram that the material division is organized so that the several sections thereof have cognizance of the several general divisions or classes of vessels. It is the duty of the officers of the various sections of the division to keep in close touch with those handling the planning and operating end of the work for their classes of vessels, and to attempt to shape their work to meet the approved plans and the operating orders for the vessels in question, subject, of course, to the approval of the head of the material division.

It is the duty of the head of the material division to coordinate the work of the navy yards and other industrial establishments of the Navy. He shall carefully study all projects which have for their purpose the expansion of any industrial establishment or base, or the building of any new base or plant for industrial activities. It is his duty to anticipate the material needs of the service, to advise the Chief of Naval Operations accordingly, and to initiate correspondence on such questions and prepare such papers as may be advisable for consideration by the planning division and by plans committees.

15. *Naval districts division.*—The function of the naval districts division is to form the connecting link between the Office of Naval Operations and the naval districts. It undertakes the routine central administrative work in connection with naval districts operations and advises the Chief of Naval Operations in regard to matters of policy affecting the naval districts. It undertakes the work of properly supplying the districts with facilities, so far as practicable for carrying out their work including the supply and assignment of district vessels and the locating and building of district bases.

The districts division has cognizance of the routine commandeering of vessels for the Navy, and of the correspondence which such commandeering occasions. It must work closely with all other divisions of the office, and with all bureaus, in order that it may assist in adjusting all matters between the districts and the department about which a clear understanding does not exist.

16. *Aviation division.*—The aviation division has cognizance of all aviation activities which are under the direction of the Chief of Naval Operations, except the actual operation of aircraft designated for offensive and defensive operations. Such aircraft are part of the operating forces of the Navy.

17. *Operating division.*—The movements of all naval craft, whether surface, submarine, or air, not especially designated for training and experimental purposes exclusively, shall be directed by the Chief of Naval Operations and the Assistant Chief of Naval Operations, through the officers charged with the responsibility of supervising the movements of: (1) Fighting vessels of the Navy; (2) vessels of the naval overseas transportation service.

In the case of craft assigned to a naval district, a fleet, or a force, the orders issued by the Chief of Naval Operations to the commandant or force commander, as the case may be, will not specify individual craft unless the character of the mission or the existing circumstances so require. In order that the movements of all classes and types of craft may be coordinated and effectively and efficiently directed, it is essential that the supervising officers work in closest touch with the various divisions of the office, especially with material, naval districts, and aviation.

Complete and accurate records and analyses of the movements and operations of Naval craft shall be made and particularly care shall be taken to disseminate this information to the divisions, offices, and bureaus concerned. Only by the exercise of intelligent thought and constant attention can satisfactory results in this respect be attained. The success of much of the work of the bureaus and the development of the requisite spirit of cooperation between this office and the bureaus depends on the intelligence and skill with which this phase of the work is handled. Commandants of districts and commanding officers of fleets, forces, and stations shall be kept informed of the movements of all of our own and allied naval craft and of all known or probable movements of enemy craft which would make their work more comprehensive or assist them in carrying out the orders of the department. The Assistant Chief of Naval Operations will be responsible for the general coordination of the

movements and operations of all naval craft, but the officers supervising the several classes and types of craft will be held strictly accountable for the efficient performance of the duties assigned to them.

18. *Communication division.*—The director of naval communications is charged with the administration, organization, and operation of the entire radio, telegraph, telephone, and cable systems of communications within the naval service, including the operation of the trans-Atlantic radio system and all communications between merchant ships and all shore stations in the United States and its possessions. The foregoing includes the preparation and distribution of all codes, cyphers, and secret calls and commercial accounting. The director of naval communications handles all matters pertaining to radio communication in any manner whatsoever, except those relating solely to purchase, supply, test, and installation of apparatus.

The director of naval communications is also chief cable censor, which involves the administration of the organization for censor in all cablegrams from or to the United States and its possessions, except the Philippine Islands.

19. *Gunnery exercises and engineering performances division.*—That branch of Naval Operations which is the office of gunnery exercises and engineering performances is charged with the issuing to the service of instructions for gunnery and engineering exercises and operations, for collection, analyzing, and review of data, in regard to gunnery and steaming performances of naval craft, and the review of battle inspections of ships for the Chief of Naval Operations, in connection with the preparation and maintenance of the fleet for war. To this end the director of gunnery exercises and engineering performances is expected to make timely and suitable recommendations to the Chief of Naval Operations to increase efficiency.

The functions of the office are divided into four parts: (a) Gunnery, (b) steaming, (c) small arms, and (d) inspections. Each of these functions has three distinct steps: (e) Preparation and training, including the issuance of necessary plans to the service for conducting exercises and tests; standard instructions; and general dissemination of information. (f) The conduct of exercises and inspections, including cooperation with the operating branches of the Office of the Chief of Naval Operations, in the movement of units to conduct exercises, cooperation with operations (Mat) and the bureaus to conduct special tests, improve installations, and increase efficiency in operation. (g) Analytical and historical, including the collection of data of gunnery inspections and engineering as regards actual performances of naval craft in service; and the dissemination of this information to those who would be benefited thereby.

GENERAL INSTRUCTIONS.

20. Up to the time of the promulgation of this order heads of divisions have not taken up for consideration the problems of policy with other divisions as much as appears advisable. Careful consideration must, therefore, be given in the future to this question, and the views of the Planning Division and such plans committees as may be ordered must be obtained where doubt exists. It becomes the duty of the heads of all divisions to carefully consider such questions and to refer them to the Planning Division without awaiting the advice of the Chief of Naval Operations to follow this course. The fact that an officer refers questions to the Planning Division for consideration is no reflection upon his knowledge or ability, but rather an appreciation on his part of the value of deliberate professional discussion of weighty problems which are sure to arise from time to time.

21. The Assistant Chief of Naval Operations shall call a weekly conference, the committee consisting of the heads of divisions, the officers of the Planning Division, and such others as he may consider necessary for the purpose of discussing the current questions which are before the office, and for the further purpose of taking up for general discussion such questions as may relate to the activities of two or more divisions of the office. It is the duty of the heads of the divisions to prepare such matters for discussion upon the occasion of these meetings.

22. The head of each division should consider the advisability of holding a weekly conference of all officers of his division for the purpose of coordinating the work of his several sections and with a view to giving these attending to details a comprehensive idea of the general work of the division and of the office, imparting to them such information as may assist them in their work or may make more comprehensive the policies involved.

23. Formal correspondence between the different divisions of this office is not approved and shall not be indulged in. Matters in which two or more divisions are jointly concerned must be taken up informally in conference or, if this is not necessary, by memorandum.

24. It is the duty of every officer to consider every piece of correspondence that comes to his desk with a view to its usefulness to others. Nothing helps so much in an organization as large as this office as a wise dissemination of proper information and this fact must be carefully borne in mind and must be a guiding principle. When action is taken in one division upon any matter regarding which other divisions or bureaus should be informed, the division initiating the action must, if necessary, prepare additional copies for the information of others who are concerned or whose work may be facilitated by a knowledge of the action taken. An officer taking any action on any paper or an officer receiving incoming information is responsible for the dissemination of the information to others whether they be in this office, in the bureaus, the districts, or the forces afloat, and he will be held accountable for the same by the Chief of Naval Operations.

25. Officers must bear constantly in mind the fact that the Office of Naval Operations is the coordinating center of all the various naval activities of the service. The function of the office is, therefore, largely one of rendering decisions upon which the various bureaus and offices concerned may base their administrative work. In handling correspondence all officers should be governed by these conditions:

First. Does this paper come under my personal cognizance?

Second. If so, does it reflect upon, or would it make any more comprehensive the work of any other division of the office or bureau of the department?

Third. Shall it be referred by routing slip or by indorsement for information?

Fourth. Does my action on this paper affect, and, knowing same, would it assist any division or bureau other than that to whom it is addressed? If so, shall I send copy of my action or route via party concerned, or shall I consult with the interested parties before taking action?

Fifth. Am I acting in accordance with a well defined and approved policy?

Sixth. If not, shall I refer to the bureau or others concerned, for recommendation, and then to the Planning Division for its action, or is the general policy of the question before me sufficiently well known for me to prepare a brief memorandum to accompany my action letter to the Chief of Naval Operations for his signature?

Admiral FISKE. A year later—that is, on August 1, 1919—this organization was revised, and a planning division organized in the Office of Naval Operations, in which the work of the Planning Division was divided into two parts, the first of which was concerned with war plans only. I beg to place in the record an official paper called “Revised organization orders of the Office of Naval Operations,” and to call attention to the fact that it was not until August 1, 1919, that the Navy Department established an organization for the exclusive duty of making general and detail plans of war. I beg leave to place in the record an official diagram showing the work of planning division now.

(The revised organization orders above referred to are here printed in the record, as follows:)

REVISED ORGANIZATION ORDERS OF THE OFFICE OF NAVAL OPERATIONS, THIRD
ISSUE, AUGUST 1, 1919.

NAVY DEPARTMENT,
Washington, D. C., August 1, 1919.

The revised organization orders of the Office of Naval Operations contained herein are approved.

These orders and the organization which they make effective are the result of war experience in handling the work which legally comes under the cognizance of this office. I earnestly hope that the officers attached to this office and the service at large will realize the tremendous value to the service and the country of the Office of Naval Operations, and will use their best efforts to increase its efficiency and its effectiveness.

W. S. BENSON,
Admiral, Chief of Naval Operations.

THE CHIEF OF NAVAL OPERATIONS.

The functions of the Chief of Naval Operations as head of this office are defined by the following:

There shall be a Chief of Naval Operations who shall be an officer on the active list of the Navy, appointed by the President, by and with the advice and consent of the Senate, among the officers of the line of the Navy, not below the grade of admiral, and not less than four years, who shall, under the direction of the Secretary of the Navy, be charged with the operations of the fleet, and with the preparation and execution of its use in war. (Act Mar. 3, 1915; N. R. 103 (1).)

The Chief of Naval Operations, while so serving as such Chief of Naval Operations, shall have the rank and title of "admiral," to take rank next after the senior admiral in the Navy. All orders issued by the Chief of Naval Operations in performance of his duties shall be performed under the authority of the Secretary of the Navy, and his orders shall be considered as emanating from the Secretary, and shall have the same force and effect as such. (Act Aug. 29, 1916; N. R. 103 (2).)

ASSISTANT CHIEF OF NAVAL OPERATIONS.

The Assistant Chief of Naval Operations, for administrative purposes, and next in authority to the Chief of Naval Operations, shall be an officer of suitable rank and experience will be designated as Assistant to the Chief of Naval Operations. He shall hold the same relation to the heads of divisions as the Chief of Naval Operations holds to the heads of departments on board ships. The Chief of Naval Operations shall not administer the details of any

division, but shall refer all questions involving the formation of plans, or a change in the policy of any division, to be taken up with the Assistant to the Chief of Naval Operations of the division concerned.

The Assistant Chief of Naval Operations has cognizance of Navy regulations, naval orders, and general orders. When circumstances require it, an officer may be detailed to the details incident thereto.

DIVISIONS OF THE OFFICE OF NAVAL OPERATIONS.

The functions of the Office of Naval Operations are: (1) the preparation of policies and plans, and (2) the operation of the forces of the Navy in accordance with approved plans and administrative work incident thereto.

The functions of the Office of Naval Operations are not administrative, and all work in connection therewith shall be done by a body known as the Planning Division, none of whose members shall have administrative duties.

The Office of Naval Operations will be operated under the supervision of the Chief of Naval Operations, and the Assistant Chief of Naval Operations, the administrative details shall be handled by the Division of Operating Forces. The functions of (2) are purely administrative, and for the purpose of making effective the approved work of the Office of Naval Operations.

The administrative divisions are as follows: Operating Division, Division of Communication, Materiel Division, Naval Districts Division, Gunnery Exercise and Engineering Performances Division, and Records Division.

PLANNING DIVISION.

The Planning Division shall be composed, as nearly as personnel conditions will permit, of selected officers who shall have had training in war staff work.

The Planning Division has been organized for the purpose of deliberating upon all matters which come before the department and the preparations of plans and policies. It is important that the members of the Planning Division be selected on the basis of their experience, rank, and reputation, command the confidence of the department and of the naval service. The work of this division is of two kinds, namely: (1) war plans, and (2) plans in connection with current operations. The work of the Planning Division shall be divided into the following sections:

- 1. Foreign relations.
- 2. Naval policies.
- 3. Naval policies.

Section B.—Strategy section:

- (1) Strategy of foreign powers—
 - (a) Peace-time strategy.
 - (b) War-time strategy.
 - (c) Building programs.
- (2) Own grand strategy. This comprises—
 - (a) Naval strategy in peace and in war.
 - (b) Military strategy in peace and in war.
 - (c) Building program—types, numbers.
 - (d) Naval bases.

Section C.—Tactics section:

- (1) Naval tactics of foreign navies.
- (2) Own naval tactics of—
 - (a) Fleet as a whole.
 - (b) All elements of naval power.
 - (c) Building program—tactical requirements

Section D.—Education Section:

- (a) Doctrine.
- (b) Tactical instructions.
- (c) Leadership; cooperation.
- (d) Manuals.

Section E.—Submarine section.

Section F.—Aviation section.

NOTE.—Sections E and F are considered necessary at this time on account of the fact that the naval activities they cover are still under development to such a degree that not only is our future policy in regard to them not yet determined, except in a very general way, but their strategical and tactical value, when properly developed, is considered so important that these special sections for the development of these and related problems are essential. In matters of policy, strategy, and tactics, therefore, the heads of these two sections bear the same relation to submarine activities and aviation activities, respectively, as the heads of the first three sections named bear to other naval craft and bases, the problems of which are more definitely known and are of a more general character.

Section G.—Logistics section:

- (a) Bases.
- (b) Reserve supplies.
- (c) Personnel.
- (d) Mobilization.
- (e) Train.
- (f) Materiel.
- (g) Merchant marine.

Section H.—Secretary.

Section I.—Administrative plans.

WAR PLANS.

5. Every problem should be considered as a part solution of a general plan rather than as something that stands alone, detached, and solitary. For this reason the most general problems should be solved first, and subsequent problems should arise from the decisions of the more general problems. National policy, naval policy, national strategy, naval strategy, logistics, naval tactics, form a descending series from the general to the concrete which may be used as a partial guide in determining chronological sequence of effort in problem solving.

6. The Chief of Naval Operations will propose the problems, and the Director of Plans, in consultation with the Assistant Chief of Naval Operations, will prepare the problems and assign them to committees for solution.

7. Every solution of a problem concerning war plans that may be submitted shall be examined by all sections. The committee responsible for the solution shall, if necessary, demonstrate in conference to the Planning Division as a whole the soundness of its conclusions.

ADMINISTRATIVE PLANS.

8. In addition to the war plans work carried on by the permanent personnel of the Planning Division, the officers of sections E, F, G, and I will be particularly concerned with administrative plans. For planning work of this character planning committees may be named, when considered advisable, by the Chief of Naval Operations or the Assistant Chief of Naval Operations for the consideration of various classes

At least one officer from the Planning Division should be appointed to each committee. The number and composition of planning committees will be determined by the Chief of Naval Operations or Assistant Chief of Naval Operations; but as a general rule that such committees will be composed of those officers most familiar with, and in most cases, those handling the administrative subject in hand. Officers composing planning committees are not attached to Operations.

JOINT ARMY AND NAVY PLANNING COMMITTEE.

The members of the Joint Army and Navy Planning Committee will be selected by the Chief of Naval Operations from the members of the several sections of the Planning Division. Three or more members will be so designated. The Army and Navy Planning Committee will investigate, study, and report on subjects relative to the national defense and involving joint action of the Army and Navy, to be referred by the Joint Army and Navy Board. It shall also have the right to consider such subjects when in its judgment necessary. The members of this committee are authorized to consult and confer freely on all matters of national and military policy in which the Army and Navy are jointly concerned, and to consider this joint work as their most important duty. The work of the Joint Army and Navy Planning Committee will be informal. Its recommendations shall be confidential and will be made to the Joint Army and Navy Board.

GENERAL REGULATIONS AND PRINCIPLES.

Questions involving a change in policy, and those questions upon which a decision has not yet been determined, must be referred by the division concerned with appropriate remarks and all necessary papers, to the Planning Division before being presented to the Chief of Naval Operations for decision. Reports of the Planning Division or of any subcommittee thereof shall be clearly stated in official form, as briefly as may be consistent with the subject in question, by all officers who have taken part in the deliberation. The committee shall then be submitted to the Chief of Naval Operations, and if approved by him (or the Secretary if required) all divisions concerned shall be informed in order that administrative details may proceed.

The Chief of Naval Operations and the administrative heads of all divisions are ex officio members of the Planning Division.

The staff of the Planning Division shall not be given administrative work, but shall prepare and handle such correspondence with other departments as may be necessary for the study of policy and preparation of plans. On account, however, of the developments and large amount of work necessary in connection with submarines and aviation, it is necessary to assign a large of sections E and F to exercise coordinating supervision over the several sections of the different divisions which are concerned with matters connected with their respective work, and to consult with the Bureau representatives. They shall have full authority to act as far as relates to the personnel of the sections concerned in the execution of this work. Like other sections of the Planning Division they have no plans and plans for their particular work, and are advisory in matters connected with them. All administrative work shall, however, be carried on under the supervision of the divisions concerned.

To insure supervision effective and to insure the cooperation of all divisions, the officers in charge of sections E and F shall frequently call on the respective representatives in the several divisions of the office. These representatives shall be informed of the time and place of these conferences and encouraged to attend. In like manner they shall from time to time visit submarine bases and aviation bases and stations, respectively, and report on their relation to these as they do to the actual operating forces.

RELATIONS WITH OTHER GOVERNMENT DEPARTMENTS.

It is to be kept in touch with the activities in all departments of the Government, and in the Navy Department and in the fleets, constant liaison maintained. The Chief of Naval Operations hopes that it will be the aim of the Planning Division to keep in touch with officials of the Government in and out of the Navy Department.

ment from whom information can be obtained which would lend a broadening influence to the work of the office. A member of the policy section will be the liaison officer with State and other departments in routine matters.

LIAISON WITH WAR COLLEGE.

15. An officer of the Planning Division shall be designated for liaison with the Naval War College

DISCUSSION WITH OFFICERS OF THE SERVICE.

16. In order that subjects under discussion may have every viewpoint considered the Director of Plans is authorized to consult directly with officers of the service and, when he considers advisable, he may request the Chief of Naval Operations to order such officers for temporary duty with the Planning Division.

LIAISON WITH OFFICE OF NAVAL INTELLIGENCE.

17. The Planning Division shall establish a close liaison with the Office of Naval Intelligence. The officers of the Planning Division shall call upon the Office of Naval Intelligence for information collated and arranged in the desired manner.

SEPARATE FILING SYSTEM.

18. The Planning Division shall, on account of the nature of its work, have a separate and carefully organized filing system with the necessary confidential stenographers and clerks. It shall keep a careful record of all action taken by it as a body and by all planning committees.

COMPLETED SOLUTIONS.

19. The completed solutions of all problems shall be submitted to the Chief of Naval Operations for his action.

20. The director of plans shall continue in close touch, in an advisory way, with the execution of plans.

RESPONSIBILITY OF COMMITTEES.

21. Each committee will be responsible for the completeness and soundness of the solutions of problems assigned to it, and will present finished solutions to the director of plans.

APPROVAL OF PLAN.

22. The Planning Division and plans committees' decisions are in no sense final and shall never be considered as the basis for action until approved.

DIVISION OF OPERATING FORCES.

23. The movements of all naval craft, whether surface, subsurface, or air, not specially designated for training and experimental purposes exclusively, shall be directed by the Chief of Naval Operations or the Assistant Chief of Naval Operations, through the officers charged with the responsibility of supervising the movements of: (1) Fighting craft of the Navy; and (2) all other naval craft.

24. In the case of craft assigned to a naval district, a fleet, or a force, the orders issued by the Chief of Naval Operations to the commandant or force commander, as the case may be, will not specify individual craft unless the character of the mission or the existing circumstances so require. In order that the movements of all classes and types of craft may be coordinated and effectively and efficiently directed, it is essential that the supervising officers work in closest touch with the various divisions of the office, especially with Planning Division, material, and naval districts. Complete and accurate records and analyses of the movements and operations of naval craft shall be made and particular care shall be taken to disseminate this information to the divisions, officers, and bureaus concerned. The success of much of the work of the bureaus and the development of the requisite spirit of cooperation between this office and the bureaus depend on the intelligence and skill with which this phase of the work is handled. Commandants of districts and commanding officers of fleets, forces, and stations shall be kept informed of the movements of all of our own naval craft and of all known or probable movements of foreign craft which would make their work more comprehensive or assist them in carrying out the orders of the department. The

Assistant Chief of Naval Operations will be responsible for the general coordination of the movements and operations of all naval craft, but the officers supervising the several classes and types of craft will be held responsible for the administrative work involved.

ASSIGNMENT OF DUTIES.

25 The duties of the sections of this division are as outlined on the diagram accompanying these regulations. The following explanations and regulations are added:

STATISTICAL SECTION.

26. Section G shall become the statistical section for all matters pertaining to the movements and operations of naval craft. Its general scope of work shall be as follows:

1 Prepare an accurate index history of each fleet, unit, and subunit of that fleet, showing the composition of the various units, their movements, and, where possible, the duty performed in connection with these movements.

2 Prepare an accurate index history of each vessel in the Navy. This shall apply to aircraft as well as other naval craft. This data should show the dimensions, fuel consumption, cruising radius, tactical qualities, armament, and all movements of the craft from the date of commission, with duty performed, and the division or subdivision of the fleet or the stations to which attached, if any, at each time. In case of vessels not built by contract for the Navy, prepare a complete history of the vessel's activities previous to delivery to the Navy and method by which the vessel was obtained from the Navy. Also a résumé of any action against an enemy of the United States in which the vessel has been engaged.

3 Continue the present general inspector's duties of naval overseas transportation service until this is abolished.

4 Prepare movement reports of naval overseas transportation service vessels and troop transports as at present until this operation ceases.

5 Prepare summaries of naval overseas transportation service activities as at present until this activity ceases.

AUXILIARY SERVICE—MERCHANT MARINE INTERESTS—TRANSPORTS.

27. Section H shall, with its subordinate sections I and K, carry on the work heretofore under the cognizance of the naval overseas transportation service. One of the most important duties in connection with this section is the liaison with the Shipping Board and the merchant marine. Stated generally, its functions may be defined as follows:

1 The handling of all matters pertaining to the merchant marine.

a Above all is personal interest. Before the war there was no cordial relationship between the Navy and merchant marine. By the formation of the Naval Reserve, and as a result of the Navy handling merchant ships during the war, a closer sympathy between the two has been fostered. The policy in regard to the Reserve Force and its use in time of peace will foster or break the present cordial relations. Find it, if possible, what the Navy can do in time of peace to help the merchant marine.

b Keep in touch with the statistical section to build up a set of statistics on merchant ships with their availability and adaptability for naval use in time of war. Also the shore and port facilities of United States ports. This is a most important duty.

c If the Navy Department should take a similar relationship with the United States merchant marine as is maintained by England, this desk should be the beginning of such a supervision.

2 Maintenance of a nucleus for a naval overseas transportation service organization, in case such an organization is again needed by the Navy.

(a) The idea in this is to be prepared for any emergency and in doing so to profit by the experience gained in naval overseas transportation service during war operations. The merchant marine could not handle the situation of carrying supplies in the presence of the enemy, and the Navy will have it to do again if the emergency arises.

(b) In connection with the plans committees, prepare general plans in regard to routing, coastwise and otherwise, for the preservation of our merchant vessels in case of war.

3) The handling of all matters pertaining to the operation of naval auxiliaries, and cargo vessels operated by the Navy for other Government departments.

(4) The handling of all matters pertaining to the operation of troop transports by the Navy.

NAVAL OVERSEAS TRANSPORTATION SERVICE PROBLEMS.

28. In carrying out the above for probably a year there will be a great many matters come up in regard to the naval overseas transportation service. These matters of course will be handled by this desk.

INTELLIGENCE DIVISION (OFFICE OF NAVAL INTELLIGENCE).

29. The Intelligence Division is charged with the collection of information for the department and for other naval activities which require it. It publishes and disseminates such information to the Navy and to Government officials requiring it. It cooperates with the other executive departments of the Government in discovering and bringing to justice persons engaged in activities against the United States. It directs all naval attachés abroad, and is the official channel of communication for all foreign naval attachés in the United States.

30. It is the duty of the Office of Naval Intelligence to keep in close touch with all naval activities, both in and out of the department. The office handles all classes of information excepting purely operating information, which is usually (and should always be) forwarded by the senior officer present direct to the Chief of Naval Operations. Such information is under the cognizance of the Division of Operating Force.

COMMUNICATION DIVISION.

31. The director of Naval Communications is charged with the administration, organization, and operation of the entire radio, telegraph, telephone, and cable systems of communications within the naval service, including the operation of the trans-Atlantic radio system and all communications between merchant ships and all shore stations in the United States and its possessions. The foregoing includes the preparation and distribution of all codes, ciphers, and secret calls and commercial accounting. The Director of Naval Communications handles all matters pertaining to radio communications in any manner whatsoever, except those relating solely to purchase, supply, test, and installation of apparatus. During war the Director of Naval Communications is also chief cable censor, which involves the administration of the organization for censoring all cablegrams from or to the United States and its possessions, except the Philippine Islands.

COMMUNICATION OFFICE OF NAVY DEPARTMENT.

32. The communication office of the Navy Department (a section of the Communication Division) is responsible for the handling of all telegraphic and radio communications to and from the Navy Department. In order that the Planning Division may be kept in constant touch with progress in the execution of plans and all other information which would affect their work, the communication office will, from date of promulgation of these orders, furnish the Planning Division with copies of all dispatches sent or received by the Office of Naval Operations.

33. The duties of the sections of this division are as outlined on accompanying diagram.

MATÉRIEL DIVISION.

34. It will be noted from that diagram that the Matériel Division is organized so that the several sections thereof have cognizance of the several general divisions or classes of naval craft. It is the duty of the officers of the various sections of the division to keep in close touch with those handling the planning and operating end of the work under their cognizance and to attempt to shape their work to meet the approved plans and the operating orders for the vessels in question, subject, of course, to the approval of the head of the Matériel Division.

35. It is the duty of the head of the Matériel Division to coordinate the work of the navy yards and other industrial establishments of the Navy. He shall carefully study all projects which have for their purpose the expansion of any industrial establishment or base or the building of any new base or plant for industrial activities. It is his duty to anticipate the material needs of the service, to advise the Chief of Naval Operations accordingly and to initiate correspondence on such questions and prepare such papers as may be advisable for consideration by the Planning Division and by plans committees.

The duties of the sections of this division are as outlined on accompanying diagram.

NAVAL DISTRICTS DIVISION.

36. The function of the Naval Districts Division is to form the connecting link between the Office of Naval Operations and the naval districts. It undertakes the routine central administrative work in connection with naval districts except such as logically comes under other divisions, and advises the Chief of Naval Operations in regard to matters of policy affecting the naval districts.

37. In war or national emergency the Districts Division has cognizance of the routine commandeering of vessels for the Navy and of the correspondence which such commandeering occasions. Upon demobilization it has corresponding duties with such vessels.

38. The Districts Division must work closely with all other divisions of the office and with all bureaus, in order that it may assist in adjusting all matters between the districts and the department about which a clear understanding does not exist.

INSPECTIONS DIVISION.

40. The activities at present under this division are:

(a) Board of inspection and survey, and (b) joint merchant vessels board.

41. The board of inspection and survey is charged with inspection and trials of newly constructed naval vessels and, at intervals specified by law, with the material inspections of all vessels of the Navy. It is in close coordination with the Matériel Division of the Chief of Naval Operations.

JOINT MERCHANT VESSELS BOARD.

42. The joint merchant vessels board is charged with the inspections of privately owned craft and the securing of such data relative to such craft as will determine their suitability for military purposes.

GUNNERY EXERCISES AND ENGINEERING PERFORMANCES DIVISION.

43. That division of the Office of Naval Operations which is the office of gunnery exercises and engineering performances is charged with the duty of issuing to the service instructions for gunnery and engineering exercises and operations, the collection, analysis, and review of data in regard to gunnery and steaming performances of naval craft, and the review of battle inspections of ships for the Chief of Naval Operations in connection with the preparation and maintenance of the fleet for war. To this end the director of gunnery exercises and engineering performances is expected to make timely and suitable recommendations to the Chief of Naval Operations to increase efficiency.

44. The functions of the office are divided into four parts: (a) Gunnery, (b) steaming, (c) small arms, and (d) inspections.

45. Each of these functions has three distinct steps:

(1) Preparation and training, including the issue of necessary plans to the service for conducting exercises and tests; the preparation of standard instructions and the general dissemination of information.

(2) Cooperation with the other divisions of the Office of Naval Operations in the movement of units to conduct exercises; cooperation with the Matériel Division and the bureaus to conduct special tests, improve installations, and increase efficiency in operation.

(3) Analytical and historical, including the collection of data pertaining to the actual performances in gunnery and engineering of naval craft in service, and the dissemination of this information to those who would be benefited thereby.

FILES AND RECORD DIVISION.

46. The head of this division is the chief clerk of the office.

This division shall have charge of the delivery, routing, handling, and mailing of all official mail of the office (both confidential and nonconfidential); of the records of all personnel, except officers, of the office and general supervision of the clerical force of all the divisions of the office; of the procuring and delivery of all supplies, printing, etc., issuance of passes, and such other administrative matters as ordinarily come within the province of the chief clerk's office of a bureau or office.

AID TO CHIEF OF NAVAL OPERATIONS.

47. In addition to the divisions of the office, an officer of or above the rank of lieutenant commander will be designated as senior aid to the Chief of Naval Operations. Additional officers may be ordered as aids or as assistants to the aids to the Chief of Naval Operations as required. In addition to the duties prescribed by regulations for an aid, the senior aid to the Chief of Naval Operations will have general supervision of all rooms and office space assigned to the office; will handle all correspondence relative to officers' records and officers' orders, and other naval personnel correspondence, and will generally assist, under the assistant to the Chief of Naval Operations, in the organization of the office and the coordination of the work of the several divisions of the office with bureaus and with other departments, unless a special representative is designated.

GENERAL INSTRUCTIONS—PERSONNEL COMPLEMENTS.

48. The complement of officers and clerical assistants shall be in accordance with the diagrammatic plan approved August 1, 1919. This shall be the "allowed complement," from which the "actual complement" may vary under the same conditions as hold in a ship's organization.

COOPERATIVE WORK OF DIVISIONS.

49. Up to the time of the promulgation of this order heads of divisions have not taken up for consideration the problems of policy with other divisions as much as appears advisable. Careful consideration must therefore be given in the future to this question, and the views of the Planning Division and such plans committees as may be ordered must be obtained where any doubt exists. It becomes the duty of the heads of all divisions to carefully consider such questions and to refer them to the Planning Division without awaiting the advice of the Chief of Naval Operations to follow this course. The fact that an officer refers questions to the Planning Division for consideration is no reflection upon his knowledge or ability, but rather an appreciation on his part of the value of deliberate professional discussion of weighty problems which are sure to arise from time to time.

WEEKLY CONFERENCE.

50. The Assistant Chief of Naval Operations shall call a weekly conference consisting of the heads of divisions, the officers of the Planning Division, and such others as he may consider necessary, for the purpose of discussing the current questions which are before the office and for the further purpose of taking up for general discussion such questions as may relate to the activities of two or more divisions of the office. It is the duty of the heads of divisions to prepare such matters for discussion upon the occasion of these meetings.

WEEKLY CONFERENCES IN DIVISIONS.

51. The head of each division should consider the advisability of holding a weekly conference of all officers of his division for the purpose of coordinating the work of his several sections, and with a view to giving those attending to details a comprehensive idea of the general work of the division and of the office, imparting to them such information as may assist them in their work or may make more comprehensive the policies involved.

NO CORRESPONDENCE BETWEEN DIVISIONS.

52. Formal correspondence between the different divisions of this office is not approved and must not be indulged in. Matters in which two or more divisions are jointly concerned must be taken up informally in conference or, if this is not necessary, by informal memorandum.

REPORTS OF FITNESS.

53. Reports of fitness for officers on duty in the Office of Naval Operations will be prepared and signed by the officers in charge of divisions and will then be submitted to Chief of Naval Operations for approval. The Chief of Naval Operations will personally prepare reports of fitness for heads of divisions and for such other officers as may be required by regulations.

METHOD OF HANDLING BUSINESS.

54. To explain the method of handling a subject involving the various divisions, the following may be taken as an illustration:

55. Certain conditions are known to exist, let us suppose, through information obtained from force commanders or through Naval Intelligence. The information, with the mission clearly stated, is sent to the Planning Division, or a planning committee is named to take up the problem. Those designated deliberate on the information at hand and on the mission. They then prepare definite recommendations stating what is proposed in order to insure the success of the mission. The matter is then taken up with the Chief of Naval Operations, and if approved by him (or the Secretary, if required), is referred to Material Division, Aviation Division, and (or) District Division, according to the requirements. These divisions proceed then to get the required information and authority to the bureau concerned so that they may proceed with the preparation of the material and personnel which may be necessary to make the approved plan effective.

56. Everything having been provided, and everything being in readiness for making the plan effective, the operating orders are issued (by the Division of Operating Forces) and the plan is put into effect so far as movements are concerned, the forces being handled under the direction of the Chief of Naval Operations or the Assistant Chief of Naval Operations.

DISSEMINATION OF INFORMATION.

57. It is the duty of every officer to consider every piece of correspondence that comes to his desk with a view to its usefulness to others. Nothing helps so much in an organization as large as this office as a wise dissemination of proper information, and this fact must be a guiding principle. When action is taken in one division upon any matter regarding which other divisions or bureaus should be informed, the division initiating the action must, if necessary, prepare additional copies for the information of others who are concerned or whose work may be facilitated by a knowledge of the action taken. An officer taking any action on any paper, or an officer receiving incoming information, is responsible for the dissemination of the information to others whether they be in this office, in the bureaus, the districts, or the forces afloat.

58. Officers must bear constantly in mind the fact that the Office of Naval Operations is the coordinating center of all the various naval activities of the service. The function of the office is, therefore, largely one of rendering decisions upon which the various bureaus and offices concerned may base their administrative work. In handling correspondence, all officers should be governed by these considerations:

First. Does this paper come under my personal cognizance?

Second. If so, does it reflect upon, or would it make any more comprehensive the work of any other division of the office or bureau of the department?

Third. Shall it be referred by routing slip or by indorsement for information?

Fourth. Does my action on this paper affect, and knowing same, would it assist any division or bureau other than that to whom it is addressed? If so, shall I send copy of my action or route via party concerned, or shall I consult with the interested parties before taking action?

Fifth. Am I acting in accordance with a well-defined and approved policy?

Sixth. If not, shall I refer to the bureaus or others concerned for recommendation, and then to the Planning Division for its action, or is the general policy of the question before me sufficiently well known for me to prepare a brief memorandum to accompany my action letter to the Chief of Naval Operations for his signature?

(The official diagram presented by Admiral Fiske is not reproduced in this record.)

Admiral FISKE. According to modern principles, the planning division in any navy or army is the original source from which all work starts; because not only the actual operations of war, but all the previous measures of preparation of personnel and material are taken up, after the decisions of the planning division have been made, and approved. This shows that the first thing necessary to do, in order to prepare a navy for war, is to prepare a plan of war.

At the conclusion of my duty on the general board, I went to sea as a rear admiral in command of the fifth division of the fleet. This was in August, 1911. I was afterwards in command of the third and

then the first division, and second in command of the third and then the first division, and second in command in the fleet. I was detached on January 3, 1913, and made aid for inspections of the Navy. I was made aid for operations, the senior aid of the Secretary of the Navy, and his military adviser on February 11, 1913.

I took up my duties with a grave sense of my responsibilities, especially because the failure of the Declaration of London put the whole status of international law, as applied to maritime affairs, in a condition of approximate chaos; so that if any war should occur between any great European nations, the position of the United States, as neutral, would be almost impossible to maintain. Had the Navy been prepared for war, I should not have felt so much concerned, but I knew that the Navy was not only unprepared in personnel and material, but that it did not even have any plan for even entering an important war.

The present Secretary of the Navy came into office in less than a month after I became aid for operations. Naturally, I looked forward to my future relations with him with considerable interest. I was much relieved when I found him to be a delightful gentleman, companionable, sympathetic, and apparently open-minded. He announced his desire to make the Navy efficient, and he was kind enough on many occasions to say things to me and about me that were very pleasant.

The following August, 1913, I spent at the War College at Newport. By that time, I had come to realize that the Secretary's mental characteristics and his previous training were not such as to give him the capacity to regard the Navy as a whole. His tendency was to concentrate his attention on some one part of the Navy, usually connected with its personnel, and to exaggerate its importance with Navy as a whole. For this reason, I wrote him a letter from the War College, pointing out respectfully, but earnestly, the necessity for taking a broader and profounder view. I have a copy of this letter with me, and I will put it in the record if desired. Part of it was written by me personally; the other part was written by certain officers on the staff of the War College. That part is unsigned.

The CHAIRMAN. I think that matter had better be put in the record.

Admiral FISKE. Yes, sir. That was August, 1913.

(The letter and attached matter referred to are here printed in full in the record as follows:)

DEPARTMENT OF THE NAVY.

GENERAL BOARD,

Naval War College, Newport, R. I., August 26, 1913.

From: Rear Admiral B. A. Fiske, United States Navy, aid for Operations.

To: Secretary of the Navy.

Subject: Administration of the Navy Department.

Reference: Exodus, Chapter XVIII, paragraph 13 et seq.

1. In presenting this paper to the Secretary I wish to make it clear that the ideas expressed in it are not original with me, but have been gotten from study and from conference with other officers; that they agree with the ideas held by the great navies of the world, and that they are the ideas by which those great navies are directed.

2. The first point to which I ask the Secretary's attention is the fact that navies are members of a competing class. The measure of readiness of any navy is, and must be, her readiness as compared with that of other navies. In this respect, a navy is like any competitor in any competition. Therefore, it is not sufficient to say that any navy is of itself excellent or otherwise, any more than it is sufficient to say, regarding any

to this player that he is excellent. The only prize a tennis player can get is against some opponent; and, unless his excellence is greater than that of his opponent, he will not win the prize, no matter how excellent he may be.

3. If we hold this idea in mind we will then see clearly that the United States Navy must have a readiness for war which will compare favorably with that of her probable opponents; that is, with the navies of Great Britain, Germany, France, Japan, and Italy. At present we are forced to acknowledge our inferiority to the navies of Great Britain and Germany, not only in point of size, but in point of readiness for war.

4. How to get into readiness for war and keep in readiness, is not only the duty of the Navy in peace—it is its paramount duty. To get the Navy into readiness for war, and keep it in readiness, is not only the duty of the Secretary, it is his paramount duty, so far as his relations to the Navy per se are concerned. When war breaks out between two countries, the war will continue and will according to the numerical strength and the efficiency of the forces engaged, the spirit and courage with which the men have been imbued, the degree of excellence of the organizations in which they are directed, the knowledge and skill which their station and training have imparted to them, the speed and thoroughness of their mobilization. When war breaks out all the forces that will determine the result are already in existence. The result is already determined, though it is not known to mortals. Therefore, far above and beyond all minor responsibilities the direct and immediate responsibility of the Secretary of the Navy is the Navy's readiness for war.

5. We can not comprehend fully this question of readiness, unless we realize fully the change brought about in military and naval matters by the startling revelations of 1870. In 1870 the German and French armies met in a series of battles whose result astonished the world, even the military world. Germany and France were not unequal in population or resources, but whatever disproportion there was, was in favor of France. The armies were not unequal in size, but whatever disproportion there was, was in favor of France. The armies and the generals of France had had much more experience than had those of Germany; "even their generals of divisions and brigades had more actual experience than those who led the German Army corps;" the French were by nature a more military people; they were fully as brave as the Germans, and fully as intelligent. Yet the armies of France went down before the armies of Germany with a suddenness and completeness that had no parallel in history.

6. The reason was eagerly sought and speedily found. The reason was simply that the Germans, under the direction of Von Moltke, had organized a general staff which had made such perfect plans of mobilization and subsequent operations that, on the outbreak of war, the German Army was ready immediately. The whole German Army had been made into a vast machine. All its parts were fabricated, finished, and in place. Steam was up in the throttle; and as soon as war was declared, the throttle was opened, and the whole engine began to move with perfect precision, without friction and without noise.

7. The triumph of the German organization was so splendid and complete that all the military nations of the world took the lesson to heart at once, with the result that to-day every military nation in the world has its army and navy organized on German principles.

8. The last two countries to follow the lead of Germany were Great Britain and the United States. The reason for the inactivity of the United States is not hard to find; but in regard to Great Britain it must be stated that the British Admiralty and the British Navy had never lapsed into the state of unreadiness of the various armies of the world. The British Navy was even in 1870 in nearly the same state of readiness as at the present time. Little attention was called to this fact, however, or has since been called to the fact, because the British Navy has, for many centuries, been kept ready by the Admiralty and no great change was necessary, such as Von Moltke brought about in the German Army.

9. The British Army, however, remained unaffected or very little affected by the lesson of 1870; and as a result was practically disgraced by the Boer War. So startling was the evidence brought about by the Boer War of the unreadiness of the British Army and so directly was this unreadiness traced to the inefficiency of the system in the British War Office as its cause, that a commission was appointed to investigate the matter. This commission resulted in the famous "Esher report." This Esher report recommended that the British war office be entirely reorganized on the basis of the British Admiralty. This recommendation was at once put into effect, and the British war office is now organized almost exactly as is the British Admiralty.

10. In the United States little attention has been paid to the lessons of the Franco-German war by the Government. The United States, being a nonmilitary country, having engaged in no serious foreign war since the Revolution, military and naval

questions have not been considered important, and the great minds of the country, with a few notable exceptions, have not been focussed on them.

11. The War Department, however, during the administration of Hon. Elihu Root, was reorganized on a basis very similar to the German, so far as direction of the Army was concerned; with the result that the administration of the Army has been very greatly improved and the Army's readiness for war very greatly increased.

12. The only organization belonging to the national defense of any great country which is not organized on the German plan, or on a plan similar to it, is the United States Navy. Why the United States Navy has lagged behind all other organizations of a similar kind is not difficult to understand, when one realizes that the United States is a nonmilitary country; and that, while a far-sighted statesman, with the aid of a Congress in political sympathy with him, was able to place our Army on a basis of military readiness, no similar combination has yet been found to do the same thing for our Navy.

13. During the past few years, by reason of our growing familiarity with the principles of war as taught by our War College, there has been an increasing agitation over the subject of giving the Navy a more efficient organization; but nothing was accomplished in a practical way until the administration of your predecessor, in which four "aids" were made advisors to the Secretary, each aid being advisor for a certain division of the duties of the department, the four aids together forming the "council."

14. This system has made a great improvement in the work of the department, especially in coordinating the work of the various bureaus, and in giving to the Secretary the advice of experienced officers, who know what should be done in order to put the Navy into readiness for war.

15. By adopting the "aide system" the Navy Department may be said to have taken a step half way from a previous unmanageable condition to the position occupied by the military organizations of the other great countries, including the British Admiralty.

16. But the step was only half way to efficiency, and the present method of administration can be improved. If the present method were like that of any other great organization, even industrial organizations in our own country; if all the people at the head of it were engaged in doing the most important work of which they were capable; if every one of them had time for the consideration of important matters; and was not perpetually interrupted by unimportant matters; if high officials did not have their time and attention diverted by the consideration of subordinate matters, then we might declare that, while our system is different from all others, it is different because it is better. But this is not the case.

17. As a matter of fact, under the present system much of the time of the Secretary of the Navy, a Cabinet officer intrusted with the direction of one of the most important departments of the Government, must be devoted to comparatively unimportant questions. His time is precious in the highest degree and yet much of it is spent on matters that a subordinate could handle, with the result that the amount of time that he can give to important questions is abbreviated. He is sometimes compelled to delay the consideration of matters on which some subordinate needs a decision.

In any other great organization, even an industrial organization in our own country, the time of the head of the organization is economized in the most scientific way. His time is comparatively free, and he occupies his mind with great questions and not with little ones. If the work of the Navy Department were properly systematized, the Secretary's time and attention would be properly and profitably employed in great public questions connected with the Navy and the country. He would have leisure for conference with statesmen and public men, for reading the writings of authorities on naval and military policies and foreign relations; and he would be, as he ought to be, the man next to the President, or possibly next to the Secretary of State, occupying the most commanding position in the United States with relation to her really important national and international affairs.

18. What has just been said about the work of the Secretary of the Navy may be reiterated with only a little less emphasis about the work of the Assistant Secretary.

19. In my opinion what has been said about the waste of the time of the Secretary and the Assistant Secretary must be reiterated with regard to the time of the four aids. These officers are supposed to be valuable men, otherwise, they would not be advisors to the Secretary; yet we find their time wasted also. But while much of the time of the Secretary is wasted by being employed with minor matters, their time is wasted largely by simply waiting to get opportunity for those full and frank conferences with the Secretary which are essential, if efficient teamwork is to be attained.

20. While these statements are true of all the four aids, they apply particularly to the aid for Operations. The handling of the fleet and individual ships, as well as various questions pertaining to the War College, the General Board, and the Office

of Naval Intelligence, and (which is the most important of all), the preparation and readiness of the Navy for war, are in his division of labor; and yet he has no authority whatever in these matters, or any clearly defined responsibility, except that of giving advice.

21. The organization of our Navy Department is entirely different from that of any other of which the writer has knowledge. In every efficient organization, great or small, the head of the organization handles the organization as a unit, through the heads of the various divisions. He alone, at the top, handles no separate divisions. He has the right, for purposes of inspection or correction, to intervene between the head of a division and a subordinate. The heads of divisions have authority in their divisions and should be held responsible to the chief, not for details but for results. These principles, I believe, are common to every great organization of the world, great or small, that is efficiently conducted. In no other way does any successful organization conduct its business. This is the case, even in 99 per cent of the organizations of the world, in which the head of the organization is familiar with the details of the organization, having grown up with it. If such a system is necessary in these organizations; if in these organizations a system is necessary in which the heads of the organization does not manage directly each department, but simply manages the heads of the departments, how much more is it necessary in our Navy Department, of which the Secretary is a civilian, who can not be familiar with the details, and must therefore trust to his subordinates.

22. I therefore recommend that the Secretary and the Assistant Secretary meet the four aids in council every day; that at these meetings the questions before the department be discussed; that each day the Secretary give the various aids such instructions as he sees fit in regard to the work he wishes done in their various divisions, and that each aid then carries out these instructions he has received by means of oral and written orders: written orders being signed "By direction of the Secretary," as was authorized in the Regulations of 1909, but never carried out. I would also recommend that a clerk be present at the meetings of the Secretary and aids in council to keep the minutes of the meetings. No money or legislation would be needed to do this.

23. I respectfully request the attention of the Secretary to a memorandum on this subject, prepared by the War College, in which the ideas embodied in this letter are expressed in "War College language."

B. A. FISKE.

MEMORANDUM PREPARED BY THE NAVAL WAR COLLEGE, NEWPORT, AUGUST 26, 1913.

Subject: Administration of the Navy Department.

Reference: Exodus, Chapter XVIII, paragraph 13 et seq.

1. The accomplishment of any task requires, first of all, a clear conception of that task. The task to be considered here is the administration of the Navy Department. We are therefore led to inquire why the Navy Department exists. We find that it is a necessary part of the Navy. The mission of the Navy Department flows directly from the mission of the Navy.

2. The mission of the Navy is to maintain itself in the maximum possible degree of readiness for war in order that honorable peace may be maintained; or, if war comes, in order that honorable peace may be reestablished in the shortest possible time.

3. No mission for the Navy other than this will satisfy present-day conditions. Nations are competing organizations. In peace they compete by diplomacy, by legislation, and by commercial effort. In war this competition is intensified by the competition of armed forces, each seeking the annihilation of the other. The factors that govern the competition of armed forces are strength, efficiency, and readiness. Under modern conditions no one of these factors can be neglected. No matter what the condition of a navy may be when judged by a noncompeting standard, neither its strength nor its efficiency nor its readiness for war are what they should be unless it can compete successfully with navies of probable enemies. From these considerations the mission of the Navy Department is derived.

4. The mission of the Navy Department is to so administer the affairs of the Navy as to maintain the Navy in the maximum possible degree of readiness for war.

5. This mission should be clearly understood and constantly borne in mind by every individual of the Navy Department. Every decision as to naval administration should be derived from this general mission. It must be the guide to effort.

6. At the head of the Navy Department is the Secretary of the Navy, through whom the President exercises the authority of Commander in Chief. The Secretary of the Navy has a double mission. He is the head of a great department of the Government, and as such he is one of the chief counselors of the President. He is, over and above

all, a statesman, assisting his chief in guiding the destinies of a great Nation, which destinies are in unavoidable conflict with the destinies of other nations. There is a unity in great governmental duties that requires a world-wide view by each individual on whom those duties devolve. Each question as it arises is a part of the whole. A clear grasp of the whole permits the true statesman a prophetic vision by which he is the more able to give a true direction to events. From these considerations we derive the Secretary's first and highest mission.

7. The first and highest mission of the Secretary is so to coordinate the efforts of the Navy as a whole with the efforts of other departments of the Government as best to further national aims.

8. The other mission of the Secretary is derived directly from the mission of the Navy Department, of which he is the head.

9. The second mission of the Secretary is so to administer the affairs of the Navy, through the Navy Department, as to maintain the Navy in the maximum possible degree of readiness for war.

10. This mission brings us directly to the question of administration and the foundational methods of its sound practice. Efficient administration requires that there be unity of action, coordination of effort. Centuries of experience since the days of Moses have served to demonstrate the wisdom of the advice which he received from his father-in-law, and on which he acted, that there must be leaders over thousands, and over hundreds, and over tens; a supreme authority flowing downward, through subordinates, in defined channels, to individuals. This arrangement permits to high authority time for the consideration of great questions and delegates to subordinates questions graded in importance to the station and abilities of those subordinates. It results in the faculties of high authority being brought, unfatigued by the consideration of subordinate matters, to the solution of the greater problems of the organization. It results, further, in the solution of all subordinate questions of harmony with great and governing policies.

11. The necessity for the kind of administrative ability here indicated flows from the natural limitations of the capabilities of any individual and from the supreme necessity for the smooth and unclogged working of the administrative machinery of a great organization.

12. Wherever high authority is so submerged in details that it can not give proper attention to great questions as they arise, there we find the sources of the inefficiency. A badly conceived intention of high authority rapidly spreads its influence through every ramification of the organization. The same is true of a well-conceived intention when suitable expression is given to it by action. These considerations lead to the subject of the proper mission of the aids to the Secretary. It is unnecessary to quote from the regulations the present division of administration work in the department or the duties of the aids in that work. The administrative work of the department is grouped with a view to efficient coordination of effort. At the head of each administrative group is an aid, whose duties are solely advisory. This restricted view of an aid's duties is a clog in administrative procedure. The aid is powerless, except for the signature of the Secretary; and too often the Secretary has not sufficient time to see the aids and sign those papers necessary to realize the efforts at coordination with which the aids are charged. Further, the aids can not relieve the Secretary of the administrative details of which he should be relieved.

13. The experience of many years with the bureau system in the department has shown the necessity for a coordinating link between the various bureaus. The aids should be this coordinating link.

14. From these considerations we derive the following as the true mission of the aids to the Secretary. Like the Secretary himself, each aid has a double mission.

15. The first mission of an aid is, under the general direction of the Secretary, so to coordinate the efforts of his group as a whole with the administrative groups of the department as best to execute the purpose of the Secretary in the accomplishment of his mission.

16. The second mission of an aid is under the general direction of the Secretary so to administer the affairs within his own group as best to accomplish the aims of the Secretary in the accomplishment of the Secretary's mission.

17. Coordination of effort requires first of all a clear understanding of what is to be done, and then a knowledge of all on the part of each of the share each cooperating colleague has in the general effort. So the aids need, as a first step in the accomplishment of their several missions, a systematic association with each other and with the Secretary. Such systematized association establishes a feeling of the fullest loyalty and mutual confidence, as all come to know the aims and motives of each. At stated hours each day the aids should assemble with a view to the accomplishment of their first mission. This preliminary conference should be followed by a confer-

... with the Secretary, together with the recommendations of the aids. ... should then give general instructions to the aids, who would then dis- ... at his instructions, and thereby accomplish their several missions.

... FISCHE. By this time, I realized also that the Secretary ... at my insistence on certain measures of preparedness, and ... would be much better for me personally if I should moderate ... This became especially apparent when I, with ... Dewey's approval, nominated Rear Admiral Knight to be ... of the War College. The Secretary declared that I was the ... president. I should have had to go if Admiral Dewey had ... and insisted that I should stay where I was.

... the following year, 1914, I did all that I could to bring the ... to realize the necessity of dealing with the Navy as a whole, ... with its separate parts, but with little if any success. In ... I tried to make him see the necessity of approving a cer- ... of the General Board's general war plan, which we called ... "the administrative plan." This was not a war plan ... in the sense that it supplied the base from which the Navy ... could start to prepare for war. It merely provided that ... bureaus and the department itself should cooperate ... preparedness by means of a system of reports which each ... make to the department once every three months in ... status of that bureau in preparedness. I was unable ... Secretary to approve the administrative plan during my ... of office with him, though it lasted for more than two ... May 11, 1915. I frequently brought it to his attention ... him to sign it, pointing out that until he had signed it, it ... impossible for the Navy even to start toward a state of ... and that it was necessary for him to sign it as soon as ... because, even after he had signed it, it would take several ... war plans could be made and developed and the Navy ... in accordance with them. On every occasion the Secre- ... to sign the paper.

... 1914, I got permission again to go to the War College for ... of August. I arrived in Newport on July 31. The even- ... said that war between Germany and Austria on one side, ... and Russia on the other—and possibly Great Britain— ... declared the following day. I resolved immediately to ... Admiral Knight to call a meeting of the General Board the ... evening. The General Board was then at the War College, ... was in the summer months. I did so; and we spent the ... August 1, 1914, in preparing and sending a letter in which we ... the various dangers of the United States being drawn ... and the consequent necessity of making certain prep-

... I returned to Washington in September, 1914, I found that ... had been done toward preparedness, and that the Secretary's ... thought was the work that he was outlining for an aid for ... an office that he had just established. Naturally I was ... concerned. The officers of the War College had been much ... during August with the situation in Europe, and had con- ... after many conferences, that the chances were in favor of ... and that if Germany succeeded in Europe, she would th

attack the United States as the one bar between her and world dominion.

During the following months of 1914, after many consultations with Navy officers, I concluded that it was my urgent duty to make the Secretary see the truth, no matter what effect it might have on my professional future. Of course my professional future was entirely in his hands. As aid for operations, I was most concerned with the impossibility of getting the Navy ready in time, in case we got into the war, because mainly of the lack of a sufficient personnel and the absence of any staff, or planning division for making general and detail plans of war.

As to the personnel situation, the remarks in my diary during the months of October and November, 1914, contain frequent statements about the endeavors of the General Board and myself to get the Secretary to ask Congress for 19,600 additional enlisted men. I should be glad to read any extracts that the committee may desire. The gist is that the General Board decided to recommend that the Secretary ask for 19,600 more enlisted men, that the Secretary asked the General Board not to put that recommendation in their written report; that the General Board did so nevertheless; that the Secretary directed me to request the General Board to omit that recommendation; that the General Board finally did so, and that the Secretary's annual report, made in December, was generally interpreted as meaning that the General Board did not think that any more men were needed. In my later testimony before the House Naval Committee on March 24, 1916, I was cross-questioned on this matter. I told the whole truth about it; but, of course, it was too late. I have a copy of my testimony with me.

The CHAIRMAN. I suggest that you put that testimony in the record.

Admiral FISKE. Very well.

(Portions of the hearing above referred to by Admiral Fiske are here printed in the record, as follows:)

(No. 43.)

THE COMMITTEE ON NAVAL AFFAIRS,
HOUSE OF REPRESENTATIVES,
Friday, March 24, 1916.

The committee this day met, Hon. Lemuel P. Padgett (chairman) presiding.

STATEMENT OF REAR ADMIRAL BRADLEY A. FISKE.

The CHAIRMAN. Gentlemen of the committee, we have with us this morning Rear Admiral Fiske.

Admiral Fiske, you were before the committee last year, and at some length gave your views in relation to certain matters in the Navy which were published. It is now a year later, and I want to ask if you have any additional or different suggestions to make to the committee other than those given to the committee last year.

Admiral FISKE. I have no suggestions or statements to make contrary to those; but naturally, that has been 15 months ago and my ideas have expanded a good deal, and I have, of course, a good many ideas which I did not have then.

The CHAIRMAN. My question was not if you had any contrary views, but if you had any additional views?

Admiral FISKE. Yes, sir; I think I have.

The CHAIRMAN. The committee will be glad to have you express your views.

Admiral FISKE. I have prepared some notes, and if it will not take too long, I will just read them over.

The CHAIRMAN. You may proceed in your own way, without interruption.

Admiral FISKE. Fifteen months ago, on December 17, 1914, I had the honor to testify before this committee as aid for operation. In that capacity I had been brought into closer touch with the Navy and its efficiency compared with that of other navies than any other person; and the peril of the situation had been brought close home to me by the Vera Cruz and Tampico incidents, the disturbance in the public mind about Japan, the fact of the European war, and the danger of our being entangled in it.

American naval officers had been aware for many years that our Navy differed from the other great navies in the matter of preparedness; that the other great navies had followed the lead of Germany in the matter of preparedness and that we had not; that the other great navies had adopted in more or less modified forms the idea of the German general staff, but that we had continued to follow the method that we had been using for practically a hundred years without trying to adapt it to modern conditions. They realized, it is true, that we had established a Naval War College before other nations had; but they also realized that the War College remained a college pure and simple; that it was a thing apart from the Navy and that its teachings were almost ignored. They realized, for instance, that the War College had always insisted that the Navy must have a general staff, or else surrender any chance of being as efficient as other navies, and yet that we could get no general staff. They realized that, as a result, there was no continuity in the aims of either the department or the fleet; that each successive Secretary of the Navy and each commander in chief of the fleet went ahead according to his own ideas, with little reference to the ideas of his predecessor. Of course, in time of peace this state of things wrought no disadvantage; but officers all realize that if war should come with a real military power, it would come so suddenly that we could not get ready in time to fight the war successfully.

During the latter part of the last administration the department was administered under a system that was called sometimes the "aid system" and sometimes the "Meyer system," because Secretary Meyer put it into effect. The system, however, did not embody a new idea, but was the outcome of the report of a board of naval officers, called the Swift Board, which report was founded on the report of a board called the Moody Board, headed by ex-Secretary Moody, of which the other members were ex-Secretary Admiral Luce, Admiral Mahan, Judge Dayton, and others; and the report of the Moody Board was founded largely on the report of the so-called Esher Board in England, which investigated the cause of the unsatisfactory operations of the British Army in the Boer War. The Esher report itself was founded on the organization of the British Admiralty, which had continued in successful operation for nearly 300 years. In other words, the Swift Board recommended a sort of modification of the British Admiralty adapted to the needs and ideals of our country.

There were two Swift reports, however, signed the same day; one recommending the aid system and needing no legislation for its execution, and another report recommending a similar organization, except that there should be four chiefs of divisions instead of four aids, each chief having authority under the Secretary in his division.

Mr. OLIVER. What was the date of the Swift report?

Admiral FISKE. I think July, 1909; I think about that time.

This recommendation—that is, that the four men should be chiefs of division having authority under the secretary in their divisions—needed legislative authority for its execution, and it was not published. The secretary at that time desired to have the latter organization put into effect, but he did not think the time was ripe and therefore did not press it.

When the present administration came in the aid system was in operation. It worked well, but naturally, as it was a halfway or intermediate measure, it was not wholly satisfactory. If the Navy was to remain always at peace, it was unnecessary and complicated the organization of the department unduly; while if the Navy should get into war, it was not adequate to insure quick action and sure coordination. For this reason, it seemed the obvious duty of the aid for operations, as the military adviser of the secretary, and in fact his senior advisor, directly charged with the operations of the fleet, to bring the secretary gradually to the point of view that the unpublished recommendations of the Swift Board should be put into effect. The aid for operations, therefore, started at this task at once (see his letter to the secretary, dated Aug. 26, 1913) and he was still engaged on that task when he testified before this honorable committee on December 17, 1914.

The views which he expressed at that time, therefore, had not been hastily formed and they were not carelessly expressed. Neither were those views radical or peculiar; on the contrary, they were those held by all naval officers of experience and thoughtfulness, not in our Navy only, but in all navies. They represented not only the thought of the great military navies, but their actual practice; they did not advo-

cate any extreme or original measures, intended to put our Navy far ahead of other navies, but only measures to get our Navy out of a rut and put it on a par with other navies.

During the giving of my testimony the chairman of this committee said to me:

"If I understand you, the crux of your criticism of what is lacking in organization is that there should be a general staff?"

To this I answered "Yes." The chairman then said:

"To prepare plans and to do the work of a general staff ashore, preparatory to sea?"

To this I answered:

"Yes, sir; preparatory and during the war."

Perhaps a little explanation may be desirable here, to the effect that the unpublished report of the Swift Board recommended what would be in effect a general staff, though not to be called by that name; the reason for not using the name being a desire not to offend a curious prejudice among some civilians against a general staff, due to misinformation as to its intent and character. In other words, when I used the words general staff, and when American officers now use that phrase, the phrase means only a body of specially trained officers to study and recommend and execute plans, headed by a chief of staff. A general staff is somewhat like any committee, and the chief of the general staff is somewhat like the chairman of the committee. In fact, this committee at this moment is doing general-staff work for the Navy.

Previous to December 17, 1914, however, the excitement about Japan, the Tampico, and Vera Cruz incidents, and the rapid spread of the war in Europe forced on my attention and the attention of the officers in the Operations Division of the department the fact that for sufficiently quick work in mobilization and in conducting a campaign the aid for operations would need a great many assistants that the Swift report did not contemplate. The wonderful speed and certainty with which the European armies and fleets started showed that if we were ever to have to contend against one of them, we would be beaten badly in getting ready; and so we would start with a handicap that it would probably be impossible to overcome. It became clear, not as a matter of academic interest, not as a fact to be mentally accepted and not acted on, but as a living menace that no matter how many fine ships we might have, we would go down as the French did in 1870, because we were not ready and our antagonist was. It was for this reason that I accented the need for a staff to make plans and also the need for 20,000 enlisted men who should be thoroughly trained and actually ready before the war began.

Your committee was evidently impressed with the need for a general staff, for you embodied in the following appropriation bill a provision for a chief of naval operations with at least 15 assistants to prepare war plans. Unfortunately, this provision went out on a point of order, but fortunately the main feature of the provision was restored later, and the bill as it went through established the Office of Chief of Naval Operations. In the opinion of most naval officers this was the most important step toward the modernization of the United States Navy that has been taken since 1880, when the steel ships *Dolphin*, *Atlanta*, *Boston*, and the *Chicago* were authorized. Most officers regret, however, the omission of the 15 assistants. Had they been prescribed they would have been able to lighten greatly the labors of this committee by working out, with the assistance of the game board, and presenting a number of alternate plans for your selection; each plan describing a program recommended as the best for a given sum of money.

Since my previous appearance here, the effect has been continuously shown of proper preparedness before plunging into war; and the fact that this has been appreciated for years by the strong nations of the world has also been shown. This war so far has shown no new thing to Army and Navy men, except in details. The underlying principles of strategy, as expounded by the strategists of the past, have been found to apply to modern times; and the present war simply falls into line with other wars and teaches the same harsh lessons. The history of mankind has not been finished, the direction of national progress has not been changed, and the unprepared and weak still go down before those who are prepared and strong. No nation in history has ever become great without the exercise of military power, or fallen from greatness without neglecting it. Only three great nations of the world have maintained their greatness for 800 years, and these are the three greatest nations now, France, Germany, and Great Britain; and each of these nations has always maintained a carefully balanced relation between the civil and the military, allowing neither to wax unduly great in comparison with the other.

All these nations lay great stress on the preparedness of their navies, and not only in the matter of plans, but also in the matter of men; that is, not only in plans, but also in the men to execute those plans. They realize that navies do not consist of

men who use the ships. All those nations have large bodies of reserves existing not only on paper but in fact, existing not only as organizations of men. Service in the reserve is obligatory in all those countries, but practice.

We have no reserve worthy of the name, though we have been trying to get one. If we should get into war in the near future, the only men we could count on for service, or rather for effective service, would be those wearing the uniform. Modern wars come too quickly to warrant that. We may not realize this unless we realize that the probability of a fight, but to win; that the battle between the *Chesapeake* and the *Albatross*, which it was, was as fruitless for the success of the American policy as a battle with the windmill.

My opinion of opinion that it would take at least five years to get a navy to fight effectively an effective navy, like the one then indicated, more than a hundred conversations with officers since then, and not changing my position; every officer with whom I have talked has agreed with me. I wish to say now that I did not believe that it could be done in five years. I think it wise to make a statement that might seem sensational, but that my subsequent studies, discussions, and reflections have led me to believe that after how much money we may spend, we shall never be able to reach the condition of efficiency of certain other navies until we change our system to a system as good as theirs.

As I understand, it is your opinion that had Congress enacted the provision that was reported from this committee we would have a more efficient bureau than we have under the provision that was enacted?

Yes, I think so, yes, sir.

Is it your opinion that the provision reported from this committee would be complete enough to give us a real effective General Staff or whatever name we chose to call it? In other words, did we have the provision reported out from the House Naval Committee?

I think there should have been more than 15 assistants. I do not think so. Speaking only as a naval officer, and not taking any broad view of the Navy as a navy, having only in mind its ostensible duty, I think that it would be well to have some provision whereby in strictly military work the recommendations of the staff should be carried out. I am speaking only as a naval officer. Speaking as a naval officer, I understand you to mean that the staff should be placed under the control of military men, in other words, that the military and military work of the Navy should be placed under naval control.

Of course, it must all be under the President. The President is the chief, and we might call him a naval officer in that capacity. It is the President.

I understand that.

I only wish to guard against giving the idea that I want to put military officers in. Of course, none of us wants that. I want to guard against that impression.

Would you give that authority to the naval officers, over military matters, to the Secretary of the Navy?

I did not recommend that extreme, no, sir.

There was one officer who recommended it. You do not?

No, sir, but I should like to say, in trying to define my position, that I do not.

Interposing. In other words, while you do not recommend it, I understand that you would like to see it, as I understand.

I think it would be safer from the standpoint of what might happen.

In other words, while you do not recommend it, you would like to see the matters of the Navy put under naval officers, independent of the President.

As a naval officer, I can hardly imagine such a condition as that. It is like this. This comes under what is called strategy. Now, strategy is very hard to define. It is often compared to chess, and it is like chess in many ways, but it is a much more difficult game than chess, because in playing chess a man has plenty of time for his moves, and all the pieces are on the board before you play and they are not by the rules of the game, but in strategy you change the pieces.

battle cruisers instead of battleships, etc., and you bring in aeroplanes, etc. I am simply trying to show what a tremendous thing strategy is.

The CHAIRMAN. I was not speaking of management, but I was speaking of control. Admiral FISKE. I will lead up to that in a moment.

The CHAIRMAN. Should all military matters be under the control of naval officers who could act on their own authority, independently of the Secretary?

Admiral FISKE. I will come to that in a moment, if you will permit me.

Abroad—that is, in the military countries—they recognize strategy as a specialty just as much as construction, or engineering, or electricity, or anything else; and they take young officers who seem to be capable and send them to the War College. Those who make good there, and seem to be of a certain standard, are put tentatively in the general staff; and if they make good there they are put into the general staff, just as an officer in our Navy is put into the Construction Corps. Under our system of Government, the Construction Corps, for instance, is under the Secretary, and the Secretary can give any orders to the constructor that he wants; but the Secretary does not, as a matter of fact, tell the constructor that the ship ought to be so long instead of so long; and the same way in engineering, he does not say what kind of oil there shall be used on the bearings of an engine. Under our system, it would seem to me that if we recognized strategy in the way that we recognize construction, that we would get very excellent results. That would mean that the military authority would not be independent of the Secretary. We do not—in saying this I think I am in accord with most of the officers in the Navy—we do not wish to have a system whereby the staff could tell the Secretary to do so and so, or to do things without his knowledge and consent; but that it should be understood by everybody that this staff of trained men are there for a purpose, and that their recommendation should be carried out unless the Secretary, as a member of the Cabinet and the trusted adviser of the President, should rule otherwise.

The CHAIRMAN. Bearing in mind all you have stated, and your opinion on the subject, is it your idea, not your recommendation, but is it your idea that the military functions and duties should be put into execution by the naval officers constituting the general staff, or whatever name they may go by—that is not essential—assuming that the members of the general staff or organization are the very best military and naval men in the Navy, should their orders be put into operation independently of the authority of the Secretary of the Navy?

Admiral FISKE. No.

The CHAIRMAN. In other words, it is your opinion that there should not be a divided authority?

Admiral FISKE. Absolutely.

The CHAIRMAN. And that the Secretary of the Navy should be the ultimate authority not only on administrative matters, but on determining the military functions of the Navy?

Admiral FISKE. Yes.

Mr. KELLEY. Just what additional power would you give to the Chief of Operations as the law now stands?

Admiral FISKE. Those powers which are given by the provision which this committee put through last session.

Mr. KELLEY. Nothing further than that?

Mr. BRITTEN. I believe the admiral stated that he would enlarge the number.

Mr. KELLEY. That is a detail.

The CHAIRMAN. That is not limited now. He can have 100 or 200 if he desires.

While we reported that provision out of the House committee, during the time intervening I have been looking into that somewhat. Would not the draft that was submitted to the House and reported out by this committee give to the Chief of Operations supreme control not only of the preparation of plans for war, but would it not give him supreme control of military matters in time of peace for the preparation of plans and also in time of war in administering the plans?

Admiral FISKE. I think not. I think it said "under the Secretary" very clearly.

The CHAIRMAN. I think you will find that the provision which was reported out would give the Chief of Operations administration in war time as well as peace time.

Admiral FISKE. I think it said "under the Secretary."

The CHAIRMAN. It was under the Secretary. It was enlarging his powers into a much broader field of activity than the preparation of the Navy for war?

Admiral FISKE. I am quite sure, Mr. Chairman, that it distinctly provided that everything must be done under the Secretary.

The CHAIRMAN. Certainly, it said under the Secretary, but I am speaking of what, under the Secretary, he could do?

Q. My recollection is—

A. Interposing. It was not limited as the law finally put it to the preparing the Navy for war in time of peace, but it was managing, administration of military affairs, both in peace and in war.

Q. Yes, sir, but in the same way, unless my recollection is very wrong, the chief has over his fleet or the chief of bureau has over his department, have direction. To use a phrase in strategy, he had a certain sphere within which he could act, but his action in the large was to be subject to superior authority.

A. If I remember, under the first phraseology, it placed the command of the fleet under the control of the aid for operations in time of war?

Q. Yes, sir, but only in the sense, of course, that he is under the

A. Yes, sir.

Q. The provision in the bill, as you reported it, simply delegated to Naval Operations certain authority from the Secretary. The commander exercised the same as it was before; his status was not changed, except that

A. Naval Operations was recognized as having jurisdiction under the Secretary, the way, is the method abroad. In practically all the other navies

Q. The law provides that the Chief of Naval Operations shall "be in charge of the operations of the fleet and with the preparation and readiness of the fleet for war." Does not that language itself give the Chief of Operations the authority, to control the operations of the fleet in war? There is no limitation as to what he shall do in the operations of the fleet in time of peace, and he shall be charged with the operations of the fleet, and with the preparation of plans for its use in war." I can not extract any other view from that the Chief of Operations is charged with the operations of the fleet. That does not limit him to the operations of the fleet in times of peace?

A. Yes, sir.

Q. It does not say that he shall be charged with the operations of the fleet in war?

A. No.

Q. But it does say that he shall be charged with the operations of the

A. Naturally.

Q. Who must run all through?

A. You can hardly imagine any other situation.

Q. Whatever language may have been used and however it may have been interpreted, we had originally, we finally enacted a provision giving the Secretary that power?

A. I realize that it says the "fleet"; it does not say "the Navy."

Q. It was the Navy. This is limited to the fleet.

A. Yes, sir.

Q. The first provision that we reported gave him control of the Navy in time of war?

A. Yes, sir, under the Secretary.

Q. It was a very different proposition from the one we finally agreed

A. Very different, but this provision, as it finally passed, does

Q. Interposing. I limit it to the fleet?

A. Yes, sir.

Q. And the other one extended it to the whole Navy?

A. Yes, sir, the Navy, yes, sir.

Q. What is the difference?

A. There is a great deal of difference between Navy and the fleet.

Q. That depends on what you call the Navy.

A. The Navy means everything, while the fleet means the fleet that is under the command of the Secretary, the operations and preparation of the fleet, the management and control of the Navy.

Q. To differentiate between the fleet, actually in command, and at the same time, the fleet in reserve?

A. No, sir, that is the administration, that is here in the department.

Q. The Navy that is out on the water. That is why we limited it in its scope, that he should not have control over the whole Navy.

Q. With the Chief of Operations limited in his authority to the control of the fleet all the ships, whether in commission or out of com-

mission, and some other function or bureau or department of the Navy responsible for the gun foundry, the powder factory, the navy yards, and the naval stations, where have you centered any responsibility for a failure to coordinate all the military features necessary for the successful operation of the fleet?

Admiral FISKE. You have not done it.

Mr. ROBERTS. We have a weakness in our present system?

Admiral FISKE. Yes, sir.

Mr. ROBERTS. Due to the fact that there is no centralization of responsibility?

Admiral FISKE. Yes, sir.

Mr. ROBERTS. And conferring authority to support that responsibility?

Admiral FISKE. Yes, sir.

Mr. ROBERTS. If, under existing conditions, we should be drawn into war and through failure of our navy yards or our gun factory or any other of the military features the fleet was not properly supplied we could not put our finger on any one officer and say, "You are the man to blame." The Chief of Operations would say, "If I had had my way the navy yards would have been ready, the ammunition would have been ready, and the guns would have been ready. My part was all done, but through the failure of somebody else to meet the emergency we met with failure."

Admiral FISKE. I think your idea is correct.

Mr. ROBERTS. If the Chief of Operations is given authority to control all military matters in connection with the Navy, then you have placed the responsibility on one man?

Admiral FISKE. Yes, sir.

Mr. ROBERTS. And it is his duty to see that the facilities of the Navy, relating to the military end, are provided, to the one end that the fleet shall be ready for war and efficient when war comes?

Admiral FISKE. Yes, sir.

Mr. ROBERTS. This, of course, all under the Secretary?

Admiral FISKE. Yes, sir.

Mr. ROBERTS. No independent authority, but everything done under his direction?

Admiral FISKE. I think the provision that passed this committee that the Chief of Operations should be responsible for its readiness for war means not only the fleet but the Navy.

Mr. ROBERTS. You recognize, and I presume all officers recognize, that there is a wide difference between having your fleet ready for war and having all the other departments of the Government which must work in harmony with that fleet ready for war?

Admiral FISKE. Yes, sir.

Mr. ROBERTS. We might get the fleet ready for war quite readily and within a comparatively short time, and there would be no means of supplying that fleet with the thousand and one things which you must have to maintain war?

Admiral FISKE. Yes, sir.

Mr. ROBERTS. It is your thought, as I gather, that whoever is responsible for the readiness of the fleet for war and for its operations during war should also be made responsible for everything that goes to make for efficiency, when the war comes.

The CHAIRMAN. That interpretation placed upon the provision that he should be responsible for the thousand and one things and everything that is necessary to make the Navy ready for war would make him the Secretary of the Navy?

Admiral FISKE. No; I do not think so.

The CHAIRMAN. What functions would the Secretary exercise, relating to the thousand and one things that are necessary and enter into the preparation of the Navy, that this Chief of Operations could not exercise under the interpretation which you gave? You said that he would have control of everything that went into the preparation of the Navy?

Mr. ROBERTS. The military features. My questions all related to the military side of it.

The CHAIRMAN. Provisions would relate to the military side, for they have to be fed, and clothing would relate to the military side, because they have to be clothed. Everything that is in the Navy relates to the one crucial point.

Admiral FISKE. This officer is responsible to the Secretary.

The CHAIRMAN. The Secretary would just simply have the authority of passing on such things as he saw fit to submit to him?

Mr. ROBERTS. That is the condition to-day in every bureau.

The CHAIRMAN. No; not one man; it is quite different.

Mr. ROBERTS. We can get around that in a minute if we can have the regulations concerning the Chief of Operations.

Mr. KELLEY. Before Mr. Roberts goes into that, will you discuss briefly just what we are to understand by the military side of the Navy as distinguished from any other side? It seems to me, somehow, that the whole thing is military, that all and everything points to the one function of the Navy, and I can not quite distinguish in my own mind what powers would be purely military in their character?

Mr. OLIVER. Would not that be specially true in view of the defined purposes of the Navy as expressed this morning?

Admiral FISKE. Anybody who has had to map out an organization realizes the difficulty of drawing a line between any two parts and yet have them merge; and if they do not merge they do not work together, I think I see Mr. Kelley's point. The purpose of the Navy being actually military exclusively, the control of all the factors which would lead up to the battle or to war, would practically take in everything. That is true. So, naturally, there would have to be some more or less arbitrary line drawn; otherwise the power of the Chief of Naval Operations might spread over everything, more than any of us would want. There would have to be some arbitrary line drawn as to what constituted the military and what constituted the other.

Of course, if the Chief of Naval Operations were given the authority which this committee's provision seemed to contemplate last year, that would give him power over all the other factors in the Navy. For instance, he could send for a chief of bureau and ask him why he did not do so and so. If he did that and the chief of the bureau had the power of appeal, as he naturally would, to the Secretary, in case it did interfere with anybody under him in his own bureau, why, the Secretary of the Navy could very easily rectify it, I think. The idea of military and naval men is to recognize that in our country the underlying idea of our Government is not to put the military over the civil, but to prevent harm being done by a civilian official who did not quite have the proper conception of the weight of these factors; to have a competent man who is versed in all those matters to be the principal adviser to the Secretary, and also under him, just as an adjutant in a regiment. No Chief of Operations who had any sense at all—in fact I can not imagine any man at all who would want to go and interfere between the chief of a bureau and his subordinates, or the commandant of a navy yard and his subordinates.

The whole training of military men is just the reverse; and our whole training is to keep out of another man's area of discretion. A few years ago there was a regulation put in the regulation book, and it is still there, cautioning admirals not to interfere with the interior discipline of flagships. For instance, an admiral aboard ship could give orders not only to the captain of the ship but to the coxswain of the boat, to the sweeper on the deck, and to the chief engineer. Of course, he has the authority to do it and you can not stop him very well; but the regulations distinctly warn him against it. It would be a very bad thing to do, and we do not want him to do it.

The CHAIRMAN. Admiral, I should like to hand you these regulations with reference to the Chief of Operations and ask you to read them carefully and suggest what additional military power or duty you would give to the Chief of Operations.

Admiral FISKE. Yes, sir. [Reading:]

Extract from United States Navy Regulations covering the duties, etc., of the Chief of Operations. Those regulations have been in force since July 1, 1915.)

Sec. 3. The Office of Naval Operations.

126. (1) The Chief of Naval Operations shall, under the direction of the Secretary of the Navy, be charged with the operations of the fleet and with the preparation and readiness of plans for its use in war. (Act Mar. 3, 1915.)

(2) This shall include the direction of the Naval War College, the Office of Naval Intelligence, the office of target practice and engineering competitions, the operation of the radio service and of other systems of communication, the operations of the aeronautic service, of mines and mining, of the naval defense districts, Naval Militia, and of the Coast Guard when operating with the Navy; the direction of all strategic and technical matters, organization, maneuvers, target practice, drills, and exercises, and of the training of the fleet for war; and the preparation, revision, and enforcement of all tactics, drill books, signal codes, and cipher codes. The orders issued by the Chief of Naval Operations in the performance of the duties enumerated in this paragraph shall be considered as emanating from the Secretary of the Navy and shall have full force and effect as such.

(3) The Chief of Naval Operations shall be charged with the preparation, revision, and record of regulations for the government of the Navy, naval instructions, and general orders.

(4) He shall advise the Secretary concerning the movements and operations of vessels of the Navy and prepare all orders issued by the Secretary in regard thereto, and shall keep the records of service of all fleets, squadrons, and ships.

"(5) He shall advise the Secretary in regard to the military features of all new ships and as to any proposed extensive alterations of a ship which will affect her military value, and all features which affect the military value of dry docks, including their location; also as to matters pertaining to fuel reservations and depots, the location of radio stations, reserves of ordnance and ammunition, fuel, stores, and other supplies of whatsoever nature, with a view to meeting effectively the demands of the fleet.

"(6) In preparing and maintaining in readiness plans for the use of the fleet in war he shall freely consult with and have the advice and assistance of the various bureaus, boards, and offices of the department, including the Marine Corps headquarters, in matters coming under their cognizance. After the approval of any given war plans by the Secretary it shall be the duty of the Chief of Naval Operations to assign to the bureaus, boards, and offices such parts thereof as may be needed for the intelligent carrying out of their respective duties in regard to such plans.

"(7) The Chief of Naval Operations shall from time to time witness the operations of the fleet as an observer.

"(8) He shall have two principal senior assistants, officers not below the grade of captain, one as assistant for operations and the other as assistant for material.

"(9) He shall ex officio be a member of the General Board."

I would define his duties and powers as they were defined in the provision which this committee put into the last appropriation bill, as it was originally reported.

I said I did not believe that the Chief of Naval Operations should act independently of the Secretary. If he acted independently of the Secretary, he might go contrarywise, and, of course, I would not agree to that. I am very sure, in my opinion, that whatever law is passed in regard to the Navy should be so detailed that it would be impossible for a Secretary coming in to change everything without the consent of Congress. We have had that trouble always, as everybody knows.

The CHAIRMAN. Then, you would transfer the power by act of Congress from the Secretary to the officers under the Secretary?

Admiral FISKE. No, sir.

The CHAIRMAN. When you take away from the Secretary the power to control or to change the actions of the subordinates, why have you not transferred the power from the Secretary to the subordinates?

Admiral FISKE. I did not advocate that, Mr. Chairman.

The CHAIRMAN. I understood you to say you would have it so specified that the Secretary could not change it without authority of Congress.

Admiral FISKE. Yes, certain matters. Whatever is decided on should be so.

The CHAIRMAN. In whom would you vest that authority by act of Congress?

Admiral FISKE. I do not think I understand you, Mr. Chairman. Perhaps I might say here and point out that the law, for instance, gives the bureaus certain authority, and gives the commander in chief of the fleet certain authority. The law does that. The idea of that law, of course, Mr. Chairman, and of a great many of these laws is to prevent the Secretary, or even a higher official, from certain acts which they thought might not be for the public good.

The CHAIRMAN. I will ask you to name one thing that a chief of bureau can do without the authority of the Secretary of the Navy?

Admiral FISKE. He can not do anything without authority from the Secretary of the Navy, and I do not want the Chief of Naval Operations to do anything without the authority of the Secretary of the Navy.

The CHAIRMAN. What do you mean, Admiral, when you say that the law shall define certain things?

Admiral FISKE. To be specific, then, I should say—and I forgot to put it in my last recommendation—that it ought to be in the law that there should be under the Chief of Naval Operations at least 15 assistants—

The CHAIRMAN (interposing). That is a detail.

Admiral FISKE. Yes, sir; but that detail is exactly what I am insisting upon.

The CHAIRMAN. I am speaking about what authority you would give. Would you give any officer of the Navy, by law, authority which the Secretary of the Navy can not control?

Admiral FISKE. No, sir; I testified to that a short time ago.

The CHAIRMAN. That simplifies the matter very much.

Mr. ROBERTS. That has been the contention all along. There has been no point in anybody's mind on that. There has been only one officer appearing before us that had a contrary view.

Mr. OLIVER. I think your question, Mr. Chairman, is very indefinite, as is also the answer. To what extent should the Secretary be permitted to control?

The CHAIRMAN. He said he should have supreme control. I asked if the Secretary was to be the supreme control, and he said "absolutely."

Q. Is he in favor of any limitations of that control being fixed by Congress?
A. Not as between the Secretary of the Navy and his officers.

Q. But your idea is that there are some well-established policies which the Secretary of the Navy ought not to change without the authority of Congress?

A. That is exactly what I mean. For instance, this provision itself of the bill. Before that was made law, the Secretary could or could not, I do not know, appoint a man to do something like this. But by law now he is prohibited, and the succeeding Secretary can not come along and say, "I do not care for Naval Operations at all," and wipe him off the slate. He can not do that.

Q. That is the creation of an office.

A. Yes.

Q. But pardon me, the succeeding Secretary of the Navy can come along and say, "I do not care for Naval Operations at all," and wipe him off the slate. He can not do that.

A. Yes.

Q. Yes, and that has been done.

A. That applies to every bureau in the Navy Department. There are sections of the statutes that relate to the creation of all the bureaus, and that they shall have such power and perform such duties as the Secretary may designate to them. We have never had any case where the Secretary has taken such action, except where we had, under the former administration, the Bureau of Equipment, a situation where they did not appoint bureau chiefs, that provision of the bill.

Q. The history of that, if you will recall, is that the law provided for a chief of the Bureau of Equipment, with a chief, and his duties were such as were assigned him by the Secretary of the Navy from time to time. The then Secretary of the Navy distributed the duties of the Chief of the Bureau of Equipment and distributed the duties among other officers and left the office absolutely useless.

A. You are a little inaccurate about that. He did not take them away from the Chief. The office became vacant at the expiration of the time, he and the Secretary made another appointment.

Q. I think you are mistaken about that, Mr. Chairman.

A. No, I am right.

Q. I am quite certain they were distributed before the vacancy came.

A. No, they were not. There being no chief of the Bureau of Equipment, the Secretary distributed those duties among other officers and asked the approval of Congress, and we carried it by temporary enactment from year to year for several years, until we finally abolished it and permanently distributed them.

Q. Having read these regulations, I want to ask the admiral if paragraph 1 gives the Chief of Operations just the authority over the food, clothing, and the supplies and the bureaus that he thinks a Chief of Operations should have. I refer you to section 6. When the Secretary of the Navy, on the advice of the Chief of Staff, has decided on carrying out a certain program, he has given it to the bureaus, hasn't he given it to the Chief of Operations to carry out?

A. Yes, he has.

Q. That is exactly what I want to get in the law as a permanent basis. The staff is of as much importance in the administration of the Secretary of the Navy.

A. The details might much better be handled by the department with a fixed rigid law.

Q. But to take away from the department the right to regulate, to fix the scope of the staff. The objection I have to the present law is that it is not efficient. I am not criticizing its efficiency at all.

Q. To take from the Secretary of the Navy any power he has or might properly have, that I do not intend, and the Chairman of the Committee on the Secretary of the Navy is perfectly acquainted with the history of the bill. It was the fact that the bill was introduced by the Secretary of the Navy, came along and the bill was not passed. It was a bill to create a staff, and the place where it was passed was in the House of Representatives. I do not think I should have a bill that would be pulled out of the House.

Q. The bill is now a fixed law, and the duties of the staff are discharged, and the regulations of the department with a rigid law saying,

A. Yes, that is so.

Mr. ROBERTS. I do not know who the next Secretary of the Navy will be. It may be a man who will understand the importance of this Chief of Operations and continue his power. He may not understand the scope of it and may strip him of all these powers and leave it where we were when this organization started.

Admiral FISKE. I would like to say, Mr. Chairman, that all over the world, especially since 1870, when we became aware of what had been done by Prussia, there has been in naval and military circles an increasing realization of the importance of continuity in strategy, and that the danger of not appreciating it is really tremendous. In other words, in my humble opinion, this particular question we are now discussing is actually the most important question before the country to-day. The national life has hinged on this particular thing in a great many countries all during history. The general staff of Prussia brought about entirely a new state of things before the war with Austria in 1866, and when the war came along they tried their method and defeated Austria practically in three weeks.

The CHAIRMAN. Just a moment ago you suggested as one of the things you insisted upon as material that there should be a limitation of not less than 15 officers at a time. I think the Secretary has assigned 14. How much materiality do you attribute to the difference between a reservation giving 14 unlimited and fixing a limitation of 15?

Admiral FISKE. The difference between 14 and 15 is simply of course that difference. That is all the difference there is in that. May I proceed to what I was leading up to?

The CHAIRMAN. Yes.

Admiral FISKE. The war with France of 1870 brought up the same thing. Since that time all the nations except our own have been adopting that plan, and adopting it with utmost rigidity and insisting on it and seeing that it is followed. They go to the extreme in the navy of Germany and in the navy of Japan, which are the most efficient for their size, of having the Secretary of the Navy by law a naval officer. Those nations are poor and their navy to them is a very vital thing. They have to get every single cent's worth of efficiency out of a cent that they can get. That is the system they have there. I am not going to the extreme. I am simply pointing out the tremendous importance of that factor. It is absolutely impossible to have a general staff, and have it good, without doing something like that. It is easy enough to have a staff; it is easy enough to have anything; it is easy enough to have a Navy, but to have a good one is a very different matter. It is a very different matter indeed, and you have to strain every nerve to do it, because they are doing it. That is exactly what they are doing. The whole national life is back of that general staff in those countries.

The further we fall short of it, the further we will fall short of the efficiency of the Navy for its ostensible use. If we have a plan whereby every four years a new secretary will come in and change, not in detail, not the fitting of a boat or the appointment of a clerk, but the whole strategy of the Navy, we can never get anywhere—that is, not in comparison with these other navies. We may get along but not efficiently; we can not compete with them.

Mr. BRITTEN. Has not that been done in the past? Is not that the very thing that has been done in the past—changing from one system to another?

Admiral FISKE. It has been, and I am sure I am speaking what all naval officers feel; that if it is kept up, we will carry out the policy—that is our business. It is not our business to prescribe the policy; but it is our business to say, that, looking at it from the standpoint of efficiency, looking at it from the standpoint of strategy, this plan will work or it will not, and that we do need continuity.

Mr. BRITTEN. Is not that what the general staff is for?

Admiral FISKE. That is what the general staff is for. One reason that our construction corps is so good is because they follow that idea. We have a splendid construction corps. We have a corps of highly educated men, who started at the beginning and have been naval constructors all their lives, who make a specialty of it, and make a success of it; but we do not have strategists along that line. But the foreign navies think the strategy specialty is much more important, and much more difficult than the construction.

Mr. BRITTEN. Actually, from the fighting standpoint, is not the strategy just as important or more important than the ship itself?

Admiral FISKE. That is like asking which is more important, a man's mind or his legs. The strategy of the Navy is its mind. The general staff you may call the brain by which this mind acts on the body.

The CHAIRMAN. Just at that point; you are speaking of the foreign navies. Are they not given simply the power in general terms, or is their power limited and described and defined by precise regulations? Are they not created and given broad power in general language, and the general duties are left for the admiralty to work out and prescribe in detail?

Admiral FISKE. The Government, as I understand it, prescribes the policy and then they say, "Here is our policy; develop your strategy to fit our policy."

The CHAIRMAN. We have a policy and prescribe a general duty, but we have said to the Navy Department, "Carry out this policy," which they are proposing to do, meeting exactly what you say they should do.

Mr. BRITTEN. Just at that point may I offer a suggestion? Suppose there is a change in administration and a new Secretary comes in next year, and he decides this Chief of Operations idea is all wrong, and he wants to go back to the aid plan. The law has been passed which provides the Chief of Operations. The new Secretary comes in and says, "This Chief of Operations idea is all wrong from my standpoint, and I will not assign any men to that duty." The result is that the Chief of Operations will sit there alone, with nothing to do. Is not that true?

The CHAIRMAN. No, sir. That will not ever happen with any Secretary of the Navy.

Mr. BRITTEN. We have had Secretaries of the Navy who have been more radical than that.

The CHAIRMAN. When the law prescribes the duty and responsibility, the Secretary of the Navy will not defy Congress.

Mr. ROBERTS. You say that will never be done, but it was done, and you just cited the instance indirectly where the Secretary of the Navy and the President refused, when the vacancy came, to appoint a bureau chief.

The CHAIRMAN. They submitted the matter to Congress.

Mr. ROBERTS. Years afterwards.

The CHAIRMAN. No; they submitted it right at that time.

Mr. ROBERTS. Years afterwards.

The CHAIRMAN. No; right at the next session of Congress.

Mr. ROBERTS. Yes; it was submitted.

The CHAIRMAN. We made temporary approval until we could work out a permanent system.

Mr. ROBERTS. Which was several years afterwards.

The CHAIRMAN. But we gave a permanent system, and we carried it by act in the appropriation bill.

Mr. BRITTEN. The chairman of the committee was evidently in favor of the provision inserted in the last appropriation bill, because it left the committee with its unanimous approval, if I am not mistaken. It prescribed that the minimum number of aids to the Chief of Operations should be 15. The chairman reported that particular measure to the House unanimously, and supported it on the floor. He evidently has changed his mind very materially in the last year.

The CHAIRMAN. If you will permit the chairman to make a statement, he will say this: There was very little support on the floor, because it went out of the bill on a point of order. After the hearings were completed, and while the clerk of the committee was engaged in making up the bill, Mr. Hobson submitted it, just toward the close of our work, and we put it in. We had no hearings on it. I was in favor of the general principle, and I am now. I think it was a very valuable office to create. We put it in the bill, and had no opportunity to discuss it, and had no hearings upon it, but when it got on the floor it went out on a point of order.

Mr. OLIVER. What was the point of order?

The CHAIRMAN. That it was new legislation in an appropriation bill. When the Senate restored it in a modified form in conference, we worked out the clause that is in the bill now, by a conference discussion among the members of the Senate and House on the conference committee.

Mr. BRITTEN. I may be mistaken in this, and if I am I hope Admiral Fiske will correct me, but I am told by certain officers in the department, who are supposed to know, that the provision that was incorporated in the bill was very largely your language, Admiral, and drawn by you. Is that true?

Admiral FISKE. Yes.

Mr. BRITTEN. The Secretary of the Navy has taken complete credit for that section, and I am very glad to have an expression from you in that particular regard. I do not know who offered it. The officers say Admiral Fiske drew it up in his own handwriting.

The CHAIRMAN. The Secretary of the Navy has not, so far as I know, made any such claim.

Mr. BRITTEN. I would be glad to give you the press clippings that show that he did claim credit for that section.

Mr. KELLEY. Am I right in thinking the powers of bureau chiefs are provided in general language in much the same way that the power of this Chief of Operations is provided?

The CHAIRMAN. Yes; only not so specifically. It says there shall be certain bureaus created, and they shall have such power and perform such duties as the Secretary of the Navy from time to time prescribes.

Mr. KELLEY. While this does in a way prescribe the duties, it only leaves them very broadly prescribed.

The CHAIRMAN. It prescribes the policy and the general duties.

Admiral FISKE. I feel it necessary to explain something that Mr. Britten said. I do not want to seem to give assent to a remark that he made, which was to the effect that the provision for the Chief of Naval Operations, as originally reported by this committee, was drawn up in my own handwriting. It was drawn up at my suggestion, and Mr. Hobson and I had several conferences while drawing it up; and finally, in framing the phraseology in which it was presented to you, Hobson and I had the assistance of six other officers.

Mr. KELLEY. Your objection to this language that is in the law now is merely that it limits the power of this officer to preparing the fleet, whereas you think it should be preparing the Navy for war?

Admiral FISKE. That is one objection; yes.

Mr. KELLEY. Is there some other specific thing you want to put in more in detail than that?

Admiral FISKE. Yes: I think for the same reason, that if Congress should decide to direct that this office be established it should also direct that he should have a certain number of assistants to prepare war plans and certain war-game apparatus for their use.

Mr. KELLEY. You think that at some time the Secretary might destroy the office by withholding a proper amount of help? Is that the thing that is in the back part of your head?

Admiral FISKE. Or, perhaps, the Chief of Naval Operations might get lazy.

Mr. ROBERTS. We have provided in the law that the Chief of Operations should be appointed not below the rank of captain, and that while holding his office he should have the rank, title, and emoluments of a rear admiral. In view of the fact that that same bill provided for three admirals to command fleets and in view of the fact that the legislation placed on the Chief of Operations the duty of operating the fleets, was it not a mistake to make the rank of the Chief of Operations as low as that of rear admiral? Should he not have been made an admiral?

Admiral FISKE. Are you referring to the rank which he holds after appointment or to the rank he had before?

Mr. ROBERTS. I am speaking of the rank which the Chief of Operations holds while he is Chief of Operations.

Admiral FISKE. Oh, undoubtedly.

Mr. ROBERTS. If he did not have that rank or did not reach it while serving. In the present instance the Chief of Operations, when he assumed his duties, was a captain, and he could be appointed under the law from that rank. Of course, when he came into office he immediately had the rank of rear admiral. which, had he not reached that rank lineally, he would have dropped when he left the bureau and he would have gone back to his rank of captain. But, in Admiral Benson's case, he reached the rank of rear admiral lineally, while holding the position of Chief of Operations, and what has appeared to me to be a little out of joint and out of harmony in a military organization is a rear admiral having charge of the operations of fleets that are commanded by admirals.

Admiral FISKE. Yes; there is an incongruity.

Mr. ROBERTS. To say the least, and, according to my understanding of a military force, it does not tend to the best efficiency?

Admiral FISKE. You are quite correct.

Mr. ROBERTS. And does not tend to the utmost harmony?

Admiral FISKE. That is quite correct.

Mr. ROBERTS. It appears to me that there should be another change in the law regarding the Chief of Operations in that respect.

Admiral FISKE. Yes, sir; I think so, too.

Mr. ROBERTS. That he should be given the rank of admiral while holding his position as Chief of Operations?

Admiral FISKE. Yes, sir.

Mr. ROBERTS. And then to go back to whatever his lineal rank might be when his term had expired?

Admiral FISKE. Yes, sir.

The CHAIRMAN. Just at that point, and not antagonizing your view at all, but to elucidate it, would you still continue the provision that a captain may be appointed to serve as Chief of Operations with the rank of rear admiral or admiral?

Admiral FISKE. No, sir.

The CHAIRMAN. From what rank would you have the appointment made?

Admiral FISKE. Flag rank, sir. In my opinion, he should not be appointed to that position unless he had served successfully as a flag officer afloat.

The CHAIRMAN. You mean unless he had had sea service successfully as a rear admiral?

Admiral FISKE. Yes, sir.

The CHAIRMAN. And should not be appointed from the grade of captain?

Admiral FISKE. That is correct, sir.

Mr. ROBERTS. I was coming to that, Mr. Chairman; I was going to get the admiral's idea as to the lowest rank from which he should be appointed and his reasons for it.

Admiral FISKE. The duties of a rear admiral afloat are very different from those of a captain. A man may be a very good officer in a junior grade; he may be a very good captain even, and yet not at all good as a flag officer. The requirements, the mental attitude, and all of that, are quite different. A good many men have been good captains, but have not been good flag officers; and some men who have never been considered as amounting to very much have been intrusted with flag rank against, sometimes, the fears almost of their friends; and they have done beautifully; much better than men who had done better in the subordinate grades.

Mr. BRITTEN. Admiral, which is considered the most important position in the service below the Secretary, the commander in chief of the Atlantic Fleet or the Chief of Operations?

Admiral FISKE. Well, the most desirable position is that of commander in chief of the fleet; but the most important, I should say, is that of Chief of Operations. You can do more good or harm in that capacity than you can in the other; but, of course, the position of commander in chief of the fleet carries with it a great many things that are desirable.

Mr. BRITTEN. So that is an additional reason why the Chief of Operations should have the rank of admiral?

Admiral FISKE. Yes, sir.

Mr. BRITTEN. While he is holding that most important position in the service?

Admiral FISKE. Precisely.

Mr. ROBERTS. Now, I do not know that I want to ask any more questions of you on this general staff of Chief of Operations matter, because I think we have your views fully, but perhaps I might ask you one general question, although it may be that you have covered it in various ways in your answers. What, in your opinion—and you have yourself been Chief of Operations or aid for operations and you had experience with the fleet—

Admiral FISKE. Yes, sir.

Mr. ROBERTS. I understand you have commanded a division?

Admiral FISKE. Yes; three different divisions of the fleet.

Mr. ROBERTS. What, in your opinion, is the most important function or agency in the Navy for the attainment of the highest efficiency of the fighting units in battle?

Admiral FISKE. Good strategy.

Mr. ROBERTS. And you mean by that a properly constituted general staff or bureau of operations, or by whatever name it may be designated?

Admiral FISKE. Yes; to carry it out.

Mr. ROBERTS. I understand your view to be that with the very best of material, ships, guns, and ammunition, and with the very best of men and officers, you could not hope to attain the very highest efficiency, when it comes to action, without a central guiding spirit.

Admiral FISKE. Precisely, yes; just as a man could not without a good mind.

Mr. ROBERTS. It would be a good deal like assembling all of the football stars of the country into one team and allowing each one to operate as he saw best without any central governing power and directing spirit.

Admiral FISKE. Something like that.

* * * * *

Mr. BRITTEN. I believe you stated this morning that as aid for operations you were the intermediary between the Secretary and the General Board?

Admiral FISKE. Yes, sir.

Mr. BRITTEN. You were aid for operations in December, 1914?

Admiral FISKE. Yes, sir.

Mr. BRITTEN. The report of the Naval General Board in December, 1914, was the first report that was made public by any Secretary of the Navy, was it not?

Admiral FISKE. I am not clear whether they were made public the year before or not.

Mr. BRITTEN. I have here a copy of a letter written by the Secretary of the Navy which says that this was a brand new idea of his.

Admiral FISKE. If it had been in 1913 it would have been his, too. I am under the impression that the report in 1913 was also made public, but I am not sure of that.

Mr. BRITTEN. In December, 1914, the recommendation of the General Board was with it an estimate or recommendation for some 19,500 additional men in the service. I questioned Admiral Badger, who was the representative of the board who came before the committee, about that, and it appears that that recommendation for 19,500 additional men was taken out of the report of estimate that was made public. Is that correct? Have anything to do between the Secretary and the General Board in reference to that matter?

Admiral FISKE. Yes, sir; naturally, I was the intermediary between the Secretary and the General Board.

Mr. BRITTEN. Did the original recommendation of the General Board, as submitted to the Secretary, embody a recommendation for 19,500 or thereabouts, of additional men for the service that year?

Admiral FISKE. Yes, sir.

Mr. BRITTEN. You are positive about that?

Admiral FISKE. Yes, sir.

Mr. BRITTEN. How did it happen that the report when published did not contain that recommendation for 19,500 additional men? In other words, what brought about its elimination from the report of the General Board?

Admiral FISKE. Well, the General Board concluded not to publish that part of the report.

Mr. BRITTEN. Well, the General Board does not publish its reports. They go to the Secretary of the Navy, and is it not true that after the Secretary of the Navy received the report that he sent word to the General Board that unless they took that part out of the report that suggestion as to personnel he would not make it public?

Admiral FISKE. The Secretary never took the report of the General Board. It came in, and struck out something and published it with that omission.

Mr. BRITTEN. No; he didn't take it, that is true; but a recommendation did come from the General Board with a recommendation that the enlisted personnel be increased by 19,500 additional men.

Admiral FISKE. It was 19,600 additional men.

Mr. BRITTEN. It left the General Board in that condition, did it not?

The CHAIRMAN. Was that recommendation a separate one, or was it embraced in the report?

Admiral FISKE. It was in the report.

Mr. BRITTEN. You say it was not stricken out by the Secretary, but it is not true that the Secretary refused to make it public unless that was taken from it?

Admiral FISKE. Yes, sir.

Mr. BRITTEN. How did the Secretary bring about its elimination from the report? Now, it was in the original report—there is no question about that—and it was in the report that was made public. How did the Secretary bring that about? He could not strike it out of his own accord, but it was left out of the subsequent report made by the General Board, as published. Now, what brought that about? Did the Secretary go to the General Board and state that he did not want it in, or did he write them a letter, or did he send for you and talk to you about it, or just what was the transaction that brought about its elimination from the report?

Admiral FISKE. The transaction altogether took over a month. Finally, the report was sent to the Secretary, and I was told to take the report to the board and say that that part be left out.

Mr. BRITTEN. The Secretary told you to take it to the General Board and report to them that that part be eliminated from their report?

Admiral FISKE. Yes, sir.

Mr. BRITTEN. Will you tell the committee whether or not the General Board immediately acted upon that, or did they discuss it first? You were ex officio a member of the General Board at that time, were you not?

Admiral FISKE. Yes, sir. The board debated upon it and finally concluded that it was very desirable to have the report published for the education of the public and that even if that part was left out, the effect of the report in educating the public as to the necessities of the Navy would be very great, especially as there was a paragraph or two explaining the necessity for having enough men to man all the ships without mentioning the number.

Mr. BRITTEN. So the board decided that, in the interest of the service generally and especially as it would be establishing a precedent for publishing the reports of the General Board in the future, it would have a good effect on the service in that way.

that expert opinion would finally reach the general public, and that it would be beneficial in that way. For that reason they decided to accede to the Secretary's demand that their recommendation for 19,600 men be stricken from it?

Admiral FISKE. Yes, sir.

Mr. BRITTEN. They evidently did not succeed in their desire to bring about future publication of their recommendations, because in July of the following year, or a few months later, they made a recommendation that was not made public until Henry A. Wise, Wood, Congressman Gardner, and four or five others got after the Secretary and forced its publication. Is not that true?

Admiral FISKE. I do not know.

* * * * *

Mr. BRITTEN. The recommendation of the General Board for \$5,000,000 for aviation was cut to \$2,000,000 by the Secretary, or at least cut by the Secretary on the suggestion of the Chief of Operations, Admiral Benson, who practically took entire responsibility for the reduction before the committee the other day. Will you tell us, please, if \$5,000,000, in your opinion, is too much, and why? I will say to you before you start to answer that Capt. Bristol's estimate was over \$7,000,000.

Admiral FISKE. Yes; I remember that very well. His estimate was originally for \$13,000,000, was it not?

Mr. BRITTEN. Yes.

Admiral FISKE. When I was aid for operations, I became convinced, and I am still convinced, that the thing in which we are more backward than in any other thing is aeronautics; and I think it is a matter of common sense that in any large thing which is composed of a great many factors, we should look out for the weak point. No matter how fine and strong you are, if you have a weak point you want to look out for that, and in aeronautics I think we are weaker than we are in anything else. We have not a general staff; that is true, but we are on the way toward it and now we have something like it; that is, the Chief of Naval Operations—

Mr. BROWNING. Are we weaker in aeronautics than we are in battle cruisers?

Admiral FISKE. No; you are quite right there. But we can do more in a year in aeronautics than we can in battle cruisers. We are just as weak in battle cruisers as we are in aeronautics, but in one year we could do a lot in aeronautics, and we could not do much in battle cruisers. Now, that may not be all the time we want, but we may get into trouble when this war ends, and battle cruisers are not going to help us unless they are constructed and in the fleet. That is the thing that is going to take us the longest time, and it will be necessary also to train an enlisted personnel, which is going to take us quite awhile. Even if we started to-day it would be a long time before you could get your personnel enlisted, trained, and earning their pay aboard ship. But the thing that is most exciting the public is, I think, the fear of invasion. Of course, that is the most horrible thing that can happen to any country—to have its soil invaded by an enemy; nothing is so bad as that.

Now, to help us in that event we need a competent aeronautical corps and we need it right off. To do that we could get, in emergency, a lot of people from the outside. The Aero Club of America is doing a great deal, and is very much interested.

If we got 1,000 aeroplanes together and got them well organized—some of them large—to meet an attacking force, we would have aircraft that could drop large bombs and launch torpedoes and it would help to a great extent. You see, we could get ready to do that probably in a year. Then when it came to their landing the men to make the invasion, actually getting ashore, getting on the beach, getting their guns ashore, getting their ammunition ashore, and getting their food, and all of those things ashore, they would have reached the very ticklish period of their operations. If you had 1,000 aeroplanes, and they dropped bombs on those fellows, especially those in the boats, you would present an attack that they have not yet learned to answer. So I think aeronautics is the thing on which we can get to work quicker, and by which we can accomplish more than by anything else.

Admiral FISKE. As a basis on which to show the Secretary the necessity of preparing war plans in such detail that the Navy could take immediate action in case of war, I requested the General Board to give me its opinion as to the maximum time which I should state to the Secretary as the time within which, after declaration of war, the United States Navy should be ready to meet the enemy in a battle at sea. The General Board deliberated on this question during the greater part of an entire forenoon, and answered that maximum time allowed should be two weeks. I so informed the Secretary.

was unable to make any impression on him. After many conversations, and the submitting of different written memoranda, on November 5, 1914, wrote him a long letter, declaring in unequivocal terms that the Navy was wholly unprepared for showing that its unpreparedness might be divided into three parts; that is, lack of any staff for making and carrying out; inadequacy of personnel, both regular and reserve; and inadequacy of material. I handed this letter to the Secretary and he saw it in my presence. This is the letter which he subsequently denied having seen or heard of, but which he admitted later that he had seen, but forgotten. This letter could not be found in the Department's files, when the Senate asked for it in April, 1916; but it was found in them later, bearing the receiving stamp date of September 13, 1916. Despite my earnest warning, the Secretary in his report of December 4 set forth the preparedness of the Navy in general terms. One headline in his report was "Proof of the preparedness of the Navy." He gave testimony of similar purport before the House Naval Committee.

Realizing that the safety of the country was at stake, I suggested to Representative Hobson that he get me called before the House Naval Committee, as the official expert of the Navy Department on strategy, which includes, of course, preparedness. Hobson did so. In the course of my testimony I showed how wholly unprepared the Navy was, and, I believe, convinced the Naval Committee in a great measure. In my testimony, I gave certain figures showing the position and maneuvers of the German fleet in the autumn of 1913, in which dirigibles, aeroplanes, mine sweepers, and battleships operated in the fleet, and the fleet maneuvered according to strategic plans drawn up by the general staff; and I declared that it would take "at least five years" to get our Navy ready to fight off such a navy. Our Navy is not yet able to carry out maneuvers such as the German Navy carried on in 1913.

This is largely because of the absence in our fleet of battle cruisers, mainly because of our amazing backwardness in aeronautics. At the time that I was aid for operations, I strove to make the Secretary see the necessity for grasping the power that aeronautics held out to us. About a year I finally succeeded in getting a Director of Aeronautics established and Capt. Bristol put in the post. But scarcely I left my position than the division of aeronautics was abolished. Before going, Capt. Bristol, in 1915, recommended an appropriation of \$13,000,000. The Secretary cut it down to \$2,000,000.

In my testimony before the House Naval Committee on March 1, 1916, I pointed out that aeronautics gave us better opportunity than any other one thing for overcoming our unpreparedness quickly. Congress then raised the appropriation to three and one-half millions. After war had been declared by us, no appropriation for aeronautics was asked for till July, 1917. As a result, the Navy did little constructive work in aeronautics in the entire war. If my urgent recommendations had been carried out, we would have been able to send an aeroplane force to Europe in April, 1917, to have increased it rapidly, and to have carried out bombing attacks on the German submarines before they got away from their bases into deep water.

During the following month of January, 1915, I induced Representative Hobson to get the House Naval Committee to incorporate in the appropriation bill a provision for a Chief of Naval Operations, who should be given the authority and the staff necessary for preparing war plans and for putting the Navy in a state of preparedness, and be held responsible that those things were done. I drew up the phraseology myself with Hobson's assistance. The committee adopted the provision exactly as I had drawn it up with two or three unimportant changes in words and incorporated it in the bill. I beg leave to incorporate the House Naval Committee's report in the record.

This provision was described as follows in the report of the Naval Committee to the House dated January 16, 1915:

CHIEF OF OPERATIONS.

The committee recommends a provision whereby a new office of Chief of Naval Operations is created. This office is to be filled by an officer of the Navy on the active list, not below the rank of rear admiral, and appointed for a term of four years by the President, by and with the advice and consent of the Senate. This officer, under the Secretary of the Navy, is to be held responsible for readiness of the Navy for War, and is charged with its general direction. He is to perform only such duties as shall be assigned him by the Secretary of the Navy, and such duties shall be performed under the authority of the Secretary of the Navy, and is given the same authority regarding orders issued by him as is now given under existing law to the chiefs of bureaus of the Navy Department.

To assist this officer in preparing general and detailed plans of war, 15 officers of and above the rank of lieutenant commander of the Navy or major of the Marine Corps are to be assigned for this exclusive duty. It is the opinion of this committee, after a most thorough investigation and mature deliberation, that the necessity for such an office exists in the Naval Establishment. At present there exists a General Board and the Naval War College, neither of which seem to be equipped for adequately performing this duty, nor have they sufficient officers under their jurisdiction to do this fundamental work of preparation of plans for war.

The demands upon the staff of the War College and the members of the General Board for other questions involving the efficiency of the personnel and the material of the Navy are such that they have not time and opportunity to fully prepare and perfect this work, and it is therefore recommended by the committee that the proposed provision be enacted into law.

It will be noted that the Secretary of the Navy retains absolute control over the office, and the Chief of Operations performs only such duties as are assigned by the Secretary, and all orders are issued under the authority of the Secretary of the Navy.

The principle of civilian control of the Navy Department is in no way affected by the provision recommended.

(The report of the committee above referred to is here printed in full in the record as follows:)

[House Report No. 1344, Sixty-third Congress, third session.]

CHIEF OF NAVAL OPERATIONS.

February 2, 1915.—Committed to the Committee of the Whole House on the State of the Union and ordered to be printed.

Mr. Hobson, from the Committee on Naval Affairs, submitted the following report to accompany H. R. 21257):

The Committee on Naval Affairs, to whom was referred H. R. 21257, a bill to create the office of Chief of Naval Operations and for other purposes, report the same favorably, with the recommendation that the bill do pass.

The bill provides for the creation of a new office in the Navy Department, to be known as the Chief of Naval Operations. This office is to be filled by an officer of the Navy on the active list, not below the grade of rear admiral, and appointed for a term of four years by the President, by and with the advice and consent of the Senate. This officer, under the Secretary of the Navy, is to be held responsible for readiness

of the Navy for war and in charge of its general direction. He is to perform only such duties as shall be assigned to him by the Secretary of the Navy, and such duties shall be performed under the authority of the Secretary of the Navy, and is given the same authority regarding orders issued by him as is now given under existing law to the chiefs of bureaus of the Navy Department.

To assist this officer in preparing general and detail plans of war, 15 officers, of and above the rank of lieutenant commander of the Navy or major of the Marine Corps, are to be assigned for this exclusive duty.

At present there exists a General Board and Naval War College, neither of which seems to be equipped for adequately performing this duty, nor have they sufficient officers under their jurisdiction to do this fundamental work for preparation of the plans of war. The demands upon the staff of the War College and the members of the General Board for other questions involving the efficiency of the personnel and material of the Navy are such that they have not had time and opportunity to fully prepare in detail and perfect this work. It is the opinion of the committee that the necessity for such an office exists in the Naval Establishment.

It will be noted that the Secretary of the Navy retains absolute control over the office, and the Chief of Naval Operations performs only such duties as are assigned by the Secretary, and the orders are issued under the authority of the Secretary of the Navy. The principle of civilian control of the Navy Department is in no way affected by the provision recommended. The tentative duties of the proposed Chief of Naval Operations and his assistants will be such that the work may be conveniently divided among nine committees or sections. The sections would probably be as follows:

The historical section, which covers the study and analysis of past campaigns.

The policy section, which studies the inherent interests of all nations and the policies which logically follow.

The strategic section studies the theaters of possible wars from every aspect and sources and means of supply for the military and naval forces.

The tactical section studies tactics, particularly in relation to strategy; determines and endeavors to insure that the tactics of the fleet are kept constantly up to date and conform to the character of the ships and weapons that will be used.

The logistic section studies the logistic aspects of the strategical and tactical plan involving the requirements as to supplies at the beginning of the war, during the war and the organization of transportation, and many other things incident to the auxiliary service, including the inspection of merchant vessels.

The organization section studies and devises plans of organization for war in order to secure the most efficient flow of authority, the best administrative and tactical grouping of the forces, detail of personnel for command, and the orders necessary for the execution of the various plans.

The mobilization section prepares and keeps always up to date plans for mobilizing for each of the various stations arising from conflict with possible enemies.

The training section studies methods for the training of the naval forces and devises strategical problems and tactical exercises involving combined maneuvers of battleships, auxiliaries, submarines, aircraft, and mining vessels.

The executive section sees that the plans devised are executed.

The importance of this work may be judged from the fact that Great Britain has a separate organization called "the naval war staff," composed of 39 line officers, a few staff officers, and about 31 civilian assistants; in Germany, by the admiral staff, composed of 22 officers, with 13 officer assistants, and a librarian; in Japan, by a general staff, which is immediately under the Emperor.

Such an agency as is hereby established in the Department of the Navy to coordinate and harmonize all parts of that establishment, prepare plans in detail, and supervise their execution, the committee believes is necessary for the effective or efficient accomplishment of the object for which the Navy exists, to insure our country victory in war. The committee unanimously recommends that the bill do pass.

The subjoined statements of Rear Admiral A. M. Knight, United States Navy, in an address before the Efficiency Society of New York, sets forth the importance of this legislation:

"The War College considers that every effort of the fleet and every effort of the department in connection with the fleet, should have for its sole aim the war efficiency of the fleet.

"There is much about the Navy which is splendidly efficient, but as a whole it is far less efficient than it can and ought to be. Our ships are fine. Our officers are capable, industrious, and ambitious. Our enlisted men are the equals of those in other navies. But efficient ship and officers and men do not alone make an efficient Navy. They must be welded into an efficient whole by a unity of organization and administration and purpose which coordinates their capabilities and directs their

efforts toward a common end, wisely selected, and very clearly seen. Here is the first point at which we are lacking.

"I come now to what is, perhaps, the most important part of my subject—the organization of the Navy Department, viewed from the standpoint of efficiency. There can be no question that the existing organization is inadequate and would break down under the strain of war. The administration starts from too many sources and flows through too many channels. It lacks the unity of purpose which would come from recognition of the fact that a navy have one excuse for existing, and only one—that it shall always be ready to strike on the minute and with every element of power concentrated behind its blow for the defense of the country.

"Do not misunderstand me. I am not telling you that our organization is wholly bad. I am telling you that it is inadequate. In many cases it works rather surprisingly well. But if you analyze these cases you will find that in so far as the results are good, they are so in spite of the system and because of some personal factor which has compelled efficiency. Moreover, and this is the crux of the whole matter, the cases with which we can deal at the present time are illustrations of peace efficiency, whereas the efficiency upon which our attention should be fixed unwaveringly is war efficiency: not because we are going to have war, but because we may have it, and because the one supreme duty of the Navy is to be ready for it if it comes.

"I suppose this relation of the Navy to war, whether possible war or actual war, has always been understood more or less clearly. But it is a singular fact that the organization of the Navy Department takes no account of it. War is the one thing for which no arrangement is made. There are seven bureaus in the department, each with clearly defined duties; but in all the elaborate legislation creating these bureaus and defining their duties there is not a word about the duty of keeping the Navy in readiness for war or preparing plans for war or conducting war after it begins. There would be a certain element of comedy in this if there were not so many elements of possible tragedy.

"There is a bureau in the department charged with the construction and repair of ships, one with the design of machinery, one with the preparation of ordnance, one with the direction of personnel, and so on; but nowhere is it said 'this bureau shall be responsible for the readiness of the fleet for war, for the preparation of war plans, and for the conduct of war.' This, then, is the last and great defect in the efficiency of the Navy. How shall it be remedied? The answer is, I think, by the creation in the Navy Department of a division of strategy and operations, preferably not coequal with the present bureaus, but superior to them and standing between them and the Secretary. This arrangement would be a recognition of the fact that all the activities of the present bureaus should lead up to the Secretary through a channel which coordinates them all and directs them toward war efficiency.

"I have explained that the defects in the organization of the Navy Department are a lack of coordination of authority, as a result of which the administration starts from too many sources and flows through too many channels, and a total lack of provision for planning and carrying forward the operations of war. It must not be supposed that these defects have escaped recognition or that no efforts have been made to correct them. The most successful of the efforts to secure coordination between the bureaus was the adoption during the last administration of a system of aids to the Secretary, who coordinated the work of the various bureaus, and who, when important questions were under consideration, formed a council upon which he could call for advice. The weak point about this system was, and is, that the aids have never been legalized by Congress, and therefore have no permanent status whatever. In spite of this, they are in a position to do much toward improving the administration of the department.

"The General Board was called into existence in 1900, by an order of the Secretary of the Navy to provide a body for the consideration of war plans and allied subjects. It has performed and is performing work of the very highest importance, but it, like the council of aids, lacks legislative sanction, although Congress has for many years past shown great interest in its work and not a little deference to its views.

"Another and a very important agency to which the Navy Department looks for a contribution to its work in strategy and other matters connected with preparation for war and the conduct of war, is the Naval War College at Newport. The War College has been in existence since 1884 and has been an important factor in the education of officers from the very beginning. For some reason, however, it has failed until very recently to command the full recognition which it has deserved from the Navy Department or even from the officers of the Navy. The present Secretary of the Navy visited the college shortly after coming into office, and, with an insight of which many naval officers have shown themselves incapable, recognized its possibilities for usefulness and pronounced himself as its friend. Since that time he has done everything to forward its work which could be dictated by the most thorough comprehension of its mission and its needs, and as a result of this generous support, both moral and

material. the college has taken its proper place as an institution for the training of officers for high command and for the development of the art of naval warfare. Thus the college is able to contribute something toward making good the lack of a strategic division in the Navy Department itself.

"You will see, therefore, that, although no law takes cognizance of the necessity for keeping the Navy ready for war, there are many agencies which cooperate toward that end—the council of aids, to which the Secretary would naturally turn in an emergency, the General Board, and the War College. These agencies are so closely in sympathy that they are able to cooperate harmoniously with each other and with the fleet, and this cooperation is having important and very valuable results. This does not change the fact that there should be—that indeed there must be—in the Navy Department itself and close to the Secretary a coordinating office to bring the efforts of these and other agencies to an administrative focus, bearing directly upon the efficiency for war. Such a coordinating office I have already sketched as a division of strategy and operations immediately below the Secretary of the Navy in authority.

"The creation of this office would provide a policy for the Navy, so far as the activities of the Navy itself are concerned, insuring unity of effort and shaping plans toward the end which we have recognized to-night as the proper end of all our efforts—preparedness for war."

Admiral FISKE. This provision was struck out on a point of order in the House. Subsequently, it was introduced into the appropriation bill again by the Senate, but with certain modifications suggested by the Secretary. As modified the provision read:

There shall be a Chief of Naval Operations who shall be an officer on the active list of the Navy appointed by the President, by and with the advice and consent of the Senate, from among the officers of the line of the Navy, not below the grade of captain, for a period of four years, and who shall, under the direction of the Secretary of the Navy, be charged with the operations of the fleet and with the preparation and readiness of plans for its use in war.

It will be noted that although this provision as finally passed was a tremendous boon to the Navy, yet that it omitted to supply the Chief of Naval Operations with any staff for preparing war plans. It charged him with the preparation and readiness of plans, but provided no officers for making the plans. It is true that the Secretary of the Navy could, if he so desired, order officers to Washington for doing that work; but my intention in preparing the original draft was to make the ordering of these officers to Washington mandatory, because I realized that, if it were not done, officers would probably not be ordered.

It is absolutely necessary for me to declare here that, in bringing about the establishment of this new office, in which the Chief of Naval Operations would continue my work, but under very much better conditions, I was not working for myself, because I realized that it would give the Secretary the opportunity of superseding me by another officer; and I told a number of my friends that there was not the slightest chance that I should be made the Chief of Naval Operations.

During the time that had elapsed after the war had broken out in Europe the Secretary and I had had a number of unpleasant conferences with relation to preparedness, mainly in the matter of securing increased personnel and the signing of the administrative plan. The Secretary refused to do either, and a natural tension between us ensued. It is absolutely essential also, in the interests of the truth, for me to declare in the most positive terms that there was no unpleasant feeling on my part toward the Secretary personally, and that I have no reason to think that there was any unpleasant feeling on his part toward me personally. Our intercourse was always polite, and on the surface cordial.

For part of 1915 my position became extremely difficult. I knew that I could not stand it indefinitely, but Admiral Dewey insisted that I must stand it as long as I could. Finally I resigned on April 1, 1915. A year later--that is on April 3, 1916--the Secretary testified before the House Naval Committee that I was not in touch with the department and that I would have been asked to resign if I had not resigned myself. The reason why I was not in touch with the department was that I insisted on the signing of a general administrative plan and the establishment of some system like that which I had established later in the Office of Naval Operations. Yet both of these measures the Secretary approved of highly later, and it was one of them that the Navy was handled with whatever of success it attained in preparing for the war and afterwards in waging it. I was requested to the delay involved by the Secretary's insistence on a measure finally adopted.

In the report of the Secretary of the Navy for 1915--the summer of 1916--page 11, there is a large headline, "Better organization effected." Under that heading read as follows:

OPERATIONS--BETTER ORGANIZATION EFFECTED.

"In accordance with the naval appropriation act of 1914 provided that 'there shall be an Office of Naval Operations . . . who shall, under the direction of the Secretary of the Navy, be charged with the operations of the fleet and with the preparation of plans for its use in war.'

"This details how that is being carried out, and then in the middle of the report says:

"The general plan, prepared by the General Board, for the preparation of the Navy for the Atlantic has been approved and each office and bureau under the Secretary has been assigned its proper share in the general scheme of preparedness. The Secretary reports the department may at any time become informed of the progress made to overcome them, and of the progress made toward a complete reorganization."

The Secretary appointed Capt. Benson as Chief of Naval Operations, and relieved me on May 11, 1915. At this time the Navy was not prepared for war, and I was sorry that the Secretary had appointed as my successor an officer who had had experience on the General Board or on the staff at the War College.

I returned to duty at the War College; but during the following year I was on leave, so that I spent the months of January, February, March, and most of April, 1916, in Washington. I had no touch with the Navy, and I knew that no officers had been sent to the office of the Chief of Naval Operations for the purpose of making general and detail plans of war, as the House Naval Committee had emphatically recommended; that no planning had been established in that office, and that, therefore, the progress toward preparation had been taken, except that the general plan had at last been signed.

I was intensely anxious that a planning division should be established in the Office of Chief of Naval Operations, for making general and detail plans of war. I arranged that I should be called before the House Naval Committee, in order that I might urge upon them the necessity of directing that the 15 assistants which the committee had recommended in January, 1915, should be

I testified on March 24 and 36, 1916. The committee adopted my recommendation and incorporated it in the bill, but only in appearance and not in substance. In January, 1915, the House Naval Committee had recommended earnestly that to assist the Chief of Naval Operations in preparing general and detail plans of war, 15 officers of and above the rank of lieutenant commander of the Navy or major of the Marine Corps be assigned for this exclusive duty; but in their recommendation of 1916 the provision relating to this matter read:

To assist the Chief of Naval Operations in the performance of the duties of his office there shall be assigned for this exclusive duty not less than 15 officers of and above the rank of lieutenant commander of the Navy or major of the Marine Corps.

It will be noted that these 15 officers were simply for exclusive duty in the office of Naval Operations, but that it was not directed specifically that their duty should be exclusively in making war plans.

Of course, my whole endeavor had been to convince the committee that the exclusive duty of those 15 officers should be in making war plans, and it has always been my belief that that was the intention of the committee. I may be wrong about this, of course; but it is difficult to see why the committee should have gone to the trouble to direct that those 15 officers should be for the exclusive duty of assisting the Chief of Naval Operations in his duties, for the reason that it has always been the custom (with some possible exceptions) that the duties of an officer are exclusively in whatever office he may be assigned to. For instance, an officer ordered to duty in the Bureau of Ordnance is assigned for exclusive duty in that bureau, although the word "exclusive" is not used. Whether or not the change was intentional, or whether the change had been suggested to them by someone opposed to having a proper Planning Division, I do not know. But I do know that the change was most unfortunate.

The bill was signed and went into effect on August 29, 1916. Although the phraseology was ambiguous, the bill as passed made a new epoch possible for the Navy, because if the 15 assistants which the bill ordered had been assigned to the exclusive duty of making general and detail plans of war, as the House Naval Committee had urgently recommended in January, 1915, a fairly good war plan could have been developed by the time we declared war in April, 1917; provided, of course, that those 15 assistants had gone to work immediately and prosecuted their endeavors zealously. But 15 officers were not assigned to the exclusive duty of making general and detail plans of war.

In fact, as Capt. Laning testified to you, no Planning Division had been established even as late as March 3, 1917; for some days after March 3, 1917, the Chief of Naval Operations appointed a special committee to consider a paper prepared by Capt. Laning individually, that was, so far as he knew, the first attempt at a war plan that would meet the actual war situation. Up to that time, apparently, no Planning Division had been established. I understand, however, that one man, Commander Schofield, had been engaged in making some plans regarding the installation of armed guards on merchant ships, and other minor efforts.

Less than six months elapsed after the bill went into effect assigning not less than 15 assistants to the Chief of Naval Operations, before our relations with Germany were broken off, and only seven months and a half before we were actually at war. As this interval had not been utilized in developing a war plan to meet the actual situation, it was unavoidable that the Navy should enter the war without such a war plan, and, therefore, that it was caught unprepared to carry such a war plan into execution.

Passing now from the unpreparedness of the Navy when it entered the war to the subject of the strategic handling of the Navy during the war, Admiral Sims charges that the Navy Department violated the immutable principles of war in not applying its major effort in the actual theater of war. If Admiral Sims is wrong, then the teachings of the War College are wrong, and the campaigns of Alexander, Cæsar, Napoleon, Washington, and the other great commanders were carried out according to principles that were wrong.

In order to see this matter from the correct point of view, it is necessary to realize that the history of war is a matter of careful record for more than 2,000 years, and that no other subject of man's activity has been gone into with such care or had such an amount of money, time, and mental effort spent upon it. The campaigns of the great commanders have been analyzed, and thousands of books have been written that show the causes of failure and success. From the study of these campaigns, certain principles and lessons have been evolved. These principles and lessons are taught to officers of mature age by the various war colleges in the various countries.

The first war college was the German war college, that was established by Moltke. It was because of the training which officers received from that war college that Prussia triumphed so easily over Austria in 1866, and over France in 1870. The Austrian Army and the French Army were not as armies distinctly inferior to the Prussian. In fact the French Army in 1870 was supposed by most people to be superior to the Prussian, and it was well known that the French generals had had more actual experience in war, than the Prussian. Nevertheless, the war plans of the Prussians were so much more virile than those of the Austrians or the French, that in each case Prussia advanced into the heart of the enemy country immediately and conquered it. In both cases Prussia left only a small force home to guard her there.

Similar strategy was exercised by the British admiralty in the days of Nelson and Napoleon; for the British Navy guarded the British coast, not by staying on the British coast, but by advancing to the coast of the enemy and preventing the squadrons and fleets of the enemy from uniting.

Similar strategy has marked the campaigns of every great commander from the days of the Egyptian Kings to the present time. On the opposite sides we see recorded a different kind of strategy, which I beg leave to call "safety-first" strategy. This safety-first strategy is the kind of strategy that one reads about in most of the wars of history, but it is not the kind that was exercised by Caesar or Napoleon or Frederick or Washington. Those great commanders always adopted a strategy that was very daring, and that usually began with an energetic attack against the enemy.

It can not be too clearly emphasized, however, that, in order to start in war with proper energy and effectiveness, a high state of preparedness must previously have been achieved. History shows by countless incidents that it has always been dangerous in the highest degree even to enter a war when unprepared.

That our Navy was unprepared when we entered the war, I think nine officers in ten would be glad to testify. To what extent this lack of preparedness accounts for the fact that our full naval strength was exerted for many months, it would be difficult to determine with precision. It may be that had the Navy been fully prepared for war on April 6, 1917, the efforts put forth by the Chief of Operations and his assistants and the bureau chiefs would have resulted in the weight of our naval effort being exerted at a much earlier date in the actual theater of war. Certainly, unpreparedness was, in some part, the cause of our dilatoriness in getting into the war with full strength, and whoever was responsible for the unpreparedness must bear a large share of whatever blame may finally be adjudged.

As the war is over, some may think our unpreparedness a matter of little moment now, and may bewail the injury to the prestige of the Navy caused by the fact of its unpreparedness becoming known to the public.

We must all realize, however, that we can learn even more from past failures than from past successes; and that the more clearly the fact is recognized that we missed disaster by only a narrow margin in this war, by reason of our unpreparedness, the less danger there will be of unpreparedness happening again.

The American Navy has made a good record in past wars, but no American wishes that it shall make a bad record in the next war, or that the Navy shall go down before the enemy in disaster and disgrace.

It becomes the Navy's duty therefore to realize and to declare as clearly as we can what was the reason of our unpreparedness, and how similar unpreparedness can be prevented in the future.

By this standard it is my duty to give my professional opinion in this matter, to say that I think that my opinion is the same as that of 9 in 10 officers of the Navy, and that my opinion is based not only on my personal observation but on a careful study of war.

The result of my experience and studies has been to convince me that immeasurably the most important single element in any naval or military organization is the man at the head; and that whether any organization be efficient or inefficient, good or bad, the main reason in either case is to be found at the head.

In all the historical events that I have analyzed and studied, the paramount importance of the personality of the man directing them has impressed me more and more. No matter who else was concerned in any undertaking that was really great, the man at the head has stood out so clearly as to obscure every other person and every other thing. In all the campaigns of Cæsar, 99 per cent of everything was Cæsar; similarly, the most important single cause of Germany's ruin was the Kaiser.

This means, in this special case of the United States Navy, that the reason why it was unprepared lay in the mental and temperamental characteristics of the man at its head, and of the policy which he, as a consequence of those characteristics, had pursued.

—As to the means whereby unpreparedness can be prevented in the future, I am forced to the conclusion that by far the most important step is for the public to insist that the man at the head of the Navy shall always be a man imbued with the spirit of the Navy, highly educated, open-minded, and acquainted with the principles on which naval preparedness is based, and by following which naval preparedness can be secured.

• The CHAIRMAN. Admiral, how could you make such a brilliant appointment, of such a man as you have described; how could you find a man who could be imbued with the spirit of the Navy, and who would have sufficient knowledge, who had not been connected with the Navy?

Admiral FISKE. I think the public men of the United States, Mr. Senator, are pretty well known, and their characteristics are pretty well known. The President, of course, in selecting his Cabinet, in selecting his men, would realize that certain men have certain characteristics.

The CHAIRMAN. I am simply asking for information.

Admiral FISKE. Yes. Of course, I might say——

The CHAIRMAN. You mean a public man who had had some experience of naval matters; any such practical experience?

Admiral FISKE. Senator, that is a tremendously difficult question to answer, tremendously difficult. I think that it is a very important question, and very, very difficult to answer; very difficult indeed. I should leave that to wiser persons than I am.

The CHAIRMAN. What do you think the condition of the Navy would have been in 1917 if you had not succeeded in having the office of the Chief of Naval Operations established, and had not opposed the policy of the Secretary of the Navy in the way your statement has indicated?

Admiral FISKE. I have often thought about that, Senator, and I have wondered. I have come to the conclusion, after a great deal of thought, that the Navy would have been in a state of demoralization. During the little trouble with Mexico, when I was aide for Operations, the weakness of the department organization showed up very clearly. Some of us had to stay there all night. We could not have stood it very much longer, and that was a very small affair. I had two assistants only, two lieutenant commanders, and the whole organization of the Navy was absolutely unable to tackle any situation more serious than that, and that situation kept us going as it was.

The office of Chief of Naval Operations as established gave the Chief of Naval Operations a very considerable staff, and legalized him before the Nation by the action of Congress, and gave him much more power to have things done than I had.

Equally important or nearly equally important was the existence of the administrative plans; because before we actually went into the war in April, 1917, this administrative plan had been in action then for pretty nearly two years, so that the system had got to going, whereby the Navy Department was kept continually informed of what was the condition of preparedness of the bureaus, each bureau, and not only of the bureaus as far as they were individually concerned, but the way in which the work of the whole department was divided up among them.

Now, if I had let things go in what would have been the easiest way for me, I suppose I would have stayed there until I retired in June, 1916, less than a year before the war was declared. By that time there would have been no organization in the department for doing much, and the very fact of my having yielded and not having tried to keep the Navy up would have been reflected among all the officers in the Navy, because I was at that time the principal officer of the Navy. I had the most responsible position of anybody.

The CHAIRMAN. As aide for Operations?

Admiral FISKE. Yes; as aide for Operations, which afterwards, as you know, became the Chief of Naval Operations; and of course you realize that the Navy is a very artificial product, and what we call its morale and spirit must be kept up. Otherwise they will not do what you want them to do in time of war. The morale of the Navy is its spirit.

Now, somewhat different from morale, and yet very close to it, is discipline. The question of discipline is as old as fighting. A great many people think discipline means a system of punishment, whereby if somebody does something wrong he is punished. That is one part of discipline, it is true; but that is a minor part of discipline. The major part of discipline is what the War College calls the indoctrination of the Navy, whereby the system of authority is almost venerated, so that a man instinctively salutes his superior officer, without hardly knowing him. He thinks his superior officer is much better than he is, and that spirit has always been found necessary. The subordination of the individual has always been found necessary.

Now, I do not think that the plan of the Secretary would help that out, but just the reverse. He insisted on a great many things being done against the advice of his aids; that is, to a degree; that is, incorporating a system of education among the enlisted men, an excellent idea, and an idea that had been carried out very carefully by us always; but it was carried out by the Secretary to a degree which I think almost every officer in the Navy thought was so great as to be very injurious indeed to the discipline.

The CHAIRMAN. In what way?

Admiral FISKE. By taking up the time of the enlisted men with work that was not along the line of their professional duties, and by making them do these things when they knew and all the officers knew that their immediately superior officers; that is, the officers of the Navy themselves, were opposed to. So the Secretary of the Navy put all the officers of the Navy on the defensive in that way, by making them carry out before the enlisted men duties which the enlisted men knew the officers did not think were wise, to the degree to which they were carried. There was a great deal of time taken up on board the ships with that. That was one instance of it. The attempt to democratize the Navy was made by Camil Pellaquin in France, with results that were very deplorable there. Camil Pellaquin was the Minister of Marine of the French Navy, and I know it is the consensus of opinion of everybody that has ever written about it at all that the influence of Camil Pellaquin on the French Navy was awful, was ruinous, and that the French Navy has never recovered from it. I have never heard it denied that to democratize the Navy is not to improve its morale, but I believe officers of the Navy think it is just the wrong way to do,

Now, the War College has been the central source from which we have been getting all our ideas about the Navy, as a whole, for many years, and that War College has imbued the Navy with what we call a certain indoctrination, which has been found to be a very fine thing for cooperation, whereby everybody knows what we ought to do, and he will do it even if he does not get orders to do it. It is the kind of spirit that was maintained among Nelson's captains. It is said they were a band of brothers, and that they would do a thing even if he did not tell them to do it. Any system which comes in between the operation of that principle and endeavors to decrease the feeling which enlisted men have for their officers, or the feeling which junior officers have for their superior officers, which is the result of attempted democratization, is bad. A Navy or an Army must be a very different organization from any commercial or other organization, and if it is going to be efficient it has got to be handled along lines which are not democratic.

The CHAIRMAN. Can you give the committee some specific cases of attempts to democratize the Navy that resulted in a breakdown of discipline?

Admiral FISKE. I think that attempt which I just spoke of, to insist that all this time should be taken up with the study of arithmetic, etc.—studies which are not professional—I think that the general feeling which existed in the Navy, on account of the attitude toward that and toward high officers had that effect. Of course there has been no mutiny, but the feeling all through the Navy is that the morale of the Navy, the loyalty, the regard which juniors had for their superiors, has not been increased, but the reverse.

The CHAIRMAN. Admiral, what was the effect on your own personal affairs of your pushing this campaign for preparedness and your attempt to inaugurate the system of the Bureau of Naval Operations?

Admiral FISKE. Well, of course I had to get out. That was the first thing.

The CHAIRMAN. You mean you had to get out of that position?

Admiral FISKE. Out of that position.

The CHAIRMAN. Out of that position.

Admiral FISKE. I had to resign. I was not told to resign, but I knew perfectly well that that was the idea, and the secretary so testified on April 3, 1916, that if I had not resigned myself I would have had to get out, that I would have been asked to resign. Of course, I had to give up the best position in the Navy, and I was not on duty except at the War College all the rest of my time on the active list.

The CHAIRMAN. You were never actually chief of the Bureau of Operations. You were aid for Operations, but had to resign from that when the other office was created?

Admiral FISKE. Yes. Of course the Secretary's remarks about me in his testimony of April 3, 1916, especially in regard to Admiral Dewey not wanting me on the General Board, and that I would have been asked to resign—of course that officially discredited me, put me in as bad a position officially as an officer could be put in, and I have heard in a number of ways that that impression got abroad. Possibly I can illustrate it by a story.

A waitress in my family was asked by a young man in New York, a beau of hers, whom she was working for. She said she was working in the family of Admiral Fiske, and this man said "Admiral Fiske? Oh, that is the guy Secretary Daniels had to get rid of in order to get the Navy prepared?" Well, things like that, and I was officially discredited, that was all. I lost my position and was officially discredited. I was put in the position of a man who had gotten to the highest position in the Navy and did not make good and had to be fired.

The CHAIRMAN. You spoke of Secretary Daniels's statement about Admiral Dewey not desiring that you be put upon the General Board. In your book, *From Midshipman to Rear Admiral*, I think you stated that Admiral Dewey denied that he made any such statement as that attributed to him by Secretary Daniels.

Admiral FISKE. Absolutely, and Admiral Dewey said that to other people, too. That is all right. Everything in that book is correct. I am willing to stand by it.

The CHAIRMAN. But the statement was made by the Secretary of the Navy that Admiral Dewey had recommended that you be not put upon the board.

Admiral FISKE. Yes. The statement of the Secretary of the Navy before the Committee on Naval Affairs of the House of Representatives, April 3, 1916, is found on page 3824 of the hearings. Shall I read it?

The CHAIRMAN. If you will.

Admiral FISKE. I read from page 3824 of the hearings before the House Naval Affairs Committee:

The CHAIRMAN. Mr. Secretary, When Admiral Fiske was before the committee, he was asked if Admiral Dewey had recommended him for appointment to the General Board, and he stated that he had; and he was then asked if he was appointed, and he said that he was not. I will ask you to give the committee your statement with reference to that, and, if he was recommended, if anything subsequently took place, and why he was not appointed on the General Board.

Secretary DANIELS. I do not recollect the date, Mr. Chairman, but some time after Congress had created the office of Chief of Operations Admiral Dewey said to me one day that he would like to have Admiral Fiske to go on the General Board when he was relieved from Operations. I told him I would consider it:

Mr. TALBOTT. What did you say, Mr. Secretary?

Secretary DANIELS. I told him I would think about it. Later Admiral Dewey requested me not to put Admiral Fiske on the General Board. He said he wanted a practical man; that Fiske was too theoretical; and I did not put him on.

The CHAIRMAN. But Admiral Dewey later denied that statement?

Admiral FISKE. In the most positive terms. As I state in my autobiography, Admiral Dewey, not at my solicitation at all and without my previous knowledge, asked the Secretary in my presence to have me retained on the General Board after I had been relieved, and the Secretary said he would do so. Very shortly after that—I think the next day, or at any rate before I left—I reminded the Secretary of that and said, "Shall I tell the Chief of the Bureau of Navigation to make out my orders to the General Board?" Secretary Daniels said, "Yes." Then I went and told the Chief of the Bureau of Navigation that the Secretary said to make out my orders to the General Board. The next day or so I got my orders, but instead of being to the General Board they were to the War College in Newport. Then I went to the Chief of the Bureau of Navigation, and I said, "I told you that the Secretary told me to tell you to make

"to the General Board," and he said, "Well, that is my order, Admiral." Of course, I was very much surprised. I had been on the General Board with Admiral Dewey. He had always given me a "perfect" mark every time on my report. I had been with him at the Battle of Manila. He used to go his way very frequently to speak to me very kindly about my work. I was doing as aid for Operations. So I was very surprised when that statement was made, and I heard from someone that Admiral Dewey was denying it. So I telephoned to the General Board one day, to Admiral Badger, and I asked him if it was true, and he said, "Well, you had better come down and see Admiral Dewey yourself."

I went down to the General Board and went into Admiral Dewey's room and he was there with his aid, Lieut. Commander Benson. Admiral Dewey jumped out of his chair and came over and said:

"What is it? I never said it. No communication passed between me and Benson while he was on the General Board except when you were present, and I asked him to keep you on the board."

"That is all of that, sir."

THE CHAIRMAN. Admiral, I think you have stated in your testimony that it was unfortunate that in choosing a man for the chief of Naval Operations a graduate of the War College was not chosen.

Why did you make that statement?

THE WITNESS. The War College was established for the purpose of training officers in just that kind of thing, in the operations of the Navy as a whole. A man ordinarily in the Navy does not get that training. As an officer below the rank of captain of a ship he is engaged in various detail duties aboard the ship. As captain of a ship he has nothing to do except with the ship. His responsibility for the ship is not for any one man. The hardest job I ever saw was as captain of a battleship. The War College, and to a somewhat degree, the General Board, bring a man into contact with the Navy as a whole as distinguished from a part of the Navy; by going to the War College and studying there, a man gets an entirely new point of view. You do not see this ship or that ship, or that man, or this corps or that corps, or this rank or that rank. You see a great, magnificent machine, the most magnificent machine that there is, a very complicated machine, all the parts put together and in exact adjustment under the control of the man at the head of it. Now, unless a man goes to the War College and gets that point of view, I do not know of any other way in the Navy where he could get it. Now there were a number of men suggested to the Secretary to be chief of Naval Operations, and some of them had had that training; and so, when Capt. Benson was chosen, who had not had that training, I think he was at a disadvantage. At the conference for a short time, what they call a conference, it was not possible that he could have gotten the view of the Navy. A man ought to have to occupy the position at the head of the Navy. For instance, the War College was under him. The organization of the General Board is very similar, and I do not see how it would be possible for a man to occupy that position and fill it without a thorough understanding, unless he had had that training.

Capt. Benson was the captain of the *Utah* in my division, and he was a good captain. I gave him fine reports. He wanted at that time to be superintendent of the Naval Academy. He would have been a splendid man for superintendent of the Naval Academy. After he left the *Utah*, however, he went on duty as commandant of the Navy Yard at Philadelphia, and I think a better training for the position he occupied as the head of the entire naval operations would have been obtained in the War College and General Board.

The CHAIRMAN. Did you consider that he had any special qualifications for the office of chief of the Bureau of Operations?

Admiral FISKE. No, sir; he was a fine man, a fine gentleman, a fine character, industrious, straightforward, careful, very conscientious, but it had not occurred to me that he was to be appointed, and when the Secretary appointed him as my successor I was surprised, because it had never occurred to me that he would be the man who would be appointed.

The CHAIRMAN. When you devised the system of the Bureau of Operations, when you recommended it, what sort of a man did you suppose would be placed at the head of the bureau?

Admiral FISKE. The kind of man I was speaking of. For instance, the man I would have picked myself, if I had had the selection, would have been Rear Admiral H. S. Knapp, except at that time I believe he had not got the rank of rear admiral; but he was that kind of a man, a man who had had that experience. Rear Admiral Knight would have been a very good man. I suggested him. He was the actual president of the War College; but I did not really suggest Admiral Knight seriously, because I did not think the Secretary would appoint him—was quite sure he would not.

The CHAIRMAN. But one of the essential qualifications would be that the chief of the Bureau of Operations should be familiar with naval strategy?

Admiral FISKE. Oh, that would be the first thing.

The CHAIRMAN. That would be the first thing.

Admiral FISKE. I should think so. I should think that would be the first qualification.

The CHAIRMAN. Admiral Benson had no such knowledge as far as you know?

X Admiral FISKE. I have never known of his taking any interest in that branch of the profession. I knew him quite well, and admired him very much in many ways, but that particular thing was a thing that, so far as I knew, he had never devoted any thought to.

The CHAIRMAN. As aide for operations I assume you had a very close connection with the Secretary of the Navy?

Admiral FISKE. Oh, yes; very.

The CHAIRMAN. In matters other than this question of the Bureau of Operations did you find that the Secretary attended to all matters that you took up with him with promptness?

Admiral FISKE. Not as a rule. There were certain classes of questions or matters, matters of personnel, matters of individuals, this person or that or the other—he was always very much interested in the enlisted men, of which I was glad. Anything connected with that he was always ready to listen to and ready to act on.

The CHAIRMAN. Not the increase in the personnel?

Q. Fiske. Oh, no; not the increase of the personnel. The reason, as it seems to me, was that the Secretary was very much interested in the enlisted man himself, and in his well-being—I think he was unselfishly interested—and I admired him for it, because every man needs somebody to help him, no doubt about that. He tried continually to make the enlisted man think we were not his overlords to too great a degree. Any question, even any personal question, he was always very glad to answer. For he seemed to me to have a curious characteristic of regarding the Navy as a whole. That impressed me all the time. He was for a long while after he first came into the department full of chaplains occupied him a great deal. But even that much in regard to their connection with the Navy as the Navy itself, of course, was fine. But he never seemed to think of the Navy as a whole, and, as far as I could make it out, it has seemed to me that he was always absolutely convinced in his mind that there never would be any war.

Q. After a while that it was not a good thing to say anything about war. He did not seem to be ready to start on any subject connected with war at all. He approached the subject from a different point of view. To bring up a subject in connection with something like that, would secure his interest, but if you brought up anything in connection with the efficiency of the Navy in the war, why that was not good. We must avoid that. I gave up using the word war as much as I could; but of course when things became, as I thought, rather dangerous at the time when I got through this project of the Chief of Operations, by that time I had to come out and inform him that I could that he had to do something, that we would be attacked and I wrote him a letter which was dated November 9, 1902, originally written on November 5, which letter is in my book, Senator, in which I thought I went into the matter carefully and very clearly; but to answer your question, it is difficult as a rule to get him to take any action whatever. He was polite. He would listen to you with the most untiring patience. He was always courteous, and then he would usually say, "Speak to me about this to-morrow, or next

Q. Was that true of ordinary routine matters?

A. Fiske. No, not routine matters. About routine matters he was good. He had a fine memory and was very good at all sorts of that. He was very good at routine matters.

Q. But that was not true of any suggestion of any

A. Fiske. No, nothing which suggested the use of the Navy in anything like that; but if you would bring up any routine matter he would act on that at once, and he was very industrious, he never gave and never lost his temper, a very nice man to deal with.

Q. After you retired from the position of aid for operations how long were you in the service before you were retired?

A. Fiske. A little over a year.

Q. What were your duties during that time?

Admiral FISKE. I was supposed to be on duty at the War College, but I just was there. I had been aid for Operations, and there was not really much I could do. The people at the War College were engaged on their own War College work.

The CHAIRMAN. After we entered the war, on April 6, 1917, were your services utilized in any way during the war?

Admiral FISKE. No, sir.

The CHAIRMAN. Not in any way?

Admiral FISKE. No, sir.

The CHAIRMAN. Was that true of most of the retired rear admirals?

Admiral FISKE. I do not know about most of them, sir. Of course there were a great many on duty. I do not know what proportion they bore to the entire number. There were a great many, of course, that were on duty.

The CHAIRMAN. In your book you refer to a letter on the unpreparedness of the Navy, which letter was submitted to the Secretary. Can you tell me anything about that letter?

Admiral FISKE. You mean my individual letter?

The CHAIRMAN. Yes.

Admiral FISKE. I submitted that letter to him and he read it and gave it back to me, and then I returned to my office; and the same officers were there who were there when I left to go into the Secretary's office, as I recollect—Lieut. Commanders Cronin and Capt. Smith. They were there when I returned, and I told them that the Secretary had read it and made no comment on it, and I said, "I will speak to him again about it," and I put it on my desk; but I thought about it later and then thought, "Well, there is no use in doing that. It will not do any good." So I simply filed it. The fact of that letter was known to a good many officers.

The CHAIRMAN. Have you a copy of that letter?

Admiral FISKE. I have no copy here. It is in my book. I am sorry I haven't it here. I did not think to bring it here.

The CHAIRMAN. That letter is included in your book?

Admiral FISKE. Yes.

The CHAIRMAN. I would like to have that letter inserted in the record.

Admiral FISKE. Yes.

(The letter is as follows:)

NAVY DEPARTMENT,
Washington, November 9, 1914.

From: Aid for Operations.

To: Secretary of the Navy.

Subject: The Navy's unpreparedness for war.

1. I beg leave, respectfully but urgently, to request the attention of the Secretary to the fact that the United States Navy is unprepared for war.

2. It is true that the United States does not expect to get into war in the near future and is not preparing for war. It is true that nothing could be more unwise than for the country or the Navy itself to become nervous about the condition of war into which most of the civilized world has been plunged. It is true that there is no cause for excitement, and it is also true that even the most timid person can give no specific reason for anticipating war with any given country at any given time.

3. It is also true, however, that the mere absence of actual certainty of coming war is no reason for neglecting preparation. Some persons assume that a disposition to make preparation evidences a state of alarm in the mind of the person who proposes to make preparation. Yet such an assumption is entirely illogical. Wise men and wise nations show their wisdom in no better way than by taking wise precautions against possible dangers. The prevalence of smallpox induces wise people to guard

against it by vaccination. They do not expect to be attacked by small-pox, but they think it wise to take precautions against it.

In the position which I have occupied for more than a year and a half as the Secretary of the Navy, it has been my duty to keep myself posted as I have been able, of the condition of the various nations in relation to that condition upon us, the strength of our Navy compared with that of the degree of probability of our being dragged into war. The condition all over the world is one of general upheaval. The state of peace in which the great powers maintained for many years with great success is at last upset. A conflict is going on, very few results of which anything probably can be foretold, however. I mean that it can be foretold that the conflict will be violent and also will be long, involving other nations now taking part, and followed, even after the war at present ended, by a series of more or less violent readjustments of boundaries, treaties, and agreements of every kind.

I should be an optimist who would expect that a state of general peace would last more than five years. During the next five years we must expect a great deal of disagreement between this country and other countries, and between this Government and others; periods like that preceding the war, needing only a casualty like the blowing up of the *Maine* to precipitate it.

As your professional adviser, and in the opinion of every naval officer I have talked, the United States is in danger of being drawn into a war to be in danger for several years. And when I say war, I do not mean the kind that we had with Spain, but war with a great power, carried on with the same spirit and in the same wholesale manner as that which is now going on in Europe now. It is true that I can not specify the country with which war is most probable, nor the time, nor the cause. But my studies of wars and my observations of conditions at the present time, convince me that if a war during the next five years, it will be accomplished only by the exercise of high diplomatic skill and rare good fortune.

It is not wise to base all our hopes of national safety on such a frail foundation. It is not wise to close our eyes to the dangers that confront us? Would it not be wise to look the dangers clearly in the face and take reasonable precaution to meet them?

When I compare our Navy with the navies which we may have to meet in war, I find it is unprepared in three ways:

First, an insufficient number of officers and enlisted men. The number of officers can not be increased—that is, the number of suitable officers—because it takes a long time to get a midshipman through the academy and several years afterwards to get him ready for service. But the number of enlisted men can be increased, and very much so. It has been said that in time of war we could add to our enlisted personnel the Naval Reserve and the Naval Militia. To my mind, this is a visionary thing to rest upon. We have been working to get a Naval Reserve and a Naval Militia for more than 30 years, scores of expedients have been tried, but the result has been no naval reserves at all and less than 7,000 in the Naval Militia. Possibly we may do better with the Naval Reserve in the future, but only possibly, not probably. All reasonable expectation must be based, and must be based, on the experience of the past, and the past shows us that to place dependence on the Naval Militia and the Naval Reserve is to place dependence on hope, not reasonable expectation. The men who depend upon for naval work on board our ships are men who are trained on board our ships, and wear the naval uniform. If we would expect reasonably to get a Naval Reserve in the future, we must train that we want enlisted men right now. To man the ships in time of war we need 19,000 more men.

Second, in which I find our Navy unprepared is in departmental organization. The ships are well organized and pretty well drilled, the fleets are well organized and very well drilled, but the department itself is neither organized nor drilled in any way. Perhaps this is nobody's fault, and may be attributed to the fact that the Navy has never had to fight a serious enemy. Certainly, not in 100 years. The country have naturally devoted their energy along the lines of commerce, and have not been confronted with any obvious military danger. In my opinion there is an obvious military danger at present, and the Navy should be organized to meet it. The organization which other great powers employ to meet this danger is known in English, and in many other languages, by the name of "general staff." In different languages, of course, the words are dif-

ferent, but the meaning is the same. In Great Britain it is called the "Board of Admiralty." This general staff has as its first duty preparation for war, and as its second duty the conduct of war when war comes. In making preparation for war the general staff makes war plans. These war plans are of two kinds—general and specific. The general plans are simply analyses of what should be the general conduct of the Navy in case of war; and the specific plans are plans in which the general plans are worked out in detail. Besides these general and specific plans, however, the general staff devises means whereby information regarding these general and specific plans shall be given to the various executive bureaus and divisions, corrected up to date, and whereby the various executive bureaus and divisions shall always be compelled to be ready to carry the various parts of those plans into immediate effect.

12. In directing the conduct of a war, the general staff, under the direction of the minister, sees to it that all information is kept up to date and supplied to the various commanders, and that all machinery for carrying out their decisions is kept in working order.

13. Our Navy Department has no machinery for doing what a general staff does. The closest approach to it is the General Board, which, as part of its numerous duties "shall devise measures and plans for the effective preparation and maintenance of the fleet for war," and "shall prepare and submit to the Secretary of the Navy plans of campaign," etc. The General Board does carry out these duties but the plans that it makes are general and elementary. It exists entirely as an advisory board to the Secretary of the Navy. It is highly valuable; but, as its name indicates, it is only a "general board." It does hardly 1 per cent of the duties that a general staff would do. Having no executive authority and no responsibility, and being called upon to do a great variety of work, it has not the time to prepare specific plans, and has no means to see that even its general plans are ever carried out. If we compare our General Board with the general staff of any other country or with the Admiralty of Great Britain and when we see what those general staffs have been accomplishing during the past three months, we must become convinced that unless we go on the theory that we shall always have peace we shall be whipped if we ever are brought into war with any one of the great naval powers of Europe or Asia. We shall be like the lawyer who has not prepared his case when pitted against the lawyer who has prepared his case. We shall be as the French were before the Germans in 1870.

14. The performance of the Germany Army during the last three months is the greatest triumph of the human mind and the human will that has ever been accomplished. It is not the triumph of one mind or one will but the triumph of several million minds and several million wills, coordinated by a general staff with a degree of perfection that the world has never before seen. This pace being set, any navy not provided with a general staff is a navy not provided with "the most modern improvements."

15. The third way in which I find our Navy deficient is in training. This deficiency in training is due not to lack of spirit or ability but to a combination of the two preceding causes; that is, to insufficient personnel and lack of departmental organization to which must be added lack of small ships. I mean that because we have had not enough small ships to do work on the coasts of Haiti, San Domingo, and Mexico, because our ships have been insufficiently manned and because the Navy Department has had no general staff which would devise and carry out a progressive system of training, lack of progressive training has resulted. When I say lack of progressive training I mean lack of training such as the Germans and other nations have. I mean lack of training that secures a high degree of skill. If we are forced into war with a navy like Germany's or England's or Japan's, our training should be at least as good as theirs, or, rather, our skill should be. It is impossible for me or for anybody to compare exactly the skill of our Navy with the skill of other navies; but, on the theory that cause produces effect, we must admit that we have not had nearly so good a system to produce skill as other navies have. The developing of skill in the navies and armies of the other great powers is carried out with a vigor and persistency that we can not approach, and has been directed by an organized intelligence that certainly has no superior and probably no equal in any other branch of human effort.

16. The subject of the improper organization of our Navy Department was exhaustively analyzed by the Moody Board and afterwards by the Swift Board in 1909. Certain recommendations were made to remedy the evils that they found. These recommendations have not been carried out. They were, in effect, to establish a general staff, though the words "general staff" were not used. In my opinion, the failure to adopt those recommendations was serious and will invite disaster if a great war comes.

B. A. FISKE.

The CHAIRMAN. Were you afterward informed that that letter was not filed with the department?

Admiral FISKE. Some time in April, 1916, the Senate asked for a copy of that letter and also asked for a copy of a letter which the General Board was supposed to have written on the outbreak of the European war, August 1, 1914.

In regard to this letter that you are speaking of I received a telephone message from the Secretary's aide asking if I had a copy of it as a copy could not be found in the files. I said yes. They asked me to send a copy, which I did. The Secretary had that letter copied and transmitted to the Senate, with a letter which is also in my book, saying that he had not seen it and expressing surprise that I should have had a letter put in the department files without his knowledge and without his having seen it.

The CHAIRMAN. I would like to have that letter put in the record also.

Admiral FISKE. Yes.

(The letter is as follows:)

NAVAL WAR COLLEGE,
NEWPORT, R. I., August 1, 1914.

From: Senior member present.

To: Secretary of the Navy.

Subject: Withdrawal of battleships to home yards.

In view of the immediate danger of a great war in Europe, and in pursuance of its duties as laid down in paragraph R 167 (1) of the Navy Regulations, the General Board earnestly urges that the battleships be brought home, docked and put in perfect readiness, with the exception of the ships actually necessary in Caribbean and Mexican waters.

(2) The present situation in Europe is absolutely without precedent; not only in the vast extent and variety of the interests involved, but in the suddenness with which it has developed.

(3) It is not clear at this moment that any interests of the United States are threatened. Yet it would be rash to assume that there may not emerge from the extraordinary situation in which so large a part of the world has become unexpectedly involved some incident or combination of incidents fraught with danger to our interests.

(4) Our commercial interests are closely interwoven with those of every one of the great powers which are apparently on the verge of war. Our trade routes pass through the waters of those powers and terminate in their ports. Our privileges and duties as neutrals may easily become matters of misunderstanding and controversy.

(5) There are said to be 300,000 United States citizens now in Europe. Many thousands of them are claimed by European powers as liable to military service, and those who find themselves abroad may at any moment be arrested and imprisoned. As bearing upon this point, the following quotation from a press dispatch of July 31, is pertinent:

"Other Americans whose safety promises to be a serious matter are now naturalized citizens passing between Europe and the United States. Efforts may be made by European belligerents to arrest such people because of their nativity, regardless of their naturalization."

Should incidents occur as are here forecast, they could hardly be ignored, and this is only one of the many difficulties that may arise in connection with the interests, personal and commercial, of American citizens residing or traveling abroad.

(6) Another press report from Copenhagen of the same date suggests another source of complications if the report is authentic. The report is as follows:

"A German squadron, cruising off Langeland in the Great Belt, is stopping all vessels to investigate their nationality and the destination of their cargoes."

There is so little American shipping engaged in foreign trade that such procedure in the locality mentioned is hardly likely to affect American vessels: but what has happened in one place may happen in another. The United States would hardly permit its merchant ships to be overhauled by foreign men-of-war when no actual state of war exists, and the spirit thus manifested by the German squadron might cause acts in violation after war has supervened.

(7) In the event of a general European war, it is probable that foreign shipping will endeavor to register under the United States flag. The shipping then needed adequately to supply the war requirements of European nations will be enormous. Many questions of neutrality, or alleged breaches of neutrality, may, in the irritable condition of public opinion at home and abroad, result in strained relations; and notwithstanding all efforts to the contrary, may further result in the embroilment of this country with some country or countries of Europe.

(8) Again, the merchants of the United States will certainly endeavor to supply immense quantities of munitions of war, arms, ammunition, fuel, food, and other warlike supplies, with the resulting accusation that the country has become a base from which war is supported against friendly nations in violation of its proclamation of neutrality.

(9) There are other possible complications: Belligerents always tend to overstep their powers in executing the right of search; disputes will arise over the definition of contraband; and accusations of unneutral service will be brought against the United States traders and foreigners doing business under the United States flag.

(10) A serious possibility for the United States connected with a great European war lies in the changes of sovereignty in possessions on or adjacent to the American Continent that may result from corresponding changes in sovereignty on the Continent of Europe. We can not forecast the eventualities of such a war. Many indications exist that Germany desires a foothold in American waters, and it is well known that she does not concur in the Monroe doctrine. If Great Britain is drawn into war the German fleet will be neutralized as far as any danger from it to our interests in the immediate future is concerned. If she is not, and if the end of the war should find Germany stronger than ever in her European position and with her fleet practically unimpaired, the temptation will be great to seize the opportunity for obtaining the position she covets on this side of the ocean. We should prepare now for the situation which would thus be created.

AUSTIN M. KNIGHT.

Admiral FISKE. Then I wrote to the Senate pointing out the position in which this put me; and then the American Defense Society in New York wrote the President and brought this matter up, and the President wrote the American Defense Society and said that Mr. Daniels had said that he might have seen the letter but had forgotten it. This is also in my book.

The CHAIRMAN. That is also in your book?

Admiral FISKE. Yes.

The CHAIRMAN. Then have that put in the record, and all matters connected with that.

Admiral FISKE. Yes.

(The extracts from Admiral Fiske's book are as follows:)

My diary says:

"December 16, 1914: I suggested to Hobson over phone this a. m. that if he wanted to get straight news about the Army, he would get committee to call for Chief of General Staff. Hobson answered, 'A word to the wise is sufficient,' so I got word to-night to appear before committee to-morrow."

I spent that evening in my office with Lieut. Commander Madison, who was the officer on duty there that evening. We discussed the subject of my testimony and collected some papers which I could use to refresh my memory. Madison and I agreed that the Navy could not be got into the same state of efficiency as the German Navy for many years. I told Madison that I wanted to bring out that point very strongly, and we discussed what number of years I should state as the time required, knowing, as we both did, that it was a matter of doubt whether the political influences in the United States would ever permit the Navy to be as efficient as the German, and realizing that even if the politicians should all stand aside and permit a general staff to be established, it would probably take that general staff at least 10 years to train itself and train the Navy. We finally decided that I should say that it would take at least five years to get the Navy ready to fight a navy like the German effectively.

My diary says:

"December 17, 1914: * * * I was before the committee at Hobson's request nearly all day to-day, and never received more courteous treatment and more attention in my life—much to my surprise. I certainly startled committee when I told them it would take five years to get ready. Congressman Roberts took me to lunch

in Capitol restaurant and I asked him to ask me how long it would take to get Navy ready for war, and I told him I would answer five years. Roberts took the hint."

The Washington evening papers published most of my testimony, and I got several congratulatory messages over the telephone that evening. The first message I received was from my old classmate and roommate Dorn, who said that my action was the most splendid thing that had been done by any naval officer since the Civil War.

On my walk down to the department the following morning numbers of Navy officers, and Army officers as well, came up to shake hands with me and thank me. I got to my office at 9 o'clock and found several officers waiting for me. All were most enthusiastic, and each one thanked me as if I had done him a personal favor. About a quarter after 9 the Secretary's messenger came in and said the Secretary wanted to see me. All the officers became grave at once, and some of them said, "He is going to fire you." They all seemed to think this, and I know I did. I expected to be sent to some distant place like Olongapo in the Philippines.

The entries in my diary during the remainder of December refer mainly to the congratulatory letters and messages that I continued to receive regarding my testimony, and also to my efforts to establish a general staff.

December 27, 1914, Sunday: Called on Hobson in afternoon and explained why a general staff is absolutely essential, if one is to have a Navy of maximum effectiveness; though it is not necessary if one is to have merely a Navy.

January 3, 1915, Sunday: Had long interview in afternoon with Hobson at his residence, in regard to general staff, etc. I took many documents with me, and Hobson became thoroughly interested. We concluded that it might be better not to attempt to get through legislation for any modification of aid system, because Secretary would say present aid system is adequate and that it might be better to propose a new scheme, whereby an addition would be made to present system and additional means be provided to accomplish preparation for war. So I asked Capts. Knapp, Hood, and Oliver, and Lieut. Commanders Cronan, Madison and Knox to be at Hobson's at 8.30 a. m. We all met there in Hobson's study, and sat till after 11 p. m., when we adjourned. We agreed on program whereby Chief of Naval Operations is to be legislated for and to have 15 assistants."

The entries under head of December 27 and January 3 give the outlines of a good deal of work that Hobson and I did on those days and in the intervening week. The plan which we drew up was drawn up in the light of my knowledge of strategical requirements and Hobson's knowledge of congressional requirements. When the six officers arrived that evening, they came secretly because they were engaged on an exceedingly dangerous mission. I had expected more or less objection on the part of some of them to certain features of the bill as drawn, but I found that every one of them was enthusiastically in favor of it. We eight men went over the whole subject very carefully, and when we finally came to an agreement, the original memorandum that Hobson and I had planned had been changed but little.

During the discussion that evening it happened occasionally that some one would speak of the power and authority which I would have if the bill should pass. Whenever anybody made such a remark as that, I told him that, if Congress should authorize a chief of naval operations, I was absolutely certain that I would not be the chief of naval operations. I told them that I was positive that the Secretary wanted to get rid of me, but could see no opportunity or give any reason for it, because he knew that I was performing my duties to the satisfaction of the Navy, including Admiral Dewey; but that if a new office was established by Congress, the Secretary then would be perfectly free to appoint any one whom he wished. I told the company that I was like the well-known gentleman who sawed off a branch of a tree at a point between himself and the branch, except that that man did not realize what he was doing, and I did.

January 4, 1915: The six officers who met at Hobson's last night met in my office at 8.30 a. m. and we drew up on neat typewritten page the proposition agreed on. Hobson came to my office at 10.15 and took up the matter with Secretary. Hobson told me later that Secretary declared that if the bill went through he would "go home." How foolish. Now he has the chance to back it up and get back into good opinion of the country. Hobson came to our apartment at 2.20 and told me subcommittee—of which Padgett is chairman—passed the proposition unanimously. Hobson asked me to get him a brief with which to argue matter before full committee January 5. So Madison, Cronan, Dudley, Knox, and I met in my office from 9 p. m. till 11.15 p. m. and drew up brief, which Knox will leave at Hobson's house at 9 a. m. to-morrow.

January 5, 1915: Papers give large space and headlines to action of subcommittee. Dewey is delighted, and told me I might tell Hobson, which I did at 10.30 a. m. by telephone.

"January 6, 1915: Hobson telephoned me at 1 p. m. that full House Naval Committee agreed unanimously on incorporating in naval appropriation bill the provisions for a 'Chief of Naval Operations.'"

With the exception of Admiral Dewey, Hobson, and the six other officers, nobody knew that I or any other naval officer had any connection with this measure.

"January 7, 1915: Evening papers last night and morning papers to-day confirm news that House Naval Committee unanimously agreed to incorporate in naval appropriation bill the provision, 'There shall be a Chief of Naval Operations.' * * * The New York papers give great space and comment (sympathetic) to establishment—Bureau of Operation. New York Tribune is especially favorable, and the World, the leading Democratic newspaper, gives the project its first column of first page, headed 'Fixed Naval Policy Assured.' It must hurt Mr. Daniels very much indeed to see the World taking a stand so antagonistic to him."

When the naval appropriation bill came up before the House, the provision for a chief of naval operations was stricken out on a point of order, on the motion by Mr. Mann. This did not surprise us because Hobson had said at the start that it was liable to this fate, being new legislation added to an appropriation bill. Hobson said that he thought he could get the Senate Naval Committee to put it back in the bill; he added, however, that this would give an opportunity for the Secretary to modify the provision by recommending certain changes in it, though he thought that the Secretary would not oppose a provision that had been agreed to by the full House committee.

Hobson's prediction was verified in toto. The provision, as finally incorporated in the bill by the Senate Naval Committee, was made to conform to the suggestion of the Secretary. In its amended form it was passed by both Houses. It established the office of Chief of Naval Operations in a form which, though it omitted the 15 assistants for making war plans which Hobson and I had suggested, accomplished, nevertheless, a greater advance than any other naval legislation had accomplished in many years. Most officers said that it was as great a boon to the Navy as the act of Congress in 1880, which authorized the "new Navy" in the shape of the steel ships *Chicago*, *Atlanta*, *Boston*, and *Dolphin*.

On March 24 and 26, 1916, I testified again before the House Naval Committee and made the strongest argument I could in favor of putting back into the appropriation bill the provision for 15 assistants, for making war plans, which had been left out in 1914. The subcommittee of the Naval Committee agreed to do this. When the matter came up before the full Naval Committee, the committee divided half in half, most of the Republicans voting yes, and most of the Democrats no. As the subcommittee had recommended it, and the full committee had not rejected it, the full committee had to pass it, though half of them opposed it.

This is the organization by which the Navy Department handled the Navy throughout the war. The excellence of the system is now admitted by everybody, including the Secretary.

The appropriation bill, as finally passed, contained the provision for the 15 assistants to the Chief of Naval Operations that had been omitted from the previous bill after having been included in the original draft of the House Naval Committee in the session previous.

The language of the bill is:

"Hereafter the Chief of Naval Operations, while so serving as such Chief of Naval Operations, shall have the rank and title of admiral, to take rank next after the Admiral of the Navy, and shall, while so serving as Chief of Operations, receive the pay of \$10,000 per annum and no allowances. All orders issued by the Chief of Naval Operations in performing the duties assigned him shall be performed under the authority of the Secretary of the Navy, and his orders shall be considered as emanating from the Secretary, and shall have full force and effect as such. To assist the Chief of Naval Operations in performing the duties of his office there shall be assigned for this exclusive duty no less than 15 officers of and above the rank of lieutenant commander of the Navy or major of the Marine Corps."

"The office of Naval Operations with the 15 assistants "assigned for this exclusive duty" constitutes a general staff.

Before I gave my first testimony, the personal relations between the Secretary and me had been friendly and pleasant, though we disagreed entirely as to the desirability of getting the Navy ready for war. Our disagreement on this point was extremely trying to me, for the reason that I liked the Secretary so much as a man. I appreciated his kindness of heart and his delicate refinement. I admired his steadfast adherence to the principles of Christian conduct which he professed, and I was continually tempted to cease from urging him to undertake a course of conduct against which he was resolved. But I often told him that I was the only man in 90,000,000

people to hold before him the military side of the Navy, and that I felt it my duty to resist. He always told me that I was right in so doing, and for a long while I thought that I was gradually impressing him with our dangers.

But his report of December 1, 1914, dispelled all my illusions on that point. I saw that I had not impressed him at all, and that the disagreeable and dangerous duty devolved on me of endeavoring to impress Congress and the people. Hence my testimony.

Beginning with the morning after my testimony the Secretary's manner toward me changed entirely. He was always polite, but a cold formality took the place of warm cordiality; disapproval was intimated in every way, though never expressed in words. But my period of misery had passed. I knew that I had done right, and that my testimony as the official expert of the Navy Department had roused a powerful minority to a realization of the peril of the Nation.

As I walked out of the shady corridors of the department building into the bright sunshine of the town, I said to myself that I thought I had been able to prevent any very great lowering of the efficiency of the Navy, and that I had had the great privilege of being able to do five things which would be of permanent benefit to it. These were:

- (1) Establishing the Division of Aeronautics.
- (2) Instituting strategic war problems for the fleet.
- (3) Proving that the country trusts Army and Navy officers more than it trusts any one else.
- (4) Making Congress realize the needs of the Navy more clearly than it had ever done before.
- (5) Establishing the office of Chief of Naval Operations.

Besides these, there were three other undertakings which I had not yet brought to a successful issue, but which I felt sure were in such a state that it was only a matter of a short time before they, also, would be accomplished facts. These were:

- (1) The establishment of some agency under the department for recognizing and developing new inventions. This was accomplished in the following summer by the establishment of the Naval Consulting Board, with Mr. Edison at the head. This differed from my plan mainly in being composed of civilians exclusively. My idea had been to have a naval officer with inventive ability to be the head, in order to steer the efforts of the civilians along the most advantageous lines.

- (2) The recognition of the possibilities of the diving-shell.

- (3) The putting into effect of the administrative section of the general war plan. Much more than any other one thing the refusal of the Secretary to sign this plan was the cause of the differences between him and me. Let anyone imagine himself in my position, and realize how I must have felt in knowing that the department possessed no means of knowing its degree of readiness for war, and that it could not know it until a certain paper had been signed, and until the methods which that paper provided for had been in operation for a considerable time.

The administrative plan was signed shortly after I gave up my position to my successor. That plan and the office of Chief of Naval Operations are the means by which the Navy Department got ready for war, and by means of which it operated during the war and has operated since.

The virtue of these two schemes were realized immediately after they were put into operation. This is proved by the following extracts taken from page 7 of the official report of the Secretary, made in the following December, 1915:

"OPERATIONS—BETTER ORGANIZATION EFFECTED.

"Upon my recommendation the naval appropriation act of 1914 provided that 'there shall be a Chief of Naval Operations * * * who shall, under the direction of the Secretary of the Navy, be charged with the operations of the fleet and with the preparation and readiness of plans for its use in war.' * * * A well thought-out plan, prepared by the General Board, for the preparation of the fleet for war in the Atlantic has been approved, and each office and bureau under the department has been assigned its proper share in the general scheme of preparedness. By reference to periodic reports the department may at any time become informed of defects, of efforts made to overcome them, and of the progress made toward a complete state of readiness."

It was mainly (almost wholly) because I urged the two measures which the Secretary described and praises that I had to resign my position as aid for operations.

I was surprised that the Secretary should state that the provision for a Chief of Naval Operations was made upon his recommendation.

My diary says:

"April 3 (1916): Secretary testified to-day. Roasted me in the afternoon; said I was not in harmony with department, and that he would have asked me to resign, if I had not done so.

"April 4 (1916): The morning papers give considerable space to the Secretary's attack on me. I held conference in forenoon and evening with Admirals Schroeder, Wainwright, and Osterhaus at Schroeder's house. We agreed best thing is for me to write to Naval Committee, requesting permission to appear and refute Secretary's testimony."

It had always been the custom for the Secretary of the Navy to be the first to testify before the House Committee, but on this occasion the Secretary was the last.

The following account of the Secretary's testimony is taken from the New York Herald, on April 4:

"Just before the hearings on the naval bill came to a close before the House Committee on Naval Affairs to-day Josephus Daniels, Secretary of the Navy, took occasion to bring about a final airing of his personal differences with Rear Admiral Bradley A. Fiske, United States Navy, one-time aid for operations. Mr. Daniels, in answer to questions propounded by Representative Lemuel P. Padgett, of Tennessee, chairman of the committee, tried to impress the committee with the fact that Rear Admiral Fiske, in criticising the situation in the Navy and its lack of preparedness, was moved by personal grievances rather than by higher motives.

"One of the causes of differences, the Secretary said, was his issuance of the order barring wine from the officers' mess. Rear Admiral Fiske, he stated, had protested against this. Then, to cap the climax, he said:

"'Rear Admiral Fiske told me that if the officers were deprived of their wine they could take to cocaine.'

"The Secretary then went on to give further details of his relations with the rear admiral.

"RAISES ISSUE OF VERACITY.

"In one instance a direct issue of veracity was raised. Rear Admiral Fiske told the committee that he acted as the personal messenger of the Secretary when he sent word that he desired the General Board to suppress its recommendations with respect to increased personnel of the Navy.

"To-day, Mr. Daniels said:

"'I never told the General Board to do anything in my life.'

"The Secretary's broadside at the officer all occurred in the last few minutes of the hearing.

"Mr. Daniels also contradicted in some degree the statement of Rear Admiral Fiske with regard to his failure to be appointed to the General Board. The Secretary said it was true that Admiral George Dewey had recommended the appointment of the officer to the board, but he had afterwards changed his mind, saying he thought Rear Admiral Fiske too 'theoretical' for this post and that a more practical man should be appointed to it.

"The thing the Secretary wanted to emphasize most, it appeared, was his contention that the rear admiral's troubles with the civilian head of the department arose long before the question of preparedness became acute; that when Rear Admiral Charles J. Badger was about to retire Rear Admiral Fiske importuned the Secretary 'a dozen times' that he be made commander in chief of the Atlantic Fleet; that when it was suggested that Rear Admiral Fletcher, now Admiral, might be available for the appointment of commander of the fleet, Rear Admiral Fiske stated that he would not desire the place and would refuse it if it was offered to him; whereupon, according to Mr. Daniels, the Secretary wrote and offered the place to Rear Admiral Fletcher and he was glad to accept the appointment.

"Also, the Secretary explained that the real issue between himself and Rear Admiral Fiske was whether the Navy should be operated under the ideals of the Old World or of America.

"'He told me, not once, but five times,' said the Secretary, 'that if we did not follow the principle of militarism and put men at the head of the Navy whose fathers and grandfathers had been naval officers, we would never attain any degree of preparedness.'

"April 5, 1916: New York Sun and World say editorially I must reply to Secretary. Herald has editorial taking my side against Secretary of Navy. I must defend myself. Fortunately, that is easy."

After my meeting with Schroeder, Wainwright, and Osterhaus I prepared a letter to House Naval Committee. We had a meeting the following morning, April 5, at which

I read my letter to them. They suggested a few minor changes in it, which I made. At their suggestion I handed this personally to the secretary of the House Naval Committee.

My letter read as follows:

WASHINGTON, D. C., April 5, 1916.

TO the NAVAL COMMITTEE,

House of Representatives,

Hon. Lemuel P. Padgett, Chairman.

GENTLEMEN: Referring to my testimony given before the Naval Committee on March 24 and 26, to the testimony given on April 3 by the honorable Secretary of the Navy and the editorials in this morning's issue of the New York World, Sun, and Herald, I beg leave to request your attention to the fact that the testimony of the Secretary has cast a serious cloud on mine.

For this reason I respectfully request permission to appear before the committee to explain certain occurrences concerning which I fear that the Secretary's memory had led him to do me great injustice.

According to all the papers that I have seen, the Secretary said that I told him that if naval officers were deprived of their wine they would take cocaine. It is true that I tried to persuade the Secretary not to prohibit wine and beer; spirituous liquors had been forbidden by law for 50 years. My arguments were expressed in a closely typewritten letter to him, four pages long, dated May 27, 1914, and covered many points. It would be necessary to read this entire letter to get a correct idea of what I told the Secretary. I should like to show a copy of the letter to the committee.

I did not know that my letter caused any unpleasantness between the Secretary and me. It caused no unpleasant feeling on my part toward the Secretary, because I felt that he was acting according to his convictions.

In the matter of desiring to be commander in chief of the Atlantic Fleet, I did make application for the command. Such an application was perfectly proper, as I had served successfully in command of three divisions at different times and was then aid for operations, which many officers thought a more important position.

I wish an opportunity, however, to convince the committee that I did not tell the Secretary that Fletcher did not want the command: the Secretary's memory leads him into error there. What I did tell the Secretary was that Fletcher had told me some time before that he thought the natural thing to do when Admiral Badger gave up the command was to give it to me, make Fletcher aid for operations, and then make Fletcher commander in chief when I retired, Fletcher being 18 months younger than I and my junior in rank.

I find the following entry in my diary on the date of April 30, 1914:

"Secretary of the Navy, in accordance with my request, telegraphed Fletcher asking him if he would like to change places with me."

Fletcher was then in Mexico in command of the first division, which I had commanded a year and a half before; and Admiral Winslow, my junior, also a candidate for the position of commander in chief, was also in Mexico, in command of the special service squadron. It will be seen that at my request I was to leave Washington, give up altogether my position as aid for operations and take a much lower place—a subordinate position in the fleet in Mexico as commander of the first division. Surely this was not pressing my claims unduly, but rather the reverse.

I find an entry in my diary of May 1:

"Fletcher answered above dispatch, saying that he would not like to become aid for operations, as he wished to succeed the present commander in chief."

I was greatly surprised but Fletcher has explained to me since why he changed his mind. It is needless to state that Fletcher's reasons were perfectly satisfactory to me.

I find in my diary under date of June 15, 1914:

"Secretary of the Navy told me the accounts published in the morning papers were correct; that he is going to make Fletcher commander in chief. I told him I could make no objection, that I had continually praised Fletcher as a fine admiral and that he could make no mistake in making Fletcher commander in chief."

I have never had the slightest ill-feeling about this episode, and I have told everyone to whom I have talked about it that if I had been in the Secretary's place I would have appointed Fletcher because he had made good in important practical work in Mexico. For many years Fletcher and I have been close friends, and we are so still.

As to my telling the Secretary, not once but many times, that "if we did not put men at the head of the Navy whose fathers and grandfathers had been in the service, we would never be able to obtain any degree of preparedness," I have never entertained such ideas; my father was a clergyman, and not one of my paternal ancestors for more than 400 years had been in the Army or Navy. My maternal uncle was in

the Navy, but he was killed at the age of 18; and my maternal grandfather was an Army officer in his early days, but resigned and went into the lumber business.

I do not remember any other Army or Navy relatives, and I am not a militarist or a believer in caste. What I did tell the Secretary was that countries like Germany and Japan have aims and ideals different from ours; that in those countries every man is in a measure military, as his father and grandfather were before him, and that such nations naturally have a greater military spirit and a greater military ability than nations like ours.

Referring to that part of the Secretary's testimony that bears on my testimony that the Secretary directed the omission of a recommendation of 19,600 men from the General Board's report of December, 1914, I should like an opportunity to convince the committee of the correctness of my recollections by showing the entries made in my diary at the time.

Very respectfully,

B. A. FISKE,
Rear Admiral, United States Navy.

"April 6, 1916: Navy League has ordered 2,500 copies of my 'Naval Strategy' and asked me to read it before the convention next month, and has put my name on program to read it. Of course, I am forbidden to speak at all on preparedness. So some one else will have to read it.

"April 7 (1916): New York Herald, Times, Sun, Tribune, and American, also Washington Post (doubtless practically all big papers) have long scare-head accounts of my letter to House Naval Committee, quoting it almost in full. * * * Lots of letters from friends about it.

"April 8 (1916): I received Mr. Padgett's letter, saying Naval Committee would not call me, but I may send copy of my letter of May 27, 1914, expostulating about the Secretary's wine mess order and he will print it in the hearings. So I wrote to Secretary, asking for a copy of it and wrote Padgett, telling him I had done so. Lots of congratulatory letters from friends.

"April 11 (1916): Representative Gardner in his Navy League speech ended, 'Bradley Fiske, I salute you as our Arnold von Winkelreid.'

"April 12 (1916): At meeting of Navy League this a. m., Col. Thompson, the president of league read a letter from Secretary of the Navy declining to permit me to read my paper on 'Naval Strategy,' published in March-April Naval Institute. Col. Thompson made eloquent speech denouncing Secretary's act, and was followed by W. S. Stayton on same lines, but bitter. Stayton was followed by Henry Reuter Dahl, the artist, in really an oratorical outburst—at the conclusion of which all the audience rose and cheered me. Mayor Lewis of Forest City, Ill., read my paper. When he started, Stayton asked audience to act as if he were Admiral Fiske, and they got all up and cheered again. Very nerve-racking to me.

"April 13 (1916): Morning papers devote considerable space and headlines to demonstration of cheers and hisses at Navy League yesterday. Senate yesterday p. m. adopted unanimously a resolution proposed by Senator Lodge 'directing' Secretary of the Navy to send to Senate General Board's letter of August 3, 1914, urging getting Navy ready and my letter to Secretary of November 9, 1914, reporting Navy unprepared for war. Papers mention it.

"April 15 (1916): Received from department a letter inclosing a photo copy of my letter expostulating against using the wine mess order. Took it down to Naval Committee with a letter of transmittal from me, and handed it to the secretary of the committee."

This letter was very long, and analyzed the whole sobriety question as related to the Navy. It dealt also with the letter from the Surgeon General, which seemed to me an insult to Navy officers, because it represented them as being much less sober than the enlisted men. My letter pointed out also that whatever lapses from sobriety occurred, occurred in almost every case when on shore leave, away from the restrictions of naval life, so that the Secretary's order would not affect the real trouble. It also predicted that the issuing of the order would not decrease drunkenness. My information is that this prediction has been fulfilled. In the middle of paragraph 10 was the sentence, "Another effect would be an increased temptation to use cocaine and other drugs."

"April 17 (1916): Called on Admiral Dewey, and he stated in the most emphatic terms that the statement to House Naval Committee made by Secretary of the Navy in his recent testimony to the effect that Dewey had asked Secretary not to keep me on General Board, as he wanted a practical man and not a theoretical man, was utterly in error. Dewey also told me that he was telling this broadcast. Several officers had told me of this."

The statement of the Secretary as printed in the official report of his testimony was as follows:

"Later, Admiral Dewey requested me not to put Admiral Fiske on the General Board. He said he wanted a practical man; that Fiske was too theoretical; and I did not put him on."

This statement surprised me for the reason that I had served twice on the General Board and Admiral Dewey had given me the mark 4 (the perfect mark) on every semiannual efficiency report; and his request that I be retained on the board after being relieved as aid for operations, had been made without any suggestion from me. Furthermore, he had put my name in a short list of officers whom he had mentioned for "heroic conduct" at the Battle of Manila and had taken occasion many times while I was on the board to compliment me on my abilities and conduct. So I was not surprised when I heard that Admiral Dewey was denying the statement attributed to him.

Finally, after several officers had told me that Dewey was denying it, I went to his office to ask him face to face if he had done so. When he saw me coming in at the door he rose from his chair (in the presence of his aid, Lieut. Commander Le Breton) and advanced toward me with both hands outstretched, saying, "Fiske, I never said it: I never said it. No communication passed between the Secretary and me about your staying on the board except when you were present, and you heard me tell the Secretary that I wanted you to stay."

[Chapter XL.—Unpreparedness letter, letter of President, and retirement.]

"April 19 (1916): * * * Telephone message from Secretary's aid said my preparedness letter can not be found. I sent a copy, which was copied and returned.

"April 23: All the papers (I believe) print my unpreparedness letter practically in full. Secretary transmitted it to the Senate yesterday with a letter, etc."

The Secretary's letter read as follows:

THE SECRETARY OF THE NAVY,
Washington, D. C., April 21, 1916.

To the SENATE:

I am in receipt of the resolution adopted by the Senate on April 12, 1916, calling for—

(1) A communication, dated August 3, 1914, from the General Board of the Navy warning the Navy Department of the necessity of bringing the Navy to a state of preparedness.

(2) A communication, dated November 9, 1914, from Rear Admiral Bradley A. Fiske, senior advisor to the Secretary, warning the Navy Department of the unprepared state of the Navy.

Upon receipt of this resolution, diligent search was made in the files of the department for the communications desired. That dated November 9, 1914, from Rear Admiral Fiske, is appended hereto. The chief clerk was unable to find it in his files, it having been withdrawn by an officer who "looked it up several times but could not find it." However, the copy herewith transmitted was furnished the department by Admiral Fiske at my request.

This communication was not furnished me, and I did not know of its existence until long after it was written. I find upon inquiry that it was filed with the chief clerk, without my knowledge that it had been written. Although Rear Admiral Fiske was in my office daily, he did not tell me he had placed the communication on file. His article was written after the estimates for the Navy, as required by law, had been submitted, and I was left in ignorance of its existence, while Congress was considering legislation for the increase of the Navy and actually enacting legislation which has secured the best organization the Navy Department has enjoyed in its history. I was greatly surprised when I learned that a communication deemed important enough now to be the subject of a Senate resolution was not considered by its author of sufficient importance for him to present in person to me, instead of depositing it, without acquainting me of his action, in the files of the Navy Department.

We are unable to find any communication such as that described in the resolution, from the General Board under date of August 3, 1914, though our files contained a letter of two days previous not bearing upon the subject mentioned in your resolution. I therefore addressed the following letter to Admiral Dewey, president of the General Board:

[Secretary's letter to Dewey.]

"APRIL 17, 1916.

"MY DEAR ADMIRAL DEWEY: I am in receipt of a resolution from the Senate requesting me to send a communication dated August 3, 1914, from the General

Board of the Navy, warning the Navy Department of the necessity of bringing the Navy to a state of preparedness.

"I have made a careful examination of the files of the Navy Department and have not been able to find any such communication. If the General Board has such a communication of that date, won't you please send me a copy?

"Sincerely yours,

"JOSEPHUS DANIELS

"Admiral GEORGE DEWEY,
"President of the General Board,
"Washington."

In response to this inquiry I received the following letter from Admiral Dewey

"OFFICE OF THE ADMIRAL OF THE NAVY,

"Washington, April 18, 1916.

"MY DEAR MR. SECRETARY: I am in receipt of your letter of the 17th instant, asking me to send you a communication from the General Board, dated August 3, 1914, 'Warning the Navy Department of the necessity of bringing the Navy to a state of preparedness.'

"There is no letter or recommendation from the General Board bearing the date of August 3, 1914. I find, however, that on August 1, 1914, a special meeting was called at the request of Rear Admiral Fiske, aid for operations, to consider the withdrawal of battleships from Mexican waters to their home yards. A letter adopted at this meeting and bearing its date was signed by Rear Admiral Knight, senior member present, a copy of which is forwarded herewith.

"You will note that this is a confidential communication, and as it bears intimately upon our policy with regard to certain foreign powers I do not think it advisable that it should be given to the public.

"Sincerely, yours,

"GEORGE DEWEY.

"Hon. JOSEPHUS DANIELS,
"Secretary of the Navy."

It will be noted that Admiral Dewey states the communication of August 1, 1914, "bears intimately upon our policy with regard to certain foreign powers," and that he does "not think it advisable that it should be given to the public." In view of this statement of Admiral Dewey and of the fact that the letter of August 1, 1914, does not refer to "the necessity of bringing the Navy to a state of preparedness," as stated in the resolution adopted by your body, it does not appear to be in the public interest to transmit the confidential communication of the General Board of August 1, 1914. No other report from the General Board touching preparedness has been received, except those published as appendices to my reports and in my hearing before the House Committee on Naval Affairs.

Respectfully,

JOSEPHUS DANIELS.

The SENATE OF THE UNITED STATES,
Washington, D. C.

"April 29 (1916): * * * Army and Navy Journal has editorial, 'Admiral Fiske and the Secretary,' saying a naval correspondent says so and so—recounting facts stated by him, showing I did show Secretary the unpreparedness letter."

From Washington, I returned to the War College. Then I wrote the following letter:

UNITED STATES NAVY, WAR COLLEGE.

Newport, R. I., April 29, 1916.

To the PRESIDENT OF THE SENATE:

1. In a communication to the Senate, dated April 21, 1916, transmitting a copy of a letter dated November 9, 1914, to the Navy Department from me as aid for operations, the Secretary of the Navy makes the following statement:

"This communication was not furnished me, and I did not know of its existence until long after it was written. I find upon inquiry that it was filed with the chief clerk, without my knowledge that it had been written. Although Rear Admiral Fiske was in my office daily, he did not tell me he had placed the communication on file. His article was written after the estimates for the Navy, as required by law, had been submitted; and I was left in ignorance of its existence, while Congress was considering legislation for the increase of the Navy, and actually enacting legislation which has secured the best organization the Navy Department has enjoyed in its history. I was greatly surprised when I learned that a communication deemed important enough

"The subject of a Senate resolution was not considered by its author of sufficient importance for him to present in person to me, instead of depositing it, without consideration of his action, in the files of the Navy Department."

... Secretary, while as a matter of fact, I was always scrupulously careful to not permit to receive, or to remain under, any mistaken impression, or to be ... important matter, if I could prevent it.

and appeared in the New York Herald and in many other papers on and injured my reputation for fair dealing.

I respectfully request permission to appear before such persons and state facts which I and other officers remember very clearly.

are noted in my diary, showing that there has been a lapse of memory on the Secretary's part. In particular, I wish to show the two following entries in my diary:

... I showed Secretary paper I had written to him, stating Navy is not needed more men more training, and a general staff. He made almost no comment on paper though he read it carefully. During conversation, Secretary said, early April, 1913, etc.

... I showed Assistant Secretary a copy of my letter to Secretary on ... of the Navy, lack of training, lack of general staff, etc. He said, it ... would keep it, etc."

It is pertinent to the fact that, although the copy of the letter sent to the President November 9, while the entry in my diary was November 5, yet, the enclosed shows that the contents of that letter were the same as the contents of November 9. My recollection is that I kept the letter on my desk intending to take up the matter again with the Secretary, but finally decided merely to file it, and that a fresh copy was made. The date was changed by inadvertence, but no changes were made in the letter except some verbal alterations. Certainly no change was made in the character of the letter.

- like to prove by my diary that this letter was merely the con-
- clusion of a great many oral conversations carried on frequently after the
- which I repeatedly urged on the Secretary the peril of the country and
- to form a general staff, and more progressive training

As a matter of fact, it seems to me that it was wise to grant this request. I then ask you, as a matter of fact, to give as much publicity as was given to the letter of the Secretary.

BRADLEY A. FISKE,
Rece. Advisor, United States Army.

Q. I would that the Secretary should state that "the letter of August 1, 1914, stated the necessity of bringing the Navy to a state of preparedness" and that the letter should urge it, and it was my recollection that it did so. The entry in my diary under date of August 1, 1914, confirmed me in this. I did not think it proper to cite this in my letter, however, as it would be questioning the veracity of the Secretary.

...the newspapers say that Vice-President Marshall gave my letter
...to be what I did with it, that Lodge defended my action, and
...and Lodge.

As to the Senator Tillman read my letter in the Senate and
 I am convinced that disappointed ambition, our good Senator
 New York Sun and New York World have agreed to publish
 it in its entirety. World is particularly strong.

Yours very truly,
 Wm. B. E. R. I am very glad to get your piece
 and the rest of the material.

1. The report must be printed with appropriate headlines - all capital letters written in large letters.

2. The report must be typed on the President's letter paper - must be on the letter paper of the Secretary of Navy and no other.

... request from the United States Senate, the Secretary of the Navy
... a letter written on November 9, 1911, by Rear Admiral Bradle
... *then and for Operation.*

Secretary of the Navy has stated that his aid for Operations filed this letter with the chief clerk of the Navy Department and did not show it to the Secretary. Admiral Fiske states that he handed the letter to the Secretary of the Navy as the latter was standing at his desk in the Navy Department, and he read it carefully.

An issue of veracity has thus arisen between Rear Admiral Bradley A. Fiske and the Secretary of the Navy. Mr. President, we respectfully petition you, in fairness to your Secretary of the Navy and fairness to a gallant naval officer, not to allow this matter to remain uninvestigated.

Admiral Fiske graduated from the Naval Academy in 1874; he has given 40 years' service to his country. When he served as navigating officer of the *Petrel* at the Battle of Manila, he was cited by his captain for "eminent and conspicuous conduct in battle," and by Admiral Dewey for "heroic conduct." His series of inventions have done more than those of any other man to place the United States Navy in a preeminent position. His telescope sight has been adopted by every navy in the world and is chiefly responsible for the improvement that has taken place in the naval gunnery since 1898.

Admiral Fiske is recognized throughout the service as the logical successor to Admiral Mahan. His writings on naval strategy mark him as the leading strategist in the United States Navy. His record, therefore, is one of gallantry in battle, coupled with faithful attention to the less spectacular duties of a naval officer in time of peace. Never before has there been a blot on his record. To-day he stands accused by your Secretary of the Navy of negligence and untruthfulness, for if he filed his letter on the unpreparedness of the Navy with the chief clerk without showing it to the Secretary he was culpably negligent of duty. This, he says, he did not do. We earnestly request that, without delay, you will order an investigation.

Very respectfully, yours,

C. S. THOMPSON,
Chairman Executive Committee.

"May 16 (1916): New York Times and World have editorials insisting that 'question of veracity' between Secretary of Navy and me be investigated."

"May 24: The newspapers publish a letter from President Wilson to the American Defense Society in reply to their letter of May 14, in which President quotes a letter from Secretary of Navy, saying he accepted my statement that I had shown my unpreparedness letter to him and he had read it."

The letter of the President read as follows:

"THE WHITE HOUSE,
Washington, D. C., May 22, 1916.

MY DEAR SIR: I am in receipt of your letter of the 12th of May. I referred it to the Secretary of the Navy, and he has furnished me the following memorandum:

"Some days ago, in response to a resolution of the Senate, I transmitted to that honorable body a copy of a communication written by Rear Admiral Fiske in November, 1914. In transmitting the letter I stated that I had not seen it and did not know that it had been filed until long after it was filed with the chief clerk.

"In a recent letter to the Senate Rear Admiral Fiske stated that my statement showed a 'lapse of memory,' because he had presented the letter to me and I had read it. I have no recollection that this paper was ever presented to me or of reading it.

"Inasmuch, however, as Admiral Fiske states that he did show it to me before it was filed I of course accept his statement. It was his custom while aid for operations to present to me scores of papers bearing upon all naval matters. It is utterly impossible for any Cabinet officer in the multiplicity of papers presented to him to recall all of them.

"I had talked with Rear Admiral Fiske several times about the subject matter of the communication, upon which I had rather fixed views. But I did not, when my letter was written to the Senate, and do not now, recall that he had at any time committed his views to paper, presented them to me, or placed them on file."

Inasmuch as the difference referred to in your letter between the Secretary of the Navy and Rear Admiral Fiske is merely one of recollection of an incident which occurred in November, 1914, and inasmuch as the Secretary says that, while he has no recollection of having read the communication by Rear Admiral Fiske, he is willing to accept the Admiral's statement, the matter does not seem to me to call for any comment.

Very truly, yours,

WOODROW WILSON.

"May 25 (1916): Letter from Dr. Graeme Hammond says no need for apprehension about Jo."

During the preceding two years my wife's health had caused me great anxiety. The physicians did not seem to be able to locate the cause of her distress; but finally they declared that her system indicated a nervous malady.

"June 2 (1916): Admiral Benson made adulatory speech at United States Naval Academy dinner Annapolis last night about Secretary of Navy and telling the fine things he and Secretary had been doing during past year. Unprofessional.

"June 11, Sunday: * * * Leave Newport for New York to-night and bid farewell to my naval life.

"June 13: Retired to-day, 62 years old. Had a wonderful ovation from American Defense Society in big room of Great Northern Hotel, hung with flags, etc., during which I was presented with a book by the society, my name on outside in gold letters, etc., letter read to me, etc. I made a speech in answer, and then several photographers and 'movie men' took pictures of us."

The letter from the American Defense Society read as follows:

AMERICAN DEFENSE SOCIETY,
303 FIFTH AVENUE, NEW YORK,
Office of the Trustees.

DEAR ADMIRAL FISKE: With sincere pleasure we hand you this album containing extracts from the leading papers of the country which should be of particular interest to yourself.

To have been instrumental in having justice done in this public way to a gallant and distinguished officer of the United States Navy is a source of satisfaction to the American Defense Society.

And may we say in conclusion that your dignified and courteous bearing in the trying circumstances of an extremely unpleasant experience has won universal admiration, and has increased, if that is possible, the high regard and esteem in which you are held not only by the members of the American Defense Society, but by millions of your fellow countrymen.

Very respectfully, yours,

J. H. CORR,
Chairman of the Board of Trustees.

JUNE 13, 1916.

The CHAIRMAN. Senator Trammell, do you desire to ask any questions?

Senator TRAMMELL. Yes, I have some questions.

On March 25, 1917, did you address a communication to the Secretary of War in which you made the following statement: "I beg leave to express the hope that I shall be permitted to proceed with this work, as I believe that I can do more good in this way than in any other way"—in connection with some convention?

Admiral FISKE. Yes.

Senator TRAMMELL. You did then, on March 25, ask to be allowed to remain on the work that you were doing?

Admiral FISKE. Yes.

Senator TRAMMELL. March 25, 1917?

Admiral FISKE. Yes.

Senator TRAMMELL. Now, you seem to have disagreed with the Secretary of the Navy in regard to his efforts to democratize the Navy, and you refer only to one particular matter, that of trying to give the enlisted man some opportunity to get an education. You objected to that, did you?

Admiral FISKE. No, sir; only to the degree to which he carried it.

Senator TRAMMELL. You spoke of it in a critical way.

Admiral FISKE. To the degree to which it was carried.

The CHAIRMAN. To what degree was it carried then?

Admiral FISKE. There were orders issued prescribing the amount of time in the forenoon and afternoon to be devoted to this instruc-

tion, and a system was put into operation which most of the officers of the Navy thought was out of proportion to the good to be obtained, considering all the other duties which the officers and men had to carry out.

Senator TRAMMELL. Do you remember how much time they were allowed for study during each day or during the period of a week?

Admiral FISKE. No; I do not remember the details, Senator.

Senator TRAMMELL. You do not know?

Admiral FISKE. I do not remember the details. I did at one time.

Senator TRAMMELL. Do you remember any other efforts on his part to democratize the Navy?

Admiral FISKE. I have not at hand any distinct policies, but in general the feeling that I had and that I think others had was that this attitude was not incorrect but that it was carried to an undue extreme. It is very hard now for officers of the Navy to maintain discipline, as it is. It is very difficult, the most difficult thing possible, and I think the feeling was throughout the service, Senator, that the looking out for the enlisted men was carried to a degree further than was consonant with our idea of discipline.

Senator TRAMMELL. If you can recall any particulars of his abuse of the principle of looking out for the enlisted personnel, I should like to have you recite it.

Admiral FISKE. I would not call it abuse in any case, Senator.

Senator TRAMMELL. You said he carried it to an extreme.

Admiral FISKE. Yes, to an extreme.

Senator TRAMMELL. I would call that an abuse if he carried it to an extreme.

Admiral FISKE. Of course, it is a matter of definition. My idea of "abuse" would almost carry with it the idea of intention. I certainly do not think there was any intention on his part to do anything wrong, but the feeling was, I think, that that part of the work of the Navy was given a prominence out of proportion to the rest, and that for that reason other things had to be overlooked.

Senator TRAMMELL. Can you give us some more facts as to his carrying it to an extreme—something definite?

Admiral FISKE. I can not give any facts that I know of my own knowledge, no; I can not state any absolute facts along that line, except the one I am speaking of now in regard to what we thought was undue importance attached to the comfort and education of the enlisted men.

Senator TRAMMELL. And you think that that interfered with the discipline?

Admiral FISKE. Yes; I think so.

Senator TRAMMELL. I am sorry you can not remember something about the educational opportunities that he wanted to give these men.

Admiral FISKE. For instance, he appointed an aid for education. Now, that officer had an office next to mine. The idea of the aids had been to coordinate the work of all the various different activities, which were quite different, one from another. The Bureau of Steam Engineering, for instance, had very different work from the Bureau of Ordnance, and very different from the Bureau of Navigation, and very different from the Bureau of Yards and Docks.

one of the aids was to coordinate these, so as to let the aid have four men to deal with, instead of a great number. Now, the aid for material had to coordinate what we call the material bureau. That was along the idea which has been in the Army and Navy, especially since they have got up to date. The aid for education had duties which were along a specific line as specific as that of the Bureau of Construction, or the Bureau of Ordnance, or any other. It was not at all the work of an aid who has been accustomed to consider an aid, and as a matter of fact the aid for education did not as a rule take part in the councils of the department. His work was otherwise; but nevertheless, he gave to the man who had this position of aid for education, the same rank in the Navy Department as that for instance for the aid for material or the aid for personnel. I think that gives an exaggerated form that we thought his ideas of the education of the enlisted man took. I think that is an illustration of what

MR. TRAMMELL. Along back during those times did you not experience difficulty in getting enlistments to fill up your authorized personnel?

MR. FISKE. I will have to answer that question, Senator, by saying we were having no more difficulty than navies always have getting men. We always would eventually get them, but a new excess has been appropriated for it has always taken a length of time to get the men enlisted. Of course, I was the aid for personnel, but my recollection is that there was no great trouble. It took a little time to get them. I would not say it was a trouble.

MR. TRAMMELL. Don't you think that the fact that the men were considering entering the Navy knew that the enlisted personnel were given a good deal of consideration would encourage that going into the Navy?

MR. FISKE. I do, absolutely. I think that was a good thing to have that idea. I think that part of it was good.

MR. TRAMMELL. The idea of doing something for the enlisted men would not do any particular harm in keeping the Navy up to strength, would it?

MR. FISKE. No; that was a fine idea, only carried too far, that one of the members of the Council of Aides, the Aide for Education, will testify to-morrow, I think, and he had more experience in training the personnel than anybody else in the Navy. He was in favor of it, but we all thought it was carried too far, it was an extreme.

MR. TRAMMELL. Since you have entered into a discussion of equalizing of the Navy, I just want to get a little information. Are there any regulations of the Navy that forbid an enlisted man of the Navy from sitting at the same table with an officer in a dining place?

MR. FISKE. I trust not. I do not know of any. There was a man in the Army who was court-martialed, you may remember, a few years ago, up in Connecticut, for making an enlisted man happen to sit alongside of him in the theater get out. He was court-martialed and came very near being dismissed from service.

Senator TRAMMELL. I am glad that is not the custom, then, in the Navy. No such conditions exist in the Navy?

Admiral FISKE. Not that I know of. Would you mind repeating your question, Senator?

Senator TRAMMELL. My first question was, is there any regulation or custom that forbids an enlisted man in the Navy from sitting at the same table with an officer in a public eating place?

Admiral FISKE. Not that I know of, and I should be very sorry if there were any.

Senator TRAMMELL. Our views, then, on that are in harmony. Now, this plan that was adopted for the operations, was that along the lines that were recommended by you? I mean as finally adopted by Congress.

Admiral FISKE. Yes; with the change which I specified.

Senator TRAMMELL. You stated in your testimony, I think, that it was adopted in appearance, but not in substance.

Admiral FISKE. The recommendation as regards the exclusive duty, yes. In my testimony of March 24, 1916, I pointed out the advisability and the great value of having at least 15 officers put back, and I went into that at great length. It was finally put into the bill, and I thought for a long while that it was put in as I had suggested; but, as a matter of fact, instead of being for the exclusive duty of making war plans, it said for the exclusive duty of assisting the Chief of Naval Operations in his duties. His duties, of course, were multifarious, so they were not ordered for the exclusive duty of making war plans.

Senator TRAMMELL. The plan you originally suggested was that something on the order of the British Admiralty?

Admiral FISKE. Somewhat, but yet quite different.

Senator TRAMMELL. Along that line?

Admiral FISKE. The idea, Senator, was that war plans were very important things. Now, I had known Mr. Hobson for years, knew him when he was a young man. He is a graduate of the Naval Academy, graduated at the head of his class, a very brilliant man. I convinced Mr. Hobson of the desirability of having some legislation whereby no matter who was Secretary of the Navy, leaving out his personality altogether, there should be a machine made whereby a naval officer should be made responsible, just as the captain of a ship is responsible. The captain of the ship is held responsible for results. And the way this was framed was that the Chief of Naval Operations should be responsible for the readiness of the Navy.

Admiral Mayo testified yesterday, as I see in the papers to-day, that the Chief of Naval Operations did not now have, under the law, the responsibility and power which he ought to have in order to be sure that the Navy would not, from any accident of any kind whatever lapse into unpreparedness, and that was explained to the House committee by me, and the House Committee on Naval Affairs made a very positive recommendation after long and mature deliberation.

Senator TRAMMELL. You are referring to Hobson, of *Merrimac* fame, and later a Member of Congress, are you?

Admiral FISKE. Yes, sir.

Senator TRAMMELL. At the time that you recommended additional enlisted men, do you know whether or not along about the same time the Secretary made a recommendation of some 14,000 or 15,000 additional enlisted men?

Admiral FISKE. I do not remember that. What date was that?

Senator TRAMMEL. I think it was probably in 1916.

Admiral FISKE. I am, of course, referring to the fall of 1914.

Senator TRAMMEL. This was within a few months, I think, after you stated that you had recommended 20,000 men.

Admiral FISKE. Of course, this recommendation was for adoption by the House. It was a recommendation to the Congress that met in December, 1914.

Senator TRAMMEL. You do not know what recommendation, if any, the Secretary made in regard to increasing the enlisted personnel at that time, and along about the same time that you were making that recommendation?

Admiral FISKE. The Secretary did not incorporate any general recommendation in his report. I do not remember the statement.

Senator TRAMMELL. You do not remember what number he recommended, if any at all, about the same time you were asking for 20,000 men?

Admiral FISKE. Nineteen thousand six hundred.

Senator TRAMMELL. Yes.

Admiral FISKE. Yes, sir; I do not think, Senator, that he recommended any. I do not think he did. That would be in December, 1914.

Senator TRAMMELL. Did Admiral Benson, as chief of operations, call to his assistance officers who had been in the War College, or not? Do you know whether any of them were men who had been in the War College?

Admiral FISKE. Oh, yes.

Senator TRAMMELL. Some of his assistants had been in the War College?

Admiral FISKE. Oh, yes; very good men.

Senator TRAMMELL. On page 530 of your book I find the following quotation:

We did not have even a general staff, and the only man in the United States Navy who could remotely pretend to occupy the position of a naval strategist was myself. I occupied that position simply because I occupied the position of military adviser to the Secretary. I knew I was not fitted by training or experience for such a position, but I had had as much training and experience as anybody else in the Navy.

According to that statement you did not consider that yourself or anybody else was particularly qualified for the position of naval strategist at that time?

Admiral FISKE. No, sir; I did not. In fact I was sure of it.

The CHAIRMAN. What was the date of that?

Admiral FISKE. When I became aid for operations, in February, 1913.

Senator TRAMMELL. Prior to the time you went into the Navy Department in 1913. they had no chief of operations, or anything of the kind?

Admiral FISKE. They had the aid for operations.

Senator TRAMMELL. They just had the aid for operations?

Admiral FISKE. Yes, sir.

Senator TRAMMELL. That had been the former plan?

Admiral FISKE. Yes.

Senator TRAMMELL. And your idea was that the plan which had been in effect all along prior to 1913 should be changed, in accordance

with the testimony you have given here to-day? That is, I mean you thought it should be changed according to your suggestions?

Admiral FISKE. Yes. The aid submitted was put into operation after many years of trial to have something of that kind brought about by many of the officers of the Navy, at the head of whom was Admiral Luce, and Admiral Mahan; and many others, but Luce and Mahan were the principal ones; and two boards had been appointed to consider what should be done.

As a matter of fact, nothing was done for a long time. The situation was that these various bureaus were established by law as advisers to the Secretary. Now, that system had worked pretty well when the Navy was small, when there were only a few ships, and when the mechanism of the ships was simple, and the whole machine was of a simple character; but as time went on, and armies and navies became more complex, and especially after the German victory in 1870, and they saw what a machine the military people of Germany had been about, then everybody else had to do something about it or keep out of war, or get licked; so that Admiral Luce, and afterwards Admiral Mahan and others, tried to have something brought about by which the difficulty could be overcome in a measure.

We realized we could not get any general staff, for the reason that the words "general staff" were entirely misunderstood. The idea had gotten abroad, and was in Congress, that a general staff was—well, they had different ideas. None of them knew what it was, but they thought that it was something awful; that it was something whereby the Navy or the Army could go off by itself, and they could raise Cain with the country, and so forth. But all that the general staff was, it was the same thing you have in every newspaper or any other commercial organization, everywhere; you have a man who does the same thing for you, who acts as your secretary, who finds out about different things and collects information for you so as to present the question to you in a simple form. Of course, we had to have a large staff, and to have it highly trained. We were afraid to call it a general staff, because we knew we could not get it and could not get anything through Congress for anything like it, so that Mr. Myer got up this scheme, which is almost identical with the scheme proposed by those boards, whereby four men, officers, for instance, would coordinate the various bureaus. For instance, one bureau would coordinate for the material bureaus.

Now, Mr. Myer did not think—I talked about it several times with him—and nobody thought, that that was final. All he wanted to do was to take that step.

The next step Mr. Myer wanted to take was to get that legalized by Congress, and he tried to do it, and he went out and could not do it. They would not legalize it.

Now, when I came into the job—excuse me, I should say the position—here, of aid for operations, especially after the experience in the Mexican War, I thought that the machinery was wholly inadequate to handle the situation even in that Mexican trouble; that we needed more men, needed more clerks and more everything, and especially we needed something to start on; we needed war plans and needed men to get war plans started. That was the main thing, to get war plans; to get some line of action lined out in advance, so that when you are up against war, you have something to go on.

I suppose you may have heard the story—I do not know whether it is true or not—but when France declared war against Germany in 1870 the news came to Berlin where Moltke was asleep, and they awakened him with the news, and he said, “You will find the plan in the top drawer,” and then turned over and went to sleep. That is what we wanted—something like that—because it was just as in the early days out West, the man who got his gun out first was the man that had the drop on the other. That was all we wanted; so that that was the reason I wanted it, not so much changed, but amplified.

Senator TRAMMELL. You found this condition when you entered the department in the early part of 1913, prior to the induction into office of Secretary Daniels, such that you thought there ought to be a good many changes made in the Navy Department; and that was prior to his induction into office?

Admiral FISKE. Yes, in the sense that I felt that the system of aids should be extended and more of a machine there to handle the work. But of course I thought that the aid system was very much better than anything that had gone before.

Senator TRAMMELL. You thought that the plan suggested by you would be an improvement over that?

Admiral FISKE. Yes.

Senator TRAMMELL. Of course if you had not, you would not have suggested it. I do not think I have any further questions.

The CHAIRMAN. You stated in your book on page 530, that the fact was that, fit or unfit, you were the official strategist of the Navy, and that you were not fitted by training or experience for that position. Does that mean that you were not in any way familiar with naval strategy?

Admiral FISKE. It means that I was not sufficiently familiar with it. My training had been inadequate for such a position as that.

The CHAIRMAN. And also the training of every other officer in the Navy had been inadequate?

Admiral FISKE. Yes, sir.

The CHAIRMAN. How long were you acting as aid for operations before Admiral Benson was made Chief of Operations?

Admiral FISKE. Two years and three months.

The CHAIRMAN. During that two years and three months you spent a good deal of time studying naval strategy?

Admiral FISKE. I certainly did.

The CHAIRMAN. So that by the time the bureau was created and the chief was appointed, you probably were better up on naval strategy than any other officer in the Navy? You had had some experience?

Admiral FISKE. Well, I ought to have been, Senator, by that time.

The CHAIRMAN. Whose duty was it to prepare a war plan? Was it entirely the duty of the bureau of operations or did the general board have any duty in it?

Admiral FISKE. You mean when I was in operations?

The CHAIRMAN. No, later on.

Admiral FISKE. The General Board is really under the office of Naval Operations, in fact, and in a sense the General Board was under me as aid for operations. Of course Admiral Dewey was at

that time the head of that board, but Admiral Dewey at that time did not do very much work in connection with the board. Of course he was the head of the board and we all almost idolized him, and anything he wanted, if possible, we would do; but he did not take part actively in the deliberations of the board and the making of war plans was a part of the General Board, but I consider myself responsible for it the same as if I had been on the General Board in charge of war plans. Admiral Wainwright held me responsible the same way, when I was aide for operations, I was responsible for; but the General Board was responsible for war plans.

The CHAIRMAN. So that the responsibility under the plan that is now in existence in the Navy lies with the Bureau of Operations and the war plan?

Admiral FISKE. Yes; but as I pointed out, the word "responsible" is not in the law. It says it is charged with the preparation of war plans. Now, you may think that is a fine point. I suppose so, but I wish to call attention to the phraseology, nevertheless. The word "Responsible" is not there.

The CHAIRMAN. I think that is all, Admiral, and you may be excused.

Admiral FISKE. Yes, sir.

The CHAIRMAN. The committee will adjourn until 10 o'clock tomorrow morning.

Admiral FISKE. May I tell the Chief of Naval Operations that we may go home?

The CHAIRMAN. Yes.

(Thereupon, the subcommittee, at 12.20 p. m. adjourned tomorrow, Thursday, April 1, 1920.)

NAVAL INVESTIGATION.

THURSDAY, APRIL 1, 1920.

UNITED STATES SENATE.

SUBCOMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 o'clock a. m., in room 235, Senate Office Building. Senator Frederick Hale presiding.

Present: Senators Hale (chairman), Keyes, and Trammell.

The CHAIRMAN. Admiral Fullam, will you take the stand and be sworn?

STATEMENT OF REAR ADMIRAL W. F. FULLAM (RETIRED).

The witness was sworn by the chairman.

The CHAIRMAN. Admiral, will you state to the committee what positions you occupied in the Navy from the time of the beginning of the World War up to the present time, and will you also give the committee any information that you have about the preparation and conduct of naval activities during the war and before the war?

Admiral FULLAM. In 1915 I was ordered to command the Pacific Reserve Fleet, and I remained in command of the Pacific reserve forces from that time until the beginning of the war.

When the war began, the commander in chief of the Pacific was sent to the Atlantic with a part of the ships, and I remained in the Pacific as commander of the forces that were held there, and I retained that command throughout the war and until the 1st of August, 1919, coordinating with the Japanese and the British forces in patrolling the whole Pacific from Alaska to the Cape, my part particularly being the patrol from Alaska to the canal, but the Japanese and English commanders reporting to me their movements, as I was the senior officer in the Pacific, and I informing them constantly of the disposition and movements of my ships in order that we might all check German activities and rascalities over the whole Pacific.

Those were my duties, sir, from 1915 until I retired, practically, in 1919; and previous to that from 1913 to 1914—in February—I was one of the aids of the Secretary of the Navy at the Navy Department. In that way I was brought in touch with the administrative function of the Navy Department and with the trend of its policy, and kept in touch constantly until almost the present time.

The CHAIRMAN. That was what the committee wanted to know.

Admiral FULLAM. I prepared a file to cover this subject, sir, and they are mostly personal letters, because I found from a year's experience at the Navy Department that official letters sometimes

were less effective than personal letters, particularly when the personal letters were written to officers with whom I was intimately acquainted, and whom I hoped I might support and encourage to help me in the work we all felt it was my duty to perform; and this file I submit, if the committee wishes it. Many of these letters are not in——

The CHAIRMAN. Are they letters to which you are about to refer in your statement?

Admiral FULLAM. Some of them I will refer to indirectly, but some of them I have in the file that I will read. Others, in addition to those, are filed here, if the committee wishes to have them.

The CHAIRMAN. I think that where you refer to a letter in the file and do not give the letter in full in your statement, the letter had best go into the record. Of course letters that you give in full in your statement will not have to go in a second time.

Senator TRAMMELL. Those to which you make no reference, there is no necessity of filing, is there?

The CHAIRMAN. No.

Admiral FULLAM. I think we can decide that as we go on, sir.

Referring to this discussion as to the naval preparedness in the Pacific from 1915 to 1918, this file shows that immediately upon taking command of the Pacific Reserve Fleet on the 15th of October, 1918, I began to recommend, and to work with the idea of getting the Reserve Fleet ready for war.

The correspondence will show that I had a constant struggle to get anything really done by the Navy Department as regards a definite policy, and as regards the personnel needed to man these vessels. The letters tell the story and indicate the reasons for the vessels not being manned when war was declared.

My caustic letter of September 14, 1916, summed up the condition as to material and showed that if something was not done to co-ordinate all the bureaus and make them all get busy, the ships never would be ready.

This letter of mine awakened the department and brought about the order dated September 30, which made it possible to get a start on the repairs needed to put the material of these ships in a condition for war.

No legislation concerning personnel was advocated or pushed by the Navy Department except by Admiral Palmer who did his utmost, but whose hands were tied.

It will be noted that on October 19, 1917, about 6 months after war was declared the Chief of Naval Operations recognized the work done in getting these ships ready for war and testified as to the thoroughness of the work. I will read that letter now. (Reading):

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, D. C., October 19, 1917.

From: Chief of Naval Operations.

To: Commander, Division 2, Pacific Fleet.

Subject: Report of commander, Reserve Force, Pacific Fleet, upon detachment.

Reference (a): Report of commander, Reserve Force, Pacific Fleet, RLW/M, June 1, 1917.

1. Reference (a) has just reached the department, having been delayed in transmission to the commander in chief, Pacific Fleet.

2. The department notes the energetic measures taken by the Pacific Reserve force prior to 1 June to make the vessels of the then Reserve force ready for war conditions.

... silent performance of these vessels since the mobilization of naval forces and the thoroughness of the preparatory work done by the Reserve force and ... desire to extend its commendation to all concerned.

The importance of scouts, screening vessels, and fast light

cruisers was manifest to anybody who had an intelligent conception of the most fundamental principles of naval warfare. It was that without such vessels, properly manned and in condition to run at their maximum speed, the fleet would be practically blind and for this reason be imperiled, or at a great disadvantage in meeting a hostile fleet properly manned and organized. This weakness was the most serious, and the condition was aggravated by the fact that the Navy had a very small and wholly inadequate air service available for scouting duty, owing to the failure of the Navy Department to supply such a force even after the vital importance of the subject had been brought to the attention of the Secretary and earnestly emphasized by Admiral Fiske in my presence in 1913, when I was on duty as one of the aids to the Secretary of the Navy.

In view of this situation, it was manifestly my paramount duty to get the reserve ships away from the docks and make them ready for the important work that would inevitably be forced upon them. I had no orders or instructions to do this, but I did it of my own accord.

In further explanation of my policy and action, and to make plain my reasons for persistence as shown by me in the remarkable series of letters hereto attached, it is proper for me to emphasize the following points:

(a) I was convinced that we would be forced into the war for reasons well stated in Admiral Fiske's prophetic letter to the Secretary of November, 1914.

(b) I knew that the Navy was fatally short of men. The General Board, in 1914, had recommended 19,000 additional men, and Assistant Secretary Roosevelt had received a statement from the Bureau of Navigation that 18,000 men were actually needed to man the Navy.

(c) Notwithstanding this condition, the Navy Department failed to advocate an adequate enlisted force in 1915. It advocated a certain number of men, as I recall, but not more than half, if half of the number recommended by the General Board and Assistant Secretary Roosevelt. The constant addition of new ships increased the shortage. In this connection it is proper to state that, subsequently, in 1916, Admiral Fletcher stated that he needed 5,000 additional men in the Atlantic Fleet, and Admiral Knight, president of the War College, urged the House Naval Committee to increase the Navy by 25,000 men. That was in 1916.

(d) Furthermore, the necessity for the maximum effort by naval officers to secure preparedness was made perfectly plain to me by one year's experience in the Navy Department, February, 1913, to February, 1914, during which time the preparation of efficiency reports for the Navy for war appeared to be the last thing considered, notwithstanding the constant but vain attempts of Admiral Fiske to secure attention to vitally important measures as regards organization, personnel, material, guns, torpedoes, mines, and particularly aviation.

To my knowledge, he forgot nothing, sir.

With the exception of the Assistant Secretary of the Navy and the General Board nobody gave a willing ear to the seriousness of the situation and the Navy Department proper was exclusively busy with a routine of peace, totally indifferent to the possibility of a state of war being forced upon us.

(c) The gravity of the situation was increased in the summer of 1915, possibly before that, by the practical wrecking of the aid system of organization which was designed, intelligently, to coordinate the bureaus without in any manner interfering with their interior organization. This system had been adopted as a result of the report of the Mahan-Moody Commission as confirmed by the Swift Board. I happened to be the secretary of that commission, sir, and to know all about its work. The following were the members of that commission:

Mr. Justice Moody, of the Supreme Court, formerly Secretary of the Navy.

Mr. Paul Morton, formerly Secretary of the Navy.

Judge Dayton, of West Virginia, who had served many years on the Naval Committee of the House.

Rear Admiral Evans, commander in chief of the Atlantic Fleet.

Rear Admiral Luce, founder of and first president of the War College, and recognized authority on naval organization, strategy, and tactics.

Rear Admiral Folger, formerly Chief of the Bureau of Ordnance.

Rear Admiral Cowles, Chief of the Bureau of Equipment; and last but first in knowledge of the subject.

Rear Admiral A. T. Mahan, the greatest authority on naval organization and strategy in this or any other country.

It is doubtful if a commission of more competent men was ever convened to consider and report upon an important administrative question. It so happened that I had served as secretary of the Mahan Commission in 1908 and was thoroughly familiar with its proceedings and with the opinions of Admiral Mahan, whose ideas dominated the commission in its work. The admiral was at the head of the subcommittee that formulated the aid system; he believed in it absolutely as the only solution of the problem; he sought simply to coordinate and group the bureaus, the general board, and other agencies in such a manner as to secure proper control and intelligent concerted action without wrecking any existing element and without in the slightest degree diminishing the power or authority of the Secretary of the Navy.

On the contrary, the ultimate and constant authority of the Secretary was loyally and clearly recognized, and the Admiral stated in one sentence the invulnerable principle that: "The Navy Department should be so organized that it could pass from a state of peace to a state of war without a jar in the machinery." This principle, so absolutely necessary to naval efficiency and preparedness, was violated by the wrecking of the aid system advocated by Admiral Mahan. The present Office of Naval Operations, the one and only modern and effective feature of our naval organization--and let me say right here that it is a splendid feature, recognized by all naval officers as being a splendid feature--resulted from a bill formulated by Admiral Fiske and the Hon. Richmond Pearson Hobson. Their scheme was, however, somewhat modified and injured thereby, in that the Chief of Operations is not given sufficient authority, or does not use sufficient authority to properly control and coordinate the bureaus, leaving the latter to work more or less independently, with no head and no well-defined policy. This fault was clearly

demonstrated in my vain attempt to get the Pacific Reserve Fleet ready for war, and this fact will be made plain in the correspondence hereto attached. It will be seen that Mahan's principle, "The Navy Department should be so organized that it can pass from a state of peace to a state of war without a jar in the machinery," was ignored, and that it was necessary to continuously jar every cog of the departmental machinery in order to get results in preparing our Navy for war or in operating it for several months after war was declared.

Five days after taking command at San Francisco I took the first step toward getting the reserve fleet away from the docks and preparing them for active service by writing the two letters following. I will read only a few paragraphs of each [reading]:

OFFICE OF THE COMMANDER IN CHIEF,
UNITED STATES RESERVE FLEET,
U. S. S. "SOUTH DAKOTA," FLAGSHIP,

San Francisco, Calif., October 20, 1915.

MY DEAR BENSON: I am sending you a copy of a letter just written to the Navy Department concerning the detail of apprentice seamen from the training station to the ships of the reserve fleet. This letter explains itself.

I am most anxious to keep these ships in good condition so that they may be ready when needed in the active fleet. The apprentices may be utilized for many duties that will relieve other men whose services are needed on board these ships, which are so shorthanded that the task of keeping them in all respects ready is no mean endeavor.

Sincerely, yours,

W. F. FULLAM.

SAN FRANCISCO, CALIF., *October 20, 1915.*

To: Navy Department (Navigation), Washington, D. C.

Subject: Detail of apprentice seamen companies from naval training station, to ships of reserve fleet at San Francisco.

1. The commandant of the training station at San Francisco has from time to time detailed companies of apprentice seamen for special duty on board ships of the reserve fleet in emergencies. The commander in chief believes this practice to be beneficial in every possible respect, not only to the apprentice seamen themselves, but to the ships also.

2. It is therefore respectfully recommended that this practice be continued and encouraged to the utmost. Should the department view it favorably, care will be taken that the routine instruction of apprentices will be continued on board with attention to every detail, not only as regards the academic part, but the professional part of their regular course of instruction. This plan will serve to somewhat broaden the training of the apprentices and make them more efficient for general service in the fleet.

3. Having commanded two training stations and being thoroughly interested in the subject of training men for the Navy, the commander in chief will give his personal attention to this matter and assures the department that the apprentices will benefit by this plan and at the same time the ships being very shorthanded, will receive much needed assistance in the work of keeping them in readiness for active commission on short notice.

W. F. FULLAM.

This was the beginning of a veritable fight that continued daily and unceasingly until war was declared in April, 1917. The story is told in the complete file of letters hereto attached and numbered serially. If the truth concerning the unpreparedness of the Navy in every detail is desired it can be found in these letters, inasmuch as

the conditions in the Pacific were practically duplicated in the Atlantic in every respect.

This scheme of utilizing apprentices from the training station was suggested as the only device that appeared to be possible in view of the shortage of navy personnel in the absence of sufficient personnel in the Navy. Strange as it may seem, however, this plan was at first disapproved by the Bureau of Navigation presumably because it might interfere with the educational and academic principle of making the Navy a "great university" instead of a primary fighting service.

In a letter dated November 20 (letter No. 3) I requested a reconsideration, and on November 29, 1915, the bureau with some reluctance granted my request with certain reservations by the Secretary (letters No. 4 and 5).

With the aid of the apprentices I moved my three ships to San Diego and immediately wrote to the department suggesting that all ships of the reserve fleet should be supplied with sufficient officers and men to enable them to move and join the commander in chief, thus testing them out and enabling me to prepare them for active service; and I requested information as to the department's policy.

In a letter dated February 10 (see letter No. 6) the department encouraged me very much by approving my suggestions and asking me for a "schedule of movements" to carry out the scheme.

On February 18 I addressed the following letter to all commanding officers as the most important step in preparing these ships for war [reading]:

SAN DIEGO, CALIF., *February 18, 1916.*

To: Commanding officers, all vessels, Pacific Reserve Fleet.

Subject: Increasing fighting efficiency of ships.

1. As it is desired to bring the ships of the fleet up to the highest possible standard of efficiency for service, commanding officers are directed to make a careful study of the present condition of the following installations on board their respective ships: (a) Guns and mounts; (b) gun sights; (c) fire control; (d) torpedoes, tubes, etc.; (e) searchlight and searchlight control; (f) radio; and to make such recommendations to the commander in chief as they see fit toward the improvement of the installations and their appurtenances, having in mind the fighting value of the ships.

2. Information is specially desired as to any recent improvements that have been made or authorized, such as the installation of new and up-to-date equipment, and as to the present state of efficiency of that now installed.

3. As much expedition as consistent with the subject is desired.

W. F. FULLAM.

That was to start my commanding officers to work with me; and start they did. Every officer out there worked his heart out, night and day, under very discouraging circumstances, to get those ships ready for war.

On February 19, 1916, the reserve fleet was short 600 men of reserve complement, as shown by the attached memorandum; shortage, with few officers on board, made it impossible for many of these ships to move. This memorandum is incorporated here showing the reserve complement of each ship, and the shortage.

The CHAIRMAN. That will be put in the record? Is it right here in the record?

Admiral FULLAM. It is in my file.

(Memorandum referred to is here printed in the record as follows.)

Enlisted men in the Pacific Reserve Fleet, on Saturday, Feb. 19, 1916.

| Ship. | Comple- ment. | On board. | Vacancies. | Excess. |
|--------------------|------------------|-----------|------------|---------|

Total number of men short.....
Average per ship.....

Admiral FULLAM. On February 23, 1916, in reply to the department's letter of February 10, 1916, asking for suggestions, I forwarded a letter (see letter No. 7) giving at length a complete statement of the measures necessary to carry out my plans as well as the department's declared policy. Special attention is called to my letter, which is too long to quote in full. It will be noted that it covered every possible detail as follows: (a) Need of a permanent policy; (b) maneuvers and drills of all kinds at sea; (c) importance of supplying personnel; (d) absolute necessity for providing more officers in the Navy by increasing flag officers, captains, and commanders; promoting lieutenant commanders and lieutenants; graduating two classes from the Naval Academy; establishing a three years' course at the academy; largely increasing officers; employing retired officers; promoting chief petty officers, etc.

In paragraphs 11, 18, 22, and 26 the commander in chief specifically sought to awaken the department as follows. Remember that this was in reply to the department's request that I submit suggestions in reference to the carrying out of their own policy [reading]:

In the above connection, however, the commander in chief is constrained to admit that the success of the whole plan depends absolutely upon the assignment of a sufficient complement of officers and men to the reserve ships. If a sufficient complement is not provided the plan will assuredly fail. There is no alternative.

The question of personnel is so important and the effect of leaving ships shorthanded is so discouraging and depressing, despite every effort of a commander in chief to inspire zeal and interest, that it would be a neglect of duty not to invite serious attention to the matter—it is the one and only key to enthusiasm and efficiency in any fleet.

The commander in chief has done everything in his power in urging officers and men to a high standard of duty even with short complements and other discouraging conditions, there having been no tendency to encourage complaints or grievances as to existing conditions as to personnel.

The above letter was followed up the next day, February 24, 1916, by a letter to Admiral Blue (see letter No. 8) in an endeavor to impress him with the situation and the importance of really doing something. Paragraph 6 of this letter should be noted, as follows:

If Congress would do something and do it right away, we could get busy and do something. I am convinced that the suggestions made in my letter, if approved,

would secure several hundred junior officers within the next few months and give us enough captains and commanders to do naval work in a proper and dignified manner. This is the key to the whole situation, and if the Navy Department does nothing in this line all plans and schemes to improve the efficiency of reserve ships—not to say other ships—will simply remain on paper.

It is, perhaps, needless to say that no action whatever was taken by the Navy Department. Not one of the suggestions made in my letter was favorably considered. The Navy Department did practically nothing. It did not lift a finger nor initiate any measure to carry out its own policy as outlined in its letter of February 10. In other words, that letter remained a mere "scrap of paper"—nothing more. The department continued to shuffle the same old cards and accomplish nothing.

On March 6, 1916, the Bureau of Navigation addressed to me the attached letter [reading]:

NAVY DEPARTMENT, BUREAU OF NAVIGATION,
Washington, D. C., March 6, 1916.

DEAR ADMIRAL: Your letter of February 24 has been received. Rear Admiral Blue is on leave, therefore, I am answering it.

I regret we can not give you the officers and men necessary to put your excellent scheme into effect. There are no officers of the rank of commander available, and the only way to get officers below the rank of commander would be to take them from the battleships of the Atlantic Fleet, which, of course, would not be practicable. In regard to the men, we have got to provide crews for the *Nevada*, *Oklahoma*, *Pennsylvania*, *Wainwright*, 12 submarines within the next six months: and in addition to that the Naval Academy practice squadron will have to be filled up, so the situation is rather hopeless from our point of view. However, we will do the best we can.

With kind regards, I am, very sincerely, yours,

J. H. DAYTON.

Admiral W. F. FULLAM, United States Navy.
United States Pacific Reserve Fleet,
U. S. S. "Milwaukee," San Francisco.

Special attention is called to this letter inasmuch as it declares that the Bureau of Personnel could not assist in carrying out the scheme of the commander in chief, which had been approved by the Secretary of the Navy in his letter of February 10. In other words, Operations and Personnel did not or could not cooperate. There was no policy at the Navy Department which made it practicable for them to cooperate in manning ships in preparation for war. This letter admitted that there were not enough men or officers in the Navy to man the ships then in commission, and none forthcoming to man 3 new dreadnoughts, 7 new destroyers, and 12 new submarines. As stated in this letter the situation was in truth "rather hopeless." This condition confirmed the soundness of the opinion of the General Board, Admiral Fletcher, Admiral Knight, and others, that 25,000 more men were needed to supply the Navy.

On March 8 I addressed the attached letter to Admiral Benson [reading]:

UNITED STATES PACIFIC RESERVE FLEET,
U. S. S. "MARYLAND," FLAGSHIP,
San Diego, Calif., March 8, 1916.

MY DEAR BENSON: I inclose for your eye a copy of a letter just written to Blue. I have been impressed during the past year or two with the fact that letters like this are not very much encourage and are often ignored or unanswered. Of course I do not want to nag people with letters and suggestions, but it is very easy to say nothing and do nothing in cases of this kind.

I am impressed with the need of a grand rally to create some real interest and enthusiasm all along the line. We need a surplus of officers and men just as quickly as

we can get them. If we could man all our ships and keep them moving, we will, at least, do some training of the personnel that will prepare us for an emergency.

Sincerely, yours,

W. F. FULLAM

Rear Admiral W. S. BENSON, United States Navy,
Chief of Naval Operations,
Navy Department, Washington, D. C.

On March 10 I addressed the attached letter to Admirals Blue and Benson [reading]:

UNITED STATES PACIFIC RESERVE FLEET,
 U. S. S. "MARYLAND," FLAGSHIP.
San Diego, Calif., March 10, 1916.

MY DEAR BLUE (and BENSON): I am sending herewith a copy of a letter received from Tozer, who commands the *South Dakota*. It has several commendations and some information which I think you may wish to know.

It is a pity that we can not get officers and men right now to put these ships in commission and begin moving them about for training purposes. Is it not possible to get immediate legislation now along the lines of the personnel bill which will authorize immediately the employment of retired officers, double the number of gunners and boatswains, and authorize the immediate enlistment of men. These things would all put new life into the service afloat; everybody is anxious to do something, but many of them are inclined to throw up their hands and say, "What's the use?" We are powerless.

I shall try to do everything possible with the material at hand, and with the assistance of Andrews we can utilize apprentice seamen in a manner that will help tremendously in putting hope into these ships.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral VICTOR BLUE, United States Navy,
Chief of Bureau of Navigation,
Navy Department, Washington, D. C.

The CHAIRMAN. These letters were in 1916?

Admiral FULLAM. In 1916; yes. These last were dated March 10, 1916, one year—13 months—before we entered the war.

On March 20 I addressed a letter to Admiral Benson (see letter No. 9) repeating the suggestion to graduate midshipmen after three years. Special attention is invited to the last paragraphs of this letter, as follows:

The general feeling of satisfaction and hope inspired by the proposition to move these reserve ships indicates the great good that will result if you adopt a new scheme—use reserve ships to train men and young officers for the active fleet and by so doing keep the reserve ships moving. It is a knife that cuts both ways.

Why should we not get busy and adopt emergency measures in an emergency?

It is easy to sit still and do nothing—altogether too easy; and this is my reason for making these suggestions to you. Reserve ships alongside a dock deteriorate and all officers and men employed on board such ships deteriorate also. The whole thing is bad and it is time to stop it.

It is submitted that this letter to Admiral Benson outlined a scheme which could have been and should have been immediately adopted by the Navy Department as a practical means of preparing the Navy for war at no expense to the Government. And it is ventured that Admiral Benson would gladly have adopted the scheme, I am sure he would, had it been approved by the Navy Department which resisted all plans to shorten the course at the Navy Academy or to take any steps whatever to increase the officers of the Navy until war was actually upon us. In this connection attention is invited to Admiral Benson's significant letter of March 28 (read) in reply to mine (see letter No. 10), which concluded with the words "the effort

you are making to build up the readiness of the Pacific Fleet is appreciated."

I knew Admiral Benson appreciated those efforts.

No further evidence is needed to prove that the Navy Department took no steps whatever up to April, 1916, to provide officers necessary to place the ships of the Navy in condition for active service.

In the meantime, confronted with, and anticipating, the trying situation as regards men the commander in chief conceived the scheme and suggested to the Navy Department that apprentice seamen at training stations be sent to reserve ships after two instead of six months' training, their instruction to be continued on board ship. After being twice disapproved by the department, this suggestion was finally approved by the Bureau of Navigation, as stated by Admiral Blue in his letter of April 1. (See letter No. 11.) It will be noted that Admiral Blue stated that he was considering other suggestions of mine looking to an increase of officers, that a few more Warrant officers had been appointed, and asking me for further suggestions along these lines. It will also be noted that this scheme of assigning apprentices to ship after two months' training was only approved by the Secretary of the Navy with the understanding that the academic instruction would be continued on board ship.

On April 8 I addressed a letter to Admiral Blue concluding with the following paragraph:

I can not too earnestly impress you with the fact that a very bad condition exists as regards personnel, and the sooner you get the ships in full commission with complete complements of officers and men, the better it will be." (See letter No. 12.)

On April 10, 1916, I addressed to Admiral Benson a letter (letter No. 13) calling attention to the need for skilled men, torpedo personnel, and additional officers. Not a day passed, sir, that I did not write a letter to somebody.

Paragraph 4 of this letter merits attention:

I can not too earnestly impress you, my dear Benson, with the immediate necessity for training our personnel with all kinds of weapons. When I inspect the crews and note the youth of most of the apprentices, I can not but wonder how long it will take to develop them into material that will answer the requirements of war.

After emphasizing the need of an immediate increase of officers, the letter concluded as follows:

The effect upon the Navy would be electrical, and it would do nothing more than provide for emergencies of the next few years. Really, Benson, we must look ahead to do things quick. I inclose a copy of my last letter to Blue. I hope I am not nagging you. It would be easy for me to say and do nothing.

I am sure that Admiral Benson agreed with these suggestions, but he was powerless to overcome the inertia of the Navy Department, which gave little thought to preparing the Navy for war.

On April 12, 1916, I addressed to Admiral Blue a letter (see letter No. 14), from which the following is quoted:

I am at sea with the *Maryland*, training for target practice. A tour of the decks and turrets, with few men and hardly an officer in sight is impressive. For heaven's sake get officers and men as quick as you can and by every means in your power. We must train them for the future and do it now. * * * We should take a tremendous brace along all military lines and get every officer, every man, and every ship on the move and sheer up generally.

Admiral Blue wanted to do things, but he was as powerless as Admiral Benson to move the Navy Department to action.

On April 14, 1916, I addressed the attached letter to Assistant Secretary Roosevelt concerning the "hearing" before the naval committee. Mr. Roosevelt was always anxious to forward measures for the fighting efficiency of the Navy.

Like his namesake of glorious memory, he seemed to regard the Navy as the first line of the Nation's defense, and he wanted to see it ready. [Reading:]

UNITED STATES PACIFIC FLEET,
U. S. S. "MARYLAND," FLAGSHIP,
Drill Grounds Off San Diego, Calif., April 14, 1916.

MY DEAR MR. ROOSEVELT: I was delighted to read your "hearing," and to note what you said about personnel.

I inclose for your eye some correspondence with Blue and Benson on the subject of personnel, and the means of increasing officers and men just at present.

My suggestions about shortening the training of apprentices ashore, and getting them on board ship was turned down at first, but I am glad to say that Blue finally changed his mind, and we will now get these lads afloat and hustle them on practical work.

In my letter to Blue of March 16, I referred to suggestions made to Blue about getting more officers, and I am pleased to note that Blue is considering these questions also.

The sooner we get busy training additional officers and men the better it will be, and I hope there will be a steady improvement and no more backward steps in this respect.

Please believe me, faithfully yours,

W. F. FULLAM.

Hon. FRANKLIN D. ROOSEVELT,
*Assistant Secretary of the Navy,
Navy Department, Washington, D. C.*

The CHAIRMAN. What was Admiral Blue's position at that time?

Admiral FULLAM. He was chief of the Bureau of Navigation. I should have stated that.

I wrote to Mr. Roosevelt instead of writing to the Secretary of the Navy, although I had been the Secretary's aid for a year, and I did it because the Secretary himself, though he was most agreeable and kindly to me, and I was very fond of the Secretary of the Navy in the early days, and I hoped he would take the proper view of the Navy, yet I could not write to him about this subject, because I felt that he was not interested in it, and so I wrote to Mr. Roosevelt.

In May, 1916, I addressed to Admiral Blue a letter (No. 15) asking for more officers and concluding with these words:

I wish you would consider this plan promptly and let me know whether I am to bother myself with such matters as these any more. It is very easy to go along in the Navy and carry on a routine. It seems to me that now is the time to encourage everybody to think and try to do something.

It is pertinent to state right here that, to my personal knowledge, the Navy Department did nothing but carry on a routine—and a peace routine at that—at a time during 1916 and the first months of 1917, when war was practically inevitable. Not a move of any consequence was made to prepare the Navy for war. It is plain that naval officers who followed the same supine policy would have been guilty of criminal neglect of duty to the Navy and to the country.

On June 10, 1916, I addressed to Admiral Blue the letter No. 16, from which the following is quoted:

There is only one solution—get every ship filled up as soon as possible with officers and men and begin a thorough military system of administration and discipline with every attempt to infuse enthusiasm and spirit into everybody.

I have been in the department a year and I know the difference between plans on paper and the actual doings of officers and men in the fleet itself. The last counts most and tells the whole story. If we fail to recognize this fact we will neglect our first duty.

It is pertinent to remark at this point that if the department had any plans at all they must have remained on paper.

There was no evidence in the Pacific of any intent to prepare the Navy for war.

On June 17, 1916, I addressed the attached letter to Admiral Benson.

I will say here, sir, that I have 12 flagships in the Pacific. I took one at a time, with my impedimenta and my staff, and went abroad and tried to key it up; and then I moved the whole outfit to another one and made a frantic struggle to get that keyed up. [Reading:]

UNITED STATES PACIFIC RESERVE FLEET,
U. S. S. "PITTSBURGH," FLAGSHIP,
San Diego, Calif., June 12, 1916.

MY DEAR BENSON: I received your letter of the 29th and am delighted that the latest cruising schedule has been approved. Of course it has been my idea to get these ships and crews ready for active service—which is, I suppose, the first duty of the commander in chief of the reserve fleet. I have no complaints to make when ships are taken away from active duty.

I inclose for your eye copy of a letter to Blue. Of course the personnel and ships are very much tangled up, but we can not have efficient ships without a personnel—even reserve ships. That is why I am sending this letter to you.

I will not repeat what I have said about conditions on this coast.

I note that you have not answered or even mentioned my letter of May 13. Of course I regret this somewhat, and do not exactly understand your attitude or reason. It is not my desire to annoy you with letters or to take up your time unnecessarily and as soon as I know your attitude, both personal and official, I will know what to do in the future.

Personally, I believe in writing frankly and fully to the department concerning conditions as they are, and I never hesitate to call a spade a spade. It seems to me of late years there has been too much secrecy, too little frankness, and too little enthusiasm or cooperation, and things have run too much on a personal basis instead of with the idea of rallying everybody and utilizing everybody's brains and good will.

I have written letters to the department which I deemed and knew were very important, but they have sometimes been ignored completely. I think this has been the tendency of late years, and I think it is very unfortunate.

I wish to repeat that, in my opinion, unless there is a tremendous revival as far as the Navy is concerned, in the Pacific coast, a condition of war would find things in a state of absolute pandemonium and inefficiency—unreadiness instead of preparedness in every essential that counts in actual warfare.

Sincerely, yours,

W. F. FULLAM.

This letter was not intended as a criticism of Admiral Benson. It was a criticism of our departmental policy. Benson was my friend and classmate and I could speak to him with perfect frankness. It was for this reason that I wrote many personal rather than official letters. The latter were too often ignored, pigeonholed, and forgotten. It is pertinent to state at this point that the condition mentioned in the last paragraph of this letter, namely, "a condition of war would find things in a state of absolute pandemonium and inefficiency—unreadiness instead of preparedness in every essential that counts in actual warfare"—was fully realized when war was finally declared in 1917.

On June 15, 1916, I addressed the following official letter to the Navy Department [reading]:

FULL POWER RUN OFF,
San Diego, Calif., June 15, 1916.

To: The Secretary of the Navy (Operations).

Subject: Condition of reserve ships as to personnel.

1. The department is informed that on June 3 the five armored cruisers of the reserve fleet were short of their reserve complements by 286 men, an average of 57 men for each ship. The total shortage in the reserve fleet was 403.

That was the reserve complement. That brought the actual complement on board down below 30 per cent, I think, or about 30 per cent. [Continuing reading:]

2. There were about 400 apprentice seamen under training in reserve ships, but these men are inexperienced, and although they help with deck work, they can not fill the places of trained men, and they can not be rated until after the passage of the appropriation bill.

3. Every effort will be made to keep reserve ships in proper condition if possible with reduced complements, but these vacancies should be filled as soon as practicable.

4. This report is sent to Operations, inasmuch as the shortage of personnel affects the cruising efficiency of reserve ships.

W. F. FULLAM.

On July 5, 1916, the Bureau of Navigation addressed the attached letter to me. This was after efforts for nine months [reading]:

NAVY DEPARTMENT,
BUREAU OF NAVIGATION,
Washington, D. C., July 5, 1916.

MY DEAR ADMIRAL: Replying to your letter of June 20, I regret that it is impracticable to send any additional officers to the reserve ships unless mobilization takes place and retired officers are ordered to duty and officers from shore are ordered to sea. Sincerely, yours,

VICTOR BLUE.

Rear Admiral WILLIAM F. FULLAM,
United States Navy, Commander Reserve Force, Pacific Force.

This letter appeared to blast the last hope that officers would be supplied sufficient to keep reserve ships away from the docks. But the force commander determined to continue to fight with the officers available and with the assistance of 10 ensigns assigned to his ships at his request from the graduating class of 1916. Accordingly the force order of July 13, 1916, was issued to the commanding officers of all ships, demanding of them renewed exertions and a high standard of training and discipline with the existing personnel. (See letter No. 17; read.)

In the meantime the scheme suggested by me, of having apprentices in my ships, was being carried out and it was by this means, and by this means alone, that I was enabled to fairly drag four armored cruisers away from the docks at Bremerton and join Admiral Winslow and afterwards cruise on the Mexican coast with Admiral Caperton when war with Mexico was threatened in the summer of 1916. Both Admiral Winslow and Admiral Caperton gave me and my officers full credit for this accomplishment which, as shown by previous paragraphs in this letter, would never have been possible had the Navy Department been left to itself. It was accomplished in spite of every obstacle and every possible discouragement. I will not read that letter, but it told them to work all the harder and not to expect additional men or additional officers, because they would not reasonably expect it; we did not have them; and they must not get discouraged but must continue to work. That is the gist of it.

In the meantime the question of repairs and material readiness of these ships, as well as question of personnel, had been pushed with the bureaus and with Capt. Coontz at Bremerton and Capt. Bennett at Mare Island. Both of these officers and their assistants gave me every possible support, but I discovered that their hands were tied for lack of material or funds and because there was no policy at the

Navy Department concerning these ships, thus leaving the bureaus to act not at all or with no concert. On this connection attention is invited to Capt. Coontz's letter of July 24, 1916 [reading]:

COMMANDANT'S OFFICE,

Navy Yard, Puget Sound, Wash., July 24, 1916.

Rear Admiral W. F. FULLAM, United States Navy,

Commanding Reserve Force, United States Pacific Fleet,

U. S. S. "Colorado," Care Postmaster, San Francisco, Calif.

DEAR ADMIRAL FULLAM: 1. I am just in receipt of your letter of July 10, 1916. I regret to state that owing to the shortage in machinists and shipfitters and the fact that we are very much cramped for funds, I found it necessary to request the department that the date of completion of the U. S. S. *West Virginia* be made August 26. The department has granted this request and so set the date. While we were about it, however, we found that we could complete all of her repairs by that date, including the directorscope, so that all that will be necessary to have her in final condition will be the installation of the catapult, which is due about October 15, 1916.

The *Saratoga* is suffering from the same conditions—lack of machinists and lack of funds, and these will continue until the appropriation bill passes. To-morrow we expect to lift the turrets of the *Saratoga* and determine the conditions as to her tracks, and will then be able to settle on a definite completion date.

The *St. Louis* got away the 21st for Honolulu. The *New Orleans* is at Sitka with the Naval Reserves, and the *Vicksburg* is ready to take the second batch out on August 10. From what the press states it looks as if the *Colorado*, *Pittsburgh*, and other vessels would shortly be available for taking out the civilians on August 15.

Starting up of new shipbuilding plants and scarcity of material have caused our recent troubles here, but we hope that they will soon end.

Sincerely,

R. E. COONTZ.

Capt. Coontz did his very best.

A vigorous correspondence had taken place between me and the commandants with their most cordial cooperation, and this continued up to the declaration of war, the only trouble being to get funds, labor, material, etc., all of which should have been provided in 1914 and 1915, before the stress of approaching war came upon the country. In other words, the delays in the fall of 1916 were the natural consequence of previous inaction by the Navy Department and its failure to act upon my repeated suggestions as to the value of these ships.

In the meantime, Admiral Blue had gone to sea and Admiral Palmer became Chief of Bureau of Navigation. He found the Navy short of officers and men with no adequate provision and no determined attempt by the Navy Department to supply the deficiency. On August 4, 1916, Admiral Palmer addressed the attached letter to me [reading]:

NAVY DEPARTMENT, BUREAU OF NAVIGATION,

Washington, D. C., August 24.

To: Commander, Reserve Force, Pacific Fleet.

Subject: Completion of *West Virginia*'s repair period; preparations of that ship for joining the Reserve Force in cruising exercises.

1. The Bureau has, at present, the following commissioned officers on the ships of the Reserve Force:

| | | | |
|------------------|---|--------------------|----|
| Maryland..... | 7 | South Dakota..... | 7 |
| New Orleans..... | 1 | West Virginia..... | 4 |
| Pittsburgh..... | 8 | | |
| Saratoga..... | 1 | Total..... | 28 |

2. This gives an average of about five per ship. This is the maximum that can be allowed until the department releases sufficient personnel by placing ships out of commission.

In other words, I could only have, as a maximum, five officers on a 14,000-ton ship; and the only scout cruisers we had in the Navy, unless ships were placed out of commission. [Continuing reading:]

3. In the meantime recommendation is requested of the commander, Reserve Force, for nominations of officers from those ships of his command having more than five commissioned officers for their further transfer to the *West Virginia* and *Saratoga*.

4. There is no additional enlisted personnel available for fitting of the *West Virginia* and the *Saratoga*. It is requested that such men as are necessary be requested from the commander in chief, United States Pacific Fleet.

L. C. PALMER.

The hopelessness of the situation that confronted Admiral Palmer is shown by the fact that he could allow only four officers for each of my ships "until the department releases sufficient personnel by placing ships out of commission"; and he declared that no enlisted personnel could be made "available for fitting out the *West Virginia* and *Saratoga* at the Bremerton yard.

It is proper to state at this point that Admiral Palmer attempted to assist me, and he apparently made powerful efforts to get an increase of officers and men for the Navy, and to secure the graduation of midshipmen after three years at the Academy. But he, too, found his hands tied by the department's policy of inaction along these lines.

The instruction of apprentice seamen on board my ships, after two months at the training station, having enabled me to get the ships away from the docks I now requested the department to curtail the courses at the training stations to one month in order to expedite the preparation of my ships for war. But it was only with reluctance that the Secretary had curtailed the course to two months, and I was not surprised therefore to receive the attached letter from Admiral Palmer under date of August 28, 1916 [reading]:

NAVY DEPARTMENT,
BUREAU OF NAVIGATION,
Washington, D. C., August 28, 1916.

To: Commander, Reserve Force, Pacific Fleet.

Subject: Training of apprentice seamen in reserve ships.

References: Your letter No. 486, WGG-S, of August 18, 1916.

1. The present course of two months' instruction at training stations can not be reduced unless congestion occurs at the stations, in which case your recommendations will be given careful consideration. The schedules of training of apprentice seamen in effect in your force meets the approval of the bureau, and your reports of the efficient aid this personnel has rendered the Pacific Reserve Force are gratifying.

L. C. PALMER.

In this letter it will be noted that Admiral Palmer appreciated the service rendered by training afloat.

The need of engineering officers in the work of preparing the armored cruisers for their maximum speed, which would be demanded under war conditions was urgent, and I accordingly addressed the following letter to the Chief of Bureau of Steam Engineering to enlist his assistance:

SAN DIEGO, CALIF., September 4, 1916.

MY DEAR GRIFFIN: I wish you would personally glance over the attached correspondence, which explains itself.

I am sure you will not misinterpret my action, for I know that we are short of officers in the Navy; but there must be a few qualified officers in these armored cruisers or they can never be made ready for service.

It was only by persistence (after being turned down twice) that I got enough apprentice seamen on board to get these ships away from the dock. Having done so, I am now anxious to keep them in proper condition. This can not be done if they compel me to cruise too much and give me no engineer officers. I never cry for help if I am given reasonable support and authority.

It has been my ambition to get these six armored cruisers (including the *West Virginia* and *Saratoga*) into shape while training and developing their crews at the same time. I only ask for apprentices and a few engineer officers—that is all.

Bowen is now doing the work of about three men. If he can be relieved as engineer of this ship and can concentrate on his staff duty, we may accomplish something. It is an important matter.

Sincerely, yours,

W. P. FULLAM.

ROBERT S. GRIFFIN.

*Engineer in Chief, Chief of Bureau of Steam Engineering,
Navy Department, Washington, D. C.*

Special attention is invited to the declaration: "There must be a few qualified officers in these armored cruisers or they can never be made ready for service." When it is remembered that six months before war was declared the only cruisers in the Navy that could make 20 knots sea speed were unmanned, unofficered, and unready for full-speed trials, the situation could only be considered most amazing in the annals of naval unpreparedness.

On September 7, 1916, I addressed the letter No. 18 to Admiral Palmer. Special attention is called to the following:

If these armored cruisers are to be ready when called upon—and they are the only cruisers we have—there are three things that must be kept in good condition: (1) Boilers and engines; (2) guns; (3) torpedoes. I assure you that I have struggled hard with this problem with the minimum of assistance as regards officers and men, and I shall continue to do so and to avoid bothering you all I can.

The failure of the Navy Department to supply personnel up to September, 1916, to man the fleet has been fully treated in the foregoing pages. It is now important to emphasize the neglect as to material and the failure to adopt any policy that would insure the material readiness of the armored cruisers for battle.

In September, 1916, all of the armored cruisers except the *West Virginia* and *Saratoga* had been fairly dragged from the docks at Bremerton, and with scant personnel these ships had been tried out and inspected by me to detect their defects.

Right here, to illustrate, sir, I prodded the captains of these ships so constantly that they were kept on the jump, and my letters to them, I was told, were called "ginger letters"; and it seemed to me that the injection of ginger was an excellent tonic at that time; and it is the only thing in the world that ever got those ships away from those docks. Sargent took the *West Virginia* out of that channel at Bremerton steering from the steering-engine room, and with no engine-room telegraph—a thing that I do not believe any captain in the Navy ever did before, and he ought to have a medal for it. But he got that ship out of there, and then together we found out what was the matter with her, and we sent her to another navy yard and fixed her up, and she was convoying during the war.

These defects were found to be serious. The boilers were in poor condition, the fire control, director firing, and other important features were incomplete, and constant correspondence with the bureaus and commandants had proved that there was no well-defined policy, no head whatever, no control of the work of getting these ships ready for war.

In desperation, after 11 months of unremitting work and correspondence, I wrote the attached letter to the department date of September 14, 1916 [reading]:

UNITED STATES PACIFIC FLEET RESERVE FORCE,
U. S. S. "COLORADO," FLAGSHIP
San Diego, Calif., September 14,

To: The Secretary of the Navy (Operations).

Subject: Movement and employment of ships of Reserve Force, Pacific Fleet.

References: (a) Operation's letter 27772-138 Op-11 of 5 September, 1916. (b)

2. Mobilization Plan. "comments and suggestions useful in perfecting this requested." (c) Force commander's letter 505 WFF-M of 28 August, 1916.

1. Referring to the above, the following suggestions are submitted with a view to the preparation of all armored cruisers for action and dependable service, at the earliest practicable date.

2. The *West Virginia* has been at the Bremerton yard off and on for years, and armored cruisers have been in reserve for extended periods during recent years, withstanding this fact, the *West Virginia* developed troubles during her recent repair trial; the *South Dakota* and *Maryland* may need to have their boilers overhauled in the near future, and the fire control, radio installations, and director firing systems are not yet installed in these ships—

And those things are absolutely necessary to meet an enemy when you will go down to the depths of the sea in the early part of the war. [continuing reading]—

the material for some of this work not being at hand.

3. It is not believed that the personnel of the navy yard or of the ships are to be blamed for this condition—it would appear that the system or policy is alone at fault. The force commander had been impressed with the zeal and energy of the personnel of the yard and the ships, but the personnel has been inadequate. At one time, Mr. Atkins, engineer officer on the staff of the commander in chief, commanded the *West Virginia* and one other armored cruiser—he was the only commissioned officer assigned to and responsible for two 14,000-ton ships. This illustrates the system which has been followed in the past. The result is logical. A decided change is necessary.

4. In suggesting a change, it is clear that correspondence must be free from circularity and consequent delay and inaction. The commander in chief, force commander, commandant of the navy yard, operations, navigation, engineering, and other bureaus may be involved in voluminous writing at cross purposes as regards material and personnel, and the date when these ships will be ready will be indefinitely postponed.

5. The following procedure is suggested:

(1) Decide on a policy regarding the armored cruisers.
(2) Consider and decide on the repairs of each individual ship.
(3) Assemble at once all material, boiler tubes, etc., necessary to complete each ship.

(4) Provide personnel to insure this work being properly done.

(5) Send ships to navy yard in turn as soon as the work can be pushed to completion.

6. In this connection with this subject, attention is invited to the correspondence hereto attached, especially to the letter and telegram from the commandant of the Bureau of Steam Engineering and to Operations.

7. If some definite plan is not adopted and pushed; unless there is some coordination; some one directing head, the armored cruisers will never be made ready for effective service—certainly not by August, 1917.

8. The force commander, supposing that these ships might be of some possible use pending the building of more modern cruisers has done his utmost to get them in cruising condition, and has made the necessary recommendations to this end. Being twice disapproved by the department, the suggestion to train apprentice men in these ships has been approved, and this plan alone made it possible for these ships to do duty on the Mexican coast. Crews of these ships have been almost entirely self-developed in this manner, and will continue to be without asking for help from men except when absolutely necessary. Few commissioned officers have been assigned; nearly all the officers being junior in rank or newly graduated ensigns. The limit of endurance has been demanded and the chances of possible success have not been forgotten.

9. This letter is not a complaint. It is intended as a statement of facts, or of conditions based upon experience with the reserve force, and it is submitted for such consideration as it merits.

10. Before considering the general policy recommended above, the following schedule of movements is submitted for immediate adoption or consideration in the absence of the commander in chief and with no opportunity to confer with him:

- (1) Dock the *Colorado* at once.
- (2) Send the *West Virginia* and *New Orleans* to Mexican waters to relieve the *Pittsburgh* and *Maryland*, if necessary.
- (3) Send the *South Dakota* to navy yard later on, at discretion of force commander in consultation with commandant, to have her boilers thoroughly overhauled and other work completed.
- (4) Following *South Dakota* send other ships as may be decided by the department.
- (5) In the meantime, rendezvous at San Diego when not in Mexico, for target practice, inspection, etc.

11. This letter concludes the recommendations which the force commander has to submit regarding the preparation of these ships for war.

W. F. FULLAM.

Copies to: Navigation; Commandant navy yard, Puget Sound.

I was junior commandant then to the commander of the fleet. My status as commander of the reserve fleet had been changed to that of "force commander," which placed me under the commander of the fleet.

The CHAIRMAN. Who was commander of the fleet?

Admiral FULLAM. At that time it was Admiral Caperton. As you see, that letter continues to pound on things just like that.

I said, you see, that this letter was not a complaint. This was official, and it told the Navy Department that they had no policy, and that they had no head getting these ships ready for war.

As a result of this caustic letter, which plainly condemned the department and its policy, the following order was signed by Admiral Palmer while acting as Secretary of the Navy, directing all bureaus to get busy and do something [reading]:

NAVY DEPARTMENT,
Washington, September 30, 1916.

To: All bureaus; commander in chief, Pacific Fleet; commander Reserve Force, Pacific Fleet; commandant, navy yard, Puget Sound, Wash.; commanding officers of vessels listed:

Subject: Reserve Force, Pacific Fleet—repairs.

1. Instructions have been issued directing all authorized and necessary work be proceeded with at once on the *Colorado*, now at Puget Sound Navy Yard, and it is estimated that this work will require about two months, although no date of completion has as yet been set.

2. As soon as the *Pittsburgh* has completed target practice in the near future at San Diego she will be directed to proceed to the navy yard, Puget Sound, and upon arrival will be available for the performance of all authorized and necessary work, estimated to require about 50 days.

3. The *South Dakota* will arrive at the navy yard, Puget Sound, about November 30, when she will be available for survey and the performance of all authorized and necessary work.

4. The *Maryland*, upon the completion of target practice, will arrive at navy yard, Puget Sound, about November 30, when she will be available for the performance of all authorized and necessary work.

5. The *Colorado* and *Pittsburgh* should have all work completed by the time of arrival of the *South Dakota* and *Maryland*, and every effort will be made to accomplish the same.

6. Upon the arrival of each vessel and as soon as information is obtainable the commandant will recommend a date of completion.

7. The bureaus will take the necessary action to insure the prompt delivery of all necessary material at the navy yard, Puget Sound.

8. It is the department's desire that all work heretofore authorized or found necessary during the progress of present authorized jobs be completed as early as practicable on these ships, and when so completed that they will be in all respects ready for service at sea, with their director control, fire control, battery boilers, and engines complete in all respects and ready for active service with the fleet away from navy yards.

L. C. PALMER, Acting.

This letter was prepared in the office of operations in the department of material, which showed the efficiency of that office of material in the office of naval operations. It was the one agent and the only agent that could coordinate all these bureaus and get anything done. This letter was prepared there in the office of operations in the division of material. It was directed that all these offices and bureaus should get busy.

Under a proper organization this order should have been and doubtless would have been issued a year sooner. This letter conclusively proves that a directing and ever present controlling and coordinating military head is at all times essential to the efficiency and preparedness of a military service for war. If the Secretary will not or can not coordinate all agencies nothing may be done unless he leaves the department temporarily in charge of an officer vested with the Secretary's power over the bureaus—an officer who knows what should be done and who has the energy to do things.

On October 10, 1916, I addressed the attached letter to Admiral Palmer [reading]:

UNITED STATES PACIFIC FLEET RESERVE FORCE,
U. S. S. "COLORADO," FLAGSHIP,
NAVY YARD, PUGET SOUND,
Bremerton, Wash., October 10, 1916.

MY DEAR PALMER: I was delighted with the order, which you signed which was dated September 30, directing all bureaus to get busy and put these armored cruisers in condition.

It was the first real military control of a hopeless situation in which all bureaus were working independently with no head.

I am doing my best to get these armored cruisers ready. All the officers are working overtime, and it is the saying now, "that if an officer wants a rest, he would ask transfer from the Reserve Force to the active fleet."

I hope you were not annoyed by my request for a few more officers. It was my duty to put the case before you. If I could get two junior lieutenants and one ensign for the *New Orleans* right away, she could relieve the *Maryland* in Mexican waters in about two weeks.

The *Maryland* has measles on board and they have been four months at Salina Cruz and Manzanillo, and I know from experience that this is too long to keep them there. Both the ship and the crew will deteriorate if they are not soon relieved and I have told Benson the same thing.

Sincerely, yours,

W. F. FULLAM.

Rear ADMIRAL L. C. PALMER,

Chief of Bureau of Navigation, Navy Department, Washington, D. C.

With the signing by Admiral Palmer of the department's letter of September 30, 1916, we had the first glimmer of a departmental policy concerning the preparation of the armored cruisers for the war into which we entered six months later. And it is only the truth to state that the department would not have taken this action had it been left to its own initiative. It took this action only after 11 months of constant prodding and unceasing effort by the commander and officers of the Pacific Reserve Fleet. That was September 30, 1916, six months before we entered the war. I wish to bear testimony to the very important action and to the efficiency of the Division of Material.

Palmer did everything in his power to help. His hands were tied through no fault of his, as I believe the hands of every one of the officers in the Navy Department were tied, because the Navy Department had no policy and was not imbued with the absolute necessity of getting ready for war.

The department's final and tardy action gave some impetus and direction to the work of preparing ships in the Pacific. Nevertheless the work proceeded slowly, because of lack of material and funds due to previous neglect to anticipate such work.

The force commander continued to press matters and to emphasize once more the importance of personnel. In this connection attention is invited to my letter (see No. 19) of September 28, addressed to Admiral Palmer, and my letter (see No. 20) of October 11, addressed to Capt. Chase, in which the folly of employing young officers at training station teaching arithmetic was emphasized, when these officers were needed afloat.

On October 23, 1916, I addressed the attached letter to Admiral Benson [reading]:

UNITED STATES PACIFIC FLEET RESERVE FORCE,
U. S. S. "COLORADO," FLAGSHIP,
Navy Yard, Puget Sound, Wash., October 23, 1916.

MY DEAR BENSON: Lieut. Commander Theleen, of the *Maryland*, has been sent to the hospital, and it is doubtful if he may return to the ship for a long time, if at all.

A lieutenant is now in command and doing executive duty also. They had had 48 cases of malaria within 2 weeks and have a large sick list now. As you know, I have felt that the *Maryland* ought to be relieved, and I still think it would be a very great mistake to keep her down there any longer than is absolutely necessary, and for this reason I hoped that the department could get two young officers to the *New Orleans* and let me send her south. She is a sheathed ship, and as you know she ought to be in those waters if possible.

It is a very pathetic state of affairs when we can not do the things in the Navy that ought to be done, especially when so little is needed to accomplish it.

I inspected the *New Orleans*, and she is in good condition in all the essentials.

The circular letter of September 30 encouraged me that I might succeed in getting these armored cruisers in shape. Of course you realize ships would never have gotten to Mexico at all had it not been for my insistence for manning them with apprentices. This is not a boast. It is a mere fact to say that this was accomplished after having twice been disapproved by Navigation; that is, those four ships were available in an emergency, but the Navy Department would not have made them so had it been left to itself.

After working the ships and personnel up to a state of some efficiency and enthusiasm, I should have now to have the personnel feel that they are not treated with consideration; that they are doing double duty with little reward.

I thought you would want me to let you know the actual conditions on the *Maryland*; hence this letter.

I am getting the *Colorado's* torpedoes into shape now, and when the *Pittsburgh*, *Maryland*, and *South Dakota* come here they will finish the work with theirs.

I shall peg away at this business until I find that it is hopeless or until I am told to take it easy, and let the department take all the responsibility, as it did previously.

I confess I am amazed that young officers should be kept at training stations teaching arithmetic when a ship like the *New Orleans* is helpless for the lack of two of them. Now, Navy will never amount to anything, Benson, when such absurd things are possible. I have several times made suggestions as to graduating midshipmen a little earlier, and doing something to relieve the present situation, but I have not even received the courtesy of an acknowledgement of such letters. As you know, classes were graduated ahead of time upon several occasions in the past, and as some of the officers tell me they seem to have done quite as well as those who stayed the full four years.

The last academic year is entirely practical anyway, and would be perfectly possible to employ midshipmen who were graduated in February that they would learn even more on practical lines than at the Naval Academy during these four months; and they could be required to pass a good stiff examination and have a course of study outlined for them should they leave the Naval Academy in February.

With the Naval Academy packed and jammed full, the graduating of the senior class in February would, it seems to me, relieve the situation somewhat.

Sincerely, yours,

W. F. FULLAM.

Admiral WM. S. BENSON, U. S. Navy,
Chief of Naval Operations, Washington, D. C.

On November 21, I addressed the attached letter to the department, reporting that all ships of my force (except the *Saratoga*) had been forced away from the docks at the navy yards. [Reading:]

UNITED STATES PACIFIC FLEET RESERVE FORCE.

U. S. S. "COLORADO," FLAGSHIP.

Navy Yard, Puget Sound, Wash., November 21, 1916

To: The Secretary of the Navy (Navigation).

Subject: Personnel and employment of ships of the reserve force, Pacific Fleet

1. With the departure of the *New Orleans* from the navy yard, Puget Sound, it is proper to state that all ships that were in the reserve force when the present commander took command about one year ago are either in active service or have done cruising duty in Mexican waters.

2. The activity of the reserve force in the Pacific has been made possible by the training of about 1,200 apprentice seamen, who have been distributed among these ships or assigned to active ships after completion of their training.

3. It is proper to state that the four armored cruisers could not have been sent to Mexico during the difficulties on that coast last summer, and the *West Virginia* and *New Orleans* could not have been made available for their present duties in Mexican waters, had it not been for the system of training apprentices in the reserve ships on this coast.

4. Strict orders have been given concerning the uniform and the military training of men; and preparations will be made to supply a full deck complement to the *Saratoga* as soon as repairs to that ship are so far completed that men can be properly berthed and employed on board.

W. F. FULLAM.

Copy to commander in chief.

On November 30, 1916, I addressed the attached official letter to the department concerning the vital importance of thoroughness in repairing the boilers and machinery of the armored cruisers. [Reading:]

UNITED STATES PACIFIC FLEET RESERVE FORCE,

U. S. S. "COLORADO," FLAGSHIP,

Navy Yard, Puget Sound, Wash., November 30, 1916.

To: The Secretary of the Navy (Operations):

Subject: Boilers and machinery of *Maryland*, *South Dakota*, and *San Diego*.

1. In view of the fact that the armored cruisers will be the only scouts available for the fleet for several years to come, it is the duty of the force commander to earnestly recommend that the boilers and machinery of the above-named ships be placed in absolutely dependable condition during their next overhaul, in order that they may be ready to make their maximum speed whenever occasion demands.

2. It is submitted that false economy as regards retubing boilers and overhauling machinery might be fatal to the efficiency of these ships in an emergency, and subject the crews to possible and unnecessary danger.

3. It is believed that the *Colorado*, *Pittsburgh*, *Saratoga*, and *West Virginia* will be dependable as far as their boilers and motive power are concerned, and it therefore remains to place the *San Diego*, *Maryland*, and *South Dakota* in similar condition in this vitally important respect.

4. This matter is brought to the attention of the department at this time in order that there may be no failure to have all these cruisers in perfect condition should mobilization be required next summer.

W. F. FULLAM.

Attention is invited to letters No. 21 to No. 26 to and from the department, concerning personnel and material matters between December 12, 1916, and January 24, 1917. It will be noted that the two letters from the Secretary's office indicated more activity and that the Secretary's letter of January 24, 1917, gave to the force commander the first real proof that his efforts had been appreciated and that the department was "doing all that it can do toward the end you seek."

As proof of the continued and zealous work by the officers of the Reserve Force to expedite the preparations for War, attention is invited to the attached circular order issued by the force commander, February 15, 1917, only two months before war was declared. [Reading:]

SAN FRANCISCO, CALIF.,
February 15, 1917.

To: Commanding officers all ships Reserve force, Pacific Fleet.
Subject: Concentration on important work.

1. The force commander assumes that all commanding officers are attending to the following points, but it is desired to emphasize them:

(a) Concentrate upon work directly affecting cruising efficiency, sea endurance, and man-of-war duty.

(b) Do not ask for, and if possible stop, all alterations and other work not essential to the above.

(c) Avoid the employment of a single navy-yard workman except upon jobs that are absolutely necessary; and cooperate with navy-yard authorities in this respect.

(d) Perfect as far as possible the organization for and conduct with all possible thoroughness the military instruction of the crew.

(e) Anticipate demands for a sudden call for the distant cruising for which these ships were intended.

2. Everybody must be made to realize that full complements of officers and men may not be available.

Officers were not excused for crying for help. [Continuing reading:]

Now is the time for everybody to hustle and do double duty without complaining.

4. This letter will be read in confidence by the commanding officer to all officers on board, and they will be required to quietly instill these ideas into their men, and inspire them to show what they are made of, and to exhibit a proper spirit—a thing that our men always do when appealed to in emergencies.

W. F. FULLAM.

I did not know what minute war might be declared, and I did not want to write a public letter, but I asked them quietly to give this to the officers and men.

On March 24, 1917, believing that war was imminent, I sent the attached radio concerning the importance of immediately recruiting the reserve force, and received the next day the department's authority to begin recruiting. My letter and the authority of the department are as follows. [Reading:]

MARCH 24, 1917.

From flag *Pueblo* to Secretary of the Navy, via N. P. G.

In view of the need of men in the Reserve Force, will the department authorize me to stimulate recruiting on this coast by stating to the press over my signature the number needed to fully man ships? I am advised that the result may be excellent. Request telegraphic reply. 14224.

MARCH 25, 1917.

From: Bu. Nav. to commander Reserve Force, via N. P. G.

14424: You are authorized to publish the fact that the President has signed an Executive order calling for an emergency increase to 87,000 enlisted men. Give widest publicity. You are authorized to state number of men needed in your force and to enlist and retain on board men to fill vacancies. 12525.

When war was declared in April, 1917, the force commander then cruising in Mexican waters, addressed the attached letter to the commander in chief, Admiral Caperton. [Reading:]

To: Commander in chief, U. S. Pacific Fleet.
Subject: Preparation of armored cruisers for battle.

1. After experience of a year and a half, with the aid of a zealous staff in getting the armored cruisers in a condition for war, the force commander, from a feeling of interest in this matter, submits the following suggestions from a sense of duty.

2. The regular target and torpedo practice as planned by the force commander for these ships for the fall of 1916 and the spring of 1917 was interfered with by conditions beyond control, and the inability of the Keyport station to render proper assistance prevented proving the torpedoes of the *South Dakota* and *Frederick*.

3. Many men have been transferred or discharged from these ships since the last target practice, and a very large percentage of the men recently added to the ships' companies have therefore never seen a gun fired.

4. The complements of officers as provided for war conditions will doubtless be somewhat short, and many of them will be inexperienced and by no means up to a desirable standard.

5. It follows from the above that it may require at least six months' strenuous training to prepare the armored cruisers for battle against ships that have been properly trained.

6. To do this, it is of the utmost importance that each of these ships should have target practice with great guns, even if it may be necessary to simulate this practice at sea and fire all the guns in the daytime, simply for the purpose of giving the crews some experience and opportunity to observe. It is also of the utmost importance that they should all have an opportunity to fire their torpedoes and overhaul the plants.

7. For this reason it is suggested that these ships, as they become available, should each be based on San Diego for a short time until they can have all this practice, and at the same time place their crews on the rifle range for instruction with the rifle and revolver.

8. It is for these reasons, as well as in consideration of efficient service on the Mexican coast, that the force commander has emphasized the importance of a patrol of yachts and small cruisers in Mexican waters in order that armored cruisers may be made and kept at all times ready for the serious emergencies of war and be prepared as regards their batteries, engines, and boilers for extreme speed and battery efficiency to meet a serious emergency at short notice.

9. It is assumed that any German cruiser that might gain the sea would be manned and officered by highly trained personnel. If the only fast armored cruisers in the Navy are to be prepared to chase and attack such a ship, they should have officers of ability and skill and crews that are trained to successfully land the first salvo. This is a very serious matter. Such an engagement is more probable than an engagement between battleships at the present time. Such a contingency should be the one to anticipate first of all, and such ships should be prepared for it, even at the expense of ships that may not have a chance to fight at all as long as the British fleet exists.

10. Armored cruisers in Mexican waters deteriorate rapidly, and, standing by constantly night and day in a warm climate, their crew soon becomes more or less enervated and listless. It is no place to train a fighting ship for battle, nor to keep its material in condition for a supreme test. In the event of a submarine menace, such a ship may be needlessly sacrificed.

11. If war with Mexico is not anticipated nor contemplated, therefore, it is my duty to emphasize the fact that armed yachts are of more use than armored cruisers on the Mexican coast to-day.

12. I am sending a small power boat, the *Paxinosa*, by courtesy of the owners, to investigate the report of a radio station at Angeles Bay. This is an object lesson.

13. It is assumed that these comments will be considered to be as respectful as they are intended to be and as practical as they are believed to be by an officer now on the Mexican coast.

W. F. FULLAM.

Serious attention is invited to this letter, especially to paragraph 9, in which it is stated that if one of these ships met a German ship which was fully manned it would have been in a very embarrassing position. In this connection it is pertinent to state with all emphasis that whereas all the armored cruisers except the *Saratoga* were not at sea, only one of the six—the flagship of Admiral Caperton—could be said to be ready for battle or for the strenuous conditions of war. With the exception of Caperton's flagship, these six vessels were underofficered and undermanned, with largely untrained crews. When it is remembered that the war had been in progress nearly three years it was to be expected that all enemy vessels were fully officered and manned and thoroughly trained. The battle of Jutland had

demonstrated the high degree of fighting efficiency of the German fleet.

In view of these facts and conditions no man has the faintest glimmer of intelligence concerning modern naval warfare and the vital importance of quick and accurate hitting in the initial stages of a naval battle can resist the conclusion that the armored cruisers of our Navy, officered and manned though they were with a personnel unequalled, we will say, in intelligence, patriotism and bravery by the men of any navy in the world would nevertheless have been at such a fatal disadvantage due to their lack of training that a battle at this time with enemy vessels manned with trained and seasoned crews could only have resulted in inevitable defeat for our ships. To claim the contrary would be to exhibit a degree of ignorance and bombast of which any American citizen or naval officer should be ashamed. It was a condition of complete naval unpreparedness for war as far as the scouts and screening vessels of the Navy were concerned.

I then wrote to the department about the completion of the *Saratoga*. On May 2, 1917, while at sea in the U. S. S. *Pueblo*, and knowing that the *Pueblo* would soon be required in the war zone, I wrote the attached letter concerning the completion of the armored cruiser *Saratoga* still under repair at Bremerton. [Reading:]

UNITED STATES PACIFIC FLEET, RESERVE FORCE,
U. S. S. "PUEBLO" FLAGSHIP,
PASSAGE, CERROS ISLAND TO SAN DIEGO,
May 2, 1917.

To: The Secretary of the Navy (Operations) (Material).
Subject: Completion of *Saratoga*.

1. I am informed by the commandant of the Bremerton yard, under date of April 3, that he has been embarrassed for lack of funds to provide for the completion of the *Saratoga*.

2. In view of the department's confidential message "10028," and assuming that this ship may be ultimately under my command, I earnestly suggest that every possible effort be made to put her in readiness for efficient service at the earliest possible date.

3. As soon as she comes under my control an attempt will be made to drill and train her personnel to the highest state of military efficiency.

W. F. FULLAM.

The *Saratoga* was completed and became my eighth flagship in the fall of 1917. It is proper to state at this point that I at all times assisted the department by gladly sending every ship I could possibly spare into the Atlantic. Upon the receipt of a letter from Admiral Benson, October 1, 1917, that he regretted taking the *Saratoga* from me, I promptly answered his letter which is herewith attached. [Reading:]

October 8, 1917.

MY DEAR BENSON: Your letter of October 1 at hand.

(Of course, I personally regret leaving the *Saratoga*, my eighth flagship—but "War is hell," and we must recognize it.)

I understand the situation perfectly. If the Japanese Navy, Australian Navy, and the few English cruisers on the coast of South America are active, they should practically prevent the possibility of raiders or submarines getting around either cape into the Pacific. And, therefore, there is no reason why ships like the *Saratoga* should not go to the Atlantic, where the demands are clearly paramount.

In the meantime, I will keep the few ships here in the best possible condition, by sending them to the navy yard frequently; and with the patrol scheme in Mexico, I can hold the situation down.

I can use colliers and even the oil barge, if necessary, to guard our interests in those ports.

I can see that if all the South American Republic stampede over to our side, as they may do, the Germans can find no bases for their operations in South America; and we will only have to circumvent them in Mexico and Central America.

With good consuls and a well-organized secret service in Mexico we can checkmate them here, with the aid of these small ships.

I have ordered the *Oregon* to San Diego and will make this my headquarters, as it is the only place under the circumstances.

I shall remain on board the *Saratoga* until after her target practice and will inspect the submarine and training station at San Pedro next Thursday; and will shift to the *Oregon* on Friday, October 12.

I do hope our Government will consider the Mexican situation and put the screws on all German rascality, and make German merchants in Mexico squeal. They are making money at our expense and using it to help Germany.

Sincerely, yours,

W. F. FULLAM.

Admiral W. S. BENSON, United States Navy,
Chief of Naval Operations,
Navy Department, Washington, D. C.

I was anxious to send troops to the war.

On October 19, six months after we entered the war, Admiral Benson addressed to me the attached letter of appreciation of my work on getting the armored cruisers ready for war.

This ends the story of the preparation for war in the Pacific during the two-year period from October, 1915, to October, 1917.

It is proper to state in this connection that while I had served as second in command under Admiral Winslow and Admiral Caperton, from June, 1916, to May, 1917, part of the time the work of preparing the armored cruisers and other large vessels in the Pacific devolved entirely upon me inasmuch as all these vessels except the one flagship of the commander in chief were directly under my command. Admiral Winslow and Admiral Caperton received from me the most loyal support at all times and they both gave me credit for the work our officers did.

In conclusion, it may be claimed that the following facts are established by the evidence in this correspondence:

(a) The Navy Department did not take the initiative in preparing the armored cruisers for war either as regards personnel or material.

(b) It was only after the lapse of 11 months constant effort, and after my caustic letter of September 14, 1916, that the bureaus of the Navy Department were coordinated and a policy adopted.

(c) The few armored and fast cruisers in our Navy would have been of great value if our battle fleet had been called upon to meet a hostile fleet in war. Every one of these ships should, therefore, have been in instant readiness with a full crew trained when war was declared. Otherwise the fleet could not act offensively and it was at a grave disadvantage on the defensive in having no scouts or screening vessels. Unpreparedness in this respect was inexcusable.

The following subjects are briefly handled in separate files to demonstrate the complete unreadiness of the Pacific forces for war. I present first the following memorandum. [Reading]:

1. Aviation in the Pacific before and during the World War.
2. Neglect of the Navy Department to prepare and develop an adequate aviation service for war in 1917, after Admiral Fiske had urged the Secretary of the Navy to establish a bureau of aeronautics in 1913.
3. Inadequate air service during the World War.

4 Importance of aviation for a scouting duty with the fleet, especially in the absence of battle cruisers, scout cruisers, and because of the unpreparedness of the armored cruisers of our Navy.

1. In the first part of my statement concerning the unpreparedness of the armored cruisers for war it was emphasized that the battle fleet of the United States was blind for the lack of battle cruisers and scout cruisers, and for this reason the preparation of all armored and fast cruisers for scouting service was of vital importance, especially in view of the fact that our aviation service was totally inadequate to furnish seaplanes as an adjunct in scouting work in war operations. It is important, therefore, to take up the subject of aviation in connection with the conduct of the war.

2. In 1913, while I was serving as one of the aids to the Secretary of the Navy, Admiral Fiske, in my presence, called the attention of the Secretary to the immediate necessity for a bureau of aeronautics. The admiral advocated this step as the best and most economical means for the defense of the Philippines against invasion, as well as an auxiliary measure for the protection of our own costs. In his effort to impress the Secretary with the importance of this subject, Admiral Fiske laid before the Secretary the illustrations and sketches of organization and material in the aviation bureaus of European nations.

3 Notwithstanding Admiral Fiske's efforts, which continued unremittingly until his retirement from the Navy Department in 1915, comparatively little had been accomplished in aviation before the declaration of war, and, as a result of this failure to act during a period of four years, we had only 45 trained aviators and a pitifully inadequate service in July, 1917, three months after we entered the war.

Three months after we entered the war we had only 45 trained aviators.

The CHAIRMAN. In the whole Navy?

Admiral FULLAM. In the whole Navy. That is the official statement from the Navy Department, in which it demonstrates its wonderful—and they were wonderful—efforts to expand that service after the war was on top of us. Then they did hustle, and our aviators, a few of them in Europe, did wonderful work. They could not help it. Naval officers do not know how to neglect their duty. [Continuing reading:]

4. Capt. Bristol, who had been appointed director of aeronautics, exerted himself to the utmost, but his hands were tied. His estimates in 1916 were cut down by the Navy Department from \$13,000,000 to \$2,000,000, Congress ultimately increasing the appropriation to \$3,500,000, a sum, however, which was sadly insufficient.

5. There was no Navy aviation service whatever on the Pacific coast previous to the declaration of war, and no preparation for the prompt organization of such an important element in offensive and defensive warfare in the Pacific or elsewhere.

6. Several months after we entered the war, a young lieutenant reported to me at San Diego, Calif., and informed me that he was directed to organize a school for the elementary instruction of officers in the mechanical and other details of aviation, and that an aviation field was to be developed on North Island in San Diego harbor.

This young officer, Lieut. Spender, United States Navy, with few qualified assistants, pushed his work with all possible zeal and energy. But progress was very slow for lack of funds and want of careful plans. In the spring of 1918, nearly a year after we had been in the war, despite Lieut. Spender's efforts and through no fault of his, so little had been accomplished in the building of the aviation station that I had called the attention of the Navy Department to the situation, and Capt. Laning, Assistant in the Bureau of Navigation, who came to the Pacific on an inspection tour, sent a telegram to the department stating that conditions were not satisfactory and that unless immediate steps were taken there would be no means nor facilities for training officers and men at San Diego for months to come.

7. Ultimately a beginning was made, a few seaplanes were supplied, and training was pushed in 1918 with the limited material at hand. Very few of the aviators from San Diego got to the war zone, and very few seaplanes were available for use with our naval forces in Europe. I was personally informed by one of our aviators, and I think he was one of those who went on a cruise across the Atlantic—he was one of the best ones—that he flew the first American-built seaplane in Europe July 13, 1918, four months before the armistice was signed, and five years after Admiral Fiske had urged the Secretary of the Navy to establish an aviation bureau to develop this important service.

Now, I know that he made that statement—that he personally flew the first American-built seaplane in Europe in July, 1918. We flew planes that we got over there, before that, of course. I would not like to make any statement here that could not be substantiated. I only want to make the statement that that statement was made personally to me by the man who said that he did it. [Continuing reading:]

8. The record made by our aviators in the war zone was worthy of the highest praise. But the failure of the Navy Department to act promptly upon the recommendations of Admiral Fiske during the years from 1913 to 1917, resulted in a pathetically inadequate naval air service in the first year of the war. Had the Admiral's plans been approved by the Secretary, and had Capt. Bristol's estimates and suggestions been accepted, the Navy might have sent an air force to the war zone sufficiently strong at the beginning of the war to have attacked the enemy's aviation bases and interfered seriously with their submarine campaign.

9. The officers and bureaus of the Navy Department were in no sense responsible for our unpreparedness in aviation. The responsibility rested with the Secretary of the Navy, who cut the estimates and prevented the full development of this important element of naval warfare during the years preceding the declaration of war.

10. The naval air station at San Diego is still in process of building, nearly 18 months after the armistice was signed. Its present equipment and the number of planes now available are totally inadequate for effective cooperation with the fleet in war operations or for the defense of the Pacific.

11. When war was threatened with Mexico in 1916, Admiral Winslow was ordered with his whole force to the west coast. I accompanied him as second in command.

I had orders to prepare for possible hostilities with Mexico. I had three ports that I was required to stand by to take. [Reading:]

An aviation squadron would have been of the utmost importance at that time, but there was not a single seaplane on the Pacific coast for service with Admiral Winslow's forces; three years after, the importance of this adjunct had been brought to the attention of the Secretary of the Navy by Admiral Fiske.

Those seaplanes might have saved a great many lives if we had been forced ashore.

I present next this memorandum with regard to unpreparedness of ships from the Asiatic station and from Honolulu passing through the Pacific for the war zone. [Reading:]

UNPREPAREDNESS OF SHIPS FROM THE ASIATIC STATION AND FROM HONOLULU PASSING THROUGH THE PACIFIC FOR THE WAR ZONE.

1. It was my duty as the senior officer in the Pacific not only to fit out my own vessels for war, but to provide as far as possible for the needs of all vessels passing through the Pacific for duty in the war zone.

2. There were a number of such vessels—the *Cincinnati* and *Galveston* from the Asiatic station, the *Schurz* and *Gulfport* from Honolulu, and the *Alert* and *Albatross*, which had not been under my command.

3. I inspected these vessels and found them unready for war in every respect. They were woefully short of officers and men, and many of these ships had not had target practice or opportunity to train their crews for battle.

4. I stripped my own ships to supply officers, petty officers and men, as it was my manifest duty to do in order to contribute to the readiness of ships bound to the war zone. I did these things without orders or authority from the Navy Department; but both Admiral Palmer and Capt. Laning of the Bureau of Navigation heartily approved my action.

5. Fully recognizing the ability and zeal of the officers and men on board these vessels, it is the simple truth to declare that they were so short of personnel and so untrained for battle that had any one of them met an enemy vessel of the same class properly manned and trained its defeat would have been inevitable. It was a pitiful condition of unpreparedness. It was another proof of the great good fortune of this country that the German Fleet was bottled up, without a cruiser upon the sea. It is to be devoutly hoped that the United States will not again owe its safety to the fact

that its enemy is completely blockaded by the fleet of Great Britain or any other friendly power. It is time to recognize the truth—even as regards naval matters. Attention is invited to the letters hereto attached concerning the unpreparedness of the vessels mentioned above.

I desire also to read the following letters [reading]:

UNITED STATES PACIFIC FLEET, DIVISION 2,
U. S. S. "Oregon," Flagship, December 3, 1917.

MY DEAR GEORGE:—Thank you for your letter of the 30th. The K boats and the *Atilla*—*Gulfport*, *Schurz*, *Alert* and *Nanshan*—got away. The *Nanshan* will return from Acapulco and the *Alert* will return from Balboa, unless her orders are changed. Thank you very much for hustling things.

We will now concentrate on the *Savannah* and N boats, and I realize that you are doing everything possible to expedite their departure.

I have directed the division commander of the N boats to make all preparations necessary for their cruise. I am surprised at the small amount of Diesel engine oil and lubricating oil required by the N boats at Acapulco. The K boats required a great deal more.

I have granted the request for the N boats to proceed to San Diego, without convoy, but will stand by to help them with the *Yorktown* in case anything happens.

I can well understand your difficulties with all active officers detached. We will have similar conditions in the ships of my force. We are training reserve officers for cruising duty.

I shall write a letter to the department to-day concerning the project to make improvements and alterations in the *Brutus* and *Nanshan* and will send you a copy of the letter.

After departure of the *Savannah* and N boats there will be a small force remaining for us to keep in cruising trim.

Thanking you again,
Sincerely, yours,

W. F. FULLAM.

Capt. HARRY GEORGE, United States Navy, Retired,
Commandant, Navy Yard, Mare Island, Vallejo, Calif.

The CHAIRMAN. What is the name of that officer?

Admiral FULLAM. Capt. George, a very efficient and able officer; and the work that he did out there was wonderful.

Then I wrote a letter to Capt. Pratt, one of my officers and a very dear friend of mine [reading]:

DECEMBER 16, 1917.

MY DEAR PRATT: I inclose copy of a letter to Palmer, concerning the *Cincinnati*. It explains itself.

While I intended always to hustle ships on their way to the east coast, I consider it most important to put them in as good shape as possible as regards material and personnel before leaving here.

I am stripping my ships of petty officers and commissioned officers of the regular Navy whenever they are needed for ships going to the Atlantic.

When the *Galveston* arrives I will try to put her in good shape also.

Sincerely, yours,

W. F. FULLAM.

Capt. WM. V. PRATT, United States Navy,
Office of Naval Operations, Navy Department, Washington, D. C.

I wrote that letter to Capt. Pratt and addressed it to the Office of Naval Operations because I wanted them to realize that I was helping. They were helping me at that time, in December, 1917, and everything was going with speed. I wrote the following letter to Admiral Palmer [reading]:

DECEMBER 16, 1917.

MY DEAR PALMER: The *Cincinnati* has arrived. She is short of officers and of men too.

I have made tentative arrangements to detach two or three regular line officers from the *Yorktown* and three of the best reserve officers from the *Oregon* and send them to the *Cincinnati*.

I will also fill the *Cincinnati's* complement of petty officers and men from my ships so that she may start from here with a good crew.

I assume that you wish me to do this and I am proceeding with the plan to send regular officers, in excess of those absolutely necessary in my ships, to duty where they are absolutely needed.

The *Cincinnati* has been underway constantly for a month and her engines and boilers need careful attention.

The engineer force has had no rest or liberty, and I deem it absolutely necessary that she shall stay here about a week before proceeding. It will save time in the end.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral L. C. PALMER, United States Navy,
Chief of Bureau of Navigation,
Navy Department, Washington, D. C.

P. S.—I assume that the *Galveston* may need officers and men also and I will do my best to supply her needs.

The *Yorktown*, having an excess of regulars, will be called upon to supply officers for the *Galveston* as well as the *Cincinnati*.

I wrote the following letter also to Capt. Laning [reading]:

DECEMBER 23, 1917.

MY DEAR LANING: When the *Cincinnati* arrived I found she needed assistance as regards personnel.

Brumby had made a quick trip, only stopping for coal, and he needed officers at once.

I transferred two regulars from the *Yorktown* and three reserve officers from the *Oregon*, which cheered him up.

I advised Brumby to discharge or transfer all short-time men who enlisted on this coast.

I gave him 14 petty officers, 8 signalmen and radio men, and 40 seamen, second-class, which filled his complement.

He was greatly encouraged, and said that he was better off than ever before.

The engines needed overhauling before leaving San Diego, and the crew, especially the engineer department, deserved liberty.

She has several propeller blades and about 20 tons of spare boiler parts stowed on her deck. While this does not interfere with the guns, it would be desirable to ship it from Colon to the States by collier or merchant vessel, if there is any chance of the *Cincinnati* being required to meet an enemy.

Brumby informed me that the ship had not had target practice recently and that a long interval had elapsed between the last two practices.

I would suggest that the ship be thoroughly inspected upon her arrival at Hampton Roads before she is assigned to the war zone.

Upon the arrival of the *Galveston*, will take account of her needs also.

There are two more regulars on the *Yorktown* who can be sent to the *Galveston*, if she needs them. I think that will bring all my vessels down to their authorized allowance of regular officers, and we will immediately train the personnel to obtain the best standard possible.

Orders have just come to detach the *Alert*, instead of her coming back here from Balboa. She has two officers—a gunner and a reserve officer—on board whom I sent to her to help out during her cruise to Balboa. We strive to please.

I send this to you because I suppose Palmer is overloaded and I thought you would bring the matter to his attention.

Very sincerely, yours,

W. F. FULLAM.

Commander HARRIS LANING, United States Navy,
Bureau of Navigation, Navy Department, Washington, D. C.

I have here another letter that I wrote to Capt. Laning. [Reading:]

UNITED STATES PACIFIC FLEET, DIVISION 2,
U. S. S. "*Oregon*," Flagship, January 12, 1918.

MY DEAR LANING: Thank you for your letter of January 4.

Your previous letter to me concerning the *Nanshan* and *Brutus* was perfectly well justified, and I appreciated it.

I was perhaps more disgusted than discouraged. If the department does not let me handle things out here it will get into a mess sooner or later.

The *Galveston* came in yesterday, and we are giving her everything she needs. I did not hesitate to strip the ships of rated men to supply the *Galveston's* needs, and I required the submarine base at San Pedro to send two machinist's mates and aoppersmith, because we can fill our vacancies out here much easier than *Galveston* can.

I have taken all the *Galveston's* short timers on board the *Oregon* and *Vicksburg*. I hope most of them will reenlist.

Chadwick needed two watch officers badly, and he was below the complement assigned him by the bureau.

With these transfers of two regulars from my ships we will be about down to our final complement as fixed by the bureau.

It has been my policy to do my utmost for every ship leaving this side for the Atlantic, both as regards material and personnel.

Always sincerely,

W. F. FULLAM.

I present another memorandum, on the following heads:

1. Unpreparedness as regards torpedoes in the Pacific.
2. Difficulty of testing torpedoes of armored cruisers due to lack of personnel.
3. Lack of facilities at Keyport, the only torpedo station in the Pacific.
4. Submarines leave the Pacific for the war zone with no torpedoes or guns for offensive or defensive use.

The memorandum is as follows:

1. Early in 1916 the force commander took up the work of putting the torpedoes of the armored cruisers into condition for effective use as fast as personnel and facilities could be obtained.

2. It was found that this work was greatly hampered by the lack of personnel, and the department was asked to supply both officers and men.

3. It was discovered that the torpedo station at Keyport was lacking in facilities despite the zealous action of the commanding officers, Lieut. Commander Jenson and Lieut. Canaga who succeeded him.

4. There was no air pump at Keyport, and in testing the torpedoes the station was dependent upon the presence of an old torpedo boat to supply air. When this boat went to Bremerton for repairs all torpedo work was stopped. This was a great handicap.

5. The armored cruisers were undergunned in comparison with the battle cruisers and other vessels of the German Navy. Under some conditions, therefore, the skillful use of their torpedoes might have somewhat lessened the handicap of our ships in battle with the scouts of the enemy. At all events it was a duty to put their torpedoes in proper condition if they were to remain on board these ships.

6. There was shortage of torpedoes in the Pacific for the supply of new destroyers and submarines, and for this reason these vessels sailed for the Atlantic in many cases without any torpedoes or guns on board. It was fortunate for them that the German Navy was bottled up by the Grand Fleet of Great Britain, unless it can be demonstrated that an American ship with no weapons and with an untrained personnel can defeat an enemy properly armed and trained.

7. Owing to the insurmountable difficulties in the Pacific not more than one-half of the torpedoes of the armored cruisers had been properly proved and tested when war was declared. This was wrong, no matter whether these torpedoes were kept on board these ships or were sent to submarines or destroyers.

8. Attention is invited to the letters hereto attached, which suffice to explain the situation in the Pacific.

I wrote a number of letters concerning this. I do not think I will read them all. Here is one to Admiral Benson, dated May 25, 1916 [reading]:

UNITED STATES PACIFIC RESERVE FLEET,
U. S. S. "PITTSBURGH," FLAGSHIP,
San Diego, Calif., May 25, 1916.

MY DEAR BENSON: I have ordered the *South Dakota* and *Oregon* to proceed to Portland for the rose festival in accordance with the department's wishes.

You will realize that these ships are very short-handed, both as regards men and officers. Williams on the *Oregon* is a commander, and Tozer is the only other commander I have in the reserve fleet.

I suggested that Tozer be ordered to take the *South Dakota* to Portland and from there to San Francisco, and that he then return by rail to Bremerton.

I consider it very wrong to order young lieutenants, who have never commanded any kind of a ship, however small, to take command of a 14,000-ton armored cruiser—some of them with inturning screws—and expect them to take the full responsibility of a captain in the Navy and to navigate their ships on the Pacific coast with short-handed complements.

Of course, they have done it thus far and they deserve great credit. I hope, however, that this condition may not be long forced upon them.

We should all be ready and willing to tackle any job in an emergency, but the time has about come, it seems to me, to stop requiring things that are practically impossible without providing the means. We have about reached the limit in attempting to do things without the facilities for doing them.

I shall send you very soon a report on the torpedoes of the armored cruisers. This report will show that many of the torpedoes have not been fired in years and others have not been fired at all. This is a serious matter.

Of course, torpedoes can not be handled by people who don't know anything about torpedoes.

There are reasons, therefore, for supplying these armored cruisers with enough officers and men to keep them in cruising condition and keep their guns and torpedoes ready for war. The climate and conditions at Bremerton and the custom of lying alongside the dock will prevent success. The plan outlined will, I think, make success possible.

I will continue to keep things going until the department can furnish the officers and men that are needed.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral WILLIAM S. BENSON, United States Navy,
Chief of Naval Operations,
Navy Department, Washington, D. C.

The CHAIRMAN. Do you wish some of these other letters which you have not read, to be put in the record?

Admiral FULLAM. It might be well to have them there as a matter of future reference.

The CHAIRMAN. Very well; we will put them all in.

Admiral FULLAM. They are of no use to me.

Here is another letter on this matter of torpedoes of May 27, 1916 [reading]:

UNITED STATES PACIFIC RESERVE FLEET,
U. S. S. "PITTSBURGH," FLAGSHIP,
San Diego, Calif., May 27, 1916.

MY DEAR BENSON: I am inclosing for your eye copies of two letters received from Bradshaw.

These letters will give you some information which I think you should have concerning affairs of the reserve fleet. I especially call your attention to the lack of facilities at the Keyport Station for handling torpedoes. This is a matter of prime importance. We should have a station out there that is perfectly equipped to do this work expeditiously and thoroughly. All our ships that are so deficient in speed and gun power should have their torpedoes in perfect condition because these might help them out in an emergency.

I hope you and Blue, therefore, can eventually assign skilled torpedo officers and men to every ship that carries torpedoes. I shall emphasize this matter as much as possible with the personnel I have.

I will send copies of these letters to Blue for his consideration. I assume that you and Blue want to be in touch occasionally with actual conditions out here, and trust that I am not nagging you.

I wish to commend in the highest terms the manner in which Bradshaw has acted as senior officer present at Bremerton. He deserves great credit, and I shall give it to him on his report of fitness.

I truly hope that you may approve my last cruising schedule so that I may get the armored cruisers in proper condition. To be sure, they are not powerful ships.

but they are the best cruisers we have, and we will have no others for sometime to come, and in time of need they would be of some use.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral W. S. BENSON, United States Navy,
Chief of Naval Operations,
Navy Department, Washington, D. C.

Here is another letter to Admiral Blue [reading]:

UNITED STATES PACIFIC RESERVE FLEET,
 U. S. S. "PITTSBURGH," FLAGSHIP,
San Diego, Calif., May 27, 1916.

MY DEAR BLUE: I am sending you copies of two letters from Bradshaw, because they contain information which I think you should have.

I am very anxious to do my duty in getting these ships in condition for active service. They are not very powerful, to be sure, but they are the best cruisers we now have or will have for some time to come, and we should put them in perfect condition.

I consider that the torpedoes of these ships should be absolutely reliable and that the personnel should be such as to give confidence in the torpedoes. In time of need these ships, with such inadequate gun power and speed, might find their torpedoes of great use, if they were skillfully handled. For this reason, I hope the bureau will ultimately see to it that every ship carrying torpedoes has a skilled personnel to handle them.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral VICTOR BLUE, United States Navy.
Chief of Bureau of Navigation,
Navy Department, Washington, D. C.

The Battle of Jutland shows that the ships that had torpedoes used them; they fired torpedoes, often, when they were suddenly confronted by an enemy's ship at short range, in the fog and mist that they had in the North Sea; and the torpedo was a very useful weapon.

I made a report to the Navy Department on May 31, 1916, upon the subject of torpedo work, which is as follows [reading]:

UNITED STATES PACIFIC RESERVE FLEET,
 U. S. S. "PITTSBURGH," FLAGSHIP,
San Diego, Calif., May 31, 1916.

To: The Secretary of the Navy (Operations, target practice and engineering competitions).

Subject: Torpedo work of ships of the Pacific Reserve Fleet.

1. There are 40 Whitehead Mark V, Mod. 4, torpedoes in the armored cruisers attached to the Pacific Reserve Fleet—8 on each of five ships: The *Colorado*, *Maryland*, *Pittsburgh*, *South Dakota*, and *West Virginia*.

2. Attention is invited to the attached table showing the last date on which each torpedo was fired, reason for firing, result of shot and number of shots to date.

3. The *Colorado* received her torpedoes July 8, 1913, practically three years ago, and none of them have ever been fired except to test fit in tube, April 21, 1915, almost two years after receipt.

4. The *South Dakota* received her present outfit of torpedoes July 17, 1913. Four of them have never been fired; the other four once each, for test, and one of them functioned.

5. It is considered absolutely essential for the sake of the efficiency of these ships that they be given suitable personnel, and afforded opportunity to test and prove, at least, all torpedoes on board, and to keep them in an efficient condition.

• W. F. FULLAM.

I wrote another letter to Admiral Blue on the same subject, which is as follows [reading]:

UNITED STATES PACIFIC RESERVE FLEET,
U. S. S. "PITTSBURGH," FLAGSHIP,
San Diego, Calif., June 5, 1916.

MY DEAR BLUE: I am very glad we are to get some midshipmen for the armored cruisers in the reserve fleet. "Small favors thankfully received," and I will try to prescribe a routine which will be of benefit to these young men.

I shall be greatly encouraged if commanding officers and a few officers of junior rank are supplied later on in order that the work of training apprentices, and the projected civilian practice cruise, may be properly done.

The junior officers have handled these ships extraordinarily well, but I am sure you realize that it is a heavy responsibility to put upon them, and if anything should happen there would be severe criticisms.

I am trying hard to insure that important elements of man-of-war efficiency—machinery, battery, and torpedoes—are made ready in these armored cruisers.

The battery and the machinery may be satisfactorily attended to, but the torpedo question is more difficult. We are doing all we can with the personnel available, and I will continue to utilize the services of the officers and gunners' mates who are qualified to handle torpedoes. I hope, however, that special effort may be made to at least put one officer and one or two expert gunners' mates on ships that have torpedoes also that we may be sure of getting them in fighting trim.

The *South Dakota* and *Maryland* are working with torpedoes now at the Keyport station, and I shall direct the *Colorado* to overhaul hers and be ready to fire them as soon as she reaches Keyport. The *Pittsburgh*, in the meantime, will make preparations to test her torpedoes also.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral VICTOR BLUE, United States Navy,
Navy Department, Washington, D. C.

Also I wrote a letter to Admiral Caperton dated March 7, 1917, just as he was about to leave [reading]:

SAN FRANCISCO, CALIF., March 7, 1917.

MY DEAR CAPERTON: While the *Perry* is undergoing repairs at Bremerton there is no air compressor at the torpedo station and it is impossible for the *Frederick* and the *South Dakota* to prove their torpedoes.

It has been my policy to have ships employ their time to advantage while at Bremerton, particularly as regards testing and proving their torpedoes. It is amazing that the Navy Department has not equipped that station in such an important respect. It would have been a very simple matter to install an air compressor there.

I have represented the matter to the Navy Department and hope you will also give it a push. I assume that you have no destroyer available at present to send there while the *Perry* is being repaired. Meanwhile the *Frederick* and *South Dakota* are helpless with their torpedo work.

I will not read the rest of that letter, it is in my file.

Then there is a memorandum on the shortage of small-arm and machine-gun ammunition in the Navy from September, 1917, to March, 1918 [reading]:

1. Attention is invited to the attached letter from Admiral Benson dated September 20, 1917, forbidding all target practice with machine guns, rifles, and revolvers in the Navy owing to the shortage of ammunition.

Attention is invited to the attached letter from Admiral Plunkett dated March 14, 1918, removing the restriction upon the expenditure of machine-gun and rifle ammunition, but continuing the restriction as regards revolver ammunition.

3. From this it will be seen that for six months during the war, from September 1917, to March, 1918, tens of thousands of enlisted recruits must have entered the Navy and served afloat and ashore without even having pulled the trigger of a revolver rifle, or machine gun. The assertion is ventured with confidence that many thousand enlisted men of the Navy never fired a single shot, even at target practice, with any weapon, large or small, during the World War.

4. The shortage of small-arm ammunition was admittedly of less importance than a shortage of shells for big guns in the Navy. It is understood, however, that there was a perilous shortage of 14-inch shells for our first-line dreadnaughts, and that the contracts for these shells were held up for some time at the Navy Department. Such a condition, if it existed, crippled the battle fleet and imperiled the country.

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, September 20, 1917.

To: Commander in chief, Force Commander, Division Commanders, Commandants of Naval Districts, and Bureau of Ordnance:

Subject: Expenditures of small-arms ammunition for target-practice purposes.

1. Expenditure of small-arms ammunition for target-practice purposes, for pistols, rifles, and machine guns, will be suspended until further orders.

2. A small amount of unserviceable ammunition has been issued to small-arms ranges for the purpose of training recruits. This firing may continue until ammunition supplied is exhausted, when firing will be suspended until such time as the department is able to allot ammunition for target-practice purposes.

W. S. BENSON.

Then there is the letter from Admiral Plunkett, dated March 14, 1918, which is as follows [reading]:

MARCH 14, 1918.

From: Chief of Naval Operations.

To: Commander in chief, United States Atlantic Fleet; commander in chief, United States Pacific Fleet; commander, Division 2, United States Pacific Fleet; Commandants, naval districts:

Subject: Expenditure of ammunition for small-arms target practice.

1. The following letter from the Bureau of Ordnance is quoted for the information of the service, and the recommendations contained therein are approved:

MARCH 9, 1918.

To: Chief of Naval Operations:

Subject: Expenditure of small-arms ammunition for target-practice purposes.

Reference: (a) Office of N. L. Letter OP-P-W (1-157) 27832-340 of September 30, 1917.

1. Reference (a) suspended the use of small-arms ammunition for target-practice purposes, for pistols, rifles, and machine guns until further orders.

2. Recent large deliveries of .30-caliber ball cartridges, model 1906 (Springfield rifle ammunition) relieved the shortage of this type of ammunition and the bureau is now in a position to fill out ships' and shore-stations' allowances. It is recommended therefore, that the order suspending the use of small-arms ammunition for target-practice purposes be rescinded in so far as it applies to rifle and machine-gun ammunition.

3. As the shortage of pistol and revolver ammunition is still acute, it is recommended that the use of this ammunition for target-practice purposes continue to be suspended until larger supplies are received.

RALPH EARLE.

2. Ammunition for small-arms practice is furnished directly to the following ranges:

Navy rifle range, Camp Logan, Ill.

Navy rifle range, Great Lakes, Ill.

Navy rifle range, Wakefield, Mass.

Navy rifle range, Peekskill, N. Y.

Navy rifle range, navy yard, Philadelphia, Pa.

Navy rifle range, Cape May, N. J.

Navy rifle range, Glen Burnie, Md.

Naval Academy Rifle Range, Annapolis, Md.

Navy rifle range, Virginia Beach, Va.

Navy rifle range, Mount Pleasant, S. C.

And for men sent to these ranges for practice, no supply of ammunition need be furnished from their ship or station.

C. P. PLUNKETT,
By direction.

So that for six months we could not have any target practice with small arms. Here is another memorandum on shortage of guns in the Pacific and in the Navy [reading]:

MEMORANDUM.

1. Shortage of guns in the Pacific and in the Navy.
2. Removal of 3-inch guns from the armored cruisers.
3. Removal of intermediate battery from battleships in the Atlantic Fleet.
4. Shortage of guns even as late as September, 1918.
5. Inability of the Navy Department to supply guns of 4 inches and above to ships in the Pacific to safeguard them against a possible German raider.

First. Immediately upon the declaration of war about two-thirds of the 3-inch guns were removed from all the armored cruisers in the Pacific, and it is believed that the same was done in the Atlantic, and that many of the intermediate battery guns were removed from the second-line battleships to be utilized in merchant vessels.

Second. The removal of these guns from fighting ships somewhat diminished their offensive gun-fire in meeting submarine and destroyer attacks. As a war measure it was most unfortunate. Had our fleet been called upon to fight at sea, it would have somewhat lessened the chances of victory. A study of the Battle of Jutland will suffice to demonstrate this fact.

Third. It is only fair to say, however, that the removal of some of the intermediate battery and 3-inch guns, especially those on the lower decks which would, for this reason, have been of little use in a heavy sea, was justified and doubtless recommended. But the fact remains that in fair weather the volume of fire of these ships was quite materially reduced.

Fourth. After sending every available vessel from the Pacific to the Atlantic, the turret guns of the brave old *Oregon* were the sole defense against a possible well-armed raider in the Pacific. For this reason it was my duty to ask that a few guns of 4-inch and heavier calibre be supplied to certain vessels under my command to meet possible emergencies; particularly at a time when Germany was reported to be trying to fit out some special raiders with special endurance, who might get into the Pacific.

These guns could not be supplied in September, 1918, for reasons set forth in the attached letters from Capt. Laning and Admiral Earle.

These facts confirm the recent statements of Assistant Secretary Roosevelt, that he was compelled to spend many millions without authority of Congress to supply guns imperatively needed by the Navy.

Fifth. The responsibility for shortage of guns could not be laid to Admiral Earle, Chief of the Bureau of Ordnance. It was not the policy of this country to prepare for war.

I have the following letter:

BUREAU OF ORDNANCE,
Washington, D. C., September 11, 1918.

MY DEAR ADMIRAL: Please do not consider that any letters from you ever bother me; I have been the loser by not hearing from you.

The bureau will do its best to provide heavy batteries for the *Brutus* and *Nanshan* when funds for the same become available. At the present writing there are such a large number of vessels in the overseas trade that are not armed that I do not expect to be able to send any guns of 4 inches and above to the Pacific coast until next spring at the earliest.

Spring of 1919. Six months after the armistice, before any guns would be available for the Pacific.

The bureau would certainly assist in the matter of building a magazine at San Diego should the Chief of Naval Operations so authorize.

As for rifles and machine guns, the production is not anywhere near up to the demand. In other words, we are training men for the Navy and Army faster than we can turn out rifles for them.

I will speak to Leahy, Director of Target Practice, about the rifle range on the Pacific coast and see what he has to offer.

I regret that I can not answer your letter in a more satisfactory manner, but I am unable to do so. Really, there seems less and less hope of immediate betterment because of the labor conditions throughout the country.

With kindest regards, I remain,
Most sincerely, yours,

RALPH EARLE.

Rear Admiral W. F. FULLAM, UNITED STATES NAVY,
U. S. S. "Oregon," Municipal Dock, San Diego, Calif.

I have a letter from Laning dated the same day. He said that he had been in conference that day with Admiral Earle. [Reading]:

BUREAU OF NAVIGATION,
Washington, D. C., September 11, 1918.

My DEAR ADMIRAL: I received your letter dated September 4 bringing with it an inclosure, a copy of your letter to Admiral Earle. I have been in on a number of conferences with regard to the gun situation and I am very much afraid that it will be impossible for Ordnance to change the batteries of those ships at the present time. As a matter of fact the demand for guns is so heavy that Ordnance is not yet able to equip more than a few of the vessels going to the war zone, so no matter how advisable it may be it is still less possible to send guns elsewhere.

The gun problem is the most serious thing confronting us. I am sure that everybody would only be too pleased to fix those ships up the way you recommend but I am sure no one would think it the best thing to do at this time when all the available guns are needed for use against submarines.

Sincerely, yours,

HARRIS LANING.

Rear Admiral W. F. FULLAM, *United States Navy,*
Municipal Docks, San Diego, Calif.

There is another file of letters which are confidential because they refer to matters in regard to coast defense, that ought not to be made public, but I suppose that if you wish them——

The CHAIRMAN. You do not want them to be included in the record?

Admiral FULLAM. If they could be considered confidential——

The CHAIRMAN. It would be better to leave them out of the record.

Admiral FULLAM. Yes. I will abbreviate the reading of this letter [reading]:

1. This file shows the effort made by the commander of the reserve forces on the Pacific to get proper coordination between the Army and the Navy on the Pacific.

2. It will be noted that the first letter was written on the 17th of February, 1917, nearly two months before the war was declared, but that the correspondence was not concluded until 19th of October, 1917, about six months after the war was declared.

In other words, I corresponded for eight months trying to get coordination.

3. During this time things were in a more or less unsettled and chaotic state despite the efforts of the division commander.

4. There appeared to be hesitation at the Navy Department to adopting any real thorough system by which responsibility would be fixed and definite action demanded.

5. The objection by the Navy Department to permanent and properly organized "joint boards" in each port appeared to be the main stumblingblock.

6. There seemed to be fear that these boards of Army and Navy commanders would assume too much authority; but assumption of authority and definite plans to use authority and use it quickly was the secret of the whole matter, and the letter to Capt. Marvell of September 27, 1917, gave the division commander's ideas on this subject in no uncertain words.

7. It was not deemed sufficient by the division commander that boards and conferences should be "informal" or by "mutual consent" but that such boards and such conferences should be decidedly authoritative in order that they might be held responsible in their cooperation and in their defensive measures.

8. This subject is one of interest for the present and the future if we are to be at all times properly prepared for war.

9. The art of going to war "informally" has not been studied at our Naval War College and has not been justified as a sound national policy by Admiral Mahan or other well qualified authorities.

10. War must be considered as a decidedly "formal" and serious business. Our next enemy may so consider it, in which case the United States will be at a very serious disadvantage if we adhere to the "informal" attitude in organization and preparation for war.

11. The Army and Navy must work in harmony, and with perfect coordination, offensively and defensively, if we are to be victorious.

12. Organization costs nothing. It demands no appropriation by Congress. It is economical and prevents chaos when war comes. It conserves Mahan's principle "The organization of the Navy Department should be such that it may pass from a state of peace to a state of war without a jar in its machinery."

13. The maintenance of an Army and Navy involves the appropriation of hundreds of millions annually. This taxation is not justified unless both the Army and Navy are at all times ready for war, and prepared by perfect organization to instantly cooperate. The thoughts of officers should be fixed constantly upon this subject. This is the best way to occupy their minds in time of peace. They should be compelled, not forbidden, to study and advocate this policy of organization. It is their first duty. The Secretary of the Navy should reward and encourage officers who work on this line rather than those who simply carry on a peace routine with no anticipation of war. The people of this country should demand perfection of organization in the Navy and at the Navy Department.

14. The United States can not wisely pursue the gentle policy of "informality" leaving our enemy to strike with "formal" and well-organized force. We must not be so wonderfully kind and chivalrous as to leave our coasts with an "informal" defensive plan, thus giving the initial advantage to an unchivalrous enemy who is ready to take advantage of us.

15. On the 5th of February, 1917, being then in San Francisco with my flagship, believing that war was inevitable and that I might possibly be left in command in the Pacific I wrote to Capt. Chase, Assistant of the Chief of Naval Operations informing him of the need of immediate defensive plans in the Pacific; that the Army and Navy were not as yet prepared to coordinate; that "I am conferring with the military authorities and with Capt. Gilmer"; that "I send this information because there must be cooperation; and similar conditions may exist at other seaports."

16. This began a correspondence which continued for eight months—from two months before the war until October, 1917. The letters in the attached file tell the story. They should not be published. They are numbered serially. (See letter No. 1.)

17. The next day, February 6, I wrote an official letter to the department on the subject of cooperation at San Francisco. (See letter No. 2.)

18. On February 17 I wrote an official letter concerning a conference with Gen. Sibert, commanding the coast defense of the Pacific, and Capt. Gilmer, the commandant of the twelfth naval district. At this conference the subject of cooperation of the Army and Navy was thoroughly discussed, the need of immediate organization was manifest, and we unanimously recommended the formation of permanent, local "joint boards" of Army and Navy officers at each seaport to prepare and perfect defensive plans concluding with the words: "A procedure of this kind would serve to meet the emergency of sudden war without confusion or delay at any time." It is submitted that this plan merited immediate consideration and adoption by the Navy Department. (See letter No. 3.)

19. On February 20 I wrote to the department giving an account of another conference with Gen. Sibert, Capt. Gilmer, and the master of pilots of San Francisco. At this meeting, held on board my flagship, we got under way and steamed out to sea and back again to observe and discuss the existing defensive measures.

As a result of this experiment our previous opinions were confirmed and it was demonstrated, beyond question, that a radical change was demanded. (See letter No. 4.)

20. Under date of February 14 the Secretary of the Navy wrote to the force commander in answer to his letter of February 6. (See letter No. 5.)

21. Under date of February 27 Admiral Benson replied to my letters expressing satisfaction with our conferences at San Francisco. In this letter, however, there was no answer to my suggestions regarding joint boards. The department seemed to be satisfied that the existing regulations which directed commandants "to confer with Army officers" would suffice. (See letter No. 6.) I was greatly disappointed that the recommendations made by me and Gen. Sibert were not approved. In our estimation—and we were in the spot—existing regulations were not sufficient and a definitely carefully organized board at each seaport was a necessity.

22. In the meantime, while awaiting definite action by the Navy Department, upon my recommendation for thoroughness of organization, the soundness of my recommendations was conclusively demonstrated. On May 19 a sergeant at Fort Rosencrans reported three submarines off San Diego. This report caused great alarm. I did not for an instant believe that German submarines were in the Pacific, but nevertheless I sent two small vessels down to the coast to investigate, and warned all vessels, including the two Japanese cruisers at San Pedro. I had no authority to do more.

23. Confusion reigned at San Diego. The defensive measures were inadequate and there was poor cooperation of Army and Navy agencies. On May 20 the Navy Department sent a radio message to the force commander asking for an explanation of the lack of coordination at San Diego. To this radio the force commander, in reply sent the attached letter to the Navy Department.

Confidential.

UNITED STATES PACIFIC FLEET, DIVISION 2,
U. S. S. "OREGON," FLAGSHIP,
May 22, 1917.

To: The Secretary of the Navy (Operations).

Subject: Functions of commander, patrol force, and cooperation between Army and Navy on Pacific coast.

References: (a) Operations' radio 11020, May.

Inclosures: (1) Orders of patrol force commander; (2) correspondence concerning cooperation and local joint boards; (3) letters of May 2, May 9, and May 12.

1. Concerning the above subject and references, attention is invited to the following statements, and to the copies of letters, which are attached hereto for convenience of reference:

AUTHORITY COMMANDER PATROL FORCE.

2. The force commander wished to assume all responsibility that properly belonged to him on this coast, without overstepping or interfering with other commanders afloat or ashore.

3. It will be noted, from the copies of "orders" hereto attached, that the force commander is under the command of the commander in chief and that his authority is strictly limited to the ships of the patrol force. The coast torpedo force, the ships of the coast and the naval districts are independent of the Pacific patrol force.

NAVAL DISTRICTS.

4. A skeleton organization of the twelfth naval district, under mobilization orders, and dated March 23 was furnished the commander, reserve force, by Capt. Gilmer at my request, but this organization has been greatly modified by the detachment of the *Oregon*, *Annapolis*, *Yorktown*, *Hull*, *Hopkins*, and *Bear*.

5. No report of changes in the organization, no information concerning the ships or patrol boats now available or concerning the duties of the twelfth, thirteenth and fourteenth naval districts, or as to the question of cooperation with the Army and the Pacific patrol force have been made known to me.

TWELFTH DISTRICT PATROL AT SAN DIEGO.

6. The *Yorktown* was originally designated for the twelfth district patrol service at San Diego. Upon her assignment to the Pacific patrol force on May 2, I did not detach her immediately, but sent the following radio in order that she might remain and turn over her duties in the twelfth district before leaving San Diego:

"SAN DIEGO.

"From: Commander, patrol force.

"To: *Yorktown*.

"Continue present duty until further orders 13108."

7. Under these orders the *Yorktown* remained at San Diego until May 12 before sailing for Honolulu to carry out orders of Navy department. Thus the *Yorktown* was permitted by me to remain at San Diego from May 2 to May 12—10 days—during which time the naval district duties were performed and transferred.

COOPERATION WITH ARMY.

8. Attention is respectfully invited to the attached letters which show that the commander, reserve force (now commander patrol force) initiated the consideration of "cooperation" in his letter of the 7th of February and emphasized its importance in other letters to March 24, inclusive.

DANGER FROM RAIDERS AND SUBMARINES.

9. These dangers are and have been discounted by the force commander, but the message from the commander at Fort Rosecrans on May 19 was so worded that immediate action was imperative on account of the presence of Japanese cruisers at San Pedro and the tows en route from Honolulu. There was no alternative but to send the *Shaw* and the *Iroquois* on the patrol to the southward.

POSSIBLE OFFENSIVE OF SUBMARINES IN PACIFIC.

10. The presence of German submarines in the Pacific now, or in the future, is believed to be extremely improbable.

11. However, in the absence of mines and nets, considering the composition of our naval forces to-day, and noting the record of performances of modern submarines, it is believed that a bold submarine commander, choosing his time, could enter the harbors of San Diego, San Pedro, or San Francisco, at night, sink any vessels at anchor there and escape to sea with little chance of being sunk.

FUTURE DUTIES OF PACIFIC PATROL FORCE.

12. Referring to my radio, and to letters of May 2, May 9, and May 12, and to Operations' letter of May 12 and radio of May 21, hereto attached for convenience of reference, the following points have not been settled:

(1) Officers for *Oregon* (letter May 9).

(2) Are Perry and Lawrence to be permanently attached to patrol force under my command (letter May 9)?

(3) New name for *Angel* (May 9).

(4) "Policy" of department as to "Mission" patrol force (May 9).

(5) Recognition signals (Radio May 11 and 17).

13. It is assumed that none of the vessels of coast guard and Fish Commission will be assigned to the Pacific patrol force.

14. This letter is written in order to bring the following questions up to date:

(1) Cooperation with Army.

(2) Cooperation with coast defense districts.

(3) Defense and patrol against submarines.

(4) Recognition signals between United States, Japanese, and English cruisers to avoid possible danger.

15. The force commander in flagship, San Diego, will leave San Francisco about June 1 to take part in and direct patrol to Honolulu and to inaugurate itinerary of patrol force approved by Operations.

16. The question of possible changes in organization to secure better or more complete cooperation between the various commandants and commanders, Army and Navy, on the Pacific coast is left to the consideration of the department, pending which the force commander will confine himself to the limits defined by his present orders.

17. The radio—Operations' 11020—carried the possible construction that the commander, patrol force, was informed of, or in some measure responsible for, cooperation or action at San Diego in connection with the submarine incident May 19. It is hoped that he will be freed from responsibility concerning that matter.

W. F. FULLAM.

This letter showed the need of better cooperation between the Army and Navy. It proved that the recommendation of "Local Joint Boards" was practical and necessary, and that there should be one directing head in the naval defense of the Pacific.

The Navy Department ultimately approved, in part, the suggestions of the commander, patrol force, and placed him in general charge of all naval districts.

There is a clipping from one of the newspapers attached to this letter. I will just leave it there.

Meantime, I had been at sea, cruising, and I could not coordinate defensive measures in the different seaports when I was at sea. I told the department that the organization must be independent of me, because I must go to sea sometimes. I wrote this letter explaining it, and that brought a letter under date of May 26 from the department, putting me in general charge of the naval district. I did not receive that letter for a month or so, because I was at sea [reading]:

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, May 26, 1917.

To: Commander, Patrol Force, Pacific Fleet.

Commandant Twelfth naval district,

Commandant Thirteenth naval district,

Commandant Fourteenth naval district.

Subject: General supervision of the twelfth, thirteenth, and fourteenth naval districts by commander, patrol force, Pacific Fleet.

1. Due to the long extended coast to be patrolled, the varied conditions that exist in the different districts, and the great distance from Washington; and in order to insure a uniformity of action in the various districts, the commander, Patrol force Pacific Fleet, will assume general supervision of the twelfth, thirteenth and fourteenth naval districts.

2. This supervision must not be construed to displace the organization of the naval districts within their districts. It is hoped that as a result of this action more coordinate work between forces ashore and afloat will be effected.

3. Acknowledge receipt of this letter.

JOSEPHUS DANIELS.

Thus, three months after my letter on the subject of coordination, and six weeks after the declaration of war the Navy Department took the first real step toward a proper organization in the Pacific, and stated "It is hoped as a result of this action that more coordinate work between forces ashore and afloat will be effected."

The force commander: covered that this order placing him in general charge of the naval districts in t with certain limitations of authority, was by no means sufficient to secure effecti in the organization, and he accordingly wrote the following letter to the department under date of June 16th. [Reading:]

UNITED STATES PACIFIC FLEET, DIVISION TWO,
U. S. S. "OREGON," FLAGSHIP,
U. S. S. "SAN DIEGO," FLAGSHIP.

June 16, 1917.

To: The Secretary of the Navy (Operations.)

Subject: Policy as to coordination of defensive forces in the Pacific.

References: (a) Commandant Twelfth naval district, radiogram 13015 and my reply thereto (letter No. 109 W. F. F.-S. (101) of June 16.

(b) Commander Reserve Force, Pacific Fleet, letter No. 825 W. F. F.-M. of February 17, 1917.

(c) Commander Reserve force, Pacific Fleet, letter No. 846 W. F. F.-F. of March 1, 1917.

(d) Radiograms 11020, 16020 and 21220 (May).

Inclosures: (5) Copies of above references.

1. The attention of the department is respectively invited to reference (a) and to the force commander's reply to the same. Attention is also invited to references (b), (c) and (d).

2. In view of the fact that previous recommendations as contained in the above references have either not been acknowledged or favorably considered by the department, the force commander hesitated to intrude with further suggestions concerning this subject, and had no intention of doing so until, the receipt of reference (a), which constrains him to once more invite the attention of the Department to the importance of complete cooperation and coordination of defensive forces—Army and Navy—on the Pacific coast.

PRESIDENT CONDITIONS.

3. The following is a statement of existing conditions as far as they are known: the force commander:

(a) The commander in chief is absent in the Atlantic and can not therefore, control or promptly or effectively coordinate with naval forces now in the Pacific.

(b) The commander, patrol force, by the terms of his orders, is under the command of the commander in chief, and his authority is strictly limited to the few ships of his own force.

(c) Commandants of naval districts make occasional reports to the force commander as senior officer present, but the latter is not informed as to the details of conditions and activities in the several districts.

The commander, submarine force, Pacific Fleet, is independent of the commander, patrol force, as regards the movements and disposition of his vessels. He merely reports their movements as they are made.

(e) The commander, patrol force, is not informed as to the intention of the War and Navy Departments concerning the placing of mines, if they are to be placed in an emergency for the defense of harbors on this coast, nor as to the condition of defense nets, if such are to be provided at any time.

4. The patrol force available at present consists of four ships—the *San Diego*, *Yorktown*, *Marblehead*, and *Vicksburg*. The destroyer *Perry* will be available June 20, the *Patrol* about July 16, and the *Saratoga* and *Lawrence* in the latter part of July.

5. There have been various reports of raiders in the South Pacific, near the Central American coast, and in the vicinity of Honolulu. These reports have neither been credited nor ignored by the force commander.

6. As far as known at present there is no imperative need of vessels on the Mexican coast, nor in Central America, but past experience indicates that the patrol force must anticipate the necessity for cruising in these waters from time to time.

7. The force commander is not definitely informed as to the future permanent stationing of the submarine force on the Pacific coast, but he has been led to believe that it is contemplated to mobilize all these vessels at San Pedro. The 12-inch guns of the *Cheyenne* were last fired in November, 1915.

8. There appears to be no reason, at present, to expect any hostile act of Germany in the Pacific.

COORDINATION.

9. It appears from the above that there is not at present any thoroughly organized coordination or cooperation of the naval forces in the Pacific, nor between the naval and military forces and naval districts, as far as is known to the force commander.

10. It is manifest that with no offensive operation by Germany there is no present cause for anxiety and therefore no immediate demand for a coordination of defensive forces in the Pacific.

11. It is proper, however, to remark that a complete organization of defensive forces that would insure perfect coordination of effort in the event of actual hostilities in the Pacific would cost nothing and would perhaps serve the excellent purpose of a practical and interesting lesson or drill in preparedness to meet any situation that might arise at any time in the future.

EMERGENCY MEASURES.

12. In the event of any emergency, or to prepare for one, the following are a few suggestions that might be considered:

(a) Place all naval forces and districts on the Pacific under one coordinating head.

(b) Instead of concentrating all submarines at San Pedro, distribute them for defense as follows:

Send the H boats to Puget Sound.

Retain the F boats at San Francisco.

Detail the new L boats for the defense of San Pedro and Santa Barbara, the commander of the submarine force to visit each station in turn, and each small division

his force being provided with local barracks, or with a suitable mother ship merely for the living quarters of the crew.

(c) Purchase and arm a sufficient number of tugs, small vessels, etc. (that may be of permanent use to the Navy) for harbor patrol and for Mexican patrol service.

(d) Provide nets and give practice in placing them in channels, if they are not to be permanently placed.

(e) Plant mines and accustom commerce to the rules that would govern in an emergency.

(f) Arrange for the defense of Greys Harbor and Willapa Bay.

(g) If practicable send three or four of the older reserve battleships to the Pacific to be used with the Oregon as floating batteries at Puget Sound, Willapa Bay, San Francisco, San Pedro, and San Diego.

12. It is assumed that the few seagoing cruisers of the Pacific patrol force must be employed in the sea patrol of the coast, the Gulf, and the outlying islands of the Pacific. They can not well be depended upon exclusively for harbor patrol.

13. In the event that the department should reconsider the project for local joint boards as suggested in reference (b), and (c)—or at least for such a board in the special case of the Pacific coast—it is suggested that Capt. T. M. Potts, of the inspection board, who visits various ports on this coast, and who formerly served on the general board and on the Army and Navy Joint Board, at the Navy Department, might, in addition to his present duties, serve as member of a coordinating joint board for the Pacific, to be composed of three members, as follows:

1) Army officer commanding coast defenses (representing department commander and War Department).

2) The senior naval officer afloat in the Pacific.

3) Capt. T. M. Potts, representing the twelfth, thirteenth, and fourteenth naval districts and the Navy Department's policies as to harbor and local defense.

14. It is believed that a board constituted as above might serve a very useful purpose on the Pacific coast, where the conditions, at such a distance from Washington, are very different from those on the Atlantic coast.

15. In view of the possible need of additional cruising and patrol, or barrack, vessels in the Pacific, it is suggested that no more ships suitable for such purposes be transferred to the Shipping Board. From observation of the *Loongmoon*, recently towed from Honolulu to Seattle, she appeared to be available as an excellent auxiliary cruiser.

W. F. FULLAM.

Special attention is called to this letter which once more emphasized the importance of local "joint boards" as the key to the defense of each seaport.

The necessity for board has been conclusively demonstrated at San Diego by the appearance of the whales. Under the department decision a lieutenant on the retired list was in charge of all naval activities at San Diego. He was engaged in many other duties—recruiting, inspecting, in charge of coaling station, etc. He was young and inexperienced and although zealous and energetic he could not reasonably be expected to handle such a situation in cooperation with colonels and generals of the Army.

The force commander, therefore, suggested that Capt. Brotherton, commanding the naval training station who had been on duty on the general board should be made senior officer present at San Diego and should confer with the military commandants. This was approved by the department.

In the meantime, in the absence of more definite instructions from the Navy Department, and without waiting longer for action concerning the principle of joint boards I gave instructions to commandants of districts to proceed, and attention is invited to letters No. 7 to 15 inclusive in the attached file which show the action taken by the boards thus organized.

On August 17, 1917, I addressed the following letter to the commandant of districts to emphasize the importance of cooperation between the Army and Navy. [Reading:]

U. S. S. "SARATOGA," FLAGSHIP.

August 17, 1917.

To: Commandants, twelfth, thirteenth and fourteenth naval districts.

Subject: Cooperation between the Army and Navy in the twelfth, thirteenth and fourteenth naval districts. General supervision of the naval districts by the commander division two, United States Pacific Fleet.

Reference: (a) Secretary of the Navy's letter No. Op.-9-B, 24514 of 26 May, 1917.

(b) Chief of Naval Operations' letter No. Op.-11, 28754 of June 12, 1917.

(c) Chief of Naval Operations' letter No. Op.-11, 27838 of July 28, 1917.

Inclosures (four):

1. The attention of the commandants of the twelfth, thirteenth and fourteenth naval districts is called to the above references hereto attached, from which it will be seen that the commander division two, United States Pacific Fleet is directed to exercise "general supervision" over the naval districts with the view to "coordinate work between forces ashore and afloat."

2. It is not necessary to emphasize the importance of this matter. An organization mutually agreed upon to secure proper coordination and cooperation between the Army and Navy costs nothing and will enable both military and naval forces to render the most effective service possible in case of any emergency in the Pacific.

3. The fact that there are no enemy forces in the Pacific at present and that hostile operations appear to be remote would not excuse a failure on our part to prepare for and anticipate every probable war condition that might be forced upon us at short notice at any time in the future.

4. With a view to the complete review and understanding of this subject your attention is invited to the following letters included in the attached file:

Letter from commandant thirteenth naval district No. 2943—N. D. of June 28, 1917.

Letter from commanding officer North Pacific coast, artillery district, to commandant thirteenth naval district No. 267—D3 of July 1, 1917.

Letter from commandant, twelfth naval district No. 6308-7-(14-LG) and its inclosures.

5. The key to the whole problem of coordination will be found in the local joint boards in each district. In this connection the action of the commandants of the twelfth and thirteenth naval districts as detailed in the above correspondence is in all respects approved, and the general plan therein outlined will be adhered to by the naval districts on the Pacific, the commandants by mutual agreements with Army commanders making such changes and adopting such measures as may be required to meet conditions from time to time.

W. F. FULLAM.

I deemed this letter of great importance.

Not long after issuing the above instructions to the commandants in the Pacific I was amazed to receive the following letter from office of Naval Operations, addressed to the commandant, twelfth naval district, August 20, disapproving of the formation of local "joint boards." [Reading:]

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, D. C., August 20, 1917.

Op-14-S 8-17.

From: Chief of Naval Operations.

To: Commandant twelfth naval district.

Via: Commander division two, Pacific Fleet.

Subject: Cooperation between Army and Navy.

Reference: Commandant's letter 6309-1-(14) of August 9, 1917, with inclosures.

1. The receipt is acknowledged of the above references.

2. The regulations for the naval districts require that the Army and Navy authorities on duty in the naval districts shall cooperate with one another to obtain the best results in the defense of the district. Article 77 of the Regulations authorizes this cooperation.

3. The department, however, does not desire that any board by the name of "joint board" be established for this purpose. It is considered that the regulations are sufficiently elastic and mandatory to permit of and require the closest cooperation between the Army and the Navy, and it is considered that this cooperation should take place without the necessity of having any formal board to carry on the work.

W. S. BENSON.

After eight months correspondence this letter appeared to indicate disapproval of the one most important of all suggestions that I had made to secure real coordination in the Pacific. Being in a quandry concerning the department's real attitude I wrote the attached letter of August 25 asking the department if it approved or disapproved my instructions to the commandants of Naval Districts. [Reading:]

U. S. S. "SARATOGA," FLAGSHIP,
August 25, 1918.

To: Secretary of the Navy (Operations).

Subject: Cooperation between Army and Navy.

References: (a) Operations letter, Op-14-s 8-17 24514J-22 of August 20, 1917.

(b) Commander division two, letters No. 375 W. F. F.-S of August 17, 1917.

(c) Operations letter, Op-9-B 24514 of May 26, 1917.

1. Referring to reference (a), forwarded through the Commander, second division, to the commandant of the twelfth naval district, it is proper to state that the term "joint board" as used by the commandant of the twelfth district, and by the commander of the second division in his letter of 17 August (reference b) is only a term of convenience. It was not intended that these so-called "local joint boards" should be "formal," but it was especially provided that they were to be informal in character and that the Army and naval officers, commanding in each district, should occasionally meet by mutual consent to consider all matters requiring cooperation between them.

2. In other words, it was the intention simply to emphasize the importance of the provisions already authorized by regulations. It was not expected that these so-called "joint boards" should exercise any independent authority, but should merely be the medium through which the commander of the second division could exercise general control over the naval districts and bring to their attention matters that might be of importance, both to the Army and Navy in an emergency.

3. It is not clear to the commander of the second division how there can be cooperation between the Army and Navy, or how "more coordinate work between forces ashore and afloat will be effected" (as stated in paragraph 2 of Operations' letter of May 26, 1917, reference (c) in which letter the commander of the patrol force was given general supervision of the naval districts) unless Army and naval commandants occasionally meet and discuss matters of offense and defense.

4. It is therefore requested that the commander of the second division be informed without delay if the instructions given by him to the commandants of the twelfth, thirteenth, and fourteenth naval districts in his letter of August 17, 1917, reference (b) are approved or disapproved by the department. If these instructions are disapproved by the department, they will be immediately canceled.

5. It is hoped, however, that these instructions will be approved, as it is believed that they are designed to secure cooperation in the only manner that is possible, and in a manner that does not in any way violate the letter or spirit of the regulations, as referred to in reference (a); it being remembered that the term "joint board" was a mere term of convenience, that these boards had no independent authority and that the officers were to meet by mutual agreement, whenever occasion appeared to require discussion of any subject.

W. F. FULLAM.

Copy: Commandant twelfth, thirteenth, and fourteenth Naval District.

On the same day, not wishing to take any chances concerning the department's approval of my previous instructions to the commandants, I wrote the following letter, August 25, directing the commandants to conform to the department's letter as regards "joint boards." [Reading:]

UNITED STATES PACIFIC FLEET, DIVISION 2,
U. S. S. Saratoga, Flagship, August 25, 1917.

To: Commandants, twelfth, thirteenth, and fourteenth naval districts.

Subject: Cooperation between Army and Navy.

References: (a) Operations' letter Op-14-s 8-17 24514J-22 of August 20, 1917, to Commandant twelfth naval district (copy inclosed). (b) Commander Division 2, letter No. 412 WFF-F of August 25, 1917 to Operations (copy inclosed). (c) Commander Division 2, letter No. 375, WFF-S of August 17, 1917, to commandants, twelfth, thirteenth, and fourteenth naval districts.

Inclosures: 2.

1. Your attention is invited to Operations' letter reference (a) and to my reply thereto, reference (b), copies herewith inclosed.

2. You will be, in all respects, governed by reference (a) and will so construe my letter of August 17, reference (c) that there may be no conflict between its requirements and those of Operations' letter.

W. F. FULLAM.

On August 27 the department addressed a letter to me confirming its letter of August 20, in which it disapproved of "formal joint boards," and expressing its desire that instead of these boards, naval commandants should keep in very close touch with officers of the Army. [Reading:]

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, D. C., August 27, 1917.

Op-14-s:25

28754-8-27

From: Chief of Naval Operations.

To: Commander, Division 2, Pacific Fleet.

Subject: General supervision of naval districts by the commander, Division 2, Pacific Fleet.

References: (a) C. N. O. letter 278383-127 of July 28, 1917. (b) Commander Division 2, letter 279-1120 of August 17, 1917. (c) C. N. O. letter to commandant twelfth Naval District 24514 J-22 of August 20, 1917.

1. The department does not consider that it is necessary to have formal joint boards for the purpose of cooperation between the Army and Navy officers, but it does consider that it is necessary for the commandant and his subordinates to be in very close touch with the officers of the Army and the various coast defenses.

W. S. BENSON.

On September 5 in obedience to the department's orders I again addressed to the commandants a letter telling them that the department did not deem "formal joint boards" to be necessary but that the department preferred the commandants to keep in "very close touch with Army officers." [Reading:]

UNITED STATES PACIFIC FLEET, DIVISION 2,
U. S. S. Oregon, Flagship, September 5, 1917.

To: Commandants, twelfth, thirteenth, and fourteenth naval districts.

Subject: General supervision of naval districts by the commander, Division 2, Pacific Fleet.

References: (a) Operations letter Op-14-s-8-25 28754-827 of August 27, 1917 (copy inclosed). (b) Operations letter 278383-127 of July 28, 1917. (c) My letter No. 279-112 of August 17, 1917. (d) Operations' letter to commandant twelfth naval district, No. 24514J-22 of August 20, 1917.

Inclosure:

1. Your attention is invited to reference (a), copy inclosed, to which you will strictly conform, taking particular note that while "formal joint boards" are not considered necessary by the department, "it is necessary for the commandant and his subordinates to be in very close touch with the officers of the Army at the various coast defenses.

W. F. FULLAM.

Thus, in September 1917, after eight months correspondence the division commander in his earnest attempt to secure an effective working organization to insure coordination of the Army and Navy in the Pacific found himself practically where he started on February 18, 1917. The Navy Department disapproved of formal boards that might really accomplish something, and preferred a "close touch" between officers of the Army and Navy whatever that may mean. But it did not satisfy me. I wanted to get closer than a "close touch."

In desperation, therefore, on September 27, 1917, the division commander addressed the following letter to the Navy Department,

closing a complete file of the eight months' correspondence. (leading)]:

UNITED STATES PACIFIC FLEET, DIVISION 2,
September 27, 1917.

To: The Secretary of the Navy (Operations).

Subject: Letter of commander Division 2, No. 375 of August 17, 1917; cooperation between Army and Navy on the Pacific coast.

References: (a) Operations' letter Op-14-2 9-18, 27383 of September 19, 1917. (b) File of letters beginning February 17, 1917 to August 25, 1917.

Enclosures: 16 (reference b).

1. Referring to reference (a), letter No. 375 of August 17 should read, "No. 378 of August 17," copy of which has been previously forwarded to the department, and which is also contained in the attached file.

2. For convenience of reference and in order to properly review the whole subject, file of letters, that have passed between Operations and commander Reserve Force, commander patrol force, commander Second Division and commandants of districts, hereto attached.

3. The correspondence explains itself. It will be noted that the present commander of the Second Division began to consider the question of cooperation between the Army and Navy of this coast in February, 1917.

4. The use of the term "joint board" appears to have been unfortunate, and to have created a mistaken impression at the Navy Department. It might better have been called "Joint Conference between Army and Navy commandants."

5. In the correspondence with the commandants of naval districts, suggesting these conferences or "informal joint boards," it was recognized by all that they were informal; that they had no independent authority; that the commandants were subject to higher authority and to the War and Navy Departments.

6. These meetings, or conferences, of Army and Navy officers, by mutual consent, were considered the only possible means of discussing conditions in each port or district. Without such meetings or conferences, and in the absence of any plans agreed upon between Army and Naval commandants, cooperation and coordination would not, and could not, be possible.

7. Another important point to remember in this connection is the changing of commandants, which has, in some cases, been quite frequent. These changes in personnel manifestly require occasional meetings to secure continuity in the mutually agreed upon procedure, to be adopted at any port in an emergency.

8. The commander of the Second Division has made every possible effort to rightly interpret and conform to the wishes of the department, especially as outlined in letter post B, 24514 of May 26, 1917, signed by the Secretary of the Navy.

9. A consideration of the correspondence will make plain to the department the existing conditions. The commander of the Second Division considers it his duty, not only to himself but to the department, to state that he is by no means satisfied with the present organization, or with the means that have been taken or authorized to secure effective coordination of Army and Navy forces on this coast in the event of actual hostilities or any serious emergency. It is believed that this organization is not sufficiently definite; that it is not closely knit; that responsibility is not placed; and that the whole subject deserves careful review and serious consideration.

10. Attention is invited to my letter of July 11, 1917, concerning conditions at San Diego, and to Chief of Naval Operations' letter Op-14 s 7-20 27772-197 of July 21, in which the section commander at San Diego is placed in charge of all naval activities float and ashore, etc. This officer is a lieutenant on the retired list, whereas officers of the rank of captain in the Navy and colonel in the Army and other grades higher than that of lieutenant in the Navy, are commanding various posts in this vicinity.

11. In conversation with these various heads, it has been clearly demonstrated that there is no well understood plan of cooperation, no agreement as to the part each should lay claim to for instance—in the event of an emergency, requiring coordination. On the contrary, it would appear that there is decided bewilderment, concerning the whole matter.

12. The division commander realizes that he, himself, would doubtless be cruising the sea, and that an emergency affecting the different ports must be met by the coordinated action of Army and Navy authorities on shore at each port. The division commander furthermore realizes that the War and Navy Departments may have made plans unknown to him, and that they may be perfectly satisfied and have confidence in the arrangements already made and outlined in existing regulations, concerning naval districts and Army coast defenses.

13. In conclusion, the division commander once more regrets if the term "joint boards," as used, has been misconstrued at the department and invites attention to

1. Your attention is invited to Operations' letter thereto, reference (b), copies herewith inclosed.
2. You will be, in all respects, governed by referee letter of August 17, reference (c) that there may be ments and those of Operations' letter.

On August 27 the department addressed its letter of August 20, in which it disap boards," and expressing its desire that instead commandants should keep in very close to Army. [Reading:]

The department therefore on September 27, 1917

30

his letter No. 413 of August 25, in which commandants are cautioned to rightly interpret all directions given by the division commander in pursuance of his order to assume general control of naval districts.

W. F. FULLAM.

Special attention is called to this letter, which emphasized the following points:

- (a) That the organization in the Pacific was ineffective.
- (b) That the condition at San Diego was chaotic, bewildering, and absurd.
- (c) That the division commander might be called upon to cruise at sea at any time, in which case the boards or conferences of the Army and Navy officers at seaports would be vitally important.

On the same day, September 27, I addressed the attached letter to Capt. Marvell, who I understood had charge of naval district matters in the Office of Operations. [Reading:]

UNITED STATES PACIFIC FLEET, DIVISION TWO.

U. S. S. "Oregon," Flagship, September 27, 1917.

MY DEAR MARVELL: I received your letter of September 19, asking that a copy of my letter No. 375 be sent to you. It appears that this letter should have been No. 378, and that you already have a copy of it.

In order to clear up the whole subject, I sent to Operations to-day a complete file of the correspondence. I must confess to you that I am completely mystified as to the real attitude of the Navy Department in this matter, and I wish that Operations would take me more into its confidence.

It must be plain that we can not coordinate or cooperate without occasionally meeting, discussing, and planning; and it seems to me that the more cordial the relations between Army and Navy commanders in any district, and the more often they confer and plan together, like officers of a single service for instance, the more complete our cooperation will be.

I am greatly disappointed that my efforts since February have apparently resulted in so little good. If organization is not thorough and complete it fails inevitably. From personal observation out here and from my conversation with all the different officers, it is my opinion that the organization here on this coast is painfully incomplete, and that real war conditions would result in more or less confusion and chaos.

I realize that there is practically no war in the Pacific and no need of serious alarm, but I consider this an excellent opportunity for a good practical drill in organization and preparedness for war on this coast.

I believe that my letter of August 25 to the commandants will make clear to them that the department objects to "formal joint boards," and they will put such a construction upon my letter of August 17 that it will not conflict with the wishes of the department.

W. F. FULLAM.

Capt. GEO. R. MARVELL,
United States Navy, Office of Naval Operations.

These two letters appeared to at least partially awaken the Office of Naval Operations to the true conditions, and it accordingly addressed to the division commander a letter dated October 9 expressing qualified approval of his views [reading]:

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, October 9, 1917.

From: Chief of Naval Operations.

To: Commander, Division 2.

Subject: Cooperation between Army and Navy.

References: (a) Op-9-B 24514, of May 26, 1917; (b) commander, Division 2, letter 524 of September 27, 1917.

1. Referring to paragraph 9 of reference (b) the commander of Division 2 states that he is by no means satisfied with the present organization, etc. Previous orders relative to the organization of naval districts contained in the regulations for naval districts and in correspondence between the two departments provide for joint action and cooperation of the Army and Navy authorities in each district.

2. Reference (a) places the commander of the Patrol Force, Pacific Fleet, in general supervision of the twelfth, thirteenth, and fourteenth naval districts in order that a more satisfactory development of the organization of these naval districts might be insured and satisfactory cooperation obtained between the forces afloat and the forces ashore.

3. The commander of Division 2, therefore, has the power vested in him by reference (a) to insure the satisfactory working of the present organization of the west coast.

4. Referring to remarks on the use of the term "joint board," the department desires that this term be not used, as it is already utilized to designate a definite board now established.

5. The department concurs with the opinions of the commander of Division 2 expressed in paragraph 6 of reference (b).

W. S. BENSON.

On October 19 the division commander addressed the following letters to the department and to the commandants of districts outlining a plan of action which would tend to secure coordination by the Army and Navy in each district [reading]:

UNITED STATES PACIFIC FLEET, DIVISION 2,
October 19, 1917.

To: The Secretary of the Navy (Operations).

Subject: Cooperation between the Army and the Navy.

References: (a) Operations' letter No. Op-14-Sm-D 10-6, 27383-139 of October 9, 1917.

1. Receipt is acknowledged of Operations' letter, reference (a), concerning the above subject.

2. The instructions contained in this letter will be most carefully observed and the division commander believes that he will now be able to bring about a hearty and effective cooperation between the Army and Navy commandants in the naval districts and at different ports on the Pacific coast.

3. It will be thoroughly understood that the conferences between Army and Navy officers will be informal and the officers of both services must very carefully conform to the instructions from the War and Navy Departments, respectively, in the formulation of any plans to meet possible emergencies.

4. Although there is no present cause for concern these conferences will be mutually instructive to the officers concerned and each service will realize the better how to cooperate with the other. It will be an excellent practical study and drill.

W. F. FULLAM.

OCTOBER 19, 1917.

To: Commandants, twelfth, thirteenth, and fourteenth naval districts.

Subject: Cooperation between Army and Navy.

References: (a) My letter No. 524 WFF-F of September 27, 1917.

Operations: (b) Operations' letter Op-14-Sm-D 10-6 27383-139, of October 9, 1917, to commander Division 2; (c) My letter No. 615-WFF-S of October 19, 1917, to Operations.

Inclosures: Three (copies of above references).

1. The attention of commandants of districts is called to the above references, and they will give to this subject renewed and immediate attention, with a view of securing, or perfecting plans for, complete and hearty cooperation with the Army officers commanding coast defenses or other units within the various naval districts.

2. Commandants will immediately invite conferences with Army commandants and acquaint them with the contents of the attached letters, and invite their cooperation in the formulations of plans that will best utilize whatever facilities now existing on this coast to meet any possible emergency.

3. It is important that each commandant of the Army or Navy shall most carefully consider and conform to whatever instructions he may have received from the War or Navy Department, concerning the subject of coast defense, in order that any plan agreed upon may not conflict in any manner with the wishes or instructions of superior authority. The questions to be discussed have been referred to in previous communications on this subject from the commander of the second division, and need not be repeated in this letter.

4. It is suggested that two plans be discussed: First, the means to be taken to utilize present facilities and recognizing actual conditions in the Pacific and the improbability

his letter No. 413 of August 25, in which commandants are cautioned to rightly interpret all directions given by the division commander in pursuance of his order to assume general control of naval districts.

W. F. FULLAM

Special attention is called to this letter, which emphasized the following points:

- (a) That the organization in the Pacific was ineffective.
- (b) That the condition at San Diego was chaotic, bewildering, and absurd.
- (c) That the division commander might be called upon to cruise at sea at any time, in which case the boards or conferences of the Army and Navy officers at seaports would be vitally important.

On the same day, September 27, I addressed the attached letter to Capt. Marvell, who I understood had charge of naval district matters in the Office of Operations. [Reading:]

UNITED STATES PACIFIC FLEET, DIVISION TWO.
U. S. S. "Oregon," Flagship, September 27, 1918.

MY DEAR MARVELL: I received your letter of September 19, asking that a copy of my letter No. 375 be sent to you. It appears that this letter should have been No. 378, and that you already have a copy of it.

In order to clear up the whole subject, I sent to Operations to-day a complete file of the correspondence. I must confess to you that I am completely mystified as to the real attitude of the Navy Department in this matter, and I wish that Operations would take me more into its confidence.

It must be plain that we can not coordinate or cooperate without occasionally meeting, discussing, and planning; and it seems to me that the more cordial the relations between Army and Navy commanders in any district, and the more often they confer and plan together, like officers of a single service for instance, the more complete our cooperation will be.

I am greatly disappointed that my efforts since February have apparently resulted in so little good. If organization is not thorough and complete it fails inevitably. From personal observation out here and from my conversation with all the different officers, it is my opinion that the organization here on this coast is painfully incomplete, and that real war conditions would result in more or less confusion and chaos.

I realize that there is practically no war in the Pacific and no need of serious alarm, but I consider this an excellent opportunity for a good practical drill in organization and preparedness for war on this coast.

I believe that my letter of August 25 to the commandants will make clear to them that the department objects to "formal joint boards," and they will put such a construction upon my letter of August 17 that it will not conflict with the wishes of the department.

W. F. FULLAM.

Capt. GEO. R. MARVELL,
United States Navy, Office of Naval Operations.

These two letters appeared to at least partially awaken the Office of Naval Operations to the true conditions, and it accordingly addressed to the division commander a letter dated October 9 expressing qualified approval of his views [reading]:

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, October 9, 1917.

From: Chief of Naval Operations.

To: Commander, Division 2.

Subject: Cooperation between Army and Navy.

References: (a) Op-9-B 24514, of May 26, 1917; (b) commander, Division 2, letter 524 of September 27, 1917.

1. Referring to paragraph 9 of reference (b) the commander of Division 2 states that he is by no means satisfied with the present organization, etc. Previous orders relative to the organization of naval districts contained in the regulations for naval districts and in correspondence between the two departments provide for joint action and cooperation of the Army and Navy authorities in each district.

2. Reference (a) places the commander of the Patrol Force, Pacific Fleet, in general supervision of the twelfth, thirteenth, and fourteenth naval districts in order that a more satisfactory development of the organization of these naval districts might be insured and satisfactory cooperation obtained between the forces afloat and the forces ashore.

3. The commander of Division 2, therefore, has the power vested in him by reference (a) to insure the satisfactory working of the present organization of the west coast.

4. Referring to remarks on the use of the term "joint board," the department desires that this term be not used, as it is already utilized to designate a definite board now established.

5. The department concurs with the opinions of the commander of Division 2 expressed in paragraph 6 of reference (b).

W. S. BENSON.

On October 19 the division commander addressed the following letters to the department and to the commandants of districts outlining a plan of action which would tend to secure coordination by the Army and Navy in each district [reading]:

UNITED STATES PACIFIC FLEET, DIVISION 2,
October 19, 1917.

To: The Secretary of the Navy (Operations).

Subject: Cooperation between the Army and the Navy.

References: (a) Operations' letter No. Op-14-Sm-D 10-6, 27383-139 of October 9, 1917.

1. Receipt is acknowledged of Operations' letter, reference (a), concerning the above subject.

2. The instructions contained in this letter will be most carefully observed and the division commander believes that he will now be able to bring about a hearty and effective cooperation between the Army and Navy commandants in the naval districts and at different ports on the Pacific coast.

3. It will be thoroughly understood that the conferences between Army and Navy officers will be informal and the officers of both services must very carefully conform to the instructions from the War and Navy Departments, respectively, in the formulation of any plans to meet possible emergencies.

4. Although there is no present cause for concern these conferences will be mutually instructive to the officers concerned and each service will realize the better how to cooperate with the other. It will be an excellent practical study and drill.

W. F. FULLAM.

OCTOBER 19, 1917.

To: Commandants, twelfth, thirteenth, and fourteenth naval districts.

Subject: Cooperation between Army and Navy.

References: (a) My letter No. 524 WFF-F of September 27, 1917.

Operations: (b) Operations' letter Op-14-Sm-D 10-6 27383-139, of October 9, 1917, to commander Division 2; (c) My letter No. 615-WFF-S of October 19, 1917, to Operations.

Inclosures: Three (copies of above references).

1. The attention of commandants of districts is called to the above references, and they will give to this subject renewed and immediate attention, with a view of securing, or perfecting plans for, complete and hearty cooperation with the Army officers commanding coast defenses or other units within the various naval districts.

2. Commandants will immediately invite conferences with Army commandants and acquaint them with the contents of the attached letters, and invite their cooperation in the formulations of plans that will best utilize whatever facilities now existing on this coast to meet any possible emergency.

3. It is important that each commandant of the Army or Navy shall most carefully consider and conform to whatever instructions he may have received from the War or Navy Department, concerning the subject of coast defense, in order that any plan agreed upon may not conflict in any manner with the wishes or instructions of superior authority. The questions to be discussed have been referred to in previous communications on this subject from the commander of the second division, and need not be repeated in this letter.

4. It is suggested that two plans be discussed: First, the means to be taken to utilize present facilities and recognizing actual conditions in the Pacific and the improbability

of any serious enemy operations on this coast: second, a plan that would be necessary and the facilities and means that would be demanded in the event of enemy forces appearing on the Pacific coast.

5. The study of this subject will manifestly be of mutual benefit to officers of the Army and Navy in each district, and officers of each branch will the better realize the functions of the other and be the better prepared to cooperate.

6. It is suggested that these meetings by mutual consent be designated as "Army and Navy conferences," such and such a district or port; that these conferences should be informal; that they be held from time to time, whenever there is a change in the personnel or when conditions require a modification of the plans agreed upon; and that minutes of these conferences be kept, in order that there may be some continuity in the study and treatment of the subject.

7. In order that there may be no conflict with the War and Navy Departments, it is suggested that copies of the plans agreed upon be forwarded to the War and Navy Departments, through the department commander, and the commander, Second Division, Pacific Fleet, respectively.

8. It is not deemed necessary to refer to details in this letter, as it is believed the commandants and commanding officers in the different districts are thoroughly prepared to handle this matter successfully and with attention to every practical demand that would be forced by a state of war. It is the intention of the division commander to forward to each district copies of the plans outlined in all other districts, in order that each commandant may profit by the study and special features emphasized in all other districts.

9. It is requested that the proceedings of the conference first held, after the receipt of this letter, and the plans formulated thereby be forwarded to the division commander at the earliest practicable date.

W. F. FULLAM.

In concluding this remarkable account of eight months' vain effort by the senior naval officer in the Pacific to secure an effective organization and proper coordination of Army and Navy forces, it is proper to summarize as follows:

(1) The important recommendations made by the senior Army and naval officers on the Pacific coast were not approved by the Navy Department and were practically ignored for weeks.

(2) The appearance of three whales, mistaken for submarines off San Diego May 19, 1917, demonstrated the inadequacy of the Navy Department's organization, proved the lack of coordination of Army and Navy forces, and had more influence in bringing the Navy Department to act than the official report and recommendation of a rear admiral backed by the opinion of a brigadier general, made three months previously.

(3) Army commandants in the Pacific at all times showed a desire to cooperate with the Navy and entered into the plan of joint boards with enthusiasm, as shown by the correspondence in the attached confidential file. The Navy Department objected to a closely knit organization in the Pacific, and insisted that conferences should be "informal" rather than mandatory. This action practically forced the division commander to revoke or modify his orders and it decidedly lessened his authority or threw doubt upon it. The effect was most unfortunate.

(4) The reliance of the Navy Department upon its regulations proved to be ill-considered. Regulations alone never have and never will secure efficiency in the administration of war afloat or ashore. There must be personal action and thoroughness of organization with definite orders as to the exact part that each unit is to play. Without such explicit orders, and without a carefully prepared plan the Army and Navy can never coordinate effectively and the safety of the United States in war will be jeopardized. An

“informal” organization, with the mere direction that Army and naval officers shall “keep in close touch,” will not suffice. As well might we rely upon Navy Regulations alone to secure efficiency in our battle fleet.

(5) The objection of the Navy Department to local joint boards of Army and naval officers was inexplicable. I have been informed, however, that the Navy Department did not favor any real joint organization with the Army for offensive and defensive purposes, and that the Navy Department discouraged, if it did not forbid, meetings of the joint board in Washington during the one or two years before the war. I am not personally cognizant of this fact, but it came to me from a reliable source, and if true, it would explain the department's action toward joint boards in the Pacific in 1917. It would appear, therefore, that the Navy Department, and not the War Department, objected to this means of securing proper coordination. That is a matter I wish to leave for somebody else to investigate. But I am informed that the importance of the joint Army and Navy board is now recognized, and it is to be hoped that it will play a very important rôle hereafter in providing a proper system of coast and harbor defense for this country.

I was told that the Navy Department apparently was afraid that the Army and Navy joint board in Washington might meddle with questions of preparation for war, and therefore they did not want it to meet; and that the officers on it were afraid to push the matter, because they were afraid that the board would be abolished if they did meet. That, I say, is my information. I believe it, but I can not swear to it.

The invulnerable principle must be recognized that there shall be organization—definite, authoritative, and complete—or there will be chaos. There is no alternative. The Navy Department did not itself perfect, nor permit anybody else to perfect, a thorough organization on the Pacific coast between February, 1917, and October, 1917. The appearance of three whales off San Diego made the need of a new organization very plain. The existing machinery did not work. There was no head, no board of Army and Navy officers to control the situation, and there was no plan. Confusion was inevitable.

In conclusion, it is manifest that perfection of organization with due recognition of local authority in offensive and defensive measures, is peculiarly important on the Pacific coast, 3,000 miles from Washington.

In concluding this statement regarding the preparedness of the Navy for war as regards both personnel and material, it is only proper to state that the officers and men of the Navy were and always have been individually ready for war; that the unpreparedness of the Navy for war in 1917 was not primarily the fault of any officer or officers, but that it was due to the fact that the Navy Department as a whole declined or failed to adopt policies which demanded, or even permitted officers to prepare the Navy for its duty as a fighting machine.

That the officers and men of the Navy, both regular and reserve, did their whole duty with great gallantry and devotion is admitted by everybody, and that they contributed loyally to the winning of

the war is also beyond question. That the bureau chiefs were in no sense responsible for the lack of preparedness of the Navy Department, and that they accomplished wonders as soon as their hands were free, can not be denied.

That we escaped disaster was plainly due to the fact that the enemy's fleet, with the exception of submarines, had been driven from the seas before we declared war against Germany. Furthermore, it is important to recognize that we had no naval war in the full sense of the word. No admiral led an American fleet into battle. Not one American ship fired a single gun at a German ship, and not a German ship fired a single gun at an American ship, with the exception of a few engagements between German submarines and our destroyers, armed merchant ships, and small craft, and noting the gallant little fight made by our subchasers at Durazzo. It was a war without naval battles.

In other words, there was, strictly speaking, less sea fighting than in the war with Spain, and the Navy of the United States was not fully tested as to its readiness for battle nor as to the adequacy of all its units to meet the emergency of war had Germany's fleet been free to take the sea against us.

Escaping as we did by our great good fortune, in that the German fleet never appeared after the Battle of Jutland in June, 1916, it is the duty of every naval officer who realizes the actual condition of our unpreparedness to tell the truth upon the occasion of the investigation of the conduct of the war by a coordinate branch of the United States Government, in order that the people of this country may no longer be deceived and that the United States may not again be threatened by the inexcusable failure of the Navy Department to prepare the fleet in all respects for sudden war at any time in the future.

The time has come to face the facts and to ask this question: Was the fleet of the United States, with all its units and auxiliaries; with its available supply of ammunition, torpedoes, mines, and submarines; with no battle cruisers, no scout cruisers, and with a pitifully inadequate force of scouts and destroyers; with an air service composed of only 45 trained aviators; with its ships largely manned with green, untrained men and reserve officers of little naval experience; was this fleet so constituted even though its officers and personnel were unexcelled in the world for bravery and devotion to duty, was this fleet in all respects in readiness in the spring of 1917, or at any time during the World War, to line up for battle against the German fleet with a fair chance of victory, taking into account the cold facts as shown when the British fleet met the Germans at the battle of Jutland? The commanders in chief of our fleets must gravely consider the facts and answer this question with solemn regard for the consequences. If we were in all respects ready to defeat the German fleet as it existed at Jutland in June, 1916, the Navy Department may claim the credit for our preparedness; if we were not in condition to beat the German fleet in April, 1917, the Navy Department alone is responsible for neglect to prepare for that battle during the four preceding years.

The articles for the government of the United States Navy, found in the Revised Statutes—laws passed by Congress to fix the duties

and responsibilities of officers of the Navy—contain the following provision:

That a commissioned officer of the Navy, being in command of a fleet, squadron, or vessel acting singly, who neglects when an engagement is probable, or when an armed vessel of an enemy or rebel is in sight, to prepare his ship for action; or does not afford all practicable relief and assistance to vessels of the United States or their allies when engaged in battle, shall suffer death or such other punishment as a court-martial may adjudge.

But a naval officer's duty does not, or should not, begin and end in battle, nor in time of war. He has duties and responsibilities before the war and before the battles begin. And it should be clearly understood that any officer of the Navy who sits supinely or subserenely idle and indifferent when an armed enemy nation with an efficient fighting navy is in plain sight (and has been for years), and fails with energy to prepare and to urge others to prepare his country's navy for war, when he knows or should know that it is unprepared in every respect, is unworthy of his cloth; that he is neglecting his first duty, fails to measure up to the standards of the American Navy, and is deserving of a more severe punishment than a captain who fails to prepare a ship for battle. The neglect in time of peace to prepare the great Navy of a great nation for battle imperils the whole country, and for this reason the offense is the more reprehensible.

The experience of the past demonstrates clearly, if we probe for the facts, that in throttling and ignoring officers of high rank who are seeking zealously and patriotically to prepare the Navy for war, the real truth concerning the Navy may be suppressed, the public may be deceived, and as an inevitable result the Navy may be placed in a condition of unreadiness involving danger of humiliating and disastrous defeat, or that it may fail to put forth its best efforts in affording "all practicable relief and assistance to our allies" when engaged in war.

The Navy of the United States was not properly prepared for war in April, 1917. The question is, Shall such a condition be permitted to exist again in the future?

The CHAIRMAN. You said that you were one of the Secretary's aids at one time. Will you state how long you served in that capacity?

Admiral FULLAM. I was ordered to Washington in February, 1913, as aid to Mr. Meyer. I was aid for inspections under Secretary Meyer, and I was his aid for about a month, and I observed his general policies. In fact, I had known Mr. Meyer personally and he knew that I had been on the Mahan Commission for the Navy Department organization, and that I was familiar with it, and he had consulted me and written to me to get all information about the work of Admiral Mahan and of that commission.

The CHAIRMAN. You say you were his aid for about a month?

Admiral FULLAM. Yes; about a month.

The CHAIRMAN. Did he not go out of office on March 4?

Admiral FULLAM. When that change took place I became one of the aids for Mr. Daniels, and I remained his aid from the 4th of March until about the middle of February of the next year; first, as aid for inspection, and then afterwards Mr. Daniels sent me over as aid for personnel.

The CHAIRMAN. Can you tell me anything about Mr. Meyer's general policy as regards the administration of the department?

Admiral FULLAM. As I say, Mr. Meyer took a very serious view of the utilization of the Navy Department to prepare the Navy for actual war. He always encouraged all naval officers to study the subject specially, and that is why, I think, he had me ordered down there, because he knew that I had been associated with Admiral Mahan, and his first idea seemed to be to recognize that the Navy was the first line of the Nation's defense.

The CHAIRMAN. What was Secretary Daniels's general policy?

Admiral FULLAM. Well, I regret very much to say that Secretary Daniels did not take the same interest in the preparation of the Navy for war. He regarded it—he was greatly interested in many things that were good, but, generally they did not affect the preparation of the Navy for war, or stimulate officers to exert themselves. The question of fighting efficiency, getting down to the awful conditions of fighting, were not pleasant, and he gave no encouragement to it at all—none at all. As an instance of that, when war was threatened in 1913 with a certain foreign power, I got very much wrought up about it. I was aid for inspections or personnel then, and I drew up a memorandum of things that I thought ought to be immediately done; oh, anybody would say that they should be done. But I did not take that to Mr. Daniels at all. I did not want him to know that I drew it up. I was one of his official family, but I did not feel encouraged to take it to him, because I had seen Admiral Fiske take papers like that to him, and he would not pay any attention to it.

The CHAIRMAN. What did you do with it?

Admiral FULLAM. I did not tell the aids that I did it. I did not want anybody to know that I had written it. I took it to Mr. Franklin D. Roosevelt, Assistant Secretary of the Navy, who usually—always—took a lively interest in the Navy and in the cooperation of the Navy with the Army; and I was encouraged to go to him frankly, as I wanted to do with the Secretary. We all wanted to gather around the Secretary as a man and a brother, and we would have been only too happy to do it, for the glory of the Navy and to help him, and he would have had all the credit—every bit of it. But I could not. I took it to Mr. Roosevelt.

I remember that memorandum; I can repeat the items of it. I said, "Mr. Roosevelt, do you approve this?" He read it over, and he said, "Yes; every bit of it." I said, "Will you take that as yours, and do not mention my name as ever having written it, and do not let anybody know that I wrote it, and will you present it to the Secretary of the Navy this afternoon?" He said he would, and he took it in there, and I remember so well that he sat down in his chair, and he put this paper on the desk of the office between his feet, and he read off from time to time the items; and, coming from him as a civilian to the Secretary of the Navy, it had some effect, and some of those things were done. Among them was a very important suggestion to get the few submarines we had across the Isthmus by building a cradle and getting them across by rail, because the canal was not finished.

Another item was to get all the naval officers on the retired list and on inactive duty assigned to shore duty, so that the active, physically perfect men could go to sea; and it seemed that from this a rather amusing situation took place. The Bureau of Navigation was so rattled at getting a suggestion to really do something—I do

not hesitate to say so—that they assigned this duty of assigning retired officers to duty to a picked-up board of three comparatively young officers. I was told this afterwards by Capt. French, who in the Pacific was one of my flag captains.

They picked up a board of young officers, and they tackled this job. They were unfamiliar with the personnel of the Navy; they did not know the names of these retired officers; they did not know the names of the officers, even on the active list, who were practically incapacitated; and their recommendations were very amusing. They had a one-legged captain, who was on the retired list, ordered to command a battleship. They had officers who were out here in St. Elizabeth Insane Asylum and at Las Animas and at other places assigned to important duties, and the thing was impossible. It had to be completely revoked. I knew Admiral Luce intimately. I loved that old man, because he never dreamed or thought of anything but the Navy and its preparation for the emergency for which it exists; and when I would tell him about these things he would say, "Oh, Fullam, you can not help it. The United States always goes to war in a very casual sort of way." This reminded me of it. This was just an instance.

The CHAIRMAN. You say that coming from a civilian this recommendation had some effect. Do you mean by that that the Secretary resented suggestions made by officers of the Navy?

Admiral FULLAM. I would not say that Mr. Daniels resented them. He was one of the most agreeable men personally that I ever had anything to do with.

The CHAIRMAN. But he did not pay any attention to it?

Admiral FULLAM. He did not think the naval officers—he did not want to give admirals much authority, and I can not tell you how it hurt us. He did not trust us. He did not take our advice, and realize that we were citizens of the United States just as he was, and that it was our life to do that thing and to help him to do it. It was a very trying situation, and I never would have stayed there and suffered if I had known that he was going to continue in that attitude. And that uncovers a very trying situation that naval officers were subjected to. We would support the view of Mr. Meyer's policies with great enthusiasm, because they were directed toward the preparation of the Navy for war. It was not, to him, a political matter at all, or anything else; it was to prepare the Navy for war. How could I, the next day after Mr. Meyer left office and I became Mr. Daniel's aid, view with equal enthusiasm and zeal policies that destroyed and smashed everything that Mr. Meyer had attempted to do or did do? It is impossible, unless a naval officer can turn his coat in 24 hours and say one thing to-day and another thing to-morrow; say yes when the Secretary says yes and say no when the Secretary says no. It is impossible. And as soon as I found out that that position was going to be permanent, I got out of the Navy Department as quick as I could. I applied for duty at sea. I would not have stayed there for a thousand dollars a month in addition to my pay. It was impossible.

The CHAIRMAN. You say that Secretary Meyer's policies were not based on politics, at all. Were Secretary Daniel's based at all on politics?

Admiral FULLAM. I ask you withdraw that question.

The CHAIRMAN. Very well. Now, Admiral, you stated that you were the secretary of the Mahan-Moody commission.

Admiral FULLAM. Yes, sir.

The CHAIRMAN. Can you give the committee, briefly, the facts in regard to that commission?

Admiral FULLAM. I know all about it; and to me it was the most wonderfully illuminating experience of my whole life, and I look back to it with more joy and satisfaction than anything else I have had to do since I have been in the Navy. Explaining that, I will just say that before the Spanish War, when Mr. Theodore Roosevelt was Assistant Secretary of the Navy I became intimately acquainted with him, and one day he asked me—he was usually curious, and asking people—what I thought was the one thing of all others that was most necessary to secure an efficient Navy. Well, that was a pretty terrific question to ask a lieutenant; but I was 43 years older than many Senators, and I had been at sea a good while, and had been around the world; and I said to him that I thought that the most trouble was that the Navy was handled too much from the beach and not enough from the sea, and it greatly amused him, and he gave one of those characteristic grins; and two weeks later, after he got back to Washington, he told me to write him—he reminded me of this conversation and asked me to write him—and I wrote him 20 pages. I never wrote anything that delighted me so much in my life; and he never forgot it. And so, in 1908, about 10 years after this remark, although we met frequently, and he never forgot to mention it, he made me secretary of this board on reorganization of the Navy Department, and I knew that I was going to be secretary a month before, and I took there from the office of Naval Intelligence sketches of all the organizations of the great navies of the world Great Britain, France, Germany, Japan, and ours, arranged in blue prints, with a file for each member of this commission, and I took there the report of the Essher commission, appointed to reorganize the British War Office after the Boer War. This Essher commission report is a classic. Everybody who wants to know anything about War or Navy Department organization, in fact every citizen of the United States who is interested in the Army or the Navy, ought to read that report. That report, strangely enough, recommended for the organization of the British Army practically the same organization that they had in the British Admiralty, because they said that that organization was wonderful; that it had carried Great Britain through every war, and that it, to their minds, was the best guide for the organization of their Army. I had that ready for the members of the commission and I gave to Admiral Mahan all those things.

Then Admiral Mahan, Mr. Paul Morton, and Admiral Folger were made a subcommittee to draw up an organization, and I was with them; they made me an assistant of that subcommittee, though I really was secretary of the whole committee. So they drew that up; and then they asked Admiral Mahan to write a little monologue on the subject, and he used that expression, that the Department of the Navy should be so organized that it can pass from a state of peace to a state of war without a jar of its machinery; and the admiral did not wreck anything in the Navy. He kept every agency in our Navy just as it is to-day, but he only grouped them under this aid

they could work together like a band of brothers—material, and other agencies; and he said to us that that was the way for our country; and he said to us, the whole thing recognized, fundamentally, the supremacy of the civil power and the responsibility for providing that nobody should ever for one instant forget that officers of the Navy must recognize that fundamental principle of our Constitution; and he recommended one more aid—that had been used by Secretary Meyer; he recommended the fifth aid, who, he said, should be the final and the confidential adviser of the Secretary of the Navy in all technical matters in preparation for war. This officer, he said, should stand by the Secretary, to keep him informed of everything, keep nothing back, to give him everything from the other aids, see that he knew everything; and that this aid, being in touch with the Secretary and knowing the policies of the United States Government and the Navy's policies and wishes, would in time of war, if the Secretary ordered, stand ready to go to sea and take command of the whole fleet, as Admiral Jellicoe did just before the World War in 1914 with the British fleet. I remember that so well.

REPORT. Sir, was brief, but it was an outline and splendid; and I went with Admiral Luce after the other members went away, and I put it up, and they all signed it before they left except Justice Brandeis and when I had finished it I took it to Justice Moody at the Supreme Court and he signed it and told me to take it to the President. I took it to the White House. Mr. Roosevelt glanced at it—it was short, but he was delighted. And he remembered his previous discussions and conferences with me, and he said, "Well, Captain, we have driven in an entering wedge that may result in the day when the Navy may be controlled in some measure from the shore instead of entirely from the beach"; and he gave me one of those big, hearty smiles that I think all Americans love to think about.

CHAIRMAN. Have you a copy of that report?

MR. FULLAM. No, sir. I have it, but not here. I have it at home.

CHAIRMAN. Could you furnish that to the committee to put in the report?

MR. FULLAM. It is buried deep under boxes of my impedimenta at Annapolis. It ought to be obtainable at the Navy Department.

CHAIRMAN. Can you tell us where we can get it at the Navy Department?

MR. FULLAM. I am sorry to say I can not. I think I can get it. It is a very brief thing. Mr. Meyer made me tell him that, and then he took this report—he did not want to be bothered with it—he brought up the subject and he gave that to a board of officers presided over by Admiral Swift, and they considered the thing in great detail, and then practically approved of Admiral Swift's and Mr. Moody's commission report, and that is why Mr. Meyer put it in force and effect; but he had no authority of Congress, so before the aid system was never legally authorized, and it was ineffectual for that reason.

CHAIRMAN. Are the navies of any other countries controlled and mastered by civilian heads?

Admiral FULLAM. Yes, sir; and, to my knowledge, the French Navy and the British Navy have civilians at the head. I do not know so very much about the French Navy, though I had studied it at that time; but they have had their troubles, worse than we have at times. I remember one case of a statesman, Camille Pelletan, who had charge of the French Ministry of Marine. I have here some very brief accounts of the results of his administration, which I think should be known. [Reading:]

Camille Pelletan's administration was disastrous to the navy. And yet he was a patriot, animated by the best intentions. Unfortunately, almost all his ideas were contrary to a good organization of the navy department, where so many out-of-date and incomprehensible traditions survive. He left his department in chaotic disorder.

This letter then goes on—it is in the archives of the Office of Naval Intelligence that you can find this thing. He says here:

The navy is succumbing to a double anarchy—anarchy at the top, due to an out-of-date organization of the central services of the ministry, which has permitted politics to reduce in a few years all the services to a state of complete impotency and irresponsibility; anarchy from below, due equally to the intrusion of the political element into our dockyards, thanks to which intrusion the dockyards have ceased to be able to build and maintain the fleet.

Speaking of Camille Pellatan as Minister of Marine of France in *Les Marines Française et Allemande*, 1904, the author states that the distinguishing characteristic of M. Pelletan's régime is "an increased tendency to lessen the combatant corps, to lower its prestige, to belittle it in the minds of the enlisted men and the public."

The name of democracy has been invoked to explain this merciless war on the spirit of discipline and duty; it was pretended that it was desired to make the navy democratic. It is one of the most daring jokes that a minister has ever permitted himself to play. Between demoralization and democratization there is an abyss.

Those things can be found in the Office of Naval Intelligence, and that is why the French Navy was wrecked. And it never recovered. An official examination into its history since that time—it is sad. I say this with regret, but perhaps I ought not to fully say that. They have tried hard. But when you wreck an organization and get wrong principles insidiously into it, it takes a long, long time for that organization to recover.

And another explanation for the reason the French Navy went to pieces was the lack of recognition of the fact that naval officers have a right to say something about the navy.

American naval officers are citizens of the United States. Now, this writer is a captain in the French Navy, and he writes this article. He says:

It seems to me to be a propitious time to make at least one seaman's voice heard in the passionate debate now going on about the principles of naval warfare. It is curious, indeed, to note the officers are vainly to be sought among the many spokesmen of the two opposing parties, which are daily strengthened by new recruits and sit in judgment on a technical question of vital concern to the Nation.

Unless it can be shown that naval men are incompetent to discuss their own profession, we can not admit that they alone should remain silent in regard to the principles which ought to govern the constitution of the fleet.

There is much to be done in France in the way of freeing the voices and pens of naval officers from the strict rules which limit them in the great field of discussion of naval affairs. The English Government sets us a very good example in this respect, as it always does where naval matters are concerned.

This is a French officer writing this [continuing reading]:

At the very moment when a few years ago we gave to certain officers, with extreme parsimony and under many restrictions, authority to hold conferences in the name of

the Naval League, Admiral Charles Beresford was uttering loud protests and complaints on professional subjects in the journals and at public meetings without any attempt on the part of the Admiralty to interfere in the slightest degree with his freedom of speech.

Such an attitude is justified by the importance which the British Admiralty has always attached to the education of public opinion in regard to all maritime questions and also by the very clear perception that the ideas expressed by an officer, however important, commit no one but himself and have only the exact value which people are willing to give to them.

There is no doubt that we must attribute to the fixed rule of silence, imposed even now upon our experts, the unfortunate fact that in our country first principles are constantly being questioned and the same sterile discussions are periodically renewed.

Now, that is the opinion of a French captain about the bad effects of smothering and throttling naval officers, and it is my duty to say right here that when a system like that takes place in a republic it is not consistent. If an admiral in the navy is told that he can not say that 2 and 2 make 4, it is a decree. It is not democracy; it is autocracy. And if the president of a war college is reprimanded severely for writing a paper and reading it at a dinner—I heard it read; it is a classic; it is a paper that Admiral Mahan would have subscribed to instantly, and he was reprimanded with great severity. I deplore that such things can be possible, because those officers ought to be called by the Secretary of the Navy to surround him, and he ought to discuss matters with them.

The CHAIRMAN. What letter are you referring to now—from the president of the War College?

Admiral FULLAM. Oh, in 1915, in the early months of 1915, Mr. Daniels wrote to me and to Admiral Knight and asked us to attend as representatives of the Navy a society dinner in New York City and to address that society, as they wished. I did not want to go there. I had my own job, and speechmaking, to me—I do not like it. I do it when I am compelled to. But I went, and when they called on me I spoke extemporaneously. Admiral Knight prepared a paper, but did not. I knew he would cover the serious subjects of the Navy, as he always did everything with wonderful language, and he is a man of quick intelligence, and I knew he was going to have a paper; so that I spoke extemporaneously. I spoke first and then he read his letter, and it was one of the finest things I have ever heard. It was just on a line with Admiral Mahan's work and with all his writings, about the organization of the Navy Department and the control of the Navy that would make it ready for battle, and it was dignified, it was classical.

I was amazed a few days later when Admiral Knight came to see me at Annapolis and told me that he had been raked over the coals, and he felt so badly—he was afraid that he was going to be court-martialed for reading that letter.

Then I had to send my notes on to the Secretary. Fortunately, my remarks were more or less jocular, and more or less on the human side, and the Secretary returned them to me without comment.

But I felt that when admirals of high rank, who have been 40 years in the Navy are not permitted to speak at all about the service in which their whole life has been spent, and where their energies are concentrated, it is not democracy, sir; it is autocracy. It is bad.

The CHAIRMAN. We are not on the subject, Admiral, of a civilian head of the Navy, but you have cited the question of Admiral Pelle-

tan. In general, do you think that having a civilian head of the Navy in France and England has worked out badly for those countries?

Admiral FULLAM. It has entirely worked badly in France, but not because of having a civilian there. Look at England. The First Lord of the Admiralty is a civilian. They never have had any trouble there, because that civilian recognizes that the British Navy is the first line of defense of the empire, and that the empire will go to smash and ruin if the Navy is not administered properly. And he has a serious realization of the terrible responsibility that rests upon him; and furthermore, he can not, under the laws that control the constitution and the direction of the Navy, give direct military commands, or control very important matters, without consulting with his connections, the sea lords of the Admiralty, who go to sea. He must consult with them; and as a practice, they work together.

The CHAIRMAN. You are referring now, to the Secretary of State for the Navy?

Admiral FULLAM. No, the First Lord of the British Admiralty. Now, there is an amusing case in point. An Englishman recently told me this. This is his statement that I quote, and I think he is right; that it was accurate. He said one time Mr. Goschen, whom you will all remember, who has had a very important rôle—I think he was ambassador to Germany, was he not, before this war—he was one of the ambassadors just before this war to one of the great powers, a distinguished statesman of Great Britain, was temporarily free from political or from governmental duty or assignment, and they made him First Lord of the Admiralty in recognition of his abilities and his statesmanship; and he had, as it happened, never taken the slightest interest in the Navy, or never been associated with the Navy. It was not a matter that was particularly congenial to him. He had been a statesman in a broad sense. So it caused some merriment in the British press that Mr. Goschen should be made First Lord of the Admiralty, they remembering Pinafore, and they said funny things; and among other things—this Englishman told me this only recently—Punch said,

"Mr. Goschen
Has no notion
Of the motion
Of the ocean."

But it did not matter whether he did or not, because he called to his assistance, and to coordinate with him, officers who had made British naval history for 50 years; and they knew about "the motion of the ocean," and they knew how to make the British navy—to bring it to such a condition that it would defend the British empire, and therefore no harm resulted, and that is all there is about it.

The CHAIRMAN. Then you think it is a question of the character of the civilian head more than anything else?

Admiral FULLAM. Well, men differ. All men do differ in their ideas.

I want to emphasize one thing, that not one naval officer in a hundred in our Navy would wish to have a military man—a naval man—as Secretary of the Navy. We want a civilian. We want him, why? Because we are citizens of the United States, and we are loyal to the fundamental principles. Nobody in this Nation is more loyal to our principles of government than the Army and Navy offi-

ers, of the regulars, because that is bred in their bones; and I would not for an instant see an officer there. But we do want a man who will utilize our brains, and rally us around him, and say, "Come on, now: let us all get together and work for the Navy."

Admiral Fiske said one or two things here yesterday I want to speak of. He did not know about that educational scheme. I would like to say one or two words about that.

The CHAIRMAN. I was about to ask you about that.

Admiral FULLAM. Because Admiral Fiske was pretty busy with a good many other things, and that was my job.

The CHAIRMAN. Would you prefer to finish to-day, Admiral, or come back again? We would like to finish to-day if we can.

Admiral FULLAM. I can finish in 5 or 10 minutes. I do not wish to prolong my remarks.

The CHAIRMAN. I have one or two other questions to ask you, and probably Senator Trammell has some questions; so that if you will go ahead, very well.

Admiral FULLAM. Yes, sir. I was aide for personnel, and I knew that Mr. Daniels wanted this educational scheme put in force, and I thought it was useless to oppose him. I did not think it wise to do so. And, furthermore, there was a great deal of good in it; so that I outlined a scheme to carry out his general plan, and particularly emphasizing the professional spirit, in order that all men in the Navy might make themselves eligible for promotion, and go along up the list; and in my draft I made the academic instruction optional with each man after he left the training station, except for men who were illiterate. But when I presented this draft the Secretary insisted that they should all be forced to go to school, whether they wanted to go or not. Now, this did not induce men to go into the Navy. It would tend to drive them out; because there were many men between 17 and 25 who did not want to go to school, who had been to school; so that I think it did harm. But I insisted that the general scheme, particularly when you took into account the professional part of it, might do no harm, and we had better let it go through, and I pushed it along and helped Mr. Daniels to. But if he had not been extreme about it, it would have worked. But it was so emphasized that the officers of the Navy had to look upon that as the principal duty of the Navy; and therefore, it hurt the Navy, it hurt the morale of the Navy, in the minds of men and officers, in that the minds of men and officers, instead of being directed towards getting ready to fight—it was a university. And it was harmful. And where is it now? The aide for education has folded his tent and gone, and the whole system is a dead letter in the Navy. It was extreme; that is all.

I went to Scranton, Pa., and investigated the correspondence schools, and that, I thought, was a good thing because it encouraged men aboard ship to study. That did not require men to attend school; but they could study. The commanding officer was asked to give them a place where they could study. That was an excellent plan. In other words, I tried to make the Secretary see that education was nothing new in the Navy. Admiral Luce 40 years before started education in the Navy. There were three admirals in the Navy who graduated from the apprentice system. But when the men became older, from 17 to 25 years of age, it was not so necessary. We had all these vocational schools. We had education to

burn in the Navy. There was no discovery of something new there at all; nothing. It was nothing new.

And about the democratizing of the Navy, I talked to the Secretary about that. I told him he was mistaken, that there was no aristocracy in the Navy; that there was nothing of that sort; that officers loved their men, and were ten times more solicitous of their men than an employer in civil life is of his; that I had seen officers put under suspension because they did not have a boat's crew put in rain clothes before they left the ship when rain was probable, or because they did not save dinner for the gig's crew when they were away from the ship. And the men of the Navy, why, we stood together all our lives. Admiral Huse jumped overboard not long ago and saved the life of an enlisted man—an admiral of the Navy. They are doing it all the time. Why, sir, I would rather be in a street car or in any public place with enlisted men of the Navy than with nine-tenths of the civilians in this country.

Those charges of caste and aristocracy hurt the Navy. The officers felt hurt. There is no sense in it. And when you hurt the feelings and cut down deeply into the feelings of officers, it causes what? Resentment, enmity, permanent resentment, and permanent enmity, and that does hurt. It hurts the morale. It does something that ought never to be done. No, sir; there is no caste, sir, or aristocracy. There are traditions that were established by John Paul Jones and Decatur, perpetuated by Farragut and Porter and Sampson and Dewey and Mahan and Evans and Brownson and Schroeder and Wainwright, and men like that. And if you call that caste or aristocracy, the more you have of it the better for the Navy and for this country; and when you wreck it, you will wreck the Navy just as sure as there is a God in heaven.

The CHAIRMAN. In your testimony you have said several times that you could not get anywhere on account of the inertia of the Navy Department. Do I understand that that refers to the Secretary or to the officers of the Navy or to the bureaus of the Navy?

Admiral FULLAM. Now, sir, I do not want to be too personal.

The CHAIRMAN. No; but it is necessary for the committee to know this.

Admiral FULLAM. But I do think it is my duty now to tell the truth, because it is a national question; it is not a personal question; nor have I any personal feeling—please, I want to emphasize that.

The CHAIRMAN. This is not to bring out any personal feeling, but to find out where the hold-up was.

Admiral FULLAM. I do not believe that an officer of the Navy on duty at the Navy Department at any time has intentionally failed in or neglected his duty. Duty is a passion with him. It is the life of every man in the Navy. I know it, because it so happens that I have instructed, myself personally, and been in contact with, every officer in the Navy from the lower numbers on the admirals' list nearly down to the bottom. Thirty-one different graduating classes of the naval academy have come under my inspection and instruction, and I have bothered them, somehow or other, during one year or two years at the naval academy; and I know what they are made of, and I know that they all do their duty and are obedient. Obedience is instinctive, and they would never think of violating it. I do not think that our failure to prepare for war—I know it—was due to

nothing with the Navy Department; our Government did not weigh—did not consider the subject of preparation for war, and they discouraged its consideration by everybody at the Navy Department. I saw Admiral Fiske go there day after day and try to get the Secretary to do something; and how he could have stood it I do not see, month after month. No attention was paid. It could not be done. It was impossible; until that office of Chief of Operations was forced upon the Secretary. Mr. Holson told me just the other day that he took that to Mr. Daniels, and when Mr. Daniels looked at it he said, "I will fight that. If that is adopted, I will go home." And for that reason the Naval Committee of the House was moved, I think, to change it in one or two very important matters, unfortunately, and that was war plans. If it had not been for Mr. Holson and Admiral Fiske that office of Operations would never have been organized. I can not conceive of the department taking any initiative. It did not take for the organization of that office of Operations after Mr. Holson presented the plans. Holson told me that they had to meet in his house in secret, and to call officers, like Admiral Knapp, to be there to meet them, so as not to let the Secretary know about it.

That is a pathetic state of affairs, and it was done by an officer who was about to be dismissed from the Navy Department. In his determined and zealous desire to see that the Navy was safeguarded he went up there with Holson, and they got their heads together and made that organization, and that organization of that office of Naval Operations is the only thing that saved the day for the Navy in this war. It was a splendid thing, and those officers did splendid work, all of them. Every one of them did splendid work. I can not make it clearer than that.

The CHAIRMAN. Then you have no complaint to make about inertia or lack of cooperation on the part of any officer of the Navy or any department of the Navy in any plans for the government of the Navy that you came across during the war?

Admiral FULLAM. No, sir. On the contrary I believe those officers all wanted to do it; but, sir, they have gotten down to this point. There is a dangerous idea getting around that you have got to efface yourself; that you have got to agree absolutely with somebody else; and that is going to ruin the Navy if you keep it up. If you establish the principle that a man has got to be subservient, almost servile, almost to efface himself, and say yes, and not dare to express himself the inevitable result of that is that you will put mediocrity itself upon a pedestal, and you will throw ability and zeal into the discard, and you will hurt the Navy if that system becomes embedded in the Navy Department. Officers must be assigned to duty not by reason of their subservience, but by reason of their ability, and they must be ready to leave any job and go to sea, to leave any important job on shore where they may have a palace, and take two rooms and a bath, if necessary, to go away, when they find that it is planned to do something that will injure the Navy and not prepare the Navy for war.

The CHAIRMAN. Senator Keyes, have you any questions?

Senator KEYES. No.

The CHAIRMAN. Senator Trammell?

Senator TRAMMELL. Admiral, I have a great deal of respect for naval officers, and I want that understood. I think taking them as

a whole, they are very capable, and they are a very patriotic and very efficient set of men; but I gather from your testimony that the naval officers are practically infallible, and that the civilian officers are responsible entirely for any neglect that occurred in the operation of the Navy in the carrying on of the war; is that correct?

Admiral FULLAM. No, sir.

Senator TRAMMELL. You said every naval officer did his duty.

Admiral FULLAM. Well, no, sir; I hardly——

Senator TRAMMELL. I understood you to say that. At least, your statement would carry that inference with it.

Admiral FULLAM. Well, I am sorry if it did. I am speaking now under the pressure of feeling, because it is a very serious situation; but I will emphasize it, that I do not believe that men in civilian life in any profession take duty and obedience as seriously as naval officers do, and I do not believe they do their duty as well.

Senator TRAMMELL. Well, of course that is a matter of opinion. I have found that the people connected with the Navy—and I have a great deal of respect for them—were human, just like anybody else.

Admiral FULLAM. That is right.

Senator TRAMMELL. And I have occasionally run up against some fellows of a bad character filling pretty important positions in the Navy, and I think you find them there as well as you find them all through life. You do find them all through life; and you can not pick out and throw the cloak of infallibility around naval officers and say that everybody else is all wrong. The Navy officials themselves have clashes, and have differences of opinion, and I think you are entitled to your opinion; but I do not think that a civilian is to be reflected upon merely because he might maintain an opinion different from that that a naval officer might have. I have a great deal of respect for the Navy, and no doubt you have a fine lot of men and officers; but I have not found them all absolutely infallible, nor have I found them all absolutely tiptop when it comes to business or official duties. I have had some experience and observed some of them.

Admiral FULLAM. I agree with you.

Senator TRAMMELL. If that was not true, you would not have to court-martial some of them now and then.

Admiral FULLAM. No, sir.

Senator TRAMMELL. I have a great deal of respect for them; but I am just trying to——

Admiral FULLAM. Please do not let me seem to carry the point that far, to assert that all naval officers are better than all civilians at all. We are appointed to the Navy by Congressmen. We can not get there without a Congressman appoints us; and if there are any incompetents they were appointed by some member of Congress or a Senator, or the President. We can not get into the Navy in any other way.

Senator TRAMMELL. A Congressman or a Senator is liable to make a mistake, and somebody that was a great deal wiser than a Congressman or a Senator made a mistake once, and got a Judas mixed up with his organization; but because they make a mistake is not any reason——

Admiral FULLAM. I tried to make it very clear that I respect the civil power absolutely. I do not think anybody in the world respect-

the coordinate branches of our Government so much and has such a sentimental feeling of loyalty for them and respect for them as naval officers have.

Senator TRAMMELL. I know, you stated that before in response to question of the chairman; you said that none of the naval officers were responsible for anything that had gone wrong at all. That was the substance of it.

Admiral FULLAM. They could not be responsible because they cannot control policies, and they can not get money, and they can not get men, and they can not get guns, and they can not get torpedoes, and they can not get small arms, and they can not get anything to do anything with themselves. They carry on the routine of their duty, and the most that I wanted to do, sir, was to say that their functions should be recognized, and that an admiral 40 years of age should be regarded as having probably a better idea of the Navy than any man in civil life, however distinguished he might be—some admirals. That is all; because they concentrate on that. That is all, sir.

Senator TRAMMELL. I do not question that at all, and I think you have done a splendid work; from your recital of your work here I think you have done a splendid work; I am impressed that way; but you have a Secretary of the Navy, and our Constitution and system of government so provides, now he might make mistakes by exercising some judgment himself, but he has either got to do one of two things; he has either got to be a rubber stamp and carry out the will of the naval officers, or else he has got to be a man who stands four corners to the wind and exercises some judgment himself. He has got to be one or the other.

Admiral FULLAM. We want a strong man. We love to serve under strong men. I do not want to have anything else.

Senator TRAMMELL. The fact that a Secretary might disagree with a naval officer—

Admiral FULLAM. A naval officer, yes, sir.

Senator TRAMMELL. Is no particular reflection upon the Secretary or no particular reflection upon the naval officer. Each one of them has his province and duties to perform. Now, the naval officer might have made a mistake in that instance, or the Secretary, I do not know which. It is testified here in some cases, that a naval officer has made some mistakes, probably, in some instances, and probably the Secretary has made some mistakes. So that we are all more or less subject to fallibility.

Admiral FULLAM. Yes, sir.

Senator TRAMMELL. We are all, I suppose, striving for the proper end, from our viewpoints.

Now, in the question of recommendations and suggestions, you were very energetic and made quite a number of recommendations in regard to the Pacific Fleet; but while it seems that they were not always approved of, I did not hear you read any letter rebuking you or reprimanding you for making suggestions.

Admiral FULLAM. Oh, no.

Senator TRAMMELL. You had that right, did you, to make suggestions and recommendations?

Admiral FULLAM. Oh, yes, sir.

Senator TRAMMELL. Just as you did?

Admiral FULLAM. Yes, sir.

Senator TRAMMELL. The Secretary did not object to that, even if he did not happen to agree with you?

Admiral FULLAM. Oh, no; no.

Senator TRAMMELL. The men under you, I suppose, were authorized to make recommendations to you, were they?

Admiral FULLAM. Yes, sir; they were invited to do so.

Senator TRAMMELL. You did not always approve of them, though, did you?

Admiral FULLAM. Well, I do not remember of anybody making any recommendation to me that I did not approve, because they were all working on one job, with innate intelligence.

Senator TRAMMELL. That is your policy, then, as a rule to approve recommendations made to you by subordinate officers?

Admiral FULLAM. There is nothing in the world that gives me so much joy as to approve and encourage my subordinates and to make them feel that I am using every ounce of brains they have got in their heads.

Senator TRAMMELL. I think that is very proper, but if you approve of everything they do, do they think that you are exercising every ounce of brains in your own head?

Admiral FULLAM. Well, Senator, I will leave them to say.

Senator TRAMMELL. If you accept what they say every time?

Admiral FULLAM. I will leave them to answer that question for me. If they think I have not got the brains, all right. I will not speak of my own brains.

Senator TRAMMELL. You said you were utilizing and accepting every ounce of brains they had; and you also said you always approved of their recommendations. You take those two statements and it would indicate that you were letting them govern and control so far as their recommendations were concerned, and you were not exercising your own brains.

Admiral FULLAM. Well, Senator, I have made a mistake in bringing that up. I think my brains have been pretty thoroughly occupied.

Senator TRAMMELL. I know they have, but I am just taking what you say. I do not question but what you are a very intelligent man and a very efficient officer. I am confident of that. But I am just taking your statements. I do not know a thing about the Navy, but I have observed a good many naval officers that when they had recommendations made to them by subordinate officers they did not always approve of them. They disapproved of more or less of them, and I thought they were exercising a proper prerogative in disapproving of them.

Admiral FULLAM. Quite right. I think I have disapproved of some recommendations. That is a very general statement, you know. But young men, who have not had much experience, you have got to be a little careful about them. If you take a man who has been to sea for 20 years or longer, and possibly been all over the world, and has had opportunities for observations, his opinions as a rule are pretty nearly right.

Senator TRAMMELL. Then another thing you said in regard to Secretary Meyer. Do you remember what all he did in regard to

up the Navy and building up the personnel and officers, and of the Navy, during his administration? What great progress during his administration toward preparing the Navy for

Admiral FULLAM. Well, I was with him only a month, Senator.

Mr. TRAMMEL. You were pretty familiar with the Navy. He made great preparations for war and lay plans throughout his administration for putting the Navy in a state of preparedness

Admiral FULLAM. He initiated the most important thing in his administration. You can not do anything without an organization. He realized that. He could not appropriate money.

Mr. TRAMMEL. If the present Secretary had found the Navy in a state of efficiency and in a thoroughly prepared condition for war in accordance with what you advocate, we would probably have been a good deal better prepared than we were, would

Admiral FULLAM. Yes. As I say, Mr. Meyer could not get everything he wanted. I do not want to talk about Congress, but really, honestly, I think Congress has been a little derelict.

Mr. TRAMMEL. I think Congress has had a great deal to do

Admiral FULLAM. I am sorry there was one thing, Senator, that I would like to bring out, that the Council of National Defense was suggested by members of the Navy—I think Capt. Hill of the Navy and others strongly suggested it, to bring all the civil departments of the Government together on policies—national policies and national defense—and that would have been a wonderful thing if it had been carried out. There was only one representative of the Navy and one representative of the Army, I think, on that suggested Council of National Defense, so that the supremacy of the civil power was maintained.

The vast majority of the council were civilians, and the members were perfectly willing to have it that way; and that would have coordinated all Government agencies to prepare the country for war.

CHAIRMAN. I think that will be all, Admiral.

The subcommittee adjourned until Tuesday, April 13, at 10 o'clock a. m.)

LETTER NO. 1.

OFFICE OF COMMANDER IN CHIEF
UNITED STATES PACIFIC RESERVE FLEET.
U. S. S. "SOUTH DAKOTA," FLAGSHIP.
San Francisco, Calif., November 15, 1915.

MR. UNDERWOOD: I am greatly obliged to you for having written to the department concerning the assignment of apprentices to this fleet, and I regret that I cannot approve their going to San Diego. I will write to him and see if I can modify the orders.

It is desirable to send to the ships going to San Diego apprentices who had nearly completed their course and let us graduate them there; that is, the apprentices who might not be compelled to return again to the station. If such an arrangement could be made, I should be delighted, but of course I do not suggest you with propositions of any kind.

The fleet generally has so many advantages that I should think the department should operate them.

I hope you have noted no ill effects as far as the apprentices are concerned.
Hoping to see you before many days. I am,
Sincerely, yours,

W. F. FULLAM.

Rear Admiral. United States Navy.

Capt. PHILIP ANDREWS, United States Navy.
United States Naval Training Station,
San Francisco, Calif.

LETTER NO. 2.

UNITED STATES NAVAL TRAINING STATION.

San Francisco, Calif., November 19, 1915.

MY DEAR ADMIRAL: Referring to your letter November 15, in regard to apprentices for the reserve fleet ships, I will see if it is possible to send apprentices who have nearly completed their course of instruction and let you transfer them later, but I am very much afraid that the refusal of the bureau to allow them to go from the station on account of your uncertain itinerary will prevent my doing it. I should be very glad to do it for we have too many men here to berth and handle. I have succeeded in getting the bureau to let me rate men after five months who are found qualified and I got rid of about 200 men to the *Maryland* and *San Diego*, but I must take back the three companies which you have before you sail, probably about December 1 and that will crowd us up.

The service on the ships that the apprentice seamen have had, and most of it has been on reserve ships, has been of the greatest benefit to them, and I think all of the ships have taken a great deal of interest in completing their instruction, as I have always found them much improved by these experiences on shipboard. I notice particularly the very excellent routine of instruction which the *Oregon* has prepared of which Capt. Reeves sent me a copy. By keeping a record of the individual men and marking them constantly it is possible to determine, even without an examination here, whether the men are qualified for advancement and whether they can be considered as having completed their instruction.

I shall try to drop on board to see you Saturday morning when I go to call on Admiral Winslow.

With kind regards,
Sincerely, yours,

PHILIP P. ANDREWS.

Rear Admiral W. F. FULLAM, United States Navy,
U. S. S. "South Dakota," San Francisco, Calif.

LETTER NO. 3.

OFFICE OF COMMANDER IN CHIEF,
UNITED STATES PACIFIC RESERVE FLEET,
U. S. S. "SOUTH DAKOTA," FLAGSHIP,
San Francisco, Calif., November 20, 1915.

To: Secretary of Navy, Navy Department (Navigation), Washington, D. C.

Subject: Detail of apprentice seamen to ships of the Pacific Reserve Fleet.

Reference: (a) Bureau of Navigation's letter No. 5549-618-N6th, of November 4, 1915, to commandant United States Naval Training Station, San Francisco, Calif.

1. Referring to the question of utilizing apprentice seamen from the training station on board the ships of the Pacific Reserve Fleet and to the acting chief of bureau's letter of November 4, 1915, I beg to invite the attention of the bureau to the inclosed letter from the commandant of the training station and the comments concerning the benefit to the apprentices from this employment.

2. While I do not wish to importune the bureau, nor to question its decision in this matter, I request its reconsideration for the following reasons:

(1) If apprentices who have nearly finished their course are sent to the reserve ships before they go to San Diego these men may be transferred to ships of the Pacific Fleet any time when they call in at San Diego, or they may also be transferred back to San Francisco by ships of the Pacific Fleet, which visit this port from time to time.

(2) The *South Dakota* is ordered to return to Mare Island some time after the 1st of January to have her 8-inch guns replaced, which will offer an opportunity for bringing back to San Francisco any apprentice seamen who may have been assigned to the ships at San Diego.

(3) The apprentice seamen are not only benefited by this arrangement, but the ships of the reserve fleet are, by this means, kept in better condition in every respect.

is my opinion that with the cooperation of the commandant and of the bureau this will result in very great good, and the bureau is assured that the commander in chief will take especial measures and conform to such general instructions as to prevent embarrassment or trouble to the bureau in case the commandant of the training station is authorized to continue the present assignment as outlined in his letter, with inclosed.

W. F. FULLAM.

LETTER NO. 4.

[Bureau of Navigation—First indorsement.]

NOVEMBER 29, 1915.

Commander in Chief, Pacific Reserve Fleet.

Subject: Detail of apprentice seamen to ships of Pacific Reserve Fleet.

Reference: C-in-C's letter 97-WFF-V 11-20-15.

The detail of apprentice seamen to ships on the Pacific coast prior to their completion of the full course at the training station has been taken up with the Secretary of the Navy. Such detail has had his approval in cases of short and definite cruises; and, in addition, the course at the training stations has been shortened to five months in the case of especially apt and recommended men; a further extension of these details shortening of the course does not receive the approval of the bureau.

Please return all papers.

VICTOR BLUE.

LETTER NO. 5.

NAVY DEPARTMENT,
BUREAU OF NAVIGATION,
Washington, D. C., November 30, 1915.

Subject: Commanding officers *Maryland*, *South Dakota*, and *Oregon* (via Commander in Chief Pacific Reserve Fleet.)

Subject: Apprentice seamen.

Reference: (a) C. O. *Maryland*, letter 11-21-15; (b) C. O. *South Dakota*, letter 11-23-15; (c) *Oregon*, letter 11-23-15.

The bureau notes with satisfaction the uniformly good reports of the apprentice seamen detailed temporarily on board the vessel under your command, and has already authorized a continuance of this policy in short and definite cruises.

VICTOR BLUE.

Copy to commandant training station, San Francisco, Calif.

[First indorsement.]

U. S. S. "SOUTH DAKOTA," FLAGSHIP,
NAVY YARD,
Mare Island, Calif., December 9, 1915.

From: Commander in chief Pacific Reserve Fleet.

To: Commanding officers *Maryland*, *Oregon*, and *South Dakota*.

1. Forwarded.

2. Commanding officer *South Dakota* please return papers.

W. F. FULLAM.

LETTER NO. 6.

365-29

NAVY DEPARTMENT,
Washington, D. C., February 10, 1916.

Subject: Schedule of movements of Pacific Reserve Fleet during the present year.

COMMANDER IN CHIEF,

Pacific Reserve Fleet.

1. It is the department's policy to have two vessels (never less than one) of the Pacific Reserve Fleet at San Diego during the continuance of the exposition.

2. The department assumes that the commander in chief would wish to have his flag on one of the vessels at the exposition.

3. In order that the vessel of the fleet may surely be kept in readiness and that the department may at all times be assured of this readiness by actual tests of their cruising ability, it is directed that a schedule of the movements necessary to carry out the policy laid down in paragraph 1 be submitted, the schedule to arrange that each of the vessels of the Pacific Reserve Fleet in turn shall proceed to San Diego and remain for such period as the commander in chief may desire and then be relieved by her successor.

4. Conformity with the above paragraph will assure the vessels being put in the best condition, that their officers, crews, and organizations will be adapted for actual service and will permit the commander in chief to inspect them and will give their officers and crews a trip to the exposition.

5. The above plan will provide for the annual cruising called for in the department's policy letter in reference to reserve ships and will enable the commander in chief and the department to ascertain how fully and completely that policy is being carried out.

6. A new docking schedule, which will conform with the above-requested schedule of ship movement, will be submitted.

JOSEPHUS DANIELS.

• LETTER NO. 7.

UNITED STATES PACIFIC RESERVE FLEET,
U. S. S. "MILWAUKEE," FLAGSHIP,
San Diego, Calif., February 23, 1916.

To: The Secretary of the Navy.

Subject: Schedule of movements of Pacific Reserve Fleet during the present year.

References: (a) Department's letter No. 28365-29, dated February 10, 1916; department's circular letter No. 10265-13, dated December 3, 1915.

Inclosures:

1. The department's letter of February 10, concerning a schedule of movements of ships of the Pacific Reserve Fleet, is carefully noted.

2. The plan outlined in this letter, together with the requirements of the department's circular letter of December 3, 1915, will, if properly carried out, put new life into the Pacific Reserve Fleet and insure the readiness and efficiency of all ships for any duty that may be demanded.

3. In conformity with the letter, reference (a), the following tentative schedule is submitted for the consideration of the department:

NOTE.—The department failed to provide the officers and men necessary to carry out its own program or to comply with the Navy Regulations concerning the readiness of reserve ships. This letter recommended a permanent instead of a temporary policy.

It will be noted that this schedule gives the ships, in turn, a two months' cruise from Bremerton to San Diego.

RESULTS TO BE ACCOMPLISHED.

4. Each ship spends four days at San Francisco going south and four days going north, to give liberty, make necessary transfers of officers and men, take on board or send to training station apprentice seamen, or to transport any Naval Militiamen or civilians who may be assigned to naval training by the Navy Department.

5. Each ship will remain about six weeks at San Diego for "military drills;" gunnery training; "some form of elementary target practice;" "annual fleet maneuvers" as may be prescribed; "exercises under way in a group" under the commander in chief; a four-hour (or longer) full-speed trial of engines under forced or natural draft, as may be necessary; thorough inspection by the commander in chief.

6. It is not believed that the requirements of the department's letter can be met by a shorter cruise than two months. The schedule provides that from two to four ships (usually three) shall be at San Diego during the year, and this number is necessary for "maneuvers in groups" by the commander in chief, and to supply the officers necessary to secure proper and thorough inspection by the commander in chief. It is hoped therefore that this schedule will be approved, as it will conduce to the success of the whole plan.

ADVANTAGE OF A PERMANENT POLICY.

7. The presence of these ships at San Diego, and the constant cruising from Bremerton to San Diego with stops at San Francisco, will prepare all ships to join the active Pacific Fleet at any time, and to transport officers and drafts of men to and from San Francisco for all ships.

8. It is submitted that a schedule of this kind providing for a cruise along the coast to the three important seaports of the Pacific should be made permanent—not simply during the exposition—in that it will conduce to the lasting efficiency of the fleet for reasons that are manifest; in other words, there should be a permanent, not a temporary, policy in this respect. The climatic conditions of southern California will conduce to success in training and fleet work.

FULL REQUIREMENTS OF DEPARTMENT'S LETTER.

It is stated that the following are the most important requirements of the department referred to above: (1) "Complete readiness" of each ship to perform its duties in war"; (2) "sufficient trained petty officers and men" to "maintain" and to be "ready for efficient service after a short shake-down at military drills"; (3) "exercise underway, singly or in group," (4) "readiness of all machinery"; (5) "readiness for annual fleet maneuvers"; (6) "target practice annually"; (7) readiness "for active service at any time."

The department required much and withheld everything necessary to accomplish this. This was all on paper. Nothing was done to help the commander to get results.

It is stated that the above requirements of the department's letters are very important and absolutely necessary to secure readiness of reserve ships for war.

NECESSITY FOR SUPPLYING PERSONNEL.

In this connection, however, the commander in chief is constrained to state that the success of the whole plan depends absolutely upon the assignment of sufficient number of officers and men to the reserve ships. If a sufficient complement of the policy will be a success; if officers and men are not provided, the policy will fail. There is no alternative.

The following table shows the number of officers and men at present on board the Reserve Fleet and, in red ink, the minimum number of officers and men of each rank that could possibly meet the important demands noted

ADDITIONAL OFFICERS AND MEN REQUIRED.

It is stated that, not counting the *Saratoga*, 7 additional commanding officers, 10 additional junior officers, and 26 additional warrant officers are needed, as well as 100 men to fill the reserve complements and to give each ship 4 additional officers, exclusive of the commanding officer, 4 boatswains and 4 additional watchmen, etc., and 3 machinists for engineering and mechanical

It is considered practicable or safe to attempt to carry out the proposed plan with the officers and men.

RANK OF COMMANDING OFFICERS.

In regard to the rank of the commanding officers, it is submitted that each important reserve ship should have the commanding officer who would be needed in war. Officers of lesser rank should not be assigned as a matter of policy. In case of war would throw upon the commanding officer of a reserve ship a responsibility and confront a commanding officer of a ship in full command of the reserve ship must quickly attain efficiency with a crew made up of untrained men untrained for the duties of that particular ship.

Proper rank is required for other reasons. It is demonstrated by the fact that the reserve fleet that captains and commanders are not only needed in war efficiency on board ship, but they are needed every day to maintain discipline and to carry on routine work, courts, boards, and other duties in proper manner. The commander in chief has been confronted with unfortunate conditions in discipline and routine have been caused by placing junior officers in command of big ships. At one time Lieut. Comdr. [Name] of the staff of the commander in chief, did additional duty in command of the largest ships of the fleet—the *Pittsburgh* and *West Virginia*—and was the only officer on board these two ships.

It is stated from the above that the number of junior commissioned officers required to fill the reserve complements of 10 ships is only 15 junior officers, which is more than the complement of one armored cruiser in full complement. It would not appear to be an extravagant demand if it will secure the readiness of the ships.

IMPORTANCE OF PERSONNEL.

The effect of personnel is so important and the effect of leaving ships without proper personnel is so degrading and depressing, despite every effort of a commander in

to inspire zeal and interest, that it would be a neglect of duty not to invite serious attention to the matter—it is the one and only key to enthusiasm and efficiency in any fleet.

INCREASE OF COMMISSIONED AND WARRANT OFFICERS.

19. In connection with this general subject of providing necessary officers, and having in mind that a new personnel bill is to be formulated, it is most respectfully submitted that an increase of flag officers is needed, inasmuch as many captains are now doing rear admiral's duty; that a large increase would provide commanding officers and promote and reward lieutenant commanders and lieutenants of long service; that a large increase of boatswains and gunners would promote worthy petty officers now in service and thus provide junior watch officers for ships in reserve; that the graduation of the two senior classes at Annapolis in June would further add available junior officers.

20. The project of graduating midshipmen after three years has been previously suggested to the department, and it is to be noted that the curtailment of the course at Annapolis at this time, to meet an emergency, could be compensated for at some future time by giving to all midshipmen who may be graduated prematurely a suitable post-graduate course in the future when practicable.

21. As a further means of supplying officers in the emergency that now confronts the Navy, it is most respectfully urged that the law which forbids the employment of retired officers except at their will and at a lieutenant's pay, should be repealed at once, and that all retired officers who are available should be assigned to active duty on shore or elsewhere in order that a large number of officers now on the active list may be ordered to service with the fleets.

22. The above suggestions are submitted as a means of putting new life and hope into the personnel of the Navy while increasing the efficiency of the naval service in every respect.

LETTER NO. 8.

UNITED STATES PACIFIC RESERVE FLEET,
U. S. S. "MILWAUKEE," FLAGSHIP,
San Diego, Calif., February 24, 1916.

MY DEAR BLUE: I am forwarding herewith copies of correspondence concerning the future policy and movements of the reserve ships. This correspondence explains itself, but I wanted to send a copy to you because of the paragraph concerning the employment and training of apprentice seamen, Naval Militia and civilians who are to be given instruction, etc.

I hope you will give my suggestions consideration. If the scheme as outlined is carried out, we can cheer things up out here and get all ships and the personnel in proper condition and secure enthusiasm in place of a condition of depression and discouragement.

I hope the law forbidding the employment of retired officers except on a lieutenant's pay may be repealed at once. It should never have been passed, and at the present time we need every retired officer who is fit for duty, and all such officers assigned to active duty should have active-duty pay.

Please note that the whole scheme depends on the assignment of a few more officers and men in this fleet. They need not be all assigned now but month by month during the next six months in order that the ships may move in turn.

If the department will give me a chance, I can cheer things up out here and the whole effect along the coast will be very good. It seems to me that the number of officers and men needed to secure this object is so small that it is well worth the effort and trouble necessary to get them.

If Congress would do something and do it right away, we could get busy and do something. I am convinced that the suggestions made in my letter if approved would secure several hundred junior officers within the next few months and give us enough captains and commanders to do naval work in a proper and dignified manner. This is the key to the whole situation and if the Navy Department does nothing on this line, all plans and schemes to improve the efficiency of reserve ships—not to say other ships—will simply remain on paper.

If this plan is approved, I can get the ships of the reserve fleet into splendid condition, taking them out for some form of elementary target practice, tactical maneuvers, etc., and thus keep them tuned up. For this reason I have made the plan so that there may be not less than two ships in addition to the flagship at San Diego. This

number is necessary to supply officers for target-practice work and inspection, and if the department will approve the plan as it stands, I will agree to deliver the goods.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral VICTOR BLUE.

United States Navy. Chief of Bureau of Navigation.

Navy Department. Washington, D. C.

LETTER NO. 9.

UNITED STATES PACIFIC RESERVE FLEET,

U. S. S. "MARYLAND," FLAGSHIP,

San Diego, Calif., March 20, 1916.

MY DEAR BENSON: After writing to you of my disappointment in getting some news from Dayton that he could not supply officers sufficient to move my ships, I was delighted to get a copy of his letter of March 11 in which he promised to arrange for enough officers to bring the *Pittsburgh*, *Colorado*, and *Charleston* south on the dates proposed in the schedule; and that he will later on provide personnel to carry out the entire scheme.

I hope you will approve the schedule, and I assure you that we will make no complaint about little things, for I realize that Navigation is doing the best it can.

In the meantime we will be as self-reliant as possible as regards enlisted men, and with the aid of apprentice seamen, our troubles will be greatly lessened. Andrews is helping me very much and we are working in complete harmony. The scheme of instruction I have adopted will soon whip the apprentices into shape.

I realize the main difficulty is with officers; and we should do something to solve that problem.

In connection with the suggestion to graduate two classes from the Naval Academy in June, please give your earnest consideration to the following:

The subjects covered in the first class year are as follows: Seamanship, ordnance, navigation, steam, electricity, languages, physiology and hygiene. All practical.

If you will give me 100 midshipmen who have been three years at the Naval Academy, I will guarantee to put them through a practical course in all these subjects on board reserve ships, and at the same time they would help us to keep these ships away from the dock; I am sure that with the cooperation of the academic board a plan could be easily outlined by which all midshipmen after three years at Annapolis could receive practical instruction which would bring them up to a standard practically as good for work afloat as that given during the first class year.

Should this scheme be considered, you will note that the number of officers on duty at Annapolis can be considerably reduced, which will be another gain for the fleet.

This plan would increase the output of the Naval Academy 25 per cent and would greatly help us during the next few years, after which we could return to the four-year course at Annapolis.

I can see no difficulty in carrying this out, for we might consider the last as a practice cruise, and the midshipmen need not be commissioned until the end of this cruise; in other words, they would be required to qualify in all these subjects before receiving a commission.

The post-graduate course could in time supply any deficiency caused by the adoption of this plan with certain classes during the next few years.

The general feeling of satisfaction and hope inspired by the great proposition to move these reserve ships indicates the great good that will result if you adopt a new scheme—use reserve ships to train men and young officers for the active fleet, and by so doing keep the reserve ships moving. It is a knife that cuts both ways.

Why should not we get busy and adopt emergency measures in an emergency?

It is easy to sit still and say and do nothing—together too easy—and this is my reason for making these suggestions to you. Reserve ships alongside a dock deteriorate, and all officers and men employed on board such ships also deteriorate. The whole thing is bad, and it is time to stop it.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral W. S. BENSON,

United States Navy, Chief of Naval Operations,

Navy Department, Washington, D. C.

P. S.—I inclose herewith a letter from Tozer. Please glance at the concluding paragraphs.

W. F. FULLAM.

LETTER NO. 10.

NAVY DEPARTMENT,
Washington, March 28, 1916.

MY DEAR FULLAM: I have received your various letters in regard to the condition in the Reserve Fleet, and particularly with reference to the personnel, and every effort is being made to carry out the schedule outlined.

It was with considerable reluctance that we decided to take the *Milwaukee* as the relief of the *Iris* and the *Charleston* as the relief of the *Annapolis*. The shortage of personnel is such, however, that it seems a waste of good material to keep officers and men in such vessels as the *Iris* and the *Severn*. By utilizing them for the purposes that we have, and keeping the personnel fairly well up to the number allowed, these vessels which are really fighting units, can be kept in much better readiness for service, and it gives us more men and officers toward keeping the other vessels of the reserve fleet in better shape. It seemed to me to be the very best arrangement that could be made to help the present situation.

I note what you say in regard to the detail of additional warrant officers. In regard to the graduating of the two classes from the Naval Academy, for obvious reasons the Naval Academy is a topic that I do not take up with the Secretary unless I am called upon by him for an expression of my opinion. Whatever my feelings and ideas may be on the subject, I shall certainly try to avoid any suggestion for action that could in any way give anyone grounds for suspecting any personal interest or motive in so doing.

Hoping that the whole matter will work out satisfactorily and assuring you that the effort you are making to build up the readiness of the reserve fleet is appreciated. I am,

Very sincerely, yours,

W. S. BENSON.

Rear Admiral W. F. FULLAM,
United States Navy. Commander in Chief Pacific Reserve Fleet,
U. S. S. "Maryland," Flagship, San Francisco.

LETTER NO. 10.

NAVY DEPARTMENT,
BUREAU OF NAVIGATION,
Washington, D. C., April 1, 1916.

MY DEAR FULLAM: Last week I returned from a two week's leave, and since then have been doing some business along the lines of your correspondence with me.

You will be gratified to know that your fleet will get all apprentice seamen from the San Francisco station who have completed two months of training, that they will not have to return to the training station.

The same thing will be done with apprentice seamen at the other training stations. They will be sent to the Atlantic Fleet.

The Secretary permitted me to do this with the understanding that the instruction would be continued afloat.

Again, the Secretary approved my recommendation to appoint an additional number of boatswains and gunners. In consequence, all who passed the examinations last year have been appointed; this gives us 17 gunners, 7 boatswains, and 2 machinists additional. You have several of them and can make use of them.

I will put you on a better basis in regard to officers as soon as we can get the new class of ensigns. How would you like to have a number of them for watch duty on your cruising ships? That would be valuable experience for them.

During this period of shortage of officers, what would you think of so changing the curriculum at the Naval Academy as would permit of sending the second class to sea on regular cruising ships and returning them to the Academy for examination at the end of a year to complete the first-class year there—the academic board to prescribe the course of studies to be followed during the year at sea, and in which they would be examined upon their return? This, I believe, can be done under present laws.

That part of the course could be confined to navigation, ordnance and gunnery, seamanship, and engineering, and be entirely practical in its nature and systematically laid out. These young men, of course, would perform regular duties as junior officers while on board ship.

I would be glad to receive from you suggestions along these lines.

Very sincerely, yours,

VICTOR BLUE.

LETTER NO. 12.

UNITED STATES PACIFIC RESERVE FLEET,
 "U. S. S. MARYLAND", FLAGSHIP,
San Diego, Calif., April 8, 1916.

MY DEAR BLUE: Referring to your letter of April 1, I hope I did not misunderstand your meaning in the last two paragraphs. I understood that the curriculum could not be changed for the first three years of the course, but at the end of the second class year, but after three years at the academy each class should go to sea and spend its first class year in the fleet, returning to Annapolis for its final examinations and graduation. In other words the Naval Academy course proper would be three years, the last year being devoted to a cruise and to strictly practical work.

I hope you will push this through before you leave the bureau.

I can not too earnestly impress you with the fact that a very bad condition exists as regards the personnel, and the sooner you get the ships in full commission, with complete complements of officers and men, the better it will be.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral VICTOR BLUE,
*United States Navy, Chief of the Bureau of Navigation,
 Navy Department, Washington, D. C.*

LETTER NO. 13.

UNITED STATES PACIFIC RESERVE FLEET,
 U. S. S. "MARYLAND," FLAGSHIP,
San Diego, Calif.

MY DEAR BENSON: Winslow conferred with me concerning a relief vessel for the *McCulloch*. I advised that the *Charleston* remain at San Francisco until May 12, at which time, you will note, the *Albany* should arrive there according to the cruising schedule. If you approve this plan, the *Albany* may remain indefinitely at San Francisco for neutrality duty, and the *New Orleans* may relieve the *Albany* with the Naval Militia. The *Charleston* can leave San Francisco May 12 for any other duty. It seemed to me that this was the best solution of the problem. I am more than anxious to have the ships of the reserve fleet ready for any duty at any time.

We hope to have target practice for the *Maryland* this week. And I shall make every endeavor to have the torpedoes of all ships tested in turn at the Keyport station.

We are unfortunately short of skilled personnel in connection with torpedoes. This is a serious matter because in time of a war the torpedoes of these vessels, if properly used, might do some execution which their light batteries could not do.

I can not too earnestly impress you, my dear Benson, with the immediate necessity for training our personnel with all kinds of weapons. When I inspect the crews and note the youth of most of the apprentices, I can not but wonder how long it will take to develop them into material that will answer the requirements of war.

I wish I could see you personally and talk to you freely on this subject. I am sure the Navy Department realizes that we have hard work to do and should begin at once.

I was encouraged by Blue's last letter concerning the practical scheme for midshipmen to spend the last year of their course in the fleet. The increase of warrant officers is also welcome, but we do need proper captains and commanders right away. I would like to see the whole list of lieutenant commanders promoted to-morrow, with a good increase in admirals, captains, and commanders. The effect upon the Navy would be electrical and it would do nothing more than provide for the emergencies of the next few years. Really, Benson, we must look ahead and do things quick.

I inclose a copy of my last letter to Blue. I hope I am not nagging you. It would be easy for me to say and do nothing.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral WILLIAM S. BENSON,
*United States Navy, Chief of Naval Operations,
 Navy Department, Washington, D. C.*

P. S.—I have talked with Winslow about the coal situation here, and I understand this station will be supplied at once. We ought to have a good surplus of coal here at once. I have instructed all my ships to fill up at Bremerton and San Francisco because of the shortage at San Diego. This might hamper our movements seriously.

W. F. FULLAM.

LETTER NO. 14.

UNITED STATES PACIFIC RESERVE FLEET.

U. S. S. "MARYLAND," FLAGSHIP,
San Diego, Calif., April 12, 1916.

MY DEAR BLUE: I was glad to get the two circular letters regarding (1) the training of apprentices in this fleet, and (2) the advancement in rating of enlisted men.

These are timely and cheering and will help things.

I am at sea with the *Maryland* training for target practice. A tour of the decks and turrets, with few men and hardly an officer in sight, is impressive! For Heaven's sake get officers and men as quick as you can and by every means in our power. We must train them for the future, and do it now.

I answered your last letter promptly and fully. The Navy Department should correspond with officers afloat and welcome their suggestions. The department should wish to know the worst. Perhaps it does—I certainly hope so.

I have heard rumors of your going to sea before long. If you do, I truly hope your successor will be one to whom we can write and confide. He should be carefully selected. If not, the Navy will go to the devil in double time.

I am never pessimistic by nature, but I am convinced that the situation as regards lack of personnel, etc., is critical; that laxity, discouragement, and demoralization are too prevalent; that discipline is not good, and that we should take a tremendous brace along all military lines and get every officer, every man, and every ship on the move, and cheer up generally.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral VICTOR BLUE,

*United States Navy Chief of Bureau of Navigation,
Navy Department, Washington, D. C.*

LETTER NO. 15.

UNITED STATES PACIFIC RESERVE FLEET.

U. S. S. "PITTSBURGH," FLAGSHIP,
San Diego, Calif., May 8, 1916.

MY DEAR BLUE: I inclose herewith copy of a letter and plan just forwarded to Benson.

All ships will be provided with sufficient apprentices to fill their complements and enable them to move by August 19 if you will give us only a few more officers.

I hope the department will carefully consider all the suggestions I have made in this plan.

You will note the parts that deal with personnel. If adopted, this scheme would ease up on the Naval Academy and enable the department to educate midshipmen in a practical manner and at the same time get all our ships tuned up.

I wish you would consider this plan promptly, and let me know whether I am to bother myself with such matters as these any more. It is very easy to go along in the Navy and carry on a routine. It seems to me now is the time to encourage everybody to think and to try to do something.

Respectfully, yours,

W. F. FULLAM

Rear Admiral VICTOR BLUE,

*United States Navy, Chief of Bureau of Navigation,
Navy Department, Washington, D. C.*

LETTER NO. 16.

UNITED STATES PACIFIC RESERVE FLEET,

U. S. S. "PITTSBURGH," FLAGSHIP,
San Diego, Calif., June 10, 1916.

MY DEAR BLUE: Thank you for your note of June 3 concerning torpedo officers. Of course, I knew that Mr. McMorris and Mr. Hibbs were well qualified, but you see I have five armored cruisers that carry torpedoes and I naturally feel that it is a duty to bring the torpedo element up to the proper standard, and this, of course, can not be done without a good personnel.

I suppose the torpedo boats and submarines will have the first call, but when officers are available for this work I hope to get them.

I am trying to emphasize all "military" elements in these ships by giving as much as possible to target practice, etc.

I can not too earnestly impress you with the fact that we need a tremendous military revival as regards the personnel of the Navy. From my observation out here I do not believe the standard has ever been so low as it is to-day. There are not officers enough to administer discipline properly and to secure a proper mental attitude on the part of the enlisted men. I consider that there is laxity and slackness everywhere and that a large percentage of our personnel is absolutely unprepared to meet the emergencies of war. Many of the apprentices are very young and we can not expect them to reach a high standard in a few weeks or months, particularly if ships are not kept cruising and drilling constantly.

The few officers in this fleet appear to be working very hard, but I will not hide my head in the sand like an ostrich and refuse to see things or to realize the truth as regards the conditions out here, for I consider them precarious in the extreme.

There is only one solution—get every ship filled up as soon as possible with officers and men and begin a thoroughly military system of administration and discipline with every attempt to infuse enthusiasm and spirit into everybody.

I am glad to know that there is some chance of getting an increase of the upper grades in the appropriation bill, and I deplore the fact that the law which discourages the employment of retired officers has not been repealed so that we could get additional active officers in the fleet at once. It is also very unfortunate that another class can not be graduated in September to supply immediate needs. They could be given a postgraduate course a few years later, but we need them right now.

I have been in the department a year and I know the difference between plans on paper and the actual doings and conditions of officers and men in the fleet itself. The last counts most and tells the true story. If we fail to realize this fact, we will neglect our first duty.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral VICTOR BLUE,
United States Navy, Chief of Bureau of Navigation,
Navy Department, Washington, D. C.

LETTER NO. 17.

UNITED STATES PACIFIC FLEET RESERVE FORCE,
U. S. S. "COLORADO," FLAGSHIP,
Salina Cruz, Mexico, July 13, 1916.

To: Commanding officers, all vessels, Reserve Force, United States Pacific Fleet.

Subject: General instructions concerning personnel, etc.

Reference: Force Order No. 10.

1. The attention of commanding officers is called to the requirements of Force Order No. 10 concerning the training of apprentice seamen, and to Circular Letter No. 410 of July 5, concerning personnel, care of machinery, boilers, etc.

2. Every effort will be made to strictly conform to all the requirements of these orders in order that the efficiency of ships, and particularly the personnel, may be improved as much as possible.

3. It is desirable that all seamen, ordinary seamen, and apprentices shall be taught to pull a good oar, and in order to accomplish this result pulling boats will be used daily whenever the weather and other conditions permit.

4. The officers of the deck and the petty officers of the watch on the forecastle will be required to stand a very strict heel and toe watch and a sharp lookout night and day.

5. All midshipmen who join reserve ships will be assigned watch duty on deck, and commanding officers will require of the midshipmen the strictest attention to every duty, and will prescribe a routine for the industrious employment of their time that will secure progress in practical naval subjects. It is important that these young men shall be started right.

6. A thoroughly military system will be enforced with attention to every principle and tradition of naval discipline. Smartness will be demanded at all times, and laxity, carelessness, inattention to little things, etc., will not be tolerated.

7. Commanding officers will see that all officers under their command are impressed with the importance of the subjects covered by this order.

W. F. FULLAM.

LETTER NO. 18.

UNITED STATES PACIFIC FLEET RESERVE FORCE,
U. S. S. "COLORADO," FLAGSHIP,
San Diego, Calif., September 7, 1916.

MY DEAR PALMER: I am glad you sent a few officers to the *Oregon*. All ships in reserve here have cruised a good deal, and Operations evidently intends to keep them cruising. I am glad of this because they will be kept in better condition, and they serve as excellent training schools for the large number of recruits you will soon have.

The shortage of competent officers in the armored cruisers has been precarious times, and I have feared that some disaster might take place. I have cautioned them to navigate with great care and to give strict attention to boilers and machinery.

If these armored cruisers are to be ready when called upon—and they are the only cruisers we have—there are three things that must be kept in good condition: Boilers and engines; (2) guns, and (3) torpedoes. I assure that I have struggled hard with this problem with the minimum of assistance as regards officers and men, and I shall continue to do so and to avoid bothering you all I can. However, I earnestly advise you to turn your attention to the Pacific. The Mexican trouble may not be settled for some time, permanently, to come, and the war plan distinctly states that the Navy's rôle on this coast will be more important than on the Atlantic, because there are more ports here, and a longer coast line to blockade or seize.

I have advised Operations to complete the *West Virginia* and *Saratoga* as soon as possible and put the *New Orleans* on a cruising basis. All these ships are important and may be made very efficient for future emergencies. Lieut. Bowen, my staff engineer, who is also engineer of this ship, is now overworked. He is a hustler, and the efficiency of these armored cruisers will develop largely upon his being free to inspect their engineer departments frequently and searchingly.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral L. C. PALMER,
United States Navy, Chief of Bureau of Navigation,
Navy Department, Washington, D. C.

LETTER NO. 19.

PASSAGE SAN FRANCISCO, CALIF., TO BREMERTON, WASH.,
September 28, 1916.

MY DEAR PALMER: Referring to the telegram I sent you to-day concerning officers for the *New Orleans*, you must bear and forbear with me for the following reasons, as I have been and still am trying to do something for the good of the fleet:

(1) The armored cruisers are now and have been cruising. Each one has covered about 6,000 miles and has been on active duty in Mexico.

(2) We are required to have target practice, torpedo practice, and steaming trials. These tests require officers to prevent accidents and disaster.

(3) These are the only scout cruisers we will have for three or four years to come. Unless they are made ready the fleet will remain blind.

(4) These ships are now training apprentices for the fleet in addition to their work. We have trained 1,100 apprentices for the fleet in the past few months.

(5) As commandant in Newport in 1909 with from 800 to 2,000 apprentices and with the *Mercedes*, *Constellation*, *Cumberland*, and *Boxer* I had three commissioned officers—no more—for three years. To-day Johnson has nine commissioned officers and the two biggest ships, the *Mercedes* and *Cumberland*, have been sent away.

(6) In 1913 at Chicago, I had three commissioned officers. To-day Moffett has six. It was my experience at both of these stations that warrant and chief petty officers handle apprentices and train them better than commissioned officers.

(7) I see that Dayton has seven commissioned officers at Norfolk—more than twice as many as I had at Newport, although the *Mercedes* at Newport was "receiving ship" also.

I am sure you will pardon these comparisons and forgive me for saying that if you will give me on-half the excess of officers at these three training stations over what they had a few years ago, I will keep these six ships going, make them ready for business next spring, and train apprentices as well or better than at the training stations.

I need four more officers now—three for the *New Orleans*, and an engineer officer for this ship, so that Bowen, the force engineer, can do his proper duties—duties which

very important. I will not ask for any more officers for the present, but the *Saratoga* will need six or seven more in the spring, and each armored cruiser should have more when available.

If the department will help me, I will guarantee to have six armored cruisers in one condition for mobilization next summer.

Note the number of officers in ships of the battleship fleet, and I believe that each of them could spare two or three junior officers for ships that are so short handed. In fact, I believe young officers are falling over themselves in the battleships, standing no watches, and not learning very much. Chief petty officers on the battleships could take many of the stations and do many of the duties now assigned to junior officers in fire control, etc., until we get more officers for such work.

In conclusion, Palmer, please consider the necessity and wisdom of graduating the present first class in February. Make preparations to do so now—at once. The first year is entirely practical, and if you will send these young men to the fleet—each of them with a sextant of his own—and put them on watch and make them hump themselves, they will learn more than by remaining four months at the academy, and will help out the fleet in this emergency. I will guarantee to put some of these young men through a course on these ships that would make officers and men of them. This is no idle boast.

Excuse me for saying so, but this is the time to break away from cut-and-dried systems and do something. The Naval Academy is overcrowded and the course there could be cut down to three or three and one-half years for a few years to come, training graduates at sea and giving them a postgraduate course several years later when opportunity permits. This plan, if adopted, will give you 200 young officers in February which will help the fleet tremendously. I earnestly advise you to do it. I will cheer things up.

I could have had a soft snap out here had I accepted the situation and said and done nothing.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral PALMER,

United States Navy, Chief of Bureau of Navigation,
Navy Department, Washington, D. C.

LETTER NO. 20.

UNITED STATES PACIFIC FLEET, RESERVE FORCE,
U. S. S. "COLORADO," FLAGSHIP,
Navy Yard, Puget Sound, Wash., October 11, 1916.

MY DEAR CHASE: Thank you for your letter of the 5th.

I am glad you understand me, and I hope that you and Benson will not be annoyed by my persistence. If you do not trust me and help me when I need help, my task will be hopeless.

Getting the armored cruisers to Mexican waters was a good thing, but they must not stay there too long. The *Maryland* should come north at once, and it is my duty to impress you with this fact.

One junior lieutenant and one ensign for the *New Orleans* is all I ask. I can send a boatswain from the *Colorado* and a gunner from the *Maryland*, and with them *Canagua* can relieve the *Maryland*, leaving here about October 18. In other words, two young officers will give the *Maryland* a relief and prevent harm to the ship and to the morale of the crew.

I deplore the fact that young officers must be kept at training stations for academic work in such emergencies as this. Can not the Secretary be induced to drop the academic instruction temporarily? Has the condition been made known to him? It was only by persistence that I got the course at training stations cut down to two months. Had it not been for this no armored cruiser could have gone to Mexico. And now they are practically being punished instead of rewarded for good work.

It is not alone my idea that there are more officers or young officers in the active ships than are needed at present. Many officers agree with me that some of these young officers could be spared to supply needs like these in the Pacific. It is my experience that chief petty officers and warrant officers are not fully utilized nowadays in the battle fleet. If they were, some of the young commissioned officers could be spared to meet other demands, at least temporarily.

I have made a casual inspection of the *Saratoga*; and shall inspect the *New Orleans* this week.

I am trying hard to get six armored cruisers ready for war service by June 1—the only cruisers and scouts we have for the fleet. It is an up-hill job, but I can do it with little encouragement.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral L. C. PALMER,
United States Navy, Chief of Bureau of Navigation,
Navy Department, Washington, D. C.

LETTER NO. 25.

UNITED STATES PACIFIC FLEET RESERVE FORCE,
U. S. S. "PUEBLO," FLAGSHIP,
San Diego, Calif., January 11, 1917.

To: The Secretary of the Navy (Operations).

Subject: Length of time to repair *South Dakota*, *Frederick*, and *Huntington*.

Reference: Commandant, Navy Yard, Puget Sound, let. 35611-C, RMG-Ly, dated January 6, 1917.

1. Referring to the letter above referenced, the force commander regrets that the time of completion of the *South Dakota* has been extended from March 10 to May 15, that the *Frederick* may not be completed until June 15, and that the *Huntington* can not be handled at the navy yard, Puget Sound, prior to May 15.

2. It will be noted that the *South Dakota* reached Bremerton November 29, 1916, and she will have been there 5 months and 11 days if not completed until May 15; that the *Frederick* reached Bremerton December 30, 1916, and will have been there 5 months and 15 days if she is not completed until June 15.

3. The force commander does not wish to importune the department nor to officiously interfere with its policies or with the details of navy-yard work; but in the attempt to get the armored cruisers on the Pacific into cruising condition at the earliest practicable date the force commander, after months of effort, finds the present situation extremely discouraging.

4. It is submitted that there must be a decided lack of facilities, labor, or money available at the navy yard, Puget Sound, if an armored cruiser can not be properly overhauled in less than six months.

5. From observation it is not believed that the difficulty rests with the personnel of the yard.

6. If it is the desire of the department, therefore, that the armored cruisers be prepared for war service at an early date, it is respectfully suggested that the navy yard, Puget Sound, be immediately supplied with the necessary funds, material, and laborers, and that special efforts be made to complete the *Frederick* and *South Dakota* not later than March or April, respectively, in order that they may be available for Mexican service, and that the *Huntington* may reach the yard at an earlier date than that set by the commandant.

7. In the same line it is suggested that every effort be made to anticipate the early completion of the *San Diego* as soon as that ship reaches the navy yard, Mare Island.

8. In conclusion it is respectfully submitted that the inability of the navy yards on the Pacific coast to handle expeditiously the repairs to the few ships of the Pacific Fleet demonstrates the need of serious attention to a condition which is, to say the least, precarious.

W. F. FULLAM.

Copies to D-in-C, Comdt., Puget Sound; Comdt., Mare Island.

LETTER NO. 26.

In reply address the Secretary of the Navy and refer to No. 28365-49.

NAVY DEPARTMENT,
Washington, January 24, 1917.

To: Commander, Reserve Force, Pacific Fleet.

Subject: Length of time to repair *South Dakota*, *Frederick*, and *Huntington*.

Reference: (a) Commander reserve force letter No. 751-WFF/M, January 11, 1917.

1. Receipt of the above reference is acknowledged.

2. The department notes the desire of the commander, reserve force, to have the repairs to the ships of his force completed at the earliest possible date, which desire

are the weakest of the cruisers as regards boilers, all the others, including the *Albatross*, being in far better condition in this respect.

This letter is written with the assumption that it is the department's desire that our cruisers shall be in dependable condition for war service and ready to attain maximum speed on or before June, 1917. If there is failure to thoroughly overhaul them at this time, the fleet will be crippled for lack of dependable scouts for three years.

It is therefore recommended that no efforts be spared to place the *Frederick* and *Albatross* in absolutely reliable condition.

W. F. FULLAM.

LETTER NO. 23.

UNITED STATES PACIFIC FLEET RESERVE FORCE,
U. S. S. "PUEBLO," FLAGSHIP,
San Diego, Calif., December 22, 1916.

DEAR PALMER: I noted with delight that in your "hearing" you advocated graduation of a class in February and another in June, and the three years' course a time to come.

It is the only solution of the problem to get more officers in this emergency, and I noted most keenly the report that the Secretary opposed this plan.

The situation out here is perilous, in my estimation.

And the change in the course at the training station from two to four months.

It will cripple my force again. I wrote to Senn about it and will not bother you with repetition. Please be assured that suggestions of mine are made with the desire for some assistance and that I do not wish to annoy or bother you.

We may have good reasons for changing back to the four months' course, and if the change is greatly expedited we may not suffer so much out here after all. You will hear before long.

With the season's greetings and best wishes, I am,

Sincerely, yours,

W. F. FULLAM.

Admiral L. C. PALMER,
United States Navy, Chief of Bureau of Navigation,
Navy Department, Washington, D. C.

LETTER NO. 24.

UNITED STATES PACIFIC FLEET RESERVE FORCE,
U. S. S. "PUEBLO," FLAGSHIP,
San Diego, Calif., January 7, 1917.

DEAR PALMER: I have read your annual report and your hearing, and I congratulate you.

He had asked for officers and men in the beginning as you have done, and if we needed them, he would have saved his reputation, and also saved us from a very precarious condition of affairs.

It is desirable if your plan to graduate midshipmen in February and in three months is not approved.

Midshipmen were graduated after three years, with certain rules regarding their conduct and studies during the next two years to come, each one taking a sextant course, and all being compelled to stand watch on the forecastle or quarterdeck of the ship at sea as in port, their shore liberty regulated within reasonable limits, and soon become of great service to us on board ship, and their ultimate professional standard would not be lowered—in fact, I believe it would be improved.

We will get a lot of young officers right away, officers of senior grades could be put in higher duties, where their services are sadly needed.

We would employ certain retired officers ashore, for there are many who could do so to advantage, and relieve active officers of lieutenant's rank and above.

We are suffering on this coast for officers of rank. There are not enough for the administration of discipline, and for courts and boards, etc. Retired officers could be utilized for permanent courts at various places.

Now you realize that the condition regarding officers out here is precarious. I am sure you are doing the best you can, and I note that you have recently ordered of our force.

10. The above conditions should be considered in case it is anticipated that the armored cruisers may be required to "keep the sea" and to maintain their speed in emergencies. If they are to be relied upon for constant and efficient scout duty it would seem that their engine-room personnel should not be only completely filled but that there should be at least a few surplus men in certain ratings.

11. The force commander realized that the Bureau of Navigation may have reasons and for retaining men on board receiving ships to provide drafts for the Asiatic station for other reasons, and, similarly, there may be reason for returning to the four month course at the training station.

12. The armored cruisers at present have a few men in excess of the old reserve complements, but if the new complement of 50 per cent is to be authorized, there will be vacancies in the Reserve Force.

13. The department has doubtless decided upon the duty to be performed by the armored cruisers in an emergency and also upon the policy to be followed in providing them with officers and men.

14. The force commander is merely bringing this subject to the attention of the department in order that actual conditions and necessities may be made known in time to prevent these ships going into active service with insufficient officers and men and with untrained crews that may be found unequal to the demands made upon them, if they are confronted with serious responsibilities.

W. F. FULLAM.

LETTER NO. 28.

UNITED STATES PACIFIC FLEET RESERVE FORCE,
U. S. S. "PUEBLO," FLAGSHIP,
San Francisco, Calif., March 4, 1917.

MY DEAR PALMER: I have just read your "hearing" before the Navy Committee on the need of officers and men and the necessity for graduating midshipmen after three years at Annapolis.

This is just a line to congratulate you on your splendid presentation of the whole matter. It is a pity that it was not done long ago, before you came to the bureau. I can not see how your argument can be resisted, and I should think that the Navy Department and every officer in the Navy would stand firmly behind you in your splendid efforts.

Unless we get officers and men and get them quickly, we can not properly prepare our ships for serious work and still less can we expect to have crews and officers ready for the new ones that are coming on.

I will not take more of your time.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral L. C. PALMER, UNITED STATES NAVY,
United States Navy, Chief of Bureau of Navigation,
Navy Department, Washington, D. C.

LETTER NO. 29.

UNITED STATES PACIFIC FLEET RESERVE FORCE,
U. S. S. "PUEBLO," FLAGSHIP,
San Francisco, Calif., March 9, 1917.

MY DEAR CHASE: I suppose Benson is overwhelmed with manifold duties, and although you are being kept out of mischief, too, I want to suggest that a permanent policy should be decided upon concerning the armored cruisers pending the building of better ships to take their place.

In my struggle to get these ships into condition for effective service (and it has been an unceasing struggle for a year and a half) the following facts have been made plain:

(a) The armored cruisers will not be sufficient unless arbitrary orders are given by somebody to provide them with what they need, as soon as practicable.

(b) They will never be dependable unless they are kept cruising away from the yard, so that their defects can be noted.

(c) The case of the *West Virginia* proves the above.

The personnel of these ships must slightly exceed fifty (50 per cent) per cent, and especially in certain ratings, to keep machinery in condition for maximum speed. The loss of the *Milwaukee* was due to inexperienced and bad seamanship of officers of the junior grade.

Three armored cruisers will be ready by April 7—*Pueblo*, *South Dakota*, and *Merick*; three others will be ready June 1—*Saratoga*, *Huntington*, and *San Diego*.

When these six ships are all ready for service, I earnestly recommend that not less than four of them be kept together at all times under the personal eye of the force commander, for constant inspection, limited cruising, target practice, drills, and routine administrative work to keep them tuned up and to keep their personnel properly disciplined.

The remaining two ships may be assigned to assist the active fleet in Mexico when needed.

I hope, Chase, that Operations will consider the above. I don't want to bag the department, but I do want to help keep these armored cruisers ready for the important work that might be demanded of them, and I am convinced that it can be done if the plan outlined above is approved.

It is of prime importance that four of them be kept together as a division at all times. That will keep material and personnel in the best possible condition. When the ships separate from each other and from the force commander's control, deterioration begins.

Sincerely, yours,

W. F. FULLAM.

Capt. VOLNEY O. CHASE,
United States Navy, Office of Chief of Naval Operations,
Navy Department, Washington, D. C.

LETTER NO. 30.

UNITED STATES PACIFIC FLEET RESERVE FORCE.

U. S. S. "PUEBLO," FLAGSHIP,
San Francisco, Calif., March 25, 1917.

MY DEAR PALMER: I inclose for your eye copy of a circular letter just issued to my ships.

I am trying hard to arouse some military enthusiasm, and heaven knows we need it.

We are doing all we can to stimulate recruiting with baseball teams and the assistance of the enlisted men. The apathy of the people on this coast, however, is amazing.

I fear you may have been irritated by my taking up the personnel with operations. But, My dear Palmer, ships can't operate without men, and I thought under the present organization of the Navy Department, and particularly at a time like this, that operations would coordinate with bureaus. For this reason I have sent nearly all of my official letters through operations.

I have worked very hard in my attempts to get these ships ready for war. My correspondence with the department for a year and a half has shown one constant, never-ending struggle. Reviewing it now, I feel that I have deserved some credit, but I have received very little evidence that my work has been properly appreciated. Of course, I haven't worked simply to win the department's approval, but rather from a sense of duty, and because I like to do things; and when I know I'm right I will insist on doing things in the face of every discouragement.

I am well supported by the officers of the reserve force.

Of course, we will have to work mighty hard to train our crews when mobilization takes place. We all welcome the job.

Sincerely, yours,

W. F. FULLAM.

Rear Admiral L. C. PALMER,
United States Navy, Chief of Bureau of Navigation,
Navy Department, Washington.

NAVAL INVESTIGATION.

WEDNESDAY, APRIL 7, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 o'clock a. m., in room 235, Senate Office Building, Senator Frederick Hale presiding.

Present: Senators Hale (chairman), Ball, Keyes, Pittman, and Trammell.

The CHAIRMAN. The committee will come to order. Admiral Rodman, will you take the stand?

TESTIMONY OF ADMIRAL HUGH RODMAN, UNITED STATES NAVY.

(The witness was sworn by the chairman.)

The CHAIRMAN. Admiral, have you any statement to make about matters that are pertinent to this investigation?

Admiral RODMAN. I have, sir.

The CHAIRMAN. And in that statement will you give an account of the official positions held by you prior to the war and during the war?

Admiral RODMAN. I am not quite sure whether I have that in my statement, sir. I can very easily do that.

The CHAIRMAN. I wish you would add that in making your statement.

Admiral RODMAN. I prepared this statement, gentlemen, that I might read it, that I might get the sequence in the order in which I would like to lay my evidence before you, and prior to reading my written statement I wish to assure this committee that I am here solely at my own request and on my own initiative, I am here purely from a sense of duty, to defend the good name of the Navy. I shall make my statement for this purpose alone, without malice, with no ulterior motive, and only for the reasons which I have mentioned.

The CHAIRMAN. Before you go further, I want to state that it does not seem to me that the good name of the Navy is at issue.

Admiral RODMAN. I hope not.

The CHAIRMAN. All of us want to defend it.

Admiral RODMAN. I hope so.

The CHAIRMAN. No one could have more interest than this committee, all of whom are members of the Committee on Naval Affairs of the Senate, in the Navy; but as I have repeatedly sated, we are not here to settle differences between officers of the Navy, or between

I believe to be the general sentiment of the Navy to the indiscreet and injudicious methods which he has employed in setting forth his views.

Admiral Sims's letter was very indiscreet—this, I believe, is the general opinion—it was that which, no doubt, brought about this investigation. Naturally, in defending his actions he has tried to make good by attempting to make it appear that his remarks were pertinent only to the first months of the war. To my mind it covers a wider field; his indiscretions lay primarily in the tone, wording, and phraseology of his letter, and very particularly in his breach of confidence by making public an intimate and confidential conversation which should have been held sacred. Had his letter been less indiscreet, had he omitted reference to conversations which, as I have said, he should have held sacred and confidential, had it been couched in moderate terms, such as are usually used in official correspondence, had it been less antagonistic, it would no doubt have followed the usual course of such communications, received due consideration by the proper authorities, and doubtless some good would have come from it. His mention and the subsequent publication of a certain admonition which he states he received prior to his departure for London no doubt has had its effect upon the cordial relations which heretofore existed between us and one of our closest allies. In every expression of opinion which I have heard concerning it, both in and out of the Navy, it has received the deepest censure.

His status in London, as I understand it, was that of a liaison officer, which later was combined with the duties of naval attaché there. His title as "Commanding United States naval forces in European waters" is particularly misleading. He was in reality a subordinate part of Naval Operations, with his office in London; he was its advanced agent; his was the relay office for all communications between Washington and the forces in the field. He did not personally direct the movements of our fighting ships in the war zone, as the public so generally believes. For example, every operation of the battleship force under my command was ordered and directed by Admiral Beatty, of the Grand Fleet, of which my command was a part. I served under Admiral Beatty's command throughout the war. I understand that the destroyers based on Queenstown were operated under Admiral Bayly, of the British Navy; that Admiral Wilson directed the movements of ships in and out of the French ports; that the ships of Admiral Strauss's command that laid the North Sea mine barrage were routed and protected by the Grand Fleet, and that the fighting ships in general operating in the war zone had their movements directed by some one other than Admiral Sims.

I would like to explain briefly a little more to the committee as to the operation of our convoys. Without going into the details, I have an idea that when our convoys were organized—I mean the transports—there was assigned to them their fighting force for protection; that a convoy would be routed from New York or Hampton Roads by Operations. They would be directed to proceed, we will say, to a point "A" in mid-Atlantic. Now, this information concerning the convoys would naturally be cabled to Admiral Sims in London, who would immediately inform the British Admiralty, and

also inform the officer, we will say, if it were going to a port in France, who was there, Admiral Wilson. It was then the duty of those officers who controlled the destroyers to meet them at a designated point, to afford them protection against the submarines, and on their arrival close to the coast of France Admiral Wilson would direct the naval vessels that would go out to meet them and bring them safely into port. I say this because I believe that Admiral Sims did not direct our convoys.

The CHAIRMAN. Did you have anything to do with the convoy system?

Admiral RODMAN. Nothing at all, sir.

The CHAIRMAN. This is simply your idea of it?

Admiral RODMAN. Just my opinion, sir.

My conception of his duties was that he was in London as a central office, or advanced base of operations, to help coordinate our combined interests, to collect and forward information, to make recommendations, to look out for our correspondence, supplies, stores, personnel in European waters, and to approve or disapprove his subordinates' requests or recommendations in a limited degree, referring to Washington the major ones, in his discretion; but all under the immediate supervision of the Chief of Operations in the department in Washington.

Reasoning from a standpoint of experience I would naturally infer that when Admiral Sims sent his communications to the Navy Department bearing upon policy or any other subject, that they would have received due consideration the same as from any other officer, and that the most important would have been submitted to the General Board of the Navy for its opinion. This board consists of the older and most experienced officers. It has neither administrative nor executive duties, but acts solely in an advisory capacity. And so, it seems to me, that unquestionably his communications would have received proper consideration, and that action would have been taken in accordance with the best advice offered and that which was considered best by operations. There is no doubt that when those officers who were intrusted with the policy of the Navy, had formulated an opinion, it was laid before the Chief of Operations, who was not only influenced but very largely governed by the advice of technical experts, i. e., officers of the Navy Department.

The policy of the department is largely influenced by the advice of this board, which amongst other duties assists in preparing all general war plans. These plans are formulated but modified from time to time, as new conditions arise to warrant it. To imply anything to the contrary shoots wide of the mark. I know, from experience, from having been a member of this board just prior to the declaration of the war, that my statement is correct; that there were plans and policies in existence anticipating the possible advent of our entering the war, and that they were no doubt modified as I have stated. There was probably not one single nation engaged in this great World War but which had to revise every plan that it had previously made. Admiral Sims's recommendations to the department looked to just these same ends.

One might infer that he considered himself the sole source of information, and that in consequence his every recommendation should have been instantly approved. It is true that all of the maritime

allied countries were constantly communicating direct with the department through their embassies in Washington. It is a fact that foreign allied naval attachés were in daily direct communication with our Navy Department, setting forth their desires, interests, and policies of their home countries; therefore Admiral Sims could not, by any manner of means, have had a thorough knowledge of the varied requests and propositions set forth. It was unqualifiedly the mission of our department to consider all such questions and act accordingly; as there were multitudinous recommendations and interests to be considered, many of which were interdependent with our own or pertained solely to their individual needs, all of which had to be combined, and decisions be rendered accordingly.

There is also no question but that Admiral Sims was in a most advantageous position for making recommendations and that they would have had great weight—and no doubt they did—particularly after the Allied Council was formed and he became a member; but I refer more particularly to the period prior to this and to which he himself refers in his letter. Possibly, in his earnest endeavors he has arrogated to his office more importance than was actually the case; and implies that his recommendations to the department should have received immediate and unqualified approval. I do not agree with him in the principle laid down that all recommendations from juniors to their seniors should follow this course. For example, I once made the request to him as my senior, that the British destroyers that were assigned by the Grand Fleet to my division of battleships as our screen—I mean that every time battleships went to sea on both sides, there were a number of destroyers to act as a screen against submarines—be replaced by the newest type of American destroyers that were being sent for work in British waters, giving my reasons herefore. He disapproved it. I never for a minute resented it, recognizing that he being my senior that this was his privilege; yet he implies that just the contrary should have obtained when he made recommendations to his senior, the Chief of Naval Operations.

I have an idea that the war was not fought and won in London alone. In spite of what Admiral Sims may think, unqualifiedly the only place for the direction and administration of the Navy's policy was in Washington, delegating to others abroad, and commanders in the field, such authority as should properly belong to them. My experience was that this was the case.

I do not for one minute wish to detract one iota of my opinion that Admiral Sims rendered most conspicuous and valuable service to the Navy during the war.

I can say that I know of no officer who was more conspicuous in this war, and who rendered better service, than Admiral Sims.

In this he is held in the very highest esteem; but I do wish to impress upon this committee that the only logical place in which our Navy could possibly be directed was in Washington, and that officers who were there, and legally responsible, were the logical ones to do so. To have moved our whole administration to London, even though 3,000 miles separated it from the scene of hostilities, would have been a serious blunder. The whole responsibility of winning this war was not placed upon the shoulders of Admiral Sims in his London office; the Navy Department could not surrender to him all of its power and responsibilities.

The motive which prompted this public investigation is veiled to me under a smoke-screen of words, and I can not for the life of me see but that it will discredit the work of the Navy in this war, which I know has been most creditable. It has already had its effect upon Congress, to say nothing of the public.

The CHAIRMAN. To what motive do you refer, Admiral?

Admiral RODMAN. It would be very hard for me to explain, Senator. I think that I have tried to show that beforehand. What I am trying to show is that it would have seemed to me the logical thing for an officer to have kept his letter in the hands of the department. The fact that it has been given publicity, I know from talking to a great many people in civil life, has brought about this question. "Well, what is the matter with the Navy?"

The CHAIRMAN. My question was meant to develop the question of whether you meant to accuse this committee of having any motive.

Admiral RODMAN. Not in the slightest degree, sir; not in the slightest. I would not do such a thing, sir. Even though Admiral Sims states that he did not desire this publicity, I am still of the opinion that if he himself did not desire it and had used his best endeavor to have prevented it, it might have been avoided. But the impression left on my mind, by giving his letter all this publicity, and the evident effort throughout to discredit the Navy is that it may have been the intention to give the impression that he had most of the responsibility for running this war, and that the department fell down upon its job because it did not follow his advice. This at the expense of the good name which the Navy so justly deserves. This whole affair to my mind savors of ill-advised criticism against the Navy. I refer to his criticisms before, and since the investigation has been under way. But still, since the investigation is under way, let us hope that some good may result from it, and I think that it will.

Another deep impression that is made upon my mind is, that, though praise is bestowed upon its officers and men, that there has been laid bare before this committee by some of the witnesses every possible point which is derogatory to the Navy—I refer to that more particularly in preparedness, which I will come to later—without stating the thousand and one good ones which should redound to its credit, and that they have attempted to sustain their argument by documentary evidence.

Throughout this war, and during my entire naval service, I have never found it necessary to refer to documentary evidence to establish and convince anyone of acts on my part. For example, I believe he has stated that the division of battleships which I commanded for a year or so in the war zone was not prepared when we entered the war. That it was not homogeneous. I wish to state from having been in the Atlantic Fleet from the time the United States declared war, that never in my forty odd years of service, most of which I have spent at sea, and in the latter part in the North Atlantic Fleet, never have I seen such preparedness and efficiency as obtained in our battleship fleet as at the beginning of, and during, the war. No ship has ever, in my experience, been absolutely efficient; nor will there ever be one whose commanding officer will conscientiously state that it is 100 per cent so. For this reason every officer who has pride and interest in his command will always strive for greater efficiency. No ship will ever be in absolutely perfect condition for no other reason

han that from its complicated design, from the multiplicity and complexity of its machinery and constructive features, it will always require certain repairs, alterations, and improvements to keep pace with new and important inventions and improvements, and for its maintenance and upkeep.

The personnel of our ships must of necessity from time to time be changed, and since the operation and efficiency of our ships depends upon team work, it requires constant drills and exercises to promote and insure maximum efficiency. One of his references to my division was that it was not homogeneous in reference to its guns; that different ships had different calibers. True, yet he knows full well that this has not the slightest bearing upon the reason for the selection of those individual ships which constituted my division to go on foreign service with the British Grand Fleet; that it was based solely upon the fact that they were coal burners and that coal as fuel for these ships, instead of oil, could best be supplied while actively engaged in British waters, and that he himself so stated to the department. This statement of his, to my mind, therefore, beggars the main point at issue. He further states that prior to their departure from the United States that they were unprepared and had of necessity to be docked before leaving. Also true in part, and for this reason. He well knows that in general all of our ships are docked periodically at about nine months' intervals; that it would be absolutely impracticable to dock every ship in our fleet for cleaning their bottoms and thus increasing their speed at much shorter intervals. He further must know that there is never a time on any ship when some minor, and sometimes major, repairs, alterations, or installations are not necessary, and that it is absolutely impossible to keep every ship in our Navy absolutely perfect at all times. I have not the slightest hesitancy in saying that the ships of this division at the time mentioned, in particular, were in a very high state of efficiency, and, while they were sent to our navy yards for a few days prior to sailing, it was only to put on the finishing touches while in dry dock and clean their bottoms so there would be nothing left undone to reach the maximum state of efficiency for the work in which they were about to engage.

The first knowledge to reach me that I was to command this division, composed of ships none of them under my command at the time—that was because the number of coal burners had to be selected—was while I was on board Admiral Mayo's flagship on a certain afternoon. Realizing that it necessitated shifting several flag officers and other details before leaving his flagship, by his permission I immediately sent signals giving information and orders for movements, so that they might proceed to their home yards for docking, cleaning bottom, and a final grooming before their departure for the war zone.

Three weeks later we joined the British Grand Fleet, which had been in the war for three long years, at Scapa Flow, in the Orkney Islands, to the north of Scotland. It was a matter of pride that we were at once able to coordinate and cooperate with them intelligently, without the slightest hesitancy, friction, or misunderstanding. We adopted and could use their signals, radio, secret codes, and other communications—and, gentlemen, that is one of the hardest problems we have in the Navy—and could efficiently execute their tactics

The motive which prompted this public investigation is veiled to me under a smoke-screen of words, and I can not for the life of me see but that it will discredit the work of the Navy in this war, which I know has been most creditable. It has already had its effect upon Congress, to say nothing of the public.

The CHAIRMAN. To what motive do you refer, Admiral?

Admiral RODMAN. It would be very hard for me to explain. Senator. I think that I have tried to show that beforehand. What I am trying to show is that it would have seemed to me the logical thing for an officer to have kept his letter in the hands of the department. The fact that it has been given publicity, I know from talking to a great many people in civil life, has brought about this question, "Well, what is the matter with the Navy?"

The CHAIRMAN. My question was meant to develop the question of whether you meant to accuse this committee of having any motive.

Admiral RODMAN. Not in the slightest degree, sir; not in the slightest. I would not do such a thing, sir. Even though Admiral Sims states that he did not desire this publicity, I am still of the opinion that if he himself did not desire it and had used his best endeavor to have prevented it, it might have been avoided. But the impression left on my mind, by giving his letter all this publicity, and the evident effort throughout to discredit the Navy is that it may have been the intention to give the impression that he had most of the responsibility for running this war, and that the department fell down upon its job because it did not follow his advice. This at the expense of the good name which the Navy so justly deserves. This whole affair to my mind savors of ill-advised criticism against the Navy. I refer to his criticisms before, and since the investigation has been under way. But still, since the investigation is under way, let us hope that some good may result from it, and I think that it will.

Another deep impression that is made upon my mind is, that, though praise is bestowed upon its officers and men, that there has been laid bare before this committee by some of the witnesses every possible point which is derogatory to the Navy—I refer to that more particularly in preparedness, which I will come to later—without stating the thousand and one good ones which should redound to its credit, and that they have attempted to sustain their argument by documentary evidence.

Throughout this war, and during my entire naval service, I have never found it necessary to refer to documentary evidence to establish and convince anyone of acts on my part. For example, I believe he has stated that the division of battleships which I commanded for a year or so in the war zone was not prepared when we entered the war. That it was not homogeneous. I wish to state from having been in the Atlantic Fleet from the time the United States declared war, that never in my forty odd years of service, most of which I have spent at sea, and in the latter part in the North Atlantic Fleet, never have I seen such preparedness and efficiency as obtained in our battleship fleet as at the beginning of, and during, the war. No ship has ever, in my experience, been absolutely efficient; nor will there ever be one whose commanding officer will conscientiously state that it is 100 per cent so. For this reason every officer who has pride and interest in his command will always strive for greater efficiency. No ship will ever be in absolutely perfect condition for no other reason

that from its complicated design, from the multiplicity and complexity of its machinery and constructive features, it will always require certain repairs, alterations, and improvements to keep pace with new and important inventions and improvements, and for its maintenance and upkeep.

The personnel of our ships must of necessity from time to time be changed, and since the operation and efficiency of our ships depends on team work, it requires constant drills and exercises to promote maximum efficiency. One of his references to my division was that it was not homogeneous in reference to its guns; that different ships had different calibers. True, yet he knows full well that this has not the slightest bearing upon the reason for the selection of the individual ships which constituted my division to go on active service with the British Grand Fleet; that it was based solely on the fact that they were coal burners and that coal as fuel for our ships, instead of oil, could best be supplied while actively engaged in British waters, and that he himself so stated to the department. This statement of his, to my mind, therefore, beggars the point at issue. He further states that prior to their departure from the United States that they were unprepared and had of necessity to be docked before leaving. Also true in part, and for this reason. He well knows that in general all of our ships are docked annually at about nine months' intervals; that it would be absolutely impracticable to dock every ship in our fleet for cleaning their bottoms and thus increasing their speed at much shorter intervals. He further must know that there is never a time on any ship when no minor, and sometimes major, repairs, alterations, or installations are not necessary, and that it is absolutely impossible to keep any ship in our Navy absolutely perfect at all times. I have not the slightest hesitancy in saying that the ships of this division at the time mentioned, in particular, were in a very high state of efficiency, and while they were sent to our navy yards for a few days prior to leaving it was only to put on the finishing touches while in dry dock to clean their bottoms so there would be nothing left undone to bring them to the maximum state of efficiency for the work in which they were about to engage.

The first knowledge to reach me that I was to command this division comprised of ships none of them under my command at the time—that was because the number of coal burners had to be limited—was while I was on board Admiral Mayo's flagship on a late afternoon. Realizing that it necessitated shifting several gun batteries and other details before leaving his flagship, by his permission I immediately sent signals giving information and orders for movements, so that they might proceed to their home yards for cleaning bottom, and a final grooming before their departure for the war zone.

Three weeks later we joined the British Grand Fleet, which had been at sea for three long years, at Scapa Flow, in the Orkney Islands, north of Scotland. It was a matter of pride that we were able to coordinate and cooperate with them intelligently, without the slightest hesitancy, friction, or misunderstanding. We adapted and could use their signals, radio, secret codes, and other communications—and, gentlemen, that is one of the hardest problems we have in the Navy—and could efficiently execute their tactics

and maneuvers and conform to their war plans. This was put to test when within three days of our arrival a signal was made for ships to be ready to proceed to sea in two hours for active service in the North Sea, and we reported ready when the time came that we were ready.

From that day to the end of the war we took part in every major operation in the North Sea and some independent smaller ones. There was never a time but that we were ready when called upon. We could always steam full speed, maintain our position, and receive nothing but the highest praise, not only from the British admirals, officers, and men, but from those of our own Navy who visited us.

I might further say, gentlemen, I hate to speak of the divine aid that I command, for it seems to me that I might seem to be trying to laud myself, which I am not, in the slightest degree, but our ships were maintained in such a high degree of efficiency that the British Admiralty made inquiries of us as to our methods, with the possible view of adopting them in the British Navy, for their ships.

The CHAIRMAN. I think that is a very good point to bring out.

Admiral RODMAN. Let me truthfully add that without taking the slightest credit to myself as the commanding officer, but giving it to the officers and men, where it belongs, and to the years of preparation in the American Navy, that, put it as modestly as I can, the American squadron was fully equal to any of the Grand Fleet.

Assuming that these ships were unprepared when we received order to go, as some have testified, and that in the short period of three weeks when we joined the Grand Fleet, that we were prepared (and we unqualifiedly were), it must be ascribed to divine interference, for it could not possibly have been accomplished by human hands alone in that short time.

While our ships were in active service in the war zone they were visited by Messrs. Butler, Padgett, Kelley, and others of the House Naval Committee. They are personally familiar with our conditions, and it would be most interesting for you gentlemen to have any one or all of them give you their personal views which were obtained in such close range.

Congress gives us our ships, personnel, and the money for the maintenance of the Navy. No matter what the Navy may recommend, nor the department recommend, we are bounded by this limitation. Nor does it follow that the minute an appropriation is made that the Navy instantly receives the full benefit. If Congress should see fit to maintain our fleet at its full war strength in times of peace, there would never be any question of its preparedness and readiness when war is declared. I mean that it takes time to build ships, it takes months and years to do so. It takes time to increase and train the commissioned and enlisted personnel. Yet, at the beginning of the war, the Navy had so far profited by previous appropriations that I have no hesitancy in saying from having been in the fleet, and having been in it for some years, that never have I seen such efficiency and preparedness as obtained at that time.

I might diverge for a moment and say that I refer particularly to the ships that I know more about—that is, the battleships—and do realize that around this nucleus of the old Navy, we were immediately able to expand to fully 10 times its then strength—not in capital ships, but in hundreds of others, and in the personnel, and that

were still able to do our work so that it has met with nothing but admiration and commendation. Again I say, if this be not preparedness, I do not know the meaning of the word.

Efficiency and preparedness in the Navy is never a matter of days. It is a matter of months and years. I might liken it to an athlete or to a pugilist who after months of training must strip for action and, if the latter, put on his gloves before the coming battle, but whose preparedness has attained by weeks and months of training. Or to a race horse who is not prepared for the race, by simply putting on his bridle, saddle, and final grooming before running, but whose training has extended over weeks and months. And just so with our ships, which require months and years to reach a proper standard of efficiency.

There is another point that I wish to emphasize and use an old expression that Admiral Sims has used that "Hind sight is better than foresight." Even so, I have already previously stated in public that so far as my command was concerned in this late war, that had I to live it over again I would not change it in one iota. Let me further state in reference to our actions in this war, that there can never be any great commercial enterprise, whether it be a manufacturing concern, a great railroad system, bank, or anything else, but that if those who are most intimately connected with its managements could look back over the passed years of experience, would say that if they had it to do over again they could do to better advantage. Gen. Goethals, with whom I was intimately associated at Panama for two years as marine superintendent of the canal, has stated that had he to build the canal again he could not only do it in a better manner, but that he could better have carried into execution many of the plans that were submitted during its construction. And possibly this same principle pertains to the Navy and its administration, particularly in war time. Unqualifiedly mistakes were made as there are in every great and highly technical enterprise which combines such a multitudinous number of interests which have to be coordinated, and there always will be mistakes under like circumstances.

There will always be difference of opinion in any body of men who are intrusted with the execution of great enterprises and who have the responsibilities pertaining thereto, particularly when there are so many and such varied requests, interests, and recommendations, all of which are more or less interdependent, and which have to be combined into a homogeneous whole, as there are in the Navy. For example, the very highest tribunal of our land or any other country, our own Supreme Court, has just rendered a decision of 5 to 4 in a most important case. Is it any wonder, then, that our Navy Department, and those intrusted with its policies and plans and their execution, may have found good and sufficient reasons for not following blindly the recommendations of just one single officer?

In looking back at the Navy's part in this war, and prior to the time that Admiral Sims made this charge, I had heard nothing but the very greatest praise and approbation on the part of the public, and those of us who served in the war, and were familiar with its workings, for the part which the Navy had taken. Having devoted my whole life to it, I was proud indeed to feel that this organization to which I belong had met with general approval from everyone,

and that its operations had been so highly satisfactory and meritorious.

I would refrain from mentioning personalities, but let me say with the deepest sincerity, that no one could have had more cordial relations in every sense of the word than those which existed between Admiral Sims and myself in the war zone. As a classmate of mine and a life-long friend, at the conclusion of this war he was pre-eminently conspicuous among the officers who had rendered the most valuable service. I regret exceedingly for the Navy's reputation sake, that it was through his instrumentality, directly or indirectly, that this investigation was instituted with its resultant publicity, but I hope and believe that some ultimate good may be obtained.

The Navy doubtless made mistakes during the war, but the methods and means which have been employed in attacking it will of necessity leave prejudice in the minds of those who are not familiar with the Navy and its organization. There is many a charge that is made against an innocent man; but the very fact that such a charge has been preferred, even though the accused may be proved to be perfectly innocent, leaves a bad taste in the mouth, and what may have been a spotless reputation is often besmirched by the fact that the accused was brought to trial. This, in my opinion, is exactly what this investigation spells to me. In Admiral Beatty's speech to my division when we were leaving for home, he remarked: "Now that the fighting is over, the talking will begin." Surely no truer prophecy was ever made, and I might add, of writing, too.

After the Spanish War, no matter how well Admiral Dewey may have done his work at Manila Bay, nor what the Atlantic Fleet accomplished at Santiago, both of which combined to eliminate the Spanish fleet, we had the Sampson-Schley controversy, which directly or indirectly detracted from the well-deserved reputation of the Navy. And now we have the so-called Sims controversy or investigation, which does the same thing, regardless of what the Navy accomplished.

I repeat that the Allies won the war. This was their mission; nor can anyone deny, who is fair-minded, but that the American Navy did its full share in helping to attain this end. I wish to reiterate that I have not one single document nor record of any kind, class, or description to substantiate my statement, nor have I ever felt it necessary in my service of 45 years to keep any files or records to do so. I am simply trying to lay before this committee my views in general of what the Navy accomplished, and its preparedness, and can not, for the life of me, see how any unprejudiced person in or out of the service can take any other view than that which I have tried to lay before you.

It is easy for anyone to sit on the side lines and criticize; it is a far more difficult proposition for those who are intrusted with the execution of plans and policies to carry them out with the means at their disposal, when they have an active command in time of war. When a war is ended, even though victoriously, the critics and historians have no hesitancy whatever in pointing out how much better it could have been done, not infrequently stating just how, in their opinion, it could best have been accomplished, and to back their

opinion and air before the public what they had recommended or would have done themselves and produce documentary evidence in substantiation.

No doubt the great leaders in this war in the field—Marshal Foch, Sir Douglas Haig, Gen. Pershing, Admiral Beatty, Lejeune of the Marines, and others—will come in for their fair share of adverse criticism from the literary critics. No doubt the same class of writers will attempt to show how the French, British, and American forces, afloat and ashore, were in a chaotic condition, unprepared, and made a mess of it. But those of us who were fortunate enough to hold active commands in the field of hostilities, no matter how humble or small a part we may have taken, have a different view, and are more apt to feel that even if we were not like Ivory soap, 99 $\frac{1}{8}$ per cent pure, that we still did our fair share toward winning this war.

Now, gentlemen, in looking back over the various testimony and the investigation which has been held, I have a recommendation to make. I believe that it would be for the best interests of the Navy that we might avoid mistakes in future, to intrust the Chief of Naval Operations with the responsibility of preparing plans for any future work, and to keep the Navy in a State of preparedness; and, more important still, to give him the authority to carry them into execution when war is declared, following the policy that is laid down by the Federal Government. That is all, gentlemen.

The CHAIRMAN. You think that the Chief of Naval Operations should be responsible, do you?

Admiral RODMAN. Yes, sir; and have the authority——

The CHAIRMAN. The law does not provide that he is responsible for all——

Admiral RODMAN. I believe not, sir.

The CHAIRMAN. It was the original intention of Congress, I believe, to provide that the Chief of Naval Operations should be responsible, but at the instigation of the Secretary that word "responsibility" was taken out.

Admiral RODMAN. I think he should have the responsibility and the authority, sir.

The CHAIRMAN. I will ask you some further questions a little later about that question, about the Chief of Naval Operations.

Admiral RODMAN. Yes, sir.

The CHAIRMAN. Now, Admiral Rodman, you are a very high officer in the Navy. You are in command of the Pacific Fleet, I understand.

Admiral RODMAN. Yes, sir.

The CHAIRMAN. And you are on oath before this committee.

Admiral RODMAN. I beg your pardon.

The CHAIRMAN. You are on oath before this committee.

Admiral RODMAN. Yes, sir.

The CHAIRMAN. Do you want it to be understood from your statement that you consider that the United States Navy was in a thorough state of preparedness at the beginning of the World War, or at the beginning of our entrance into the war, at the time of our entrance into the war?

Admiral RODMAN. No, sir; not by any manner of means. No navy will be absolutely prepared. The British Navy was not

thoroughly prepared. It never will be thoroughly prepared. But I say, sir, that so far as the limitations that were placed upon us by the appropriations and Congress, and what it gave us, we were in a very high state of preparedness. There were certain of our ships that were lacking. We lacked types of vessels that we should have had, and some of our ships were not, possibly, as well prepared as they might have been; but, in general, the battleship fleet was in a high state of efficiency.

The CHAIRMAN. And you think that even considering the fact that the World War began in 1914, and had been going on——

Admiral RODMAN. Three years.

The CHAIRMAN. Nearly four years.

Admiral RODMAN. Three years.

The CHAIRMAN. Practically three years, when we went into the war; you think they were in a reasonable state of preparedness when we went in, all things considered?

Admiral RODMAN. My statement shows conclusively that the battleship fleet was, so far as my force was concerned.

The CHAIRMAN. I have some further questions to ask you about that force later on.

Admiral RODMAN. Yes.

The CHAIRMAN. Your relations with Admiral Sims you have stated were entirely satisfactory during the war?

Admiral RODMAN. Most cordial; as cordial with Admiral Sims as with any man in the world.

The CHAIRMAN. You never had any controversy with him?

Admiral RODMAN. Not the slightest with him, or with any other man that I know of.

The CHAIRMAN. You were under his command?

Admiral RODMAN. Yes.

The CHAIRMAN. You were?

Admiral RODMAN. Yes, sir.

The CHAIRMAN. And yet you say that he was not really the commander in chief on the other side, or that that idea is misleading.

Admiral RODMAN. I said that the title, commanding United States Naval forces in European waters, might be misleading; meaning by that, that the public might think that—I am referring a great deal of my testimony to the public, I am free to admit—they might think that Admiral Sims directed the movements of our warships. It was to emphasize that fact that I stated this title might be misleading.

The CHAIRMAN. But he was your superior officer on the other side.

Admiral RODMAN. Yes, sir.

The CHAIRMAN. How were you assigned to the British fleet?

Admiral RODMAN. By the direction of the Secretary of the Navy.

The CHAIRMAN. Before you went over?

Admiral RODMAN. Yes, sir.

The CHAIRMAN. Did Admiral Sims interfere in your operations?

Admiral RODMAN. Not in the slightest.

The CHAIRMAN. Or limit your initiative in any way?

Admiral RODMAN. Not in the slightest, sir. No one could have been better in every way, shape, and form than Admiral Sims.

The CHAIRMAN. Was your position in the war such that you can testify at first hand to the questions brought up in Admiral Sims's testimony?

Admiral RODMAN. I have never read it, sir.

The CHAIRMAN. Do you know anything, from personal observation, about the convoy system, and about the question of sending destroyers to the other side?

Admiral RODMAN. Very little.

The CHAIRMAN. Or about the question of sending tugs?

Admiral RODMAN. Very little.

The CHAIRMAN. Or about the state of affairs there on anything else?

Admiral RODMAN. No; I do not. I was not in the position to, except what I read in the public press, I know very little about it.

The CHAIRMAN. So that your statement is made up from observation, from what you knew yourself and what you saw over there, and what you have read and gathered in general during the war?

Admiral RODMAN. Yes, sir.

The CHAIRMAN. When were you assigned by the department to take a division of battleships to the North Sea?

Admiral RODMAN. I think it was in the latter part of November, 1917.

The CHAIRMAN. In November, 1917?

Admiral RODMAN. Yes, sir.

The CHAIRMAN. And you sailed immediately?

Admiral RODMAN. I do not remember the time. I should say it was about 10 days or 2 weeks.

The CHAIRMAN. Did you do anything during those 10 days or 2 weeks——

Admiral RODMAN. I do not get that.

The CHAIRMAN. Did you have to do anything in those 10 days or 2 weeks toward getting your ships in condition to go over?

Admiral RODMAN. Yes, sir.

The CHAIRMAN. What?

Admiral RODMAN. There were a number of minor repairs, docking and cleaning bottoms. Then we naturally filled up with stores and coal and everything to the utmost capacity that we could carry——what all ships do just prior to leaving port for any extended voyage.

The CHAIRMAN. Were you given any plans or policy, by the department, before you went over?

Admiral RODMAN. None whatever. I was simply directed to follow a designated route, and I followed that route and found myself amongst the British Grand Fleet.

The CHAIRMAN. No policy or plan for the conduct of the war?

Admiral RODMAN. No, sir.

The CHAIRMAN. Did you know of any such plan?

Admiral RODMAN. No, sir; I did not need any. I was to go over to splice out the British Grand Fleet.

The CHAIRMAN. Whom were you to report to over there?

Admiral RODMAN. I do not remember. I will tell you the incident. When I arrived, I reported in the usual naval fashion, my arrival, to the department. That is a cut and dried affair.

The CHAIRMAN. Did you report to Admiral Sims?

Admiral RODMAN. No, sir. And then I got a telegram from the department "In future send all your reports and communications direct to Admiral Sims;" so that I was placed under Admiral Sims's command by a telegram from the department.

The CHAIRMAN. After you had gotten over there?

Admiral RODMAN. Yes, sir. It was explained to me before I left the department, by Operations, that I was going over to splice out the British Grand Fleet. A verbal order is as good to me as any other kind, you know. I knew what I was going for.

The CHAIRMAN. Did the department give you any instructions to govern your actions after you were on the other side?

Admiral RODMAN. None whatever.

The CHAIRMAN. Was not that rather embarrassing to you?

Admiral RODMAN. Not to me. I knew what I went for. Never the slightest embarrassment.

The CHAIRMAN. Just what did the department tell you to do when you went over there?

Admiral RODMAN. I could not repeat the words. I had an intimate conversation with the Acting Chief of Operations. The chief, I think, was abroad. He simply said, "You are designated to take this command, to go over and splice out—and strengthen the Grand Fleet in their operations against the German main force. Why, Senator, I did not have to have any more instructions than that.

The CHAIRMAN. And you were told to report to the head of the British Grand Fleet?

Admiral RODMAN. No, sir. I did report to the head of the Grand Fleet, and reported my arrival to the department. I had my orders.

The CHAIRMAN. What?

Admiral RODMAN. They left it to me to report to the Grand Fleet. That was my object in going. They supposed they could trust my judgment, or they would not have sent me.

The CHAIRMAN. You were simply told to go over and report to the Grand Fleet?

Admiral RODMAN. Yes, sir.

The CHAIRMAN. Was your position in the Grand Fleet satisfactory?

Admiral RODMAN. Very highly so, sir. I was in command of what they called, under that designation, the six battleship squadron. It was one of the two important squadrons of the Grand Fleet. Technically, I think, they called them the fast wings. I was put in command of the left end of the line, and the fifth battle squadron had the other end of the line when we went into action.

The CHAIRMAN. What was the rank of the other commanders of battleships?

Admiral RODMAN. There were three of them. The commanders of all the other squadrons were admirals or vice admirals. I was a rear admiral.

The CHAIRMAN. Did Admiral Sims recommend you for the position of vice admiral?

Admiral RODMAN. Yes, I think that was——

The CHAIRMAN. Did the department approve that recommendation?

Admiral RODMAN. No, sir.

The CHAIRMAN. Do you know why not?

Admiral RODMAN. No, sir.

The CHAIRMAN. Was it not rather embarrassing to you to hold a lower rank than the others?

Admiral RODMAN. Not in the slightest. Sometimes I commanded the British admirals and sometimes they commanded me. It de-

pended upon the nature of the work which we were doing. We strengthened the force. I took my rank in accordance with theirs.

The CHAIRMAN. Is it usual for an admiral to serve under a rear admiral?

Admiral RODMAN. I have never seen it, in my life.

The CHAIRMAN. I thought you said some of these others served under you, when they were admirals?

Admiral RODMAN. I should have stated that they were rear admirals. I used "admiral" in the sense in which we use it. I was then commanding British rear admirals who were some of them junior to me and one senior. Admiral Alexander Sinclair had some light cruisers when we were sent out on certain service, but that difference in rank he waived. The officer in command of the battleship force was originally the one to command the other ships. There was no embarrassment there.

The CHAIRMAN. Did you have under you officers ranking higher than rear admirals at one time or another?

Admiral RODMAN. No, sir.

The CHAIRMAN. If you had been higher than a rear admiral would you have had higher command, probably?

Admiral RODMAN. No, sir. When they sent out small detachments we were sent in rotation. For example, sometimes it was our duty to carry convoys from the British ports to the Norwegian ports and back, and then we would have to have sufficient strength to prevent the Germans from getting in their work. They do these things in rotation. When my turn came I would not be at all surprised, although I do not remember, if there were possibly little changes made in the British officers to make the squadron commanders juniors to me, so that I might command when I went out.

The CHAIRMAN. In the testimony before the committee on the question of naval awards, Secretary Daniels intimated that he would have preferred to have had the American battleships not under British orders, but as a separate and independent unit. In your opinion would it have been better to have established a separate divisional command of these battleships?

Admiral RODMAN. You mean the battleships I commanded over there?

The CHAIRMAN. Yes.

Admiral RODMAN. No, sir; I could only have operated intelligently and efficiently under the Grand Commander-in-Chief, regardless of his nationality.

The CHAIRMAN. Did you ever have any trouble with the Commander of the Grand Fleet?

Admiral RODMAN. Never in the slightest. Our relations were the most cordial on earth. They were brotherly, almost.

The CHAIRMAN. If you had had any trouble, what would you have done? Would you have gone to Admiral Sims?

Admiral RODMAN. That is a hypothetical case. I never had it.

The CHAIRMAN. I want to know what the procedure there would have been, and where you would have gone.

Admiral RODMAN. I should have sent my communication to the Department through Admiral Sims, unqualifiedly.

The CHAIRMAN. To the department through Admiral Sims?

Admiral RODMAN. Yes, sir.

The CHAIRMAN. Could he have changed you over, ordered you to another duty, if he had wanted to?

Admiral RODMAN. I do not know, sir. That is not an evasive answer, in the slightest. That just reaches the point that I do not know whether his authority would have extended that far, or whether the department would have stood for it. I do not know. I rather imagine he would have had the authority. If I had misbehaved or done anything wrong he would have had the authority.

The CHAIRMAN. In other words, you are not entirely familiar with how much authority he had as Commander-in-Chief of the Forces in European Waters? If you are, I would be very glad to have you tell me what the limit of authority was?

Admiral RODMAN. I am afraid, if you are trying to get me down to exact limitations, you will get me over my depth. I would rather he would tell you that himself. He knows.

The CHAIRMAN. You have stated that his position was entirely misunderstood; that he had practically no authority over there.

Admiral RODMAN. I do not think so. I would be very glad to read you what I said.

The CHAIRMAN. Did you not?

Admiral RODMAN. I do not think I said so. I think I said that he did not direct the movements of the fighting ships. I would be very glad to read you what I said, or let you read it yourself. I will say this, sir, that there was never a time when there was the slightest difficulty of any character, class or description raised between Admiral Sims and me, if that will cover it.

The CHAIRMAN. I can not locate the place in your statement, but I refer to your statement that his position as commander in chief over there was generally misunderstood.

Admiral RODMAN. No, sir; I said that it might be misleading to the public. At least, that was my intent.

The CHAIRMAN. Here is your statement. [Reading:]

His title as "Commanding United States naval forces in European waters" is partially misleading. He was in reality a subordinate part of Naval Operations with his office in London;

Admiral RODMAN. Yes; my idea was this. The public—now, just notice that I refer to the public, and this is intended for the public. The public think——

The CHAIRMAN. Your testimony, Admiral, is for this committee.

Admiral RODMAN. Yes, sir; but I am trying to explain to the public at the same time, sir, if I may, and what I was saying there was for the public.

The CHAIRMAN. Does the public have different opinions from this committee?

Admiral RODMAN. I do not know, sir. They get some mighty curious ones, sometimes.

The CHAIRMAN. Apparently.

Admiral RODMAN. And they form very queer conclusions.

The CHAIRMAN. Do you consider that your division of battleships during the war was an integral part of the British Navy, as Secretary Daniels has stated?

Admiral RODMAN. He has used that statement himself. My statement was, on another occasion, that it was an integral part of the Grand Fleet. It was just as I imagine that General Pershing's

army was an integral part of the allied forces on the west front, under Marshal Foch.

The CHAIRMAN. Did you not keep up, always, its independent character as American?

Admiral RODMAN. Absolutely; and we were praised for it by the British themselves. The commander in chief or some other admiral admired the fact that we never lost our Americanism in the slightest degree.

The CHAIRMAN. So that they were practically "brigaded" with the British, to use a military term?

Admiral RODMAN. Yes, if you can use that term. We were a squadron of the Grand Fleet.

The CHAIRMAN. But you kept up their Americanism all the time?

Admiral RODMAN. Yes. And every bit of our work, and everything about our ships down to the smallest part, from the ground floor up, was American.

The CHAIRMAN. And there never was any question in your mind or in anybody's mind, that you were an independent American unit?

Admiral RODMAN. No, sir, never in the world, not in the slightest degree in the mind of anybody.

The CHAIRMAN. And you were only under the operational direction of the British commander in chief?

Admiral RODMAN. Oh, certainly, sir. He had nothing to do with our interior management or upkeep, or anything of that kind—nothing.

The CHAIRMAN. What is your general view about the advisability of the unity of command in a situation such as that you were in the North Sea?

Admiral RODMAN. I think it is the only way to work, sir.

The CHAIRMAN. It is the only way to work?

Admiral RODMAN. Yes, sir. I think that was shown, sir, by all of our allied forces, so far as I know, being united under the general command of Marshal Foch on the French front.

The CHAIRMAN. You have stated that the condition of the battle-ships assigned to your command, when you took them over, was excellent?

Admiral RODMAN. Yes, sir.

The CHAIRMAN. In every way?

Admiral RODMAN. Well, you could find fault, if I were to say yes, but I would rather put it in general. Yes, sir, they were. They were ready to go into action.

The CHAIRMAN. How about their proficiency in gunnery?

Admiral RODMAN. The gunnery reports will give you a very good contrast. I do not remember the scores, but it was excellent from what it had been. You must remember that our gunnery is like anything else. It started in the very simplest forms, has built up through the number of years; and let me give Admiral Sims the very greatest credit of anybody in our Navy for giving us our form of gunnery; and I think everybody is deserving of the very greatest credit for building up our gunnery. That was progressive. I could not give you the scores, but I think it was excellent. I hate to speak of the ships I commanded because people may think that I am egotistical, but I can say furthermore, I can give you one instance in which the commanding officer of the *King*, which was the ship that towed the targets when we went out to target practice, told some of our officers afterwards that our target

practice there was the best that he had ever seen. I think that is going some on efficiency.

The CHAIRMAN. What report did you make to the commander in chief of the Atlantic Fleet as to gunnery proficiency?

Admiral RODMAN. I did not get that.

The CHAIRMAN. What report did you make to the commander in chief of the Atlantic Fleet as to gunnery proficiency of the ships under your command?

Admiral RODMAN. Are you speaking of the *Texas*, sir?

The CHAIRMAN. I am asking generally.

Admiral RODMAN. Are you leading up to where the *Texas* come over? I am rather anticipating that, am I not?

The CHAIRMAN. I should prefer to speak of that later.

Admiral RODMAN. The rest of the ships were excellent, but the *Texas* was rotten when she arrived, and for this reason—compared with the others. I asked for the *Texas* to come over as a replacement ship, the idea being that if any of the four that I had should break down, I should want an old ship to replace, and I asked for the *Texas* because she was a sister ship to the *New York* and was a coal burner. Now, the *Texas* unfortunately had been grounded in the previous summer or autumn, and when she was hauled off at Brooklyn she was carried to the navy yard at New York, and there she staid, and that does not spell efficiency when a ship has to stay in the navy yard some three or four months. They had had no chance whatever.

There is another thing—this is of no interest, I think, to the committee, but it will explain why her training was poor—the *Texas* had been the most efficient ship in the Navy, and flew the pennant at her masthead both in seamanship and gunnery, but when she came over there she had much deteriorated. When we went out to target practice over there we had to have all the mines swept out and we had to have a screen on both sides in order to go out, and I found that on the *Texas* at that time they were still thinking too much of competition; they were still competing. I said to the captain, "You must forget that competition idea and go in for war purposes"; and I explained to them what I meant; and I can say almost unqualifiedly that when the *Texas* recognized that she was not there competing, but for war purpose, she went ahead; and so much so that I gave the captain special commendation. The operation was excellent when she realized and had an opportunity to pick up.

The CHAIRMAN. Did you make any report to Admiral Mayo before you went abroad about the gunnery condition of the fleet?

Admiral RODMAN. Before I went?

The CHAIRMAN. Yes.

Admiral RODMAN. I think probably you refer to a report I made after I went.

The CHAIRMAN. You made none before?

Admiral RODMAN. We all made reports, but I do not recall any report. I mean, each commanding officer or flag officer makes a report on target practice. I remember no special report I made to Admiral Mayo, but I did make one after I arrived, making certain recommendations, and I got a pretty sharp letter from him. I do not think it was written by him, but by the gunnery officer, and it was a pretty sharp letter, and I placed it under the Rodman filing system; I put it in the waste basket where I thought it belonged.

The CHAIRMAN. A communication from the admiral?

Admiral RODMAN. Yes, sir; and I think he was glad of it. I have not a closer friend in this world than Admiral Mayo.

The CHAIRMAN. What were your recommendations that you made at that time?

Admiral RODMAN. I have no idea. I can give you a very brief description of what the thing was about. I made certain recommendations about target practice, as they appealed to me from the experience which I had gained in the war zone. I recited these conditions and made certain recommendations that the Atlantic Fleet immediately do thus and so. I have forgotten what they were. I think it gave offense, and it offended the gunnery officer; and it did not amount to that [witness snapping his fingers].

The CHAIRMAN. What was the basis of it?

Admiral RODMAN. That was such a little thing I would not bother with it if I were you, Senator. It is really trifling. That has no bearing on this question.

The CHAIRMAN. It has nothing to do with the efficiency of gunnery or the ships?

Admiral RODMAN. If I said no it would not be true. Everything had a bearing. But it did not amount to that (witness snapping his fingers), that letter. I have not thought of it since.

The CHAIRMAN. You have stated that the ships in your division were efficient in every way.

Admiral RODMAN. The *Texas* was not when she arrived, for the reasons I have stated. She was immediately afterwards, when they realized conditions, just as good as any of the rest of them; and I have told you the reason, because she was left up in the navy yard about six months and did not have an opportunity to go out and practice.

The CHAIRMAN. Your recommendations had nothing to do with any ship except the *Texas*?

Admiral RODMAN. No, sir.

The CHAIRMAN. There was no fault found with any of the other ships at all?

Admiral RODMAN. I think not, sir. We write those reports and state the conditions that arise. No—I do not know what you have got up your sleeve. It is something that I do not know anything about.

The CHAIRMAN. It is not a question of my having anything up my sleeve. I want you to give me information, Admiral Rodman.

Admiral RODMAN. The ships were excellent. Of course they were not perfect.

The CHAIRMAN. You said you made a certain report yourself.

Admiral RODMAN. Yes.

The CHAIRMAN. Which excited a call-down from Admiral Mayo; and yet you are not willing to give me those recommendations that you made in that report.

Admiral RODMAN. I will answer you just as willingly and as truthfully as I possibly can, but I say that matter was trifling. It is one of those things that go and come, from time to time and does not amount to a hill of beans.

The CHAIRMAN. Will you get a copy of those recommendations and submit them to the committee, and then they can see whether they were trifling or not?

Admiral RODMAN. Senator, I stated that I have never kept any files in my life. I have no more idea where that letter is than the man in the moon, except that I put one of them in the wastebasket. I will explain it to you. I have no hesitancy in doing it.

We have target practice at stated intervals. Each officer, captains and admirals, makes a report. Sometimes they give praise, and sometimes they make recommendations. Sometimes they find fault. It is a mere routine affair.

When the *Texas* arrived I saluted her. I called her captain over and her gunnery officer, and gave them the mischief for firing as they did, in the methods that we generally use in target practice. The exact conditions were that I gave them on this particular occasion, if I remember, each five rounds per gun per turret. I naturally supposed that they would fire under war conditions, and let off all the salvos instantly; but they did not. Their salvos were poor—very poor. If I remember, she took maybe—I supposed she might have fired all these salvos in three minutes—I do not remember the time. She may have been six or seven minutes. The salvos were ragged, I saw that their minds were focused still on making a score and making everything hit. There may have been a little trouble with the personnel. They were still focused on the target practice and winning the pennant; and then I told those officers to get over that competition business, and shoot trying to fire all their guns at all times, and fire them instantly. That was the gist of it, so far as I remember. That letter made no impression on me.

The CHAIRMAN. And it simply referred to that one ship and not to the others?

Admiral RODMAN. Yes, sir. I think I mentioned that thing to my officer, to my aid, this morning—I mentioned that very letter, saying that after considering it awhile, I wrote an answer. It was based on my recommendation as to target practice, and calling my attention to the fact that I had violated some of the rules on it, and my answer was a reference to the fifteenth chapter, first verse, of Proverbs. That was, "A soft answer turneth away wrath." That was my indorsement on it.

The CHAIRMAN. What was the effect on the fleet or removing large numbers of the personnel for merchant ships gun crews?

Admiral RODMAN. That was bad. It decreased for the time being the efficiency of the battleships, but as I remember the conditions, in the days of neutrality the State Department made a decision that would warrant armed gun crews going on what had been merchant ships, now turned into transports. There was an immediate necessity of getting these ships to sea. They did not at that time anticipate that the American battleship fleet would immediately go into action. It was a part of the policy, therefore, to take those gun crews and put them where they could do the most good, to man the guns on the transports. At the same time we took the other ships and took in recruits as fast as we could, and trained them up in their places. That is where I said the Navy expanded to about 10 times its original size, and that was a part of the expansion.

The CHAIRMAN. That would naturally hurt the efficiency while the training was going on.

Admiral RODMAN. Yes, it would; but it would increase the efficiency of the ships we put them on.

The CHAIRMAN. Later on?

Admiral RODMAN. Yes.

The CHAIRMAN. What were the names of the ships that went over with you?

Admiral RODMAN. The *New York*, the *Wyoming*, the *Florida*, and the *Delaware*.

The CHAIRMAN. And later the *Texas*?

Admiral RODMAN. And later the *Texas*; and then I think, still later, the *Arkansas* came.

The CHAIRMAN. Had you been in command of these ships before?

Admiral RODMAN. Not immediately. I had once commanded the *New York* as captain.

The CHAIRMAN. She was your flagship?

Admiral RODMAN. I say I had commanded her as captain.

The CHAIRMAN. You had commanded her?

Admiral RODMAN. Yes; and then when I went over I again took the *New York* as flagship.

The CHAIRMAN. Had these ships operated before as a division?

Admiral RODMAN. No, sir.

The CHAIRMAN. Or as a squadron?

Admiral RODMAN. No, sir; but we never had the slightest difficulty in operating them, as soon as I took command. They had operated in other divisions. It is not hard to go from one division to another. That does not amount to a hill of beans.

The CHAIRMAN. Had they operated together?

Admiral RODMAN. No, sir; but they operated as perfectly as ships can operate together, when they came together.

The CHAIRMAN. That answers the question.

Admiral RODMAN. I wanted to qualify it so you could understand.

The CHAIRMAN. Were they of uniform type?

Admiral RODMAN. Do you mean were they exactly sister ships?

The CHAIRMAN. I mean, were they the same type of ships?

Admiral RODMAN. They were near enough in type to operate together.

The CHAIRMAN. Practically at the same speed?

Admiral RODMAN. No, sir; they were approximately so. They would all average $21\frac{1}{2}$ knots. There may have been a knot and a half or a knot difference, but that is nothing.

The CHAIRMAN. You do not think that the fact that they came from different divisions and were of different types would injure their efficiency at all?

Admiral RODMAN. I said positively that it did not.

The CHAIRMAN. Admiral Sims stated in his testimony that for four months previous to your departure to Europe the question of sending a battleship division to reinforce the Grand Fleet had been under discussion. Had you received any information of this during this time?

Admiral RODMAN. No, sir.

The CHAIRMAN. You had never heard it discussed?

Admiral RODMAN. No, sir. I never heard, as I told you, until one afternoon I was called up and told that I was to have command. That is the first I heard of it.

The CHAIRMAN. Did you know of any general plan, war plan, prepared by the department, at all? Were you shown any war plans in any way?

Admiral RODMAN. With reference to me going over?

The CHAIRMAN. With reference to the general conduct of the Navy

Admiral RODMAN. Nothing whatever, sir; except as a member of the General Board. They were discussed before the board at times.

The CHAIRMAN. When did you leave the General Board?

Admiral RODMAN. About the time war was declared.

The CHAIRMAN. And at that time had the General Board prepared a war plan?

Admiral RODMAN. We had a number of them. I could not tell you in detail what they were. There are other members of the board who can tell you better than I. Admiral Badger, for instance, can tell you about that better than I. I was a junior member of the board. My work on the board, although I was cognizant of all the work, was not in connection with the war plans, and I paid no attention to that. My work there was of a different character.

The CHAIRMAN. But there were some war plans that were actually prepared?

Admiral RODMAN. Oh, yes, sir. Mr. Senator, there is no nation in the world, bar none, that does not make plans. I do not care how good or how bad they were, they were there.

The CHAIRMAN. Did you ever see any of them?

Admiral RODMAN. I do not know. They kept them locked up, as I understood.

The CHAIRMAN. Did you ever hear of them later in the war, or were they put into practice?

Admiral RODMAN. No, sir.

The CHAIRMAN. You never heard of their being used?

Admiral RODMAN. No, sir; I do not know a thing about them.

The CHAIRMAN. Did you ever have any trouble in your service in the Navy in getting approval of your recommendations to the department while you were in the North Sea?

Admiral RODMAN. In general, none.

The CHAIRMAN. Did you make any recommendations to the department?

Admiral RODMAN. I would not be surprised if I did, sir, but I do not recall. I am not trying to evade answering your question, Mr. Senator, but I do not remember anything. I recall once that I recommended that we have some American destroyers as our screen. I wanted to educate up our destroyer force to their work that they would have to do with our battleships, and I thought that our American destroyers were larger and better able to stand the weather, which was frightful in the North Sea.

The CHAIRMAN. Did you make some other recommendations that you know of?

Admiral RODMAN. Oh, I suppose I made hundreds of them. I do not know.

The CHAIRMAN. How did you make them?

Admiral RODMAN. In the usual form.

The CHAIRMAN. Through Admiral Sims?

Admiral RODMAN. Through Admiral Sims, and he could approve or disapprove of them as he saw fit.

The CHAIRMAN. Do you recall any one—where he disapproved of any of your plans?

Admiral RODMAN. Nothing to amount to anything. We were working in accord on all measures and plans. There was nothing to amount to anything.

The CHAIRMAN. You recall no plans or recommendations that you put up to the department that were disapproved?

Admiral RODMAN. None that I remember, but if you have any there I can tell you about them.

The CHAIRMAN. If you had made recommendations, and you do not remember about them, and they were not followed out, would it have been up to Admiral Sims and up to the Navy Department?

Admiral RODMAN. Admiral Sims would first have put his indorsement upon them and sent them on to the department—he always did. If I had disagreed—and I did not—with Admiral Sims in any way, I would have exercised a privilege that belongs to all officers. You have the right, if a senior officer disapproves, to still have your recommendations forwarded to a higher authority, and if I had found any fault—and I did not—with any recommendations I had made to Admiral Sims, in the way they were treated, I would have requested the courtesy—the privilege which was due me—to send it up.

The CHAIRMAN. But if you had made your recommendations and Admiral Sims had approved of them and the Navy Department was against them, the Navy Department would have been responsible and not Admiral Sims, of course?

Admiral RODMAN. Certainly. They were the highest authority. They were the supreme court.

The CHAIRMAN. Did you put up to the department any plan for docking facilities for your battleships, based on the assumption that your battleships were to be sent to the United States to be docked?

Admiral RODMAN. At first, yes; and then I found out they could be docked abroad, and I made arrangements with the British to have them docked in British waters, so that they would not have to be sent back to the United States. I made plans when I first went there, contemplating sending them to the United States; but when I found out I could do it abroad, we followed that plan and did dock them abroad.

The CHAIRMAN. Did the department turn you down before you took up the proposition of docking them abroad?

Admiral RODMAN. I say honestly, sir—and I am not evading—I have no idea. I remember the circumstance, the fact, that we did dock abroad.

The CHAIRMAN. But you do not remember the department turning down your plan of docking them in this country?

Admiral RODMAN. No, sir; I do not remember the action that the department took in that case. I mean I do not remember the sequence of events. I only know that we did dock them abroad, which was the logical thing to do.

The CHAIRMAN. You have stated that the fleet was in a high state of efficiency—the battle fleet was in a high state of efficiency—when you were an officer of the fleet, before you went abroad?

Admiral RODMAN. Yes, sir.

The CHAIRMAN. At the beginning of the war—at the time of the beginning of the war?

Admiral RODMAN. Yes, sir.

The CHAIRMAN. Do you mean that it was in a high state of efficiency as a fleet?

Admiral RODMAN. No, sir; I would confine myself to saying that the battleship fleet was. I stated previously, sir, I think, that some of our types, other types, of vessels were not efficient. For instance, now, you must know that I am generalizing as any naval officer would who had been in the Navy all his life, without, as I say, having documentary evidence. I do not believe our submarines were up to the standard. I can tell you why. When we first started building submarines—and we must revert back to a number of years ago—we built small ones. We did not know any better. We have built many a vessel not worth the powder it would take to blow it up, as we started. But as we learned more about submarines and what they might accomplish, we began building larger types. I remember quite a discussion once in the General Board as to the minimum size. And then Congress took it in hand, if I remember right, and—of course it was on my side—made a provision that they should not be less than 800 tons. Now, I think that is why our earlier submarines were not efficient. It was because we did not know their value, and the ones we built were too small, and they were not a proper type, and there was a misconception in the views of naval officers as to just what they might accomplish; and what led to the larger types was that we soon learned that the Germans were building submarines that could keep the seas. I do not think we had contemplated their keeping the seas, but as long as the German submarines could keep the seas, it was, like everything else, progressive, and when we learned these lessons, then I think toward the latter part of the war we devoted our attention to the larger and better type.

Now, as to their efficiency and their state of preparedness, whoever was in command of them can tell you about that better than I can.

The CHAIRMAN. How many battleships were there in the Atlantic Fleet when you were serving there, and before you were ordered abroad?

Admiral RODMAN. Just before the war?

The CHAIRMAN. Yes; that is, in Force No. 2.

Admiral RODMAN. You mean the dreadnought type?

The CHAIRMAN. Yes—well, the fleet with which you were——

Admiral RODMAN. I think there were eight. I can get you the data on that. I think there were possibly eight dreadnoughts and eight or nine of the older type, like the *Connecticut* and the *New Jersey* type; and then there were the old, old type, the crab fleet, as we called them, like the *Kentucky*, that did not amount to anything.

The CHAIRMAN. I mean of the actual battle fleet as distinguished from the reserve?

Admiral RODMAN. I think approximately 16.

The CHAIRMAN. Sixteen?

Admiral RODMAN. Yes.

The CHAIRMAN. And for a fleet, a properly prepared battle fleet, how many destroyers would we need?

Admiral RODMAN. Oh, I do not know, sir. I think that the General Board has laid down some rule, that for each battleship we should have so many destroyers.

The CHAIRMAN. It should be at least four?

Admiral RODMAN. It should be at least that.

The CHAIRMAN. How many did you have when you were serving in European waters?

Admiral RODMAN. Eight, for four battleships. But, Mr. Senator, let us not get into that, because that will depend upon the nature of the work you are going to do. It will vary from time to time.

The CHAIRMAN. I am talking about for a fully equipped battle fleet. I want to find out whether this battle fleet which you say was so efficient as a battle fleet was——

Admiral RODMAN. I would like to confine myself to the battle ships. There was nowhere near the number of destroyers they should have had.

The CHAIRMAN. Do you know how many you should have had?

Admiral RODMAN. I do not remember; no, sir.

The CHAIRMAN. You say you had nowhere near as many as you should have had?

Admiral RODMAN. Yes, sir.

The CHAIRMAN. Did you have half what you should have had?

Admiral RODMAN. I would rather not try to say. I do not know.

The CHAIRMAN. I want to know how well prepared the battle fleet was.

Admiral RODMAN. I can give you more than that. We were very much in need of destroyers.

The CHAIRMAN. I want to ask you several questions, if you do not mind answering. The fleet was deficient in vessels, to a great degree; in battle cruisers, in light cruisers—how many light cruisers did you have?

Admiral RODMAN. I could get you a list, and you could get that in two minutes.

The CHAIRMAN. I wanted to know about the battle fleet. You are an old fighter——

Admiral RODMAN. I am not so much of a fighter.

The CHAIRMAN. You had a fleet of light cruisers and submarines, and——

Admiral RODMAN. Why do you not get that from the General Board? They will give you the exact data right off the reel, of what we ought to have had and what we did have. I can not recall those things right in my mind's eye. I can only say in general that we ought to have had a greater number of destroyers. We had nowhere near enough. We ought to have had 20 or 30 light cruisers and 6 battle cruisers, and we did not have them. So that the fleet was short of all these kinds of vessels.

The CHAIRMAN. And you did not have enough of those types of vessels?

Admiral RODMAN. Not near enough.

The CHAIRMAN. So that the fleet was not complete?

Admiral RODMAN. No fleet is ever complete.

The CHAIRMAN. No fleet is ever complete?

Admiral RODMAN. Never.

The CHAIRMAN. Would you regard any fleet as of any value as a fleet without them?

Admiral RODMAN. Certainly. The fleet would be more efficient if it had all the types.

The CHAIRMAN. It would be practically as efficient as a fighting unit without those vessels?

Admiral RODMAN. I think it would put up a pretty good scrap, if it ever had a start.

The CHAIRMAN. And your opinion would be that while these other things are useful and helpful, they are not useful in a battle fleet?

Admiral RODMAN. I did not say.

The CHAIRMAN. That is what I gathered.

Admiral RODMAN. Well, you gathered it wrong. You would have to have all the types.

The CHAIRMAN. But you think it could still have performed its duty as a battle fleet without——

Admiral RODMAN. If you are driving at the fact——

The CHAIRMAN. I want to know the facts. I am asking for information.

Admiral RODMAN. I will have to give it to you from my side, too, you know. If you are driving at this, if you think that the German fleet, if it had got mixed up with the British Grand Fleet and had any success, could still have licked the Atlantic Fleet, you were never more mistaken in your life. It would never have done anything with them. They would have wiped it off the face of the earth. I will tell you why. If those two fleets had come together, even presuming that it had not been a complete victory for the Grand Fleet, they would have done a great deal of damage to the German fleet, and the Huns would never have stood up against the Atlantic Fleet.

The CHAIRMAN. We have now before the full Naval Committee the question brought up of building ships of all kinds.

Admiral RODMAN. Yes; that is the building program. That is why I was referring to the general board.

The CHAIRMAN. Then these ships are not necessary?

Admiral RODMAN. I did not say so; never, in the world. I say unqualifiedly we should have all these types, battle cruisers and light cruisers, etc. I am so glad, Mr. Chairman, to find that you know that we need them, and I hope you are going to give them to us.

The CHAIRMAN. I think you do need both, but I think that the battle fleet needs them also.

Admiral RODMAN. Yes, certainly; but just because we did not have them, we were not going to crawl in our hole and pull the hole in after us.

The CHAIRMAN. Yes; but would you have been very much of a fleet? You do not answer that very clearly, Admiral.

Admiral RODMAN. I am afraid that I do not. I am trying to, but you have got me muddled, all right.

The CHAIRMAN. Were you given these ships when you were on the other side? Were you given destroyers?

Admiral RODMAN. Yes; I was given eight destroyers.

The CHAIRMAN. And light cruisers?

Admiral RODMAN. I was given eight British destroyers to screen the American battleship force, and every time I went into the North Sea, and each time we went north, the whole British fleet, including every type of vessel, not only the battle cruisers and light cruisers, but we had sea-going submarines and air ships, and I do not know what all—we had the whole thing go out.

The CHAIRMAN. Are you familiar, generally speaking, with the composition of the British and German fleets as they met at the battle of Jutland?

Admiral RODMAN. No, sir: only from general reading. I could not give you the exact data.

The CHAIRMAN. But you are fairly familiar with the battle of Jutland—the details?

Admiral RODMAN. Fairly so, from what I have heard from the Britishers, themselves, and from what I have read.

The CHAIRMAN. Then what would your definition be of a fleet that is in all respects ready for battle, against a fleet like the Germans' in 1916?

Admiral RODMAN. We should have all the types of vessels that were necessary, and have time to train them and the men to man them.

The CHAIRMAN. In addition to battleships, what units would be necessary?

Admiral RODMAN. Exactly those I have mentioned; the battle cruisers, light cruisers, sufficient destroyers, that we now have, and possibly in an increased number, battleships planes, and their number of auxiliaries, together with the fleet, and there should be one or two ships for carrying airplanes. That, in general, is about what we need. We have got fine ships, Mr. Senator, there is no question about it. The battleships we have got are a fine type of ships. Why do you not ask me about their state of efficiency now, and I will tell you that it is very poor.

The CHAIRMAN. I will come to that later on. Would it be proper to state that a fleet composed only of battleships and destroyers, no matter how efficient and ready for war, would be a proper fleet for a battle like the battle of Jutland?

Admiral RODMAN. Certainly not. Our fleet had nothing but the battleships and a few destroyers. Still, what was left of the German Battle Fleet, it would have put it out of commission if it had ever started to come across.

The CHAIRMAN. If it had already disposed of the British Fleet?

Admiral RODMAN. It could not. That is a hypothetical case. Never in the world. The British Fleet was double their strength.

The CHAIRMAN. You are stating your opinion.

Admiral RODMAN. No, sir; I know it. The British Fleet would have cleaned them off the face of the earth.

The CHAIRMAN. No: but I say, if they had disposed of the British Fleet and come over here after a certain length of time, would we have been prepared to meet them?

Admiral RODMAN. No, sir; not fully.

The CHAIRMAN. Then a fleet is not ready for battle if it has not got scouts and screening vessels and seagoing submarines and air service and destroyers?

Admiral RODMAN. You should say it is not prepared for its maximum efficiency, but it still has right considerable fight in it.

The CHAIRMAN. It is not properly prepared as a battle fleet?

Admiral RODMAN. No, sir; it is not.

The CHAIRMAN. Nor is it in all respects fully prepared if these ships are not fully officered and manned?

Admiral RODMAN. No, sir; the more trained officers and men you have, the better the ships, everyday in the week.

The CHAIRMAN. How about our Navy when war was declared was it fully officered and manned?

Admiral RODMAN. I believe not; not as well as it should have been. I believe we were a little shy of men about that time.

The CHAIRMAN. A little shy?

Admiral RODMAN. Yes, sir. I do not know how much; possibly 10 to 20 per cent; something of that kind. That was very clearly demonstrated, because I remember before I went abroad, just at the time we increased the complements of ships; I might explain by saying that the old complements of ships contemplated having at all times a certain number of men for certain purposes in the engine room. We always had a full turret's crew; but just prior to that time we only had half enough men to man our secondary batteries, thinking that if we were engaged on the starboard side, we had enough men, and then we could shift them over to the port side. Later that was changed, and the department decided to give us full complements for all our secondary guns. When they went abroad realizing that I might need more men than usual, I asked for an increase on that, and I think I had 10 or 15 per cent more men than were used in our other ships.

The CHAIRMAN. I suppose the department put itself out to give you the best possible complement of officers and men that it could for foreign service?

Admiral RODMAN. No, sir; not a bit of it. There was not a change made in any of the officers or men on board of the ships; not one. They gave us a lot of recruits that were not trained. They had sent numbers of our men around to the merchant ships for manning the guns, and what men I had with me were not trained when I started, by any manner of means. Some of them were raw recruits.

The CHAIRMAN. Do you know anything yourself about the reserve ships, whether they were thoroughly manned when you went abroad?

Admiral RODMAN. No, sir.

The CHAIRMAN. You do not know, or they were not?

Admiral RODMAN. I do not know, sir.

The CHAIRMAN. You do not know whether there were enough men to man them and officer them?

Admiral RODMAN. I imagine there was a great scarcity of officers and men. I imagine that if you took the men out of the Navy at that time to man anything else than the naval ships, there was a great scarcity.

The CHAIRMAN. I think Admiral Palmer testified there were over 2,300 officers in the Navy, and the need was for 6,000.

Admiral RODMAN. His information is infinitely more accurate than mine. Whatever he said was perfectly true, no doubt.

The CHAIRMAN. Do you know what vessels in the Navy were available for scouts and screening vessels with the battle fleet in January, 1915?

Admiral RODMAN. No, sir; I can not recall those things. Please do not think that I am evasive, Mr. Senator, but I have not thought of those things.

The CHAIRMAN. No; you have said that you have no documents, and of course nobody can remember all these things.

Admiral RODMAN. No, sir.

The CHAIRMAN. It was notorious that there were too few, at that time.

Admiral RODMAN. I do not know about the word "notorious." It might be a fact that they had too few, but I do not know whether there was anything notorious about it.

The CHAIRMAN. It was well known?

Admiral RODMAN. Oh, yes; it might have been well known, and it might not have been notorious.

The CHAIRMAN. I do not get the distinction, but I am glad you do. Were these scouts and screening ships fully manned and officered in April, 1917, when we declared war?

Admiral RODMAN. I imagine they did not have anything like the men and officers on them, but I do not know. I imagine not.

The CHAIRMAN. There were some of these vessels with the fleet, of course, at that time?

Admiral RODMAN. You are still asking me something about things I do not know anything about.

The CHAIRMAN. It was your fleet.

Admiral RODMAN. Oh, I thought that you were asking about the reserve fleet, now.

The CHAIRMAN. No; I am asking you about the scouts and screening vessels. I want to know whether there were some of those vessels with the fleet, or whether it was purely a fleet of battleships and destroyers?

Admiral RODMAN. I think I can say, unqualifiedly, so far as I know, it was, almost. There were very few of those other ships. It was almost altogether battleships and destroyers. But Admiral Wilson can tell you about that, better than I can, because I think he was in command of a squadron of scouts and cruisers. He knows and I do not.

The CHAIRMAN. If the Secretary stated in his 1918 report that the Navy was ready from stem to stern when the war was declared, in April, 1917, would you say that that was so?

Admiral RODMAN. No, sir.

The CHAIRMAN. How was it not ready?

Admiral RODMAN. It did not have sufficient types and numbers of vessels and trained personnel to make a complete fleet along the line you were just asking me just now. The fleet was not complete.

The CHAIRMAN. And it was not in an efficient state for battle?

Admiral RODMAN. Yes, sir; what we had could put up a pretty good scrap. But if you were to go into an engagement, if you waited until everything was complete and you had absolutely everything, you could make mighty little headway. I suppose there is a necessity in every engagement and every battle ashore or afloat, there are many things that are not complete; but that does not keep a man from very frequently winning a victory.

The CHAIRMAN. Then it was not ready to run up against a fleet such as came out from Germany to fight the battle of Jutland?

Admiral RODMAN. I would not say that until I saw the figures on both sides. I always had an idea that we would give the Germans a pretty good scrap. The principal fighting force of a fleet is the battleships, Mr. Senator.

The CHAIRMAN. As I remember, in the battle of Jutland Admiral Jellicoe stayed behind with the battleships, and Admiral Beatty was in front with the battle cruisers and light cruisers?

Admiral RODMAN. Very briefly, so far as I remember from my information, without going into the harrowing details, if that would represent the German fleet in column [indicating on table], which is the fighting formation, Admiral Beatty in his battle cruisers sighted the German fleet coming in that direction [indicating], just as I bring my hand, and when he had gotten contact, he had to turn, and make a turn here [indicating], and it was in that turn that some of his ships were sunk. He then took position off the leaders of the German fleet and picked up the battle, leading them up to here, where the British fleet was in command of Admiral Jellicoe.

The CHAIRMAN. But in front of Admiral Jellicoe's command were all of these screening vessels, were they not?

Admiral RODMAN. There must have been destroyers and light cruisers, I should think.

The CHAIRMAN. We had no battle cruisers?

Admiral RODMAN. No; no battle cruisers and no light cruisers; and our scouting vessels, which is our source of information among other things, would have been very scanty indeed.

The CHAIRMAN. So that we would have had to do away with all Admiral Beatty's part of it, and it would simply have meant that the battleships would have been attacked by the German fleet, and we would have had an insufficient number of destroyers to screen them?

Admiral RODMAN. Under that condition which you have mentioned there, we would have been shy of the information. It was Admiral Beatty's duty to report what he saw to the battleship fleet, which we are always trying to get into action. Not only was Admiral Beatty scraping to beat four of a kind, but he was sending information back; and without information we would be very much behind in picking up the movements.

The CHAIRMAN. You do not think that our fleet was as well prepared as the British Grand Fleet in 1917?

Admiral RODMAN. I imagine that just at the beginning of the war they were in very much better position than we and better prepared from the fact that they did have the types of vessels that we should have had but did not have; but from what I was told when I was abroad they were far from being in a thorough state of preparedness when the war started.

The CHAIRMAN. I am not asking you that. I am asking, in 1916, when they met the German Fleet at Jutland?

Admiral RODMAN. Would you please ask that question again? Were they prepared then——

The CHAIRMAN. I asked you whether you thought our fleet in 1917 was as fully prepared and provided as was the British Fleet to meet the German Fleet at any time in 1917?

Admiral RODMAN. Not by any manner of means, for the reason that the British Fleet had the types of vessels that we did not have, and they had a war experience.

The CHAIRMAN. Then their personnel was in good shape at that time?

Admiral RODMAN. Yes; I think their personnel was in fine shape. You must remember that there was not a day but that all ships in the war zone were profiting by the experience of the war and making changes right straight along.

The CHAIRMAN. And was our Navy profiting at the same time by the experiences of the war?

Admiral RODMAN. Yes; unqualifiedly. They may not have gotten the maximum benefit, but I have never seen more energy and more preparation. We were acting to the best of our ability.

The CHAIRMAN. They were studying on the other side, as the Army was, studying up naval conditions?

Admiral RODMAN. I imagine so.

The CHAIRMAN. That is, prior to our entrance into the war?

Admiral RODMAN. Certainly they did. We had officers in the British Fleet, since I come to think about it.

The CHAIRMAN. In the British Fleet?

Admiral RODMAN. Yes; Capt. Symington. I do not know how many more. He was in one of the British battle cruisers.

The CHAIRMAN. Do you recall whether those officers, before the war commenced, some time before the war commenced, were arriving back home?

Admiral RODMAN. No, sir.

The CHAIRMAN. You do not know about that?

Admiral RODMAN. No, sir.

The CHAIRMAN. But you think that we had men studying the submarine situation and the various battle situations that might come up on the other side; but you do not know?

Admiral RODMAN. Oh, I imagine that we had; but I can not give you that information.

The CHAIRMAN. You have no information?

Admiral RODMAN. No, sir; I do not recall; but I imagine we did.

The CHAIRMAN. Now, Admiral, do you consider the organization of the Navy Department as now existing satisfactory?

Admiral RODMAN. No, sir.

The CHAIRMAN. What changes would you suggest other than the ones you spoke of?

Admiral RODMAN. None other, sir. I am not very familiar, Mr. Senator, with the intimate organization of the Navy Department, because I never had anything to do with it. There are other officers who probably know more about it than I, lots of them, in fact, who have been in the department. I think, very generally speaking, sir, that with the recommendation I made in regard to the Chief of Operations being given more responsibility and the authority, repeating that recommendation, that the continuation of the General Board as it exists is most important. Beyond that I have no recommendations to make.

The CHAIRMAN. Do you think that a civilian Secretary of the Navy who has never studied or had experience of naval warfare could reasonably be expected, without expert advice and assistance, to prepare a navy or a fleet for battle?

Admiral RODMAN. No, sir.

The CHAIRMAN. He would have to depend almost altogether on expert advice?

Admiral RODMAN. I should think so, sir.

The CHAIRMAN. And would probably have to follow that advice in order to get good results?

Admiral RODMAN. Yes, sir.

The CHAIRMAN. Do you think that the Chief of Naval Operations should be authorized to exercise throughout the bureaus and offices of the Navy Department, through naval commanders, such supervision over all activities of the Navy as is required to secure coordinated action?

Admiral RODMAN. Will you repeat that question, please?

The CHAIRMAN. Do you consider that the Chief of Naval Operations should be authorized to exercise through the bureaus and offices of the Navy Department and the naval commanders, such supervision over all activities of the Navy as is required to secure coordinated action?

Admiral RODMAN. Yes; there will be times, possibly, when the State Department might require the services of a vessel, and the Secretary of the Navy might be more in touch with the national policy, and he might direct the Chief of Naval Operations in that respect. But so far as carrying out war plans is concerned, and in the matter of preparedness and in the execution of the plans, I think it should be intrusted to the Chief of Naval Operations, as I have said.

The CHAIRMAN. You believe in a centralized control over the policies and plans?

Admiral RODMAN. Certainly I do.

The CHAIRMAN. And decentralization of authority and responsibility over the execution?

Admiral RODMAN. I do, sir.

The CHAIRMAN. That is, give the authority to execute to the subordinates as much as possible?

Admiral RODMAN. Yes, sir. What would be the use, if he had responsibility, of making preparations, what would be the use if he could not execute them?

The CHAIRMAN. What should be the general authority of the Chief of Naval Operations in time of peace?

Admiral RODMAN. I would not avoid that question, but I am not very good at that sort of thing. I would rather make my general statement, if you would allow me, and let those who are more familiar with the technicalities of the department, and who are gifted in writing regulations and that sort of thing, answer on that.

The CHAIRMAN. You state, in general, that the Chief of Naval Operations should have responsibility for the plans?

Admiral RODMAN. Yes, sir; I do.

The CHAIRMAN. And that would also apply to time of war?

Admiral RODMAN. I think he should be also given authority.

The CHAIRMAN. I think that is the point; if he has responsibility he ought to have the authority.

Admiral RODMAN. He ought to have it. He has not got it. In other words, they should be hand in glove.

The CHAIRMAN. And the same thing would apply to time of war?

Admiral RODMAN. Yes, sir. Now, I would not for a moment imply that the Chief of Naval Operations would be so independent that he could do just what he wants. You must remember that our Government would have to be run throughout as it was in this war.

through all the industries and the whole country following the Federal policy, and this policy would be told to the Chief of Naval Operations, and he then would execute that part of it which relates to the Navy.

The CHAIRMAN. Admiral Mayo brought out that question of the general policy which the Navy should be kept thoroughly familiar with in order to know what steps to take.

Admiral RODMAN. He is a very level-headed man.

The CHAIRMAN. You agree with that?

Admiral RODMAN. Yes, sir; anything that Admiral Mayo would recommend. I think he is one of the most level-headed men I know.

The CHAIRMAN. You would give him a general indorsement?

Admiral RODMAN. Yes, I would. He is a very level-headed man. He is a fine man.

The CHAIRMAN. Do you believe in a planning division under the direction of the Chief of Naval Operations?

Admiral RODMAN. I think it is necessary.

The CHAIRMAN. Do you think it needs 15 men?

Admiral RODMAN. I do not know whether it takes 15 or 50. That is a detail I do not know. I imagine that I would not put any limit on that. I would let the Chief of Operations say as to that. He would not take any more than are necessary or take any less. He would take the officers who have ability in that line and take the number required. I would not limit him to any number. That is not like saying that there is going to be a great general staff. It is like where a man is assigned to one trick of duty. A man would be planning and after a certain number of years he would be assigned to other duty. I would not put a limitation there.

The CHAIRMAN. You would not put a limitation?

Admiral RODMAN. No, sir.

The CHAIRMAN. You would not provide for the number of men?

Admiral RODMAN. I would simply say that he be authorized to have detailed sufficient officers to properly constitute a planning section. In other words, that he is so——

The CHAIRMAN. Would you provide that those officers who are serving in the planning section should do that and nothing else while so serving?

Admiral RODMAN. I do not think so. That would be the principal duty. When an officer is assigned to duty there is a multiplicity of duties that come in, and my experience has been that when an officer, to use a slang expression, has been given a job, he is expected to devote a maximum amount of his time to that work, and that is what would happen if a man was detailed to the planning section.

The CHAIRMAN. If the Chief of Naval Operations was given the responsibility and authority, which you say you approve of, would he not have to have men who would spend most of their time on that in the planning section?

Admiral RODMAN. No, sir; if he was a regular naval officer I would say if he spent as much as three years there he then ought to go to sea. That is our general policy throughout. We have a number of specialists in the Navy.

The CHAIRMAN. That is quite true, but I mean while he is serving with Operations he should do that in the planning section, and nothing else?

Admiral RODMAN. Yes, sir; he should devote his attention to this.

The CHAIRMAN. And nothing else?

Admiral RODMAN. Yes, sir.

The CHAIRMAN. After your experience and observation in the war, preparing for it, do you think it would be advisable to retain intact and without change the present organization of the Navy Department or to repeat the policies and methods of handling the Navy that prevailed in 1914 and 1917?

Admiral RODMAN. I would recommend the change that I have already recommended, that we have a Chief of Naval Operations with the responsibility and the authority that I have already stated. That, I think, would make the remedy all right.

The CHAIRMAN. You think that would take care of the personnel?

Admiral RODMAN. You are getting me over my depth again. I honestly do not know very much about the organization as to the relations of the chiefs of bureaus to the Chief of Operations, but I rather imagine that if there were a Chief of Operations he would be responsible for the personnel, just the same as he is for material and preparedness and everything else. He does now have something to say in those matters.

The CHAIRMAN. Have you any further suggestions to make, Admiral?

Admiral RODMAN. No, sir.

The CHAIRMAN (continuing). That would be of help to the committee in formulating any plans?

Admiral RODMAN. No, sir.

The CHAIRMAN (continuing). That may come up later on?

Admiral RODMAN. I would be very glad if I could be of any assistance, to come again before the committee, but I have no recommendations to make now.

The CHAIRMAN. If you have any recommendations at any time to make, I would be very glad if you will write me a letter and give any suggestions that you might have to make.

Admiral RODMAN. Yes, sir.

The CHAIRMAN. Have you any questions, Senator Ball?

Senator BALL. I have not any. You have covered the ground very well.

The CHAIRMAN. Senator Trammell?

Senator TRAMMELL. The chairman of the committee asked you a hypothetical question in regard to a Secretary of the Navy who had no assistance in the way of naval officers and no advice from naval officers, and so on; as to whether or not he would be capable of preparing plans, and I think you probably properly said that he would not. Is that the condition we have in connection with our Navy?

Admiral RODMAN. No; not as I understand it. The plans for the conduct of war, as I understand it now, are in the hands of the Chief of Operations. Also the General Board, in my time there, would prepare plans. These would be approved or disapproved by the Chief of Operations who would refer these plans to the Secretary, and the Secretary could approve or disapprove them.

Senator TRAMMELL. He could approve or disapprove; but as a matter of fact, this hypothetical question that the chairman asked you did not reflect the conditions that exist in our Navy, because

s I understand in our Navy the Secretary has a great army of naval officers around him making these plans, making suggestions and recommendations, and they very largely furnish the details—the naval officers themselves. Of course he might disapprove some of the suggestions, but he has the advantage of their advice and suggestions?

Admiral RODMAN. Unqualifiedly.

Senator TRAMMELL. And they are given liberty, and have the right, to make recommendations?

Admiral RODMAN. I will even go further and say that all plans and recommendations are formulated by technical officers, and are submitted to the Secretary.

Senator TRAMMELL. The question was asked you about the preparedness of our fleet in 1917 and that of the British fleet. Would it be presumed that the American Fleet would be quite in the prepared condition that the British fleet would, when they had been in war three years and we had not been in war for three years?

Admiral RODMAN. No: our fleet would not be quite so well prepared, for the reason that during that three years of war they had learned by experience that they could make a great many changes and improvements on what they thought was best prior to the war; and be benefited by the same experience when we went into the war, to the best of our knowledge. We were still prepared, but we made a number of changes.

Senator TRAMMELL. Is not that the story of war over and over?

Admiral RODMAN. I think so, absolutely.

Senator TRAMMELL. That there are emergencies, and the experiences of the war made necessary new preparations?

Admiral RODMAN. Absolutely.

Senator TRAMMELL. If the war went on for 15 years, during the fifteenth year there very likely would have to be something done that was not necessary the first year, to meet the same conditions of war?

Admiral RODMAN. You profit by experience, and in no place could you profit by it more than by being in contact with those who had been serving for three years.

Senator TRAMMELL. Do you have sufficient general knowledge of the Navy and its operations to know whether or not, beginning some two or three years before the entrance of the United States into the war, the Navy Department was active in trying to build up the efficiency of the Navy?

Admiral RODMAN. In general, I assume that it was. I have never seen them yet when they were not. I think the officers who are stationed in the department, who have made a life work of it, so far as I know they are very conscientious, and they would work up, doing all that they could to build it up. When it comes to an opinion about what should be had and what should not be had, we are largely dependent upon Congress, as you know. As I have stated in my statement, we are bounded by that limitation.

Senator TRAMMELL. Is it not a fact that the building program was largely increased, and an effort for increasing the personnel of the Navy was in progress a year or two before we actually entered into the war?

Admiral RODMAN. I think so. As I remember, at that time—gracious, it comes and goes! I can not remember those things in

detail. I know just of late—well, I will say in the last 8 or 10 years—there has been a tremendous increase in the Navy; and in the war, as I stated, the Navy was expanded eight or ten times, more or less.

Senator TRAMMELL. You have been questioned more or less on expert matters. Admiral Sims in his testimony before the committee stated that through the failure of the Navy Department to give adequate support with the means at our disposal during the first six months of the war, and previous unpreparedness, the war was prolonged for four months, causing the loss of 2,500,000 tons of shipping and of 500,000 lives, and the needless expenditure of fifteen billions of dollars. Have you any views upon that statement?

Admiral RODMAN. That is statistical, is it not?

Senator TRAMMELL. As to whether it is correct or not?

Admiral RODMAN. It is no reflection on Admiral Sims, but there is an old saw to the effect that there are three kinds of lies, "Lie, damn lies, and statistics." I think that is hypothetical entirely. No, sir; I do not think that any fair-minded man could ever say that the American Navy was ever responsible for any loss of tonnage or loss of lives. Now, if I understand the conditions to which that question there pertains, it possibly refers to the submarine attacks on allied shipping.

Senator TRAMMELL. That seems to have been his principal point, that on account of failure in supporting them——

Admiral RODMAN. I have no conception of those figures whatever, nor could I possibly, before any jury or before a committee and under sworn testimony, give positive evidence as to facts and as to figures, but I do not believe there is a particle of truth in that statement; not that Admiral Sims was not perfectly conscientious and may not have thought so. It may have been his interpretation. I will tell you why. Let us assume that there were a certain number of vessels of the Allies engaged in trying to get the submarines. Our percentage of that number, if we had sent every ship that was available for submarine combat, to the infested area, would have been only a small percentage. I do not know what, but it is small. Ten per cent of that amount of shipping, and that amount of lives that were lost by the submarine menace—give us 10 per cent of it, if you like, maybe; but let us make it out proportional to the number of ships that you have sent there, and that statement ought to be knocked into a cocked hat. That is my opinion. I have no figures.

Senator TRAMMELL. I do not think this represents any statistics. It just represents the Admiral's views.

Admiral RODMAN. I do not know anything about the number of ships or the tons, but on the face of it I do not think that statement will hold water, a bit. I had seen that statement, before I came here, and I thought it was a hypothetical case, and a good deal of imagination.

Senator TRAMMELL. How long have you been in the Navy, Admiral?

Admiral RODMAN. Nearly 45 years.

Senator TRAMMELL. Have you been at sea during most of the time during the 45 years of your service?

Admiral RODMAN. I left the Naval Academy in 1880, and I have been about 30 years at sea.

Senator TRAMMELL. I believe you stated, in regard to the question plans, that what knowledge you had was gained while you were connected with the General Board; that you had no general war plans furnished you when you assumed command and went abroad. Were your duties such and was your service such at the time that it was necessary for you to carry along in your pocket a copy of the general war plans in regard to other activities, other than those you were commanding yourself?

Admiral RODMAN. No; there was no occasion to furnish me with any war plans, or any other. I had a verbal order, or rather an intimate conversation. When information is to be conveyed, it is immaterial to me whether it be written or verbal or any other way. I was told what I was to do, and I did it the best I could. I did not need any plans.

Senator TRAMMELL. In your long experience and knowledge of naval affairs you do not consider it any particular neglect of duty that you were not furnished with other plans other than those connected with your particular operations, do you?

Admiral RODMAN. No, sir; it was a matter of no importance to me, sir.

Senator TRAMMELL. You were advised, so far as matters of importance to you were concerned, in connection with your command?

Admiral RODMAN. Yes, sir; I had the same instructions and orders—whatever you may call them—that anybody else would have had under like circumstances, I suppose, in any army or any navy in the world. I had instructions to go over and join the British Fleet. I can not see that there was anything more necessary.

Senator TRAMMELL. Your instructions were sufficiently explicit and intelligent, with your intelligence, to carry them out, so that you went ahead and fulfilled the mission required of you?

Admiral RODMAN. I would not say that I fulfilled it; I had a try at it.

Senator TRAMMELL. So far as you know, you fulfilled it?

Admiral RODMAN. Yes; the ships went across according to the verbal order.

Senator TRAMMELL. Were your instructions written or verbal instructions?

Admiral RODMAN. Both. The method of doing it was that I was called up to the Chief of Operations, and, naturally, there were a thousand and one things to be talked over. These we talked over, as is always the case, just as any gentleman might go to his subordinates and talk after giving his instructions, and when I was ready I was given my written instructions to leave on a certain date and go across.

The CHAIRMAN. And you were not even told whom you would be under when you got on the other side?

Admiral RODMAN. No, sir; I think the idea was, there was a little question about detaching us from the Atlantic Fleet for this reason. There are always a number of returns in relation to a number of subjects that would naturally go to the commander of the battleship fleet, and that was purely technical. It had no bearing on the conduct of the war; not a particle.

The CHAIRMAN. You stated that you did not agree with Admiral Sims's testimony that the failure to send ships over, and assistance, prolonged the war a certain length of time?

Admiral RODMAN. I did not say that, sir, I think. I said that I think his statement is incorrect. I do not think that we should have laid at our doors the responsibility for the loss of a number of men and that tonnage. That is what I said.

The CHAIRMAN. You mean you disagree with the figures of Admiral Sims?

Admiral RODMAN. Yes, sir; I disagree with the fact that we as Americans and in the American Navy were responsible for the loss of whatever amount——

Senator TRAMMELL. Five hundred thousand lives and 2,500,000 tons of shipping.

Admiral RODMAN. Most decidedly; positively not.

The CHAIRMAN. You think he was stating it too high?

Admiral RODMAN. Let us assume that that number of men and that amount of tonnage were lost. That is a fair assumption. I assume they were. There were others in the war besides us, and there were others combating the submarine menace, and I think that refers to that. Now, we could not possibly, under any conditions, have sent more than 5 or 10 per cent of the vessels that were then or were to be engaged in combating the submarine. Give us 10 per cent of that number, and you will give us our fair allowance in any conditions.

The CHAIRMAN. Do you have any particular knowledge about the submarine situation, or about the convoy situation?

Admiral RODMAN. No, sir.

The CHAIRMAN. Or any about the matters in Admiral Sims's testimony?

Admiral RODMAN. No, sir. Any officer in the service has a good general idea of what was going on; but, while I was in the North Sea, I dare say I knew less about what was going on than you gentlemen here at home, who had the papers. I knew very little. And as to the other branches of the work, I had very little knowledge, except in a general way, as to what our destroyers were doing about submarines, etc. I knew only in a general way. I had no particular knowledge. I was not in a position to have.

The CHAIRMAN. Senator Trammell spoke about the building program which was started in 1916.

Admiral RODMAN. That was——

The CHAIRMAN. That building program has not been carried out yet.

Admiral RODMAN. I think I recall in that case that there was such a pressure brought to bear upon dockyards and shipyards—I mean our navy yards as well—that it was considered inexpedient to continue building capital ships, and it was thought best to devote that space to the smaller types. I think that gives the idea.

The CHAIRMAN. When, in your opinion, did war with Germany seem probable, so far as the United States was concerned?

Admiral RODMAN. I thought, right from the very beginning of the war, we would be getting into it.

The CHAIRMAN. And you certainly thought so after we had given the German ambassador his passports, in February, 1917?

Admiral RODMAN. Certainly, sir.

The CHAIRMAN. And during all that time, with war imminent, it was up to us and to the Navy Department to do everything in its power to get ready and prepare for it?

Admiral RODMAN. Yes, sir, unqualifiedly. That is what they were there for.

The CHAIRMAN. In regard to this statement of Admiral Sims's, if the Navy Department had complied with his request and had sent the ships over he asked for and the personnel and other things he asked for, do you think it would have been helpful in stopping the submarine menace?

Admiral RODMAN. Certainly, sir; I think that all the assistance that we could have given, and the sooner it would have been given, all the better; but I doubt those figures, adding four months to the war; and I will tell you why. I have talked that over, naturally; we talk everything over. You can not put your nose outside of a building that somebody does not talk with you about something. I have talked that over with other officers and that statement seemed to me so preposterous that I went to some of the older officers and to all that seems ridiculous. Really, it seems ridiculous. That is the opinion I have heard from older officers.

The CHAIRMAN. Have you anything more, Senator Trammell?

Senator TRAMMELL. The chairman has asked you if you had advice in regard to convoys and other lines of activity?

Admiral RODMAN. None whatever. I knew nothing about that. It was not within my province.

Senator TRAMMELL. Was there any necessity or reason for you to know anything about that, so far as your efficiency in command was concerned?

Admiral RODMAN. Not the slightest.

Senator TRAMMELL. In carrying out the duties required of you?

Admiral RODMAN. No, sir; it was a different field of operations entirely. I had nothing in the world to do with it, no more than you had. You are speaking, of course, of the Atlantic operations?

Senator TRAMMELL. Yes.

Admiral RODMAN. No, sir.

Senator TRAMMELL. As a matter of fact, would it not have been the greatest piece of mere folly for them to have been advising you every time they were going to make some new change in regard to convoys; a waste of your time entirely?

Admiral RODMAN. I would have gone crazy if they had done so.

Senator TRAMMELL. When you had nothing to do with it?

Admiral RODMAN. There was no occasion to remind me what the convoys were doing. It was no business of mine.

The CHAIRMAN. I think the Senator has mistaken the purport of my question. I simply wanted to find out if the Admiral had any special expert knowledge of the facts.

Admiral RODMAN. No, sir; I had nothing to do with convoys or with the operations down off the south of England. Instead, Mr. Senator, of making war on submarines, I will tell you very frankly I had to get out of the way of them; and whenever we saw one we got out of the way as fast as we could.

The CHAIRMAN. On this question of prolongation of the war, as a matter of fact did not the question of when we got our ships there have a great deal to do with the question of whether the war was ended, and when it would be ended?

Admiral RODMAN. I have heard a good deal of hearsay evidence on that subject, and also in talking with the people here in Washington,

and there will be better testimony than mine on this score. There will be positive testimony, and mine is only a poor opinion.

Senator TRAMMELL. Do you know whether or not, as far as the question of transporting troops and transporting supplies, the Navy, so far as its connection with that, met all the requirements when they were ready to transport troops?

Admiral RODMAN. I have heard that they did. I have heard a great deal of praise showered on the Navy, and I am very much prejudiced in favor of it. I suppose my statement might be considered prejudiced. I thought they did pretty well, and the Army said so, too.

The CHAIRMAN. That is all, Admiral, and you may be excused.

(Thereupon, at 12.30 o'clock p. m., the subcommittee adjourned until to-morrow, Thursday, Apr. 8, 1920, at 10 o'clock a. m.)

NAVAL INVESTIGATION.

THURSDAY, APRIL 8, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 o'clock a. m., in room 235, Senate Office Building, Senator Frederick Hale presiding.

Present: Senators Hale (chairman), Ball, Keyes, and Pittman.

The CHAIRMAN. The committee will come to order. Admiral Wilson, will you be sworn?

TESTIMONY OF ADMIRAL HENRY B. WILSON, UNITED STATES NAVY.

The CHAIRMAN. Admiral Wilson, have you a statement to make about matters pertaining to this investigation?

Admiral WILSON. If the committee pleases, I have a brief paper that I would like to read. It has principally to do with my work, and what the Navy did during the war of which I am personally cognizant.

The CHAIRMAN. Before going ahead with that statement will you tell us about the positions that you held in the Navy during the war or immediately before the war?

Admiral WILSON. Yes, sir; that is covered in my statement.

The CHAIRMAN. Very well, proceed.

Admiral WILSON. Because of the nature of my services prior to and during the war, I believe I am able to give first-hand information to the committee on the subject under consideration, especially on the following:

- (1) The condition of the fleet just prior to the outbreak of war.
- (2) The organization of the patrol force; its object, organization, and the plans adopted prior to and immediately after the declaration of war.
- (3) The routing and escorting of convoys carrying a great part of our troops to France, together with their stores and supplies.
- (4) The work of a successful and important part of our naval forces overseas—the United States naval forces in France.

SERVICE PRIOR TO THE WAR.

In order that the committee may be informed of the prior service spoken of, I give it briefly:

In 1904, after the completion of a cruise of over three years, during which, in turn, I was the executive officer of a gunboat;

I fully believed that both representatives felt they had successfully accomplished their mission; that they were more than pleased with their reception by the Secretary of the Navy, the Assistant Secretary of the Navy, and the flag officers concerned; and were especially impressed with the hearty manner in which the responsible officers of the Navy Department had showed their desire to cooperate and thus further the cause against the common enemy.

At a further conference the next morning in the office of the Chief of Naval Operations, plans were drawn up for the cooperation of the forces of the three countries in the Atlantic Ocean and Caribbean Sea, and steps taken for the immediate detachment of certain vessels from the fleet with a view to sending them overseas and for some of the Navy colliers to transport certain supplies and stores badly needed by the French Government.

In consequence of the agreement arrived at in the conference, a modification of the organization of the patrol force was made, in which our area was extended, it now being from the headlands of the Atlantic coast of the United States to the fiftieth meridian and from Nova Scotia to and including the West Indies, the Gulf of Mexico, and the Caribbean Sea, as set forth in the campaign order as follows:

PATROL FORCE, UNITED STATES FLEET,
U. S. S. "*Olympia*," Flagship, April 17, 1917.

Campaign Order No. 2.

FORCES.

- (a) Northern patrol. Capt. Jones. Squadron 1.
- (b) Nantucket patrol. Capt. Twining. Squadron 2.
- (c) Chesapeake patrol. Capt. Morgan. Squadron 6.
- (d) Southern patrol. Capt. Oman. Squadron 5.
- (e) Gulf patrol. Capt. Johnston. Squadron 4.
- (f) Caribbean patrol. Capt. Anderson. Squadron 3.
- (g) Supports. *Olympia*, *Columbia*, *Charleston*.

1. The area assigned to this force has been extended to include a portion of the Caribbean heretofore supervised by the French.

2. This force will furnish maximum possible protection to trans-Atlantic commerce of the United States and friendly powers in areas to seaward of and contiguous to areas guarded by naval district forces.

3. (a) Northern patrol: Guard area between lines bearing 90 from Cape Sable and 100 from Sankaty Head. Base, Boston and Portsmouth.

(b) Nantucket patrol: Guard area south of northern patrol to line bearing 110 from Absecon Light. Base, New York and Newport.

(c) Chesapeake patrol: Guard area south of Nantucket patrol to line bearing 110 from Cape Hatteras. Base, Hampton Roads.

(d) Southern patrol: Guard area south of Chesapeake patrol to line bearing 107 from Cape Canaveral. Base, Charleston.

(e) Gulf patrol: Guard area of the Bahamas south of Southern patrol north of latitude 23 and west of meridian 75, and the Gulf of Mexico. Base, Key West and New Orleans.

(f) Caribbean patrol: Guard area south of Gulf and Southern patrols, and the Caribbean west and north of a line from the Panama-Colombian boundary to the west point of Jamaica; thence along north coast of Jamaica, south coast of Haiti, Porto Rico, and Santa Cruz, through Anegada passage, and thence 84 degrees. Base, Guantanamo, Canal Zone, and St. Thomas.

(g) Supports: *Columbia* at Hampton Roads; *Charleston* at St. Thomas. Be prepared to operate at high speed on short notice as far as meridian 50. Keep full of fuel.

(h) Use every means to capture or destroy enemy submarines sighted. Cooperate closely and constantly with the commandants of naval districts in adjustment of area of operations, in exchange of information, and in routing outgoing and incoming merchant vessels. Tenders are available for repairs within their capacity. Effective noon, April 25. Proceed then. Use 75 time.

4. Tenders: *Dirie* at Key West; *Panther* at Newport.

5. Flag on *Olympia*. vicinity New York. Cipher as indicated.

H. B. WILSON.

Of the 55 vessels definitely assigned to the patrol force, 24 were on station by April 16. Thirteen more joined by April 20. On this latter date 18 had not reported; 5 of these were Coast Guard vessels being fitted out for service in the Navy; others were still on foreign stations and some were undergoing extensive repairs.

Within a month of the organization of the patrol force, vessels began to be detached by order of the Navy Department for service in European waters.

I would like to add right there that the first two batches of destroyers that left the coast to go abroad had not yet been assigned to patrol forces. They were still with the fleet.

The CHAIRMAN. They went from the fleet and not from the patrol force?

Admiral WILSON. They had not been assigned to the patrol force yet. They were with the fleet.

On April 26, 1917, four destroyers (*Cassin, Cummings, Benham, and Aylwin*) were detached.

On May 1, 1917, 24 destroyers were detached: *Roe, Perkins, Terry, Sterrett, Walke, Monaghan, Warrington, Patterson, McCall, Jarvis, Fanning, Ammen, Paulding, Drayton, Trippe, Beale, Jenkins, Duncan, Allen, Wilkes, Shaw, Burrows, Parker, and Balch.*

On May 16 all destroyers remaining with the patrol force were detached.

On May 30 the *Birmingham, Charleston, and St. Louis* were detached for convoy escort.

Yachts purchased were fitted out and assigned to the patrol force. At this time—May 30, 1917—the force consisted of 22 active vessels and 8 other ships undergoing repairs and being fitted out.

On July 4, 1917, the *Albany, Cleveland* and *Raleigh* were ordered to fit out for convoy escort.

On July 7, 1917, *Chester, Yankton, Des Moines, Sacramento, Marietta, Birmingham, Machias, Paducah, Castine, Wheeling* and *Nashville* were ordered to fit out for foreign service.

These latter vessels were to comprise a force which was to be based on Gibraltar under my immediate command.

UNITED STATES NAVAL FORCES AT GIBRALTER.

On August 18, 1917, I arrived at Gibraltar on the U. S. S. *Birmingham* and for about two months commanded our forces based on that port, where, under the senior allied commander—a British rear admiral—our vessels protected commerce in the Western Mediterranean; in the approaches to the Straits of Gibraltar and escorted convoys between the Mediterranean and Great Britain.

There were in October, 1917, 21 United States vessels attached to the Gibraltar detachment. These vessels performed valuable and important service to the allied cause as so expressed by the senior allied commander.

UNITED STATES NAVAL FORCES ON FRENCH COAST.

On November 1, 1917, I assumed command of the United States patrol squadrons based on the French coast. On January 14 all the activities of the Navy in France were placed under my command

I fully believed that both representatives felt they had successfully accomplished their mission; that they were more than pleased with their reception by the Secretary of the Navy, the Assistant Secretary of the Navy, and the flag officers concerned; and were especially impressed with the hearty manner in which the responsible officers of the Navy Department had showed their desire to cooperate and thus further the cause against the common enemy.

At a further conference the next morning in the office of the Chief of Naval Operations, plans were drawn up for the cooperation of the forces of the three countries in the Atlantic Ocean and Caribbean Sea, and steps taken for the immediate detachment of certain vessels from the fleet with a view to sending them overseas and for some of the Navy colliers to transport certain supplies and stores badly needed by the French Government.

In consequence of the agreement arrived at in the conference, a modification of the organization of the patrol force was made, in which our area was extended, it now being from the headlands of the Atlantic coast of the United States to the fiftieth meridian and from Nova Scotia to and including the West Indies, the Gulf of Mexico, and the Caribbean Sea, as set forth in the campaign order as follows:

PATROL FORCE, UNITED STATES FLEET,
U. S. S. "*Olympia*," Flagship, April 17, 1917

I would like to add right there that the first two batches of destroyers that left the coast to go abroad had not yet been assigned to patrol forces. They were still with the fleet.

The CHAIRMAN. They went from the fleet and not from the patrol force?

Admiral WILSON. They had not been assigned to the patrol force yet. They were with the fleet.

On April 26, 1917, four destroyers (*Cassin, Cummings, Benham, and Aylwin*) were detached.

On May 1, 1917, 24 destroyers were detached: *Roe, Perkins, Terry, Sterrett, Walke, Monaghan, Warrington, Patterson, McCall, Jarvis, Fanning, Ammen, Paulding, Drayton, Trippe, Beale, Jenkins, Duncan, Allen, Wilkes, Shaw, Burrows, Parker, and Balch.*

On May 16 all destroyers remaining with the patrol force were detached.

On May 30 the *Birmingham, Charleston, and St. Louis* were detached for convoy escort.

Yachts purchased were fitted out and assigned to the patrol force. At this time—May 30, 1917—the force consisted of 22 active vessels and 8 other ships undergoing repairs and being fitted out.

On July 4, 1917, the *Albany, Cleveland* and *Raleigh* were ordered to fit out for convoy escort.

On July 7, 1917, *Chester, Yankton, Des Moines, Sacramento, Marietta, Birmingham, Machias, Paducah, Castine, Wheeling* and *Nashville* were ordered to fit out for foreign service.

These latter vessels were to comprise a force which was to be based on Gibraltar under my immediate command.

UNITED STATES NAVAL FORCES AT GIBRALTER.

On August 18, 1917, I arrived at Gibraltar on the U. S. S. *Birmingham* and for about two months commanded our forces based on that port, where, under the senior allied commander—a British rear admiral—our vessels protected commerce in the Western Mediterranean; in the approaches to the Straits of Gibraltar and escorted convoys between the Mediterranean and Great Britain.

There were in October, 1917, 21 United States vessels attached to the Gibraltar detachment. These vessels performed valuable and important service to the allied cause as so expressed by the senior allied commander.

UNITED STATES NAVAL FORCES ON FRENCH COAST.

On November 1, 1917, I assumed command of the United States patrol squadrons based on the French coast. On January 14 all the activities of the Navy in France were placed under my command

with the title commander United States naval forces in France in which capacity I continued until January 30, 1919.

Our mission in France was—

- (1) To safeguard United States troop and store ships.
- (2) To cooperate with the French naval forces.

The general nature of the United States Navy's work in France is shown in a memorandum dated August 29, 1918, prepared for the House Naval Committee upon the occasion of their visit to Brest, which is as follows:

I took this memorandum because I recognized it as partly an official paper, which I had already presented before the committee.

Memorandum:

For: Chairman House Naval Committee.

Subject: United States Naval forces in France.

MISSION.

Our mission is (a) to get American troops and supplies for these troops safely to France, protecting them from mine and torpedo; (b) to turn the transports and store ships around as quickly as possible, and to escort them through the submarine zone on their return trip; (c) to cooperate with the French in the antisubmarine war.

We have taken as our most important duty that of assuring that American troops entrusted to the care of the Navy shall be landed in France safely.

The success of the United States Navy in this war will be measured by the success with which it fulfills this trust.

FORCES.

The first vessels of the United States Navy arrived in France on July 4, 1917, and consisted of eight yachts. Since then the force has progressively increased, and now have 28 destroyers, 5 torpedo boats, 15 yachts, 9 mine sweepers, 3 repair ships, plus a considerable number of United States naval vessels carrying coal for the Army between Cardiff and ports on the west coast of France, 5 tugs and 2 steam lighters.

There are 736 officers and 7,970 men attached to these forces, exclusive of aviation.

ORGANIZATION.

For the purposes of administration, the coast of France is divided into districts corresponding with the French naval districts, with headquarters at Cherbourg, Brest, Lorient, and Rochefort; there being a United States naval officer with rank of captain or rear admiral in command of each district. He is charged with the maintenance of such vessels as may be based in his district and with the safeguarding of shipping in coastal waters. He will direct the operation of the air stations in his district.

At Brest, Lorient, and Rochefort naval bases have been established with facilities for repairing, supplying, and refueling our vessels and for maintaining personnel. All of the vessels of the force are based at Brest, with the exception of nine mine sweepers which are based at Lorient, and five yachts and a tug at Rochefort. The mine sweepers have been very successful in safeguarding shipping in the approach to St. Nazaire and the yachts in the Rochefort district escort convoys in and out of the Gironde River through the submarine zone.

The actual operation of the vessels performing escort duty is controlled from the Flag Office in Brest.

COOPERATION WITH THE FRENCH.

There has developed splendid cooperation between the American and French navies. The French have shown every disposition to assist us to the extent of their ability, and there is no disposition on their part to hamper our work in any way. They have permitted us to take complete charge of the handling of the American troopships convoys and of most of the storeship convoys.

Ten of our smaller yachts and the five torpedo boats operate under the French in coastal convoy escort. This protects convoys running daily along the coast North and South, including a large number of vessels in the coal trade between Cardiff and French ports.

I would like to inject there that that large number of vessels in the trade between Cardiff and the French ports refers largely to the vessels supplying our Army. It took a great quantity of coal.

There are eight groups of escort vessels handling this convoy, of which we furnish six and the French five. In appendix (a) it will be noted that of the organized convoys this has been the most successful as regards protection from submarines.

I have not the appendix available now to insert here.

The facilities of the French navy yards are at our disposal but, unfortunately, these facilities are inadequate even for the French Navy after four years of war. This is because, in 1914, the workmen from the arsenals were sent to the front, and the arsenals themselves were largely converted into munition plants. As a result, they lack mechanics, and their machine tools are worked out. We found it necessary, therefore, to provide our own facilities for repair and maintenance of our vessels.

COMMUNICATIONS.

A communication system of American telegraph and telephone lines is about completed, by means of which all our bases, port officers, and air stations are tied together. These lines have been built for us by the United States Army Signal Corps. All the changes in this system are manned by American personnel.

By means of radio we are in constant touch with conditions afloat and with our vessels. In the flag headquarters at Brest and in each district headquarters a constant radio watch is kept, which gives us complete and instant information of all calls from vessels in the areas in which we operated.

By means of distant control apparatus we operate the French high power radio stations under an arrangement by which the air is cleared for our purposes on demand. As a result, the time of getting messages through to our ships at sea has been reduced from one hour to two minutes.

The development of our telegraph communication has included a direct wire to London, by means of a cable laid across the English Channel by the Army, and a cable across the mouth of the Gironde River laid by the Navy to permit communication with London, at which place our westbound convoys from the Gironde are assembled.

PORT FACILITIES.

We found, upon arrival, that there was no fuel oil storage on the west coast of France except at Brest, where there was a capacity of only 7,000 tons. In order to provide for our oil-burning destroyers and for the oil-burning troop and store ships, we have increased the tankage at Brest to 28,000 tons, and will, within a few months, have 10,000 tons tankage each at Lorient, La Pallice, and Furt (in the Gironde). A further extension of the oil storage at Brest to a total of 50,000 tons is planned. All of these tanks have been erected by enlisted men of the Navy from material sent from the United States.

The French have turned over to us storehouses at Brest, Lorient, and Rochefort, in which are maintained stocks of supplies for our vessels. At Brest we have at the present moment a supply of provisions for 7,000 men for four months. We have increased the cold storage at Brest from 350 tons to a capacity of 750 tons.

In the beginning, the operations of our vessels were handicapped by lack of fresh water in nearly all of the French ports. This condition has been corrected at practically all the ports, either by the United States Army or United States Navy by the construction of water works. At Brest, for example, the Navy, by means of a pipeline 4½ miles long to Trinite Valley, has tapped an ample supply which will be available by September 15 and the United States Army have established a water supply from the head of the Penfeld River to the Port du Commerce.

United States naval hospitals have been established at Brest and Lorient, and an emergency hospital is to be constructed at Bassens near Bordeaux. At Pauillac, a hospital has been fitted out by the Red Cross and turned over to the Navy. The hospital at Brest is a 250-bed unit which has, however, accommodated 600 men. It is a building formerly occupied by a Carmelite monastery. The hospital at Lorient, recently completed, has 50 beds.

During the recent advances of American troops at the front, operating teams from the hospital at Brest have been sent to assist the Army at the front, where they have done splendid work.

ANTISUBMARINE WARFARE.

There are appended charts showing the improvement in the submarine case as between the month of July, 1917, and the corresponding month of this year. It will be noted that there has been a marked reduction in sinkings in all areas where American vessels have been operating; that is, west of Ireland, west of France, in the Mediterranean. This is due in large part to the protection that is now given to convoys. There are, however, two significant conditions. Enemy submarines are being destroyed more rapidly than they are being constructed, and shipping is being launched at a greater rate than it is being destroyed. (The charts are available.)

There is no doubt but that the submarine situation no longer can affect the outcome of the war, and there is no doubt but that the answer to the submarine problem is found in the depth charge. It is only within the present year that depth charges have been used extensively. Hitherto, our destroyers carried but few of them, and they were used sparingly. Now, whenever there is an indication of the presence of a submarine, a barrage of from 20 to 40 depth charges is laid, and the tactics of the depth charge barrage have been worked out so successfully that a destroyer which sights a submarine within a distance of a mile has a fair chance of either destroying or disabling the submarine.

SHIPPING.

The troop and cargo movements into French ports during the present year are shown in the following table:

| Month. | Cargo. |
|---------------|---------|
| 1918. | |
| January..... | 240,000 |
| February..... | 280,000 |
| March..... | 298,000 |
| April..... | 307,000 |
| May..... | 457,197 |
| June..... | 884,471 |
| July..... | 971,800 |

During the month of July, 1918, the distribution of this work between the ports

gangs of stevedores, and it has been considered unnecessary that the Navy duplicate their organization. In this connection it should be mentioned that close cooperation exists between the Army and Navy. Once a vessel is discharged from the Army, it is turned over to the Navy, and we endeavor to get her safely through the sea on her westbound voyage with a minimum loss of time.

It is frequently the case that transports are taken to sea again on the day following, or on the second day following their arrival. The *Leviathan* is a case in point. This vessel was, on her first few voyages, routed to Liverpool; it being considered that she could not be handled in any port in France. Due to her great draft it was necessary that she arrive and sail within a period of five days at the time of the lunar tides, which occur once a month. Missing this date it was necessary for her to remain for the next full moon with the corresponding tides. Her value as a troop transport was greatly reduced by this loss of time in port. She now comes to France, lands between ten and eleven thousand troops with their equipment, takes 4,500 tons of coal, 2,000 tons of water, and sails again the second or third day after her arrival.

It requires constant supervision to assure that vessels lose no time in port. A loss of a few hours may cause a vessel to miss a convoy, and thereby lose days before the next convoy. Due to the urgent demand for shipping, it has been necessary in many cases to send vessels to France with machinery in bad condition and with inexperienced personnel. There has been in the case of cargo ships a great amount of repair work necessary to prepare these vessels for their return trip across the Atlantic. This is accomplished by United States Navy repair ships and repair bases which do work on all American ships, regardless of classification, whether they be Shipping Board ships, chartered Army transports, or Navy vessels. Inasmuch as the United States Army and United States Navy have acquired control of practically all port facilities for repairing, ballasting, fueling, and supplying shipping, it has been necessary for us in the interest of the common good to take charge of all American shipping in these respects.

United States naval port officers have been established at practically all the ports reached by American vessels, namely, Cherbourg, La Pallice, Royan, Pauillac, Bordeaux, St. Jean de Luz, and Marseilles. It is our endeavor as soon as an American vessel first drops anchor in French waters to have her boarded by a United States naval officer who gives the master all the necessary information as to his future movements, charts, hydrographic notices, and necessary assistance as regards repairs, care of sick, fuel, and supplies. The port officer has the ship under constant supervision throughout the time she remains in port, and is charged with the responsibility of getting the ship out of port at the earliest possible moment. Inasmuch as the charter of a vessel may cost \$4,000 a day, it is evident that an efficient port officer will save the Government his year's pay several times a month.

SALVAGE.

One of the lessons of the war has been that many vessels, though seriously damaged by mine, torpedo, or collision, may be brought to port if prompt and proper effort is made toward their salvage. For this purpose, two American tugs are maintained at Brest on two hour's notice, ready to proceed to the assistance of ships in distress, and British tugs are similarly sent out from the Scilly Islands, as well as French tugs from Brest and Lorient.

The wrecking steamer U. S. S. *Favorite*, with a complement of skilled wreckers, is maintained at Brest for salvage work. There are now at Brest under repair two vessels, the salvage of which was very creditably performed. The *Westward Ho*, torpedoed 315 miles from port, was abandoned by her crew and in an apparently sinking condition. Men from the U. S. S. *Noma* and U. S. S. *May* boarded her, raised steam in her boilers, started her pumps, and backed her into port, assisted by tugs; her fore-castle nearly awash.

That ship had on board one of the most valuable cargoes that came to France. It was just at the time of the drive, and she was loaded in part with Lewis machine guns; and we saved every bit of the cargo of that ship except a little in the fore hold, and the repairs were made by the Navy and we sent her to sea.

The CHAIRMAN. That is the language of your report that you made to Congress?

Admiral WILSON. That is the language of the report I gave to the naval committee. Of course, I have a great deal more information, but this was a part of this report which was dated August 29, 1918. [Continuing reading:]

The *West Bridge*, struck by two torpedoes and with her well decks awash, was towed a distance of 400 miles into Brest by two American, two British, and one French tug. When she reached port there remained about 1 per cent of her original buoyancy.

WORK OF THE VESSELS OF THE FORCE.

Too much credit can not be given the officers and men of this force for their efficient and efficient performance of difficult and dangerous duty, under conditions which have frequently been most trying. They have their equals in no other Navy to lack of a sufficient number of destroyers for the work in hand, it has been necessary to drive these vessels to a much greater extent than we had believed possible when they are at sea two-third of the time.

The following table shows the distances steamed during the past two months by the vessels from which records are available:

| Destroyers. | Miles steamed. | |
|-----------------|----------------|-------|
| | June. | July. |
| Conner..... | 5,902 | |
| Cushing..... | 6,043 | |
| Drayton..... | 4,750 | |
| Ericsson..... | 6,468 | |
| Fanning..... | 6,232 | |
| Flusser..... | 4,457 | |
| Lamson..... | 5,220 | |
| Little..... | 5,698 | |
| Monaghan..... | 800 | |
| McDougal..... | | |
| Nicholson..... | 6,853 | |
| O'Brien..... | 5,206 | |
| Preston..... | 5,102 | |
| Reid..... | | |
| Roe..... | 5,200 | |
| Sigourney..... | 7,118 | |
| Tucker..... | 5,474 | |
| Wadsworth..... | 5,617 | |
| Wainwright..... | 5,198 | |
| Warrington..... | 5,804 | |
| Winslow..... | 6,398 | |

In the storms of winter they frequently have returned to port with masts and rigging gone, but with the officers and crew cheerful and asking to go out again after a short sleep.

The vessels engaged in coastal convoy escort have handled their convoy, frequently contain from 20 to 30 ships, through the dangerous coastal channels, frequent fogs and treacherous currents, with remarkably small losses.

AVIATION.

United States naval aviation stations have been constructed by naval personnel at various points on the coast of France as follows:

| Name of station. | Number of planes. | Number of officers. | Number of men. |
|-----------------------|-------------------|---------------------|----------------|
| <i>Seaplanes.</i> | | | |
| Dunkerque..... | 32 | 40 | |
| Treguier..... | 18 | 34 | |
| L'Aber Vrach..... | 24 | 34 | |
| Brest..... | 24 | 58 | |
| Ile Tudy..... | 24 | 34 | |
| Le Croisic..... | 24 | 34 | |
| Fromentine..... | 24 | 58 | |
| St. Trojan..... | 24 | 34 | |
| Arcachon..... | 24 | 58 | |
| <i>Dirigibles.</i> | | | |
| Guipavas..... | 2 | 16 | |
| Palmboeuf..... | 6 | 16 | |
| Rochefort..... | 2 | 16 | |
| Gujan..... | 2 | 16 | |
| <i>Kite balloons.</i> | | | |
| La Trinite..... | 6 | 14 | |
| Brest..... | 6 | 14 | |
| La Pallice..... | 6 | 14 | |

operation of these stations is the protection of ships on the coast of France within range of action, and their locations have been chosen with particular reference to the approaches to the important ports.

These stations are now practically completed, some of them are actually operating, and planes are arriving in large numbers.

In addition to these a station for training aviators is maintained in Moutchic and a flying and repair base has been established at Pauillac.

H. B. WILSON.

ROUTING AND ESCORTING CONVOYS THROUGH WAR ZONE.

The continuing the escort for United States troopship convoys was provided by the fleet on Queenstown. As the number of destroyers assigned to our forces was increased we gradually took over the escort of these convoys. The number of troops handled under the different conditions is shown in the following

United States troops transported direct to west coast of France.

| | |
|-------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| From Nov. 1, 1917 (the date I took command)..... | 47,931 |
| From Dec. 1, 1918 (of the latter number)..... | 1,004,826 |
| For which forces furnished escort through submarine zone, assisted by pilot waters by naval forces in France, for..... | 175,211 |
| For which forces, assisted by naval forces in France, furnished escort through submarine zone and further assisted through pilot waters for.... | 122,914 |
| For which forces in France furnished escort through submarine zone and assisted through pilot waters for..... | 667,932 |

These forces in France in addition routed and escorted through the dangerous and danger part of the storeships coming to the west coast of France with supplies.

In the case of convoys escorted by the naval forces in France, the routing was effected in the following manner:

From the London office we received information as to the time that convoys were to pass through certain positions well to the westward of the zone of normal submarine activity. After the receipt of this information all routing and protecting, and the preparation and issuing of operation orders to insure destroyers meeting the convoys on the high seas to escort them clear of all other convoys, were left entirely and entirely by the forces under my command.

From the London office we received information as to the time that convoys were to pass through certain positions well to the westward of the zone of normal submarine activity. After the receipt of this information all routing and protecting, and the preparation and issuing of operation orders to insure destroyers meeting the convoys on the high seas to escort them clear of all other convoys, were left entirely and entirely by the forces under my command.

After the receipt of this information all routing and protecting, and the preparation and issuing of operation orders to insure destroyers meeting the convoys on the high seas to escort them clear of all other convoys, were left entirely and entirely by the forces under my command.

PRESENT DUTY

From the London office we received information as to the time that convoys were to pass through certain positions well to the westward of the zone of normal submarine activity. After the receipt of this information all routing and protecting, and the preparation and issuing of operation orders to insure destroyers meeting the convoys on the high seas to escort them clear of all other convoys, were left entirely and entirely by the forces under my command.

From the London office we received information as to the time that convoys were to pass through certain positions well to the westward of the zone of normal submarine activity. After the receipt of this information all routing and protecting, and the preparation and issuing of operation orders to insure destroyers meeting the convoys on the high seas to escort them clear of all other convoys, were left entirely and entirely by the forces under my command.

CONCLUSIONS

From the London office we received information as to the time that convoys were to pass through certain positions well to the westward of the zone of normal submarine activity. After the receipt of this information all routing and protecting, and the preparation and issuing of operation orders to insure destroyers meeting the convoys on the high seas to escort them clear of all other convoys, were left entirely and entirely by the forces under my command.

From the London office we received information as to the time that convoys were to pass through certain positions well to the westward of the zone of normal submarine activity. After the receipt of this information all routing and protecting, and the preparation and issuing of operation orders to insure destroyers meeting the convoys on the high seas to escort them clear of all other convoys, were left entirely and entirely by the forces under my command.

(3) That from the moment war was declared the entire Navy—the department as well as the fleet—entered into the prosecution of the war with the greatest energy, and its accomplishments deserve the commendation of the Nation.

(4) As soon after the declaration of war as practicable—in fact within four days—we were in conference with the accredited representatives of the British and French Admiralties, and as soon as we learned from the naval representatives of our associates the manner in which we could best cooperate, immediate and efficient steps were taken to send our available ships overseas.

(5) A great part of our Army was safely transported 3,000 miles across the sea by the Navy, and no soldier or passenger embarked on a Navy transport during the war was lost through the efforts of the enemy.

(6) Naturally “hindsight” may discover many things that might have been done better, but when we consider that the Navy expanded six times its former size in ships and eight times in officers and men; when it accomplished so many big things that seemed almost impossible; when we consider what it did do; the things it did not do the mistakes it made are so relatively unimportant that they are hardly worth considering in comparison. Results are what count.

(7) That our naval forces from the start cooperated in a most successful manner with the naval forces of our associates in many portions of the seas; and by their splendid and efficient work materially aided in shortening the war and in this manner saving untold life and property.

The CHAIRMAN. That is all of your statement, is it?

Admiral WILSON. Yes, sir.

The CHAIRMAN. Admiral, you say in your statement that you have no hesitation in saying that no nation on the approach of war has had a force of battleships more nearly prepared for battle than the battle fleet to which you were attached.

Admiral WILSON. I did.

The CHAIRMAN. When you say that do you mean that the fleet as a battle fleet was more nearly prepared?

Admiral WILSON. No; I referred to the battleships.

The CHAIRMAN. You referred to the battleships as having been prepared?

Admiral WILSON. Having been the captain of a battleship, that is what I know about, and all I can speak of is what I know.

The CHAIRMAN. But you are also in a position to speak about the organization of the fleet, and whether as a fleet it was prepared or not.

Admiral WILSON. What we had given to us was in good condition.

The CHAIRMAN. And that consisted of what?

Admiral WILSON. Battleships and destroyers.

The CHAIRMAN. Were there an adequate number of destroyers to make up a well-prepared battle fleet?

Admiral WILSON. Not from our present knowledge. We thought we had quite a number at the time.

The CHAIRMAN. Did you think you had sufficient at the time?

Admiral WILSON. Never; never had sufficient.

The CHAIRMAN. Was the personnel of the battleships and of the destroyers sufficient?

Admiral WILSON. Yes; and excellent.

The CHAIRMAN. And well trained?

Admiral WILSON. Splendid.

The CHAIRMAN. Were there any other ships attached to the fleet, such as would ordinarily be attached to a battle fleet? I refer to light cruisers and antisubmarine vessels and scouting vessels of all types?

Admiral WILSON. No, sir; because we did not have them in the service.

The CHAIRMAN. You are referring now to force No. 2?

Admiral WILSON. Yes.

The CHAIRMAN. Which was our main defense?

Admiral WILSON. Yes.

The CHAIRMAN. And which was naturally in better condition than any other force would be.

Admiral WILSON. That is the only force I know about, and I can say that was in excellent condition.

The CHAIRMAN. Do you know anything about Force No. 1?

Admiral WILSON. No, sir.

The CHAIRMAN. From what you have heard about it, was that in good fighting condition?

Admiral WILSON. I can not remember what I heard, sir.

The CHAIRMAN. You have no recollection of hearing anything about that?

Admiral WILSON. Well, I suppose I did, but I did not pay much attention to it. My time was taken up on my own ship. The captain of a battleship does not have much time to give to other things, if he attends to his work properly.

The CHAIRMAN. When were you assigned to the command of the patrol force of this country?

Admiral WILSON. I was detached from the *Pennsylvania* on the 8th of March, and immediately took up the duty of preparing the force. That was the 28th of March, 1917.

The CHAIRMAN. The boats that were given you, they were taken from the fleet?

Admiral WILSON. Most of the ships that were given to me had been under the command of Admiral Mayo, the commander in chief of the fleet. One was on a foreign station, one cruiser, I remember that was assigned to me was doing duty at the time in the Mediterranean. A large number of the destroyers came from the fleet. The coast guard vessels came from the Coast Guard. That is all I want to say.

The CHAIRMAN. After the destroyers were taken from the fleet, it left the fleet with very little screening protection, I presume.

Admiral WILSON. The number of destroyers asked for by Admiral Mayo remained in the fleet. I do not remember the number.

The CHAIRMAN. Would you say that the fleet, after these forces of yours had been taken away from it, was in condition in case the German fleet should break through and should come over in an effective condition—would you say that the battle fleet was in condition to meet them?

Admiral WILSON. We did not worry about the German fleet coming over.

The CHAIRMAN. I know——

Admiral WILSON. We were thinking about submarines coming over.

The CHAIRMAN. I know, but I want to know whether the fleet was, in your judgment, sufficient to meet a German fleet that was thoroughly equipped?

Admiral WILSON. I guarantee that after the German fleet came across 3,000 miles and appeared on our coast, we would have given them a good drubbing.

The CHAIRMAN. But I want to know whether, according to the rules of naval warfare, the fleet was in a condition to meet the German fleet?

Admiral WILSON. Theoretically; no, sir.

The CHAIRMAN. And it was not in the condition that the English fleet was in when it met the Germans at the battle of Jutland?

Admiral WILSON. The English fleet was in better condition when it met the Germans at the battle of Jutland than it was in when war was declared.

The CHAIRMAN. Do you think our fleet, when war was declared in April, 1917, was in as good condition as the English fleet in August, 1917?

Admiral WILSON. What we had was.

The CHAIRMAN. Precisely; what we had.

Admiral WILSON. I have no comment to make on anything we did not have, because that is not my job.

The CHAIRMAN. And in spite of the fact that the whole world had been at war for nearly three years, and there was a probability of our being dragged into the war; in spite of that fact you would not say that we were as adequately prepared in April, 1917, as the English fleet was when they met the Germans in the battle of Jutland?

Admiral WILSON. You know we were not able to prepare anything to speak of, because a few months before we entered the war the majority of our people voted on the question that they approved that we had not gone to war, and we could not take any steps looking to war under such circumstances.

The CHAIRMAN. Would you say that that was the verdict of the people in the November election?

Admiral WILSON. I take it, from my reading, and as a citizen, that it was. I am not speaking as a naval officer; I am speaking as a citizen in regard to that.

The CHAIRMAN. You think that the Navy Department——

Admiral WILSON. I do not know the Navy Department, sir.

The CHAIRMAN. Do you think that officers of the Navy, I will say, thought that we were not going into the war?

Admiral WILSON. I personally thought we would surely get into the war; but I saw, at the same time, that a great many of our people, and the majority of them, had spoken in November, and it was doubtful when that time would arrive, if ever.

The CHAIRMAN. And do you think, after the German ambassador was given his passports, that there was any doubt about our going into the war?

Admiral WILSON. Mr. Senator, the night that the German ambassador was given his passports our fleet was on that night and from that night, on a war basis.

The CHAIRMAN. What do you mean by on a war basis?

Admiral WILSON. We acted just the same as if we had been at war.

The CHAIRMAN. You did everything you could to speed up preparedness?

Admiral WILSON. Ah! No, we were prepared at that time. All the ships that were with us were prepared for war.

The CHAIRMAN. The individual ships?

Admiral WILSON. Yes, sir.

The CHAIRMAN. Now, these ships that you took over when you were put in charge of the patrol in American waters, were they all in good condition and adequately prepared for war?

Admiral WILSON. They were serviceable for war, sir.

The CHAIRMAN. Were they in as good condition as you would expect them to be in in ordinary times?

Admiral WILSON. Taking into consideration their age, yes, sir.

The CHAIRMAN. Were they as well manned, as to personnel?

Admiral WILSON. Yes, sir.

The CHAIRMAN. Trained personnel?

Admiral WILSON. They were efficient.

The CHAIRMAN. They were efficient.

Admiral WILSON. And did their job, yes, sir.

The CHAIRMAN. There is no question about their doing their job. What was their job?

Admiral WILSON. I read you, sir.

The CHAIRMAN. Yes; but briefly, their job was to guard against submarines on the coast?

Admiral WILSON. And patrol areas to protect commerce, and to be prepared to meet the enemy's submarines and destroy them.

The CHAIRMAN. And while you were on this side did any submarines come over to this side?

Admiral WILSON. No, sir; and that is the reason we went to the other side. The force was organized with that idea. I will say that the force was so organized that if submarines did not come to our coast it could be moved to the war zone.

The CHAIRMAN. And the plan of patrolling our coast was given out later?

Admiral WILSON. Yes, sir.

The CHAIRMAN. Those vessels went abroad?

Admiral WILSON. Yes, sir; the decision to send them having been rendered five days after we went to war.

The CHAIRMAN. Five days after the 6th of April?

Admiral WILSON. Yes, sir; on the 11th of April, 1917.

The CHAIRMAN. The decision was made then to send them abroad?

Admiral WILSON. Yes, sir.

The CHAIRMAN. And when were they sent abroad?

Admiral WILSON. I do not remember that, sir.

The CHAIRMAN. Well, when were the first ones sent abroad?

Admiral WILSON. The order was given at once—the order was given the next day to send the first division abroad.

The CHAIRMAN. The first division consists of destroyers?

Admiral WILSON. I think there were six.

The CHAIRMAN. And when did they sail, do you know?

Admiral WILSON. They sailed as soon as prepared, after they received their orders to prepare to sail.

The CHAIRMAN. You stated that the force was in a good state of preparation?

Admiral WILSON. Oh, Mr. Senator, you can not take a ship that is going 3,000 miles across the ocean, like a destroyer, and start her off like a railroad train, just like that.

The CHAIRMAN. What was necessary to be done to prepare her?

Admiral WILSON. You have got to clean her bottom; you have got to overhaul certain little conditions and things about her ma-

chinery; you have got to fuel her and fill her with stores, and such things. Those ships that were going over had to go in as good condition as possible; as good as we could make them on this side. It is no easy trip for a destroyer to make a 3,000-mile cruise across the ocean and to come onto the other side prepared for work, as they did. It showed in the end the advantage of it, because when they arrived they were ready for business.

The CHAIRMAN. Could not that all have been done between the 2d of February and the 1st of April?

Admiral WILSON. No, sir; you can not clean a ship's bottom on the 2d of February and sail on the 1st of June.

The CHAIRMAN. You can not clean a ship's bottom on the 2d of February and sail on the 1st of June?

Admiral WILSON. You can not clean the bottom of a ship on the 2d of February and have her in the best condition to sail on the 1st of June.

The CHAIRMAN. Well, but you stated, did you not, that these vessels were sent over very soon after the 11th of April, and that they needed to have their bottoms cleaned?

Admiral WILSON. They what?

The CHAIRMAN. You stated that they were sent over very soon after the 11th of April, and that they needed to have their bottoms cleaned.

Admiral WILSON. Mr. Senator, if you were acquainted with the details of the requirements of a ship——

The CHAIRMAN. I am just taking your own testimony, Admiral.

Admiral WILSON. If you were acquainted with the details of a ship, you would recollect that when you start out on a cruise you put them in as good condition for that cruise as possible by doing such things as cleaning the bottom, filling them with stores, looking over odds and ends of machinery, and otherwise putting them in spick and span order, so that they will stand the wear and tear of the trip. I will say that the ships were in good condition, except for finishing touches, and you always put finishing touches on before you start.

The CHAIRMAN. You filled them with stores when you started out?

Admiral WILSON. Yes.

The CHAIRMAN. Did you clean the bottoms?

Admiral WILSON. Yes.

The CHAIRMAN. You got orders on the 11th of April?

Admiral WILSON. On the 11th of April.

The CHAIRMAN. And they started when, within a month from that time?

Admiral WILSON. I do not know when they started, but very shortly.

The CHAIRMAN. Very shortly after that?

Admiral WILSON. Yes.

The CHAIRMAN. You cleaned their bottoms in that short time?

Admiral WILSON. Yes. That does not take long.

The CHAIRMAN. And yet you say if you had started to clean their bottoms on the 2d of February, they would not have been ready on the 1st of June?

Admiral WILSON. I say if you cleaned a ship's bottom on the 2d of February and you wanted to start on the 1st of June, you would

have to do it all over again, and you could not start because you would have to do it all over again on the 1st of June.

The CHAIRMAN. That was not your testimony. I understand you now.

Admiral WILSON. That was my intention.

The CHAIRMAN. How often do you have to clean the ship's bottom?

Admiral WILSON. We try to do it, for the protection of the material, not less than once in nine months. We try to do it once in six months. The cost of cleaning the ship's bottom is more than paid for by the fuel saved. The saving in the expenditure of fuel more than pays for the frequent cleaning of the bottom.

The CHAIRMAN. So that if these ships had been cleaned on the 2nd of February, or in March, they would have been in good condition to go over until August or September?

Admiral WILSON. Yes; they could have gone at once. They would not have had to have anything done when we arrived on the other side. They would have taken only time to fix up, then. Mr. Senator, I can assure you as a naval officer who was in close communication and conference with all that was going on, that there was no time lost in cooperating with the forces on the other side, when we learned that that was something that would be advantageous to the Government.

The CHAIRMAN. But the testimony of other witnesses——

Admiral WILSON. I can not help what other witnesses have testified. I know what I am saying, sir, and I also say this, that when the information was presented to the Navy Department by the accredited representatives of the two principal admiralities of the world there was no urgency stated, no dire need was stated. I remember the officer himself saying "If you only could send, to show the flag;" and at that time, within two hours of the time, it was stated what we would do, and the Secretary of the Navy said "We accept that in principle," and immediately, at the next conference, the order was issued, what we should send; the order was given in detail; and from that moment there was a regular procession going over. Now, it was not anybody on the other side that put the tip here that that was what was wanted. The tip was here in Washington long before that officer ever communicated, or in fact got onto his job.

The CHAIRMAN. Now, you say you were in position to know.

Admiral WILSON. Yes, sir.

The CHAIRMAN. And you knew all about the matter?

Admiral WILSON. I was at the conference in which the decision was made.

The CHAIRMAN. Were you informed when Admiral Sims made his recommendations about sending ships over?

Admiral WILSON. I know the day that Admiral Sims arrived in London.

The CHAIRMAN. I asked you if you were informed of all of the messages that Admiral Sims sent over?

Admiral WILSON. No, sir; I was informed on no message of Admiral Sims; but I take it for granted that Admiral Sims did not send any message before he arrived in London and communicated with the people whom he was sent to communicate with.

The CHAIRMAN. And he did communicate with them?

Admiral WILSON. I imagine he did.

The CHAIRMAN. After he communicated with them, were you informed of his communications?

Admiral WILSON. Oh, no.

The CHAIRMAN. And did you act on them in any way?

Admiral WILSON. No, sir; I know nothing about that.

The CHAIRMAN. You have no knowledge of Admiral Sims's communications?

Admiral WILSON. All I know was that the decision was made before he communicated, because he could not have communicated until after he had arrived there, and that decision was made prior to his arrival.

The CHAIRMAN. Now, you say that there was a meeting—a conference—in Washington between the Secretary of the Navy and a number of the flag officers of our Navy, and a British Vice Admiral representing the British Admiralty, and a French Rear Admiral representing the French Admiralty?

Admiral WILSON. Yes, sir; that is the conference I referred to.

The CHAIRMAN. And you say that at that conference the subject under consideration was the coordination of the naval forces of the three countries?

Admiral WILSON. Yes, sir.

The CHAIRMAN. And you state that one of the representatives—I take it that is one of the foreign representatives?

Admiral WILSON. Yes.

The CHAIRMAN (continuing). Stated in the course of his remarks that we should send one destroyer over there, if nothing more, that the flag might be shown.

Admiral WILSON. Yes, sir; I stated that. That is true.

The CHAIRMAN. That was about the middle of April, 1917?

Admiral WILSON. The 11th of April, 1917, exactly.

The CHAIRMAN. The 11th of April, 1917?

Admiral WILSON. Yes, sir.

The CHAIRMAN. Do you know how many tons of shipping were sunk by the submarines during that month?

Admiral WILSON. No, sir.

The CHAIRMAN. Well, the testimony has shown that there were about 800,000 tons sunk during the month of April, 1917, the greatest amount of shipping that was sunk during any one month of the war. Does it not seem to you that this representative of the British Navy, or the representative of the French Navy, whichever he was, that came over and said practically that if we sent a destroyer over for moral effect, that would be sufficient——

Admiral WILSON. He did not say that, sir.

The CHAIRMAN. He did not say that?

Admiral WILSON. No, sir; he did not say if we sent one over it would be sufficient; but he said, "If nothing more, send one in order that the flag may be shown."

The CHAIRMAN. Well, you stated before that they did not express any dire need for help or state that there was any urgency about it.

Admiral WILSON. That is what I said.

The CHAIRMAN. Does it not strike you——

Admiral WILSON. I can not help what was going on on the other side. I only know what was going on at the conference.

CHAIRMAN. Does it not seem remarkable, in view of the great ships to take care of the submarine situation and the great of the submarine, that that statement should have been here?

Mr. WILSON. I do not know, sir.

CHAIRMAN. And in addition to that——

Mr. WILSON. Mr. Senator, have you any doubt in your mind the statement was made?

CHAIRMAN. No; I do not question your veracity in any way, sir.

Mr. WILSON. Yes, sir.

CHAIRMAN. But I am asking you if it was not a remarkable statement that such a statement should have been made, and if it was made to think that we should have taken that as a basis for not sending ships over, rather than a statement of our accredited agents who were over there?

Mr. WILSON. We did not take that as any statement that we should not send them. On the contrary, it was from that moment that we should send everything we could; and we did.

CHAIRMAN. Then you did not give much credit to the statement of the foreign representatives?

Mr. WILSON. We gave lots of credit to them; but it showed apparently that there was not such dire need and great urgency. I put that in my paper here is to counteract anything—saying that the department, or those who were directing affairs in the department, were derelict in their duty.

CHAIRMAN. And do you feel yourself that there was not dire need at that time?

Mr. WILSON. Oh. Hindsight we have now; that is all. We find nothing about that then. Instead of finding fault with anyone in our country on what was done on the 11th of April, they should be very thankful——

CHAIRMAN. What we are trying to do is to find out the mistakes made in the war so that those mistakes can be corrected in the future.

Mr. WILSON. You can rest assured, sir, that there was no mistake made on the 11th of April, 1917.

CHAIRMAN. We have simply your testimony for that, and it is corroborated by other witnesses.

Mr. WILSON. I was present at the conference.

CHAIRMAN. And you are giving your testimony about a general statement of general policy.

Mr. WILSON. No; I am only giving testimony about what took place on the 11th of April.

CHAIRMAN. Do you not think now that if we had sent antisubmarine vessels over at an earlier date than we did send them, it would have had a great effect?

Mr. WILSON. We could not have sent antisubmarine vessels any faster than we did, unless we had done things prior to a declaration of war, which the policy of our country did not justify the doing.

CHAIRMAN. You feel very sure of it?

Mr. WILSON. I feel sure about it. I feel very sure about it. I do not find any fault for any mistakes made by the United States.

States Navy on the breaking out of war, I feel proud, and I feel sure it was onto its job.

The CHAIRMAN. Everybody feels proud of the Navy. There is no question about that.

Admiral WILSON. I feel sure that it was onto the job at the start.

The CHAIRMAN. If we can find mistakes that have been made and can find ways of preventing those mistakes in the future, is it not a good thing for the country and for the Navy?

Admiral WILSON. Absolutely; but you do not need to worry, there is no need for any citizen of our country to worry; and to those questions are being studied and those mistakes are being studied by the brightest minds in our Navy, and the lessons will be learned from them. It does not need anybody who wants to make a little stir to come down and bring things to a focus. It will all be done in a calm, quiet way, by the brightest minds we have got in the country.

The CHAIRMAN. The Congress of the United States has a perfect right to go into these questions and get all the information, and it will and will do so.

Admiral WILSON. I am not questioning that at all.

The CHAIRMAN. There must be no question about that.

Admiral WILSON. I am not here for any pleasure of my own.

The CHAIRMAN. You are here because you were summoned by the committee.

Admiral WILSON. Yes; and it is my duty.

The CHAIRMAN. Precisely.

Admiral WILSON. My conscience is absolutely clear in everything that the Navy has done and what I did.

The CHAIRMAN. Now, when you assumed command of the patrol forces on the United States coast did you receive from the department any policy or any general plan of operations?

Admiral WILSON. Oh, yes, sir.

The CHAIRMAN. To govern the conduct of your forces during the war?

Admiral WILSON. Yes. I have laid before you the two orders—campaign orders which covered our whole mission and plan and everything.

The CHAIRMAN. Did you consider those general plans or special war plans?

Admiral WILSON. Why, Mr. Senator, there could not have been any more plans than what we drew up and what we made and what had already been prepared when I got into the Navy Department and take up my duties; and these were the result, all made out, ready and the day war was declared I went to the job, and as soon as the printing machine could print them they were printed in numbers and sent out to the individual ships, and they got on their way.

The CHAIRMAN. That was the plan of patrolling our coast?

Admiral WILSON. Yes, sir; that is, what I speak of as the plan to meet the enemy on our coast was planned well ahead and organized and handled accordingly.

The CHAIRMAN. Was there a comprehensive war plan, so far as you know, to cover the whole field of operations?

Admiral WILSON. I know nothing about that, sir.

The CHAIRMAN. You were never shown any such plan?

Admiral WILSON. I have never been attached to the organization that had charge of such work.

The CHAIRMAN. Your force was organized before war was declared, or immediately afterwards?

Admiral WILSON. It was organized, sub rosa, before war was declared.

The CHAIRMAN. And what time before the war was declared?

Admiral WILSON. As soon as I could get there. We arrived in port from the West Indies, I think, on the late afternoon of the 27th. My orders came by wire on the 28th. I immediately made an order and nominated the commanders of the different squadrons, organized our forces; each one of the commanders went back to his station ready for the call. I arrived in Washington, and the moment war was declared off I went. Orders went to these commanding officers as soon as the printing press could print the orders, and out they went, and in a short time the number of ships I mentioned were on stations. I think it is a remarkably good piece of work, Mr. Senator.

The CHAIRMAN. Yes. After you went abroad were you in sufficiently intimate touch with the relations between Admiral Sims and the department to give first-hand information——

Admiral WILSON. Not a word do I know about it.

The CHAIRMAN. About his testimony?

Admiral WILSON. Not a word do I know about it.

The CHAIRMAN. And his relations with the department?

Admiral WILSON. Not a word?

The CHAIRMAN. Not a word?

Admiral WILSON. My time was fully occupied in other ways.

The CHAIRMAN. What were your orders when you were sent abroad? To whom were you to report?

Admiral WILSON. I was ordered to report upon my arrival to Vice Admiral Sims in London, which I did by wire.

The CHAIRMAN. And were you under his authority when you went over there?

Admiral WILSON. Yes, sir; from the time I arrived until I left I was under his command.

The CHAIRMAN. Under his command?

Admiral WILSON. Yes, sir.

The CHAIRMAN. You stated that at Brest you had coaling capacity of 750 to 900 tons, I think.

Admiral WILSON. Tankage for 7,000 tons of oil.

The CHAIRMAN. You also referred to coaling capacity.

Admiral WILSON. No, sir; I never touched upon that.

The CHAIRMAN. You said that you increased the coal storage at Brest from 350 to a capacity of 750 tons?

Admiral WILSON. Oh, we never had any trouble with coal, sir. The reason that the amount on hand was no larger was due to the small space in the French arsenal, but the Navy had no trouble about supplying vessels with coal.

The CHAIRMAN. How could the *Leriatan* take on 13,000 tons of coal there?

Admiral WILSON. She never took on 13,000 tons. She took on 4,500 tons of coal, sir. This coal that I speak of there, that 350 to 750 tons of coal, was our own coal. When we needed more we had the unlimited capacity of the French. I imagine that most of

that 4,500 tons of coal sometimes might have come out of their coal pile, and then we would just chalk it up, and next time take it out of ours.

The CHAIRMAN. Practically you had no coal supplies?

Admiral WILSON. What?

The CHAIRMAN. Practically you had no coal storage?

Admiral WILSON. The allied corps had coal storage.

The CHAIRMAN. There simply seemed to be a discrepancy in the testimony that I wanted to straighten out.

Admiral WILSON. You understand that now; that is only our own little pile of coal there.

The CHAIRMAN. Yes. When did you receive orders to proceed to Gibraltar, Admiral?

Admiral WILSON. I left, sir, on the 8th of August, 1917, on the U. S. S. *Birmingham*, and if I remember correctly I arrived at Gibraltar on the 18th of August, 1917.

The CHAIRMAN. What plans were given you to follow after you got to Gibraltar?

Admiral WILSON. The plans consisted of directing me to report to Admiral Sims. He then furnished me with a mission and a campaign order which directed me to cooperate with the senior allied commander, who was a British rear admiral, which I did; and thus our work was performed.

The CHAIRMAN. A British admiral was in command of the allied forces?

Admiral WILSON. He was senior to me.

The CHAIRMAN. And you kept up your independence as an American organization—as an American unit, there?

Admiral WILSON. In everything else except operations.

The CHAIRMAN. Yes.

Admiral WILSON. And of course the admiral consulted me frequently, even with regard to the operations. But—well, I will not say what I was going to say.

The CHAIRMAN. Was the arrangement satisfactory?

Admiral WILSON. Officially; yes, sir.

The CHAIRMAN. Officially?

Admiral WILSON. Yes, sir.

The CHAIRMAN. That is, you do not think it is necessary to go into any personal matters?

Admiral WILSON. No, sir; I would not want to say what I would have to say, and have it taken down on paper.

The CHAIRMAN. What reports did you make concerning the situation at Gibraltar to this commander of the forces?

Admiral WILSON. What is that, sir?

The CHAIRMAN. What report did you make?

Admiral WILSON. I made weekly reports to the force commander in London.

The CHAIRMAN. Well, objecting to the way things were going?

Admiral WILSON. Oh, there was nothing to object to, sir. You misunderstand me. There was nothing to object to. As I have said in my statement, when we left, the British rear admiral, the senior allied commander, spoke most highly of the work of the forces that had been under my command, when I left.

The CHAIRMAN. The British had a larger force there?

Admiral WILSON. I doubt it, sir. I know that when we arrived we certainly were welcome, especially when the four old-type torpedo boats came around from China, boats that we thought were played out years and years ago. They were very welcome when they arrived here. Anything that could make any headway at all and drop a depth charge was of value in the war. Some vessels were of more value than others.

The CHAIRMAN. Then you do not know which country had a majority of the naval forces?

Admiral WILSON. No, sir. It did not make any difference. They all worked together.

The CHAIRMAN. And the system that was adopted was as good as it could have been, or do you think it would have been better to have acted under a separate operational command?

Admiral WILSON. It would have been impracticable to have had any other organization in Gibraltar.

The CHAIRMAN. And you never considered that your vessels became an integral part of the British Navy in any way?

Admiral WILSON. Not in Gibraltar; no, sir; although you understand, Mr. Senator, that the vessels that I commanded were operated by the senior allied commander. Just the same——

The CHAIRMAN. But that was the general course with the allied fleets?

Admiral WILSON. Yes.

The CHAIRMAN. And if we had had a senior commander he would have been the operating head?

Admiral WILSON. Yes, sir. When you get to France, when you get to the next duty of mine, I will go into that further with you.

The CHAIRMAN. Who assigned you to duty on the French coast?

Admiral WILSON. My orders came from the force commander in London.

The CHAIRMAN. Admiral Sims?

Admiral WILSON. Yes, sir; to whom I reported in Paris, and then went afterwards to London to study the situation from that end, and then to Brest; arriving on the 1st of November, 1917, when I took command.

The CHAIRMAN. What was your relation to the French admiral commanding there?

Admiral WILSON. Splendid.

The CHAIRMAN. You were under him in operations?

Admiral WILSON. He was the senior allied commander; and I invite your attention, Mr. Senator, to page 26 of my statement here, and to this statement therein. [Reading:]

The force is organized and operated as a distinct American unit. From the date I assumed command, November 1, 1917, to the end of the war, the United States Navy in France, while it completely and in the most friendly way cooperated with the French Navy, was, by full agreement with the senior allied naval commander, organized, operated, and handled as a distinct American naval force under the direct and immediate command of an American rear admiral.

This situation was quite different in Brest, because the American effort consisted in bringing troop ships east and sending empty troop ships west, and in bringing cargo ships east and sending empty cargo ships west; so that after my arrival in France I took that up with the French naval officer corresponding to me, Vice Admiral

Sereur, and we came to an agreement which was drawn up—that, of course, all under the senior allied commander, technically—that I should handle all east and west bound American ships, both troop and cargo.

The CHAIRMAN. That is, you should provide cargoes for them?

Admiral WILSON. I should handle them, sir—do the work.

The CHAIRMAN. Will you tell me what the work was?

Admiral WILSON. The work consisted in doing everything in bringing them into the zone and taking them out again. I always furnished the senior allied commander, Vice Admiral Moreau, a copy of the orders, as a matter of courtesy; and of course, any time at all he could have stepped in and stopped or changed my plans, but it was never done. I never could imagine any more cordial or friendly relations than there were the whole time I was in France between the French Navy and our Navy. It in every way cooperated, and always to the best interests of both and of the allied cause.

The CHAIRMAN. Now, these transports and supply ships that came over were started from this side; and who had charge of the starting of them? Admiral Gleaves, was it not?

Admiral WILSON. I do not know, sir. I imagine Admiral Gleaves had charge of the transport force. Whether he had anything to do with the cargo vessels I do not know. I think that when Capt. Pratt comes before you he will be able to give you all that information.

The CHAIRMAN. You yourself had cargo vessels as well as transports?

Admiral WILSON. Yes, sir; but I only got them when they got a little westward of the submarine zone, what was called the destroyer rendezvous.

The CHAIRMAN. Yes. These vessels were sent over there, were they coaled for the round trip in this country?

Admiral WILSON. In some cases. In other cases they neglected to do it on this side, probably in the hurry, and we often had to furnish coal and oil from Brest for cargo ships, and some of them could not carry sufficient to make the round trip, and we had to supply those.

The CHAIRMAN. Were they provisioned for the round trip when they started?

Admiral WILSON. Often we gave them provisions, too.

The CHAIRMAN. And then you were notified from America when they started?

Admiral WILSON. No, sir; America sent the message to the London office, and it was there relayed through there to me, when there was a convoy coming to the coast of France.

The CHAIRMAN. And they told you when the convoys came so that you could be on the lookout for them?

Admiral WILSON. Yes; the message would be made up about a convoy, and the message would be sent to us, the time that the vessels would cross the standard meridian. That standard meridian I do not mind telling you now—it was kept very quiet then—was 30° west longitude. The message gave the time, date, number of ships, speed, and latitude crossing that standard meridian. That was sent to us, and after crossing the standard meridian where they should head for Ushant, the north coast of France, Bailleul, or the mouth of the Garonne, and we would know by radio communication

through the Azores Islands whether they were on schedule time or not, whether they were going to cross this meridian on time. We would make our allowance on account of bad weather, and they even had to turn around so that they would not be ahead. We had to estimate to send destroyers to meet those ships, so that they would be clear of submarines. We would send our destroyers out under Operation's orders, timing the sailing of a convoy from the coast of empty ships, in order that they might take them safely to sea, and then meet troop ships; and they always met the troops ships early in the morning, and then during the daylight they would all spread out in a scouting line and sweep down.

It is no easy job to pick up a convoy of ships on the high seas. It looks large in a river, but they are a small dot in the ocean. We picked them up and immediately took charge—that is, I can not say we took charge, because the senior officer present is always in charge, but they would notify the senior officer of the course to steer, which he would be told to take, and then they would generally make a radical change, sometimes to the southward, and sometimes not so much to the southward, and sail in under orders we would give them. All the time we were in communication with them if we wished by radio, and they were ordered not to communicate unless necessary, except to inform us that they had made contact, and then we would just say, "Contact," broadcast. If during the time we were coming in, it was necessary, we would catch a certain destroyer by radio, and tell him to take a course A or course B, an arbitrary course that we had laid out, and bring them on the coast where we had ships laid out as light ships, and bring them into harbor.

The great advantage of having our destroyers handle them was that our men knew the ports, and we could come right into port when they were handled by destroyers from their ports. They knew nothing about France, and otherwise we would have to send ships out to convoy them in. We have had as many as 3 convoys come in on one day with over 40,000 men, one convoy consisting of 13 ships, one right after the other coming through the war zone.

The CHAIRMAN. Coming in different convoys.

Admiral WILSON. Leaving at different times at home and at different speeds, coming in. I tell you, it was a relief when we would get them in. Our office never closed, night or day. It was always open from Sunday night to Sunday night, with continuous communication, continually receiving reports referring to submarines, where they were operating, and utilizing the information for diverting the convoys against submarines. There was never a question of taking anybody through a safe place. It was always just knowing where they were by information, when they would report themselves, and dodging them.

The CHAIRMAN. That is very interesting, Admiral, and it is giving the committee a good account of it.

Admiral WILSON. I could talk to you for an hour on that subject, sir.

The CHAIRMAN. You had entire charge of the vessels that performed convoy duty?

Admiral WILSON. Yes, sir.

The CHAIRMAN. You said, however, that you were under the admiral in command of the forces in European waters.

Admiral WILSON. He was the force commander.

The CHAIRMAN. But he did not interfere with you in any way?

Admiral WILSON. He did not operate them. He gave me instructions and held me responsible for the execution.

The CHAIRMAN. There was no friction about the execution?

Admiral WILSON. Not a particle. I just obeyed orders. My Senator, there is a Senator from Kansas who came over one time and came through the war zone, who knows about what was going on. If you are much more interested, ask him. He was very much—

The CHAIRMAN. Who was that?

Admiral WILSON. I do not remember his name. I know that he came in, and I never saw anybody more pleased, in my life, when he got in. I think he is from Kansas.

The CHAIRMAN. Now, Admiral, in establishing the general organization of the forces in Europe, did Admiral Sims consult you?

Admiral WILSON. How is that?

The CHAIRMAN. In establishing the general organization of the forces in Europe, did Admiral Sims consult you?

Admiral WILSON. Admiral Sims never consulted me on anything except to tell me what I should have, and what the mission was to carry out.

The CHAIRMAN. Did he not order you to London for a conference on the organization of the forces?

Admiral WILSON. Of the forces in France; yes, sir.

The CHAIRMAN. In France?

Admiral WILSON. Yes, sir.

The CHAIRMAN. And not in Europe?

Admiral WILSON. In France.

The CHAIRMAN. And the organization that you agreed upon was satisfactory?

Admiral WILSON. Oh, perfectly. It had to be.

The CHAIRMAN. That was the organization you operated on?

Admiral WILSON. Yes; the organization we agreed upon was one he set down. The senior officer gives you your orders.

The CHAIRMAN. Were the fuel and repair facilities at Brest adequate? You have stated, I think, that they were not, in France.

Admiral WILSON. Would you like me to go into that in detail?

The CHAIRMAN. No; I do not think that it is necessary; in a general way.

Admiral WILSON. I could only explain it in detail, sir. That is one of the questions that I had been hoping you might ask me.

The CHAIRMAN. Very well; if you have any information I would be glad to have it.

Admiral WILSON. I will say at the start that the facilities on the French coast of course never became adequate, but with good management we had no trouble in carrying out our work. Our chief trouble in France was a lack of forces with which to do the work, and I recommended a number of times that our forces be increased in order that we might be able to perform better work, the better work which would consist in giving more protection to troop ships, cargo ships, to turn them around more quickly; because the turn-around of a ship meant just so much more tonnage available from the United States.

In these recommendations I always held that Brest was the place which our naval forces should have been based to handle the American effort, and on that subject, since you have asked me a question, I have a little memorandum that I would like to give you.

The CHAIRMAN. Very well.

Admiral WILSON. Of the ports in France, Brest is the one nearest the United States. In the outside harbor there is an unlimited anchorage space for large vessels. There are a number of channels leading into Brest from the Bay of Biscay, all of which could be easily closed to enemy vessels by mines. On the other hand, channels for vessels are so numerous that in case of the enemy mining some of them, there were invariably others which were open to both large and small ships.

Queenstown is about 250 miles north and west of Brest. Vessels based on Queenstown on going to sea to meet an incoming convoy had about the same distance to go until they met the convoy and left it in a French port, as did the ships based on Brest, but after leaving the convoy they had to steam some 250 miles to return to their base, and while there was always some possibility of meeting enemy submarines during this passage, as compared with the duty of escorting convoys, the time was not usefully employed. Furthermore, due to the extreme degree to which all escort vessels were worked, it was necessary to keep them usefully employed as much of the time as possible, and to give them all the remainder of the time to upkeep of material. Therefore, the time taken in going from Brest to Queenstown was time wasted.

Almost without exception, destroyers which went west from Brest to meet incoming convoys, and to escort them to the coast of France, escorted to the westward empty ships. Destroyers which left Queenstown to meet troop convoys sailed to the westward without escorting empty ships on this passage. This method, I am sure, prevailed during the war. Whether or not it prevailed during its entirety I do not know. It is obvious, however, that a ship operating by this method was performing far from a maximum amount of useful work.

It is true that development of the port facilities of Brest was necessary, and this development was carried on. As an example, there was a fuel-oil storage capacity at Brest when we arrived of about 7,000 tons. By the end of September, 1918, there was capacity for 28,000 tons. Even without this increased capacity, we were able to keep such destroyers as we had filled with fuel, and, in addition, at times supplied fuel to destroyers based on Queenstown when they arrived in Brest from escort duty short of fuel, and also many troop ships and cargo vessels.

The question of shortage of fuel oil could always have been met by bringing an additional tanker, as necessary, into Brest in one of the frequent convoys which came to that port.

In the testimony of Rear Admiral Sims on March 23, referring to United States destroyers in European waters, he stated:

* * * so that on our advice from the other side we concentrated our destroyers as far west as possible so that they would be handy to their own bases. We put them at Queenstown first because the facilities for repairs and refueling with oil were better there. Brest was better strategically, and as fast as we could increase the storage facilities there for oil we took them there, until finally we had 28,000 tons of oil there, and we sent them there and our destroyers were almost exclusively used for that purpose.

Admiral WILSON. He was the force commander.

The CHAIRMAN. But he did not interfere with you in any way.

Admiral WILSON. He did not operate them. He gave me instructions and held me responsible for the execution.

The CHAIRMAN. There was no friction about the execution?

Admiral WILSON. Not a particle. I just obeyed orders. Senator, there is a Senator from Kansas who came over one time came through the war zone, who knows about what was going on. If you are much more interested, ask him. He was very much interested.

The CHAIRMAN. Who was that?

Admiral WILSON. I do not remember his name. I know the one who came in, and I never saw anybody more pleased, in my life, who got in. I think he is from Kansas.

The CHAIRMAN. Now, Admiral, in establishing the general organization of the forces in Europe, did Admiral Sims consult you?

Admiral WILSON. How is that?

The CHAIRMAN. In establishing the general organization of the forces in Europe, did Admiral Sims consult you?

Admiral WILSON. Admiral Sims never consulted me on anything except to tell me what I should have, and what the mission was to carry out.

The CHAIRMAN. Did he not order you to London for a conference on the organization of the forces?

Admiral WILSON. Of the forces in France; yes, sir.

The CHAIRMAN. In France?

Admiral WILSON. Yes, sir.

The CHAIRMAN. And not in Europe?

Admiral WILSON. In France.

The CHAIRMAN. And the organization that you agreed upon satisfactory?

Admiral WILSON. Oh, perfectly. It had to be.

The CHAIRMAN. That was the organization you operated on?

Admiral WILSON. Yes; the organization we agreed upon was the one he set down. The senior officer gives you your orders.

The CHAIRMAN. Were the fuel and repair facilities at Brest adequate? You have stated, I think, that they were not, in France.

Admiral WILSON. Would you like me to go into that in detail?

The CHAIRMAN. No; I do not think that it is necessary; in a general way.

Admiral WILSON. I could only explain it in detail, sir. That was one of the questions that I had been hoping you might ask me.

The CHAIRMAN. Very well; if you have any information I would be glad to have it.

Admiral WILSON. I will say at the start that the facilities on the French coast of course never became adequate, but with good management we had no trouble in carrying out our work. Our trouble in France was a lack of forces with which to do the work, and I recommended a number of times that our forces be increased in order that we might be able to perform better work, the better work which would consist in giving more protection to troop and cargo ships, to turn them around more quickly; because the time around of a ship meant just so much more tonnage available to the United States.

These recommendations I always held that Brest was the place for our naval forces should have been based to handle the effort, and on that subject, since you have asked me a question, I have a little memorandum that I would like to give you.

CHAIRMAN. Very well.

MR. WILSON. Of the ports in France, Brest is the one nearest the United States. In the outside harbor there is an unlimited space for large vessels. There are a number of channels leading to Brest from the Bay of Biscay, all of which could be closed to enemy vessels by mines. On the other hand, channels are so numerous that in case of the enemy mining them, there were invariably others which were open to both small ships.

Queenstown is about 250 miles north and west of Brest. Vessels from Queenstown on going to sea to meet an incoming convoy had the same distance to go until they met the convoy and returned to a French port, as did the ships based on Brest, but after meeting the convoy they had to steam some 250 miles to return to Brest and while there was always some possibility of meeting submarines during this passage, as compared with the duty of escorting convoys, the time was not usefully employed. Furthermore, to the extreme degree to which all escort vessels were kept was necessary to keep them usefully employed as much of the time as possible, and to give them all the remainder of the time of material. Therefore, the time taken in going from Queenstown was time wasted.

Without exception, destroyers which went west from Brest to meet incoming convoys, and to escort them to the coast of France, returned to the westward empty ships. Destroyers which left Brest to meet troop convoys sailed to the westward without returning empty ships on this passage. This method, I am sure, was used during the war. Whether or not it prevailed during its entire duration I do not know. It is obvious, however, that a ship operating in this method was performing far from a maximum amount of work.

It is true that development of the port facilities of Brest was necessary and this development was carried on. As an example, there was no fuel-oil storage capacity at Brest when we arrived of about 1917. By the end of September, 1918, there was capacity for 100,000 tons. Even without this increased capacity, we were able to keep our destroyers as we had filled with fuel, and, in addition, we applied fuel to destroyers based on Queenstown when they returned to Brest from escort duty short of fuel, and also many troop and cargo vessels.

The question of shortage of fuel oil could always have been met by sending an additional tanker, as necessary, into Brest in one of the convoys which came to that port.

In the testimony of Rear Admiral Sims on March 23, referring to the operations of destroyers in European waters, he stated:

So that on our advice from the other side we concentrated our destroyers as possible so that they would be handy to their own bases. We put them there first because the facilities for repairs and refueling with oil were better there. It was better strategically, and as fast as we could get them there for oil we took them there, until finally we had them there and our destroyers were almost everywhere.

Admiral WILSON. He was the force commander.

The CHAIRMAN. But he did not interfere with you in any way?

Admiral WILSON. He did not operate them. He gave me instructions and held me responsible for the execution.

The CHAIRMAN. There was no friction about the execution?

Admiral WILSON. Not a particle. I just obeyed orders. Mr. Senator, there is a Senator from Kansas who came over one time and came through the war zone, who knows about what was going on. If you are much more interested, ask him. He was very much—

The CHAIRMAN. Who was that?

Admiral WILSON. I do not remember his name. I know that he came in, and I never saw anybody more pleased, in my life, when he got in. I think he is from Kansas.

The CHAIRMAN. Now, Admiral, in establishing the general organization of the forces in Europe, did Admiral Sims consult you?

Admiral WILSON. How is that?

The CHAIRMAN. In establishing the general organization of the forces in Europe, did Admiral Sims consult you?

Admiral WILSON. Admiral Sims never consulted me on anything except to tell me what I should have, and what the mission was I was to carry out.

The CHAIRMAN. Did he not order you to London for a conference on the organization of the forces?

Admiral WILSON. Of the forces in France; yes, sir.

The CHAIRMAN. In France?

Admiral WILSON. Yes, sir.

The CHAIRMAN. And not in Europe?

Admiral WILSON. In France.

The CHAIRMAN. And the organization that you agreed upon was satisfactory?

Admiral WILSON. Oh, perfectly. It had to be.

The CHAIRMAN. That was the organization you operated on?

Admiral WILSON. Yes; the organization we agreed upon was one he set down. The senior officer gives you your orders.

The CHAIRMAN. Were the fuel and repair facilities at Brest adequate? You have stated, I think, that they were not, in France.

Admiral WILSON. Would you like me to go into that in detail?

The CHAIRMAN. No; I do not think that it is necessary; in a general way.

Admiral WILSON. I could only explain it in detail, sir. That is one of the questions that I had been hoping you might ask me.

The CHAIRMAN. Very well; if you have any information I would be glad to have it.

Admiral WILSON. I will say at the start that the facilities on the French coast of course never became adequate, but with good management we had no trouble in carrying out our work. Our chief trouble in France was a lack of forces with which to do the work, and I recommended a number of times that our forces be increased in order that we might be able to perform better work, the better work which would consist in giving more protection to troop ships, cargo ships, to turn them around more quickly; because the turn-around of a ship meant just so much more tonnage available from the United States.

In these recommendations I always held that Brest was the place to which our naval forces should have been based to handle the American effort, and on that subject, since you have asked me a question, I have a little memorandum that I would like to give you.

The CHAIRMAN. Very well.

Admiral WILSON. Of the ports in France, Brest is the one nearest to the United States. In the outside harbor there is an unlimited anchorage space for large vessels. There are a number of channels leading into Brest from the Bay of Biscay, all of which could be easily closed to enemy vessels by mines. On the other hand, channels for vessels are so numerous that in case of the enemy mining some of them, there were invariably others which were open to both large and small ships.

Queenstown is about 250 miles north and west of Brest. Vessels based on Queenstown on going to sea to meet an incoming convoy had about the same distance to go until they met the convoy and left it in a French port, as did the ships based on Brest, but after leaving the convoy they had to steam some 250 miles to return to their base, and while there was always some possibility of meeting enemy submarines during this passage, as compared with the duty of escorting convoys, the time was not usefully employed. Furthermore, due to the extreme degree to which all escort vessels were worked, it was necessary to keep them usefully employed as much of the time as possible, and to give them all the remainder of the time to upkeep of material. Therefore, the time taken in going from Brest to Queenstown was time wasted.

Almost without exception, destroyers which went west from Brest to meet incoming convoys, and to escort them to the coast of France, escorted to the westward empty ships. Destroyers which left Queenstown to meet troop convoys sailed to the westward without escorting empty ships on this passage. This method, I am sure, prevailed during the war. Whether or not it prevailed during its entirety I do not know. It is obvious, however, that a ship operating by this method was performing far from a maximum amount of useful work.

It is true that development of the port facilities of Brest was necessary, and this development was carried on. As an example, there was a fuel-oil storage capacity at Brest when we arrived of about 7,000 tons. By the end of September, 1918, there was capacity for 28,000 tons. Even without this increased capacity, we were able to keep such destroyers as we had filled with fuel, and, in addition, at times supplied fuel to destroyers based on Queenstown when they arrived in Brest from escort duty short of fuel, and also many troop ships and cargo vessels.

The question of shortage of fuel oil could always have been met by bringing an additional tanker, as necessary, into Brest in one of the frequent convoys which came to that port.

In the testimony of Rear Admiral Sims on March 23, referring to United States destroyers in European waters, he stated:

* * * so that on our advices from the other side we concentrated our destroyers as far west as possible so that they would be handy to their own bases. We put them at Queenstown first because the facilities for repairs and refueling with oil were better there. Brest was better strategically, and as fast as we could increase the storage facilities there for oil we took them there, until finally we had 28,000 tons of oil there, and we sent them there and our destroyers were almost exclusively used for that purpose.

on that much oil, and we might have been worried about it. It never happened. I used to worry about it; but I learned then that this worrying business does not do much good.

The CHAIRMAN. Were the repair facilities at your disposal sufficient to take care of the repair of transports?

Admiral WILSON. Mr. Senator, we repaired ships that were badly damaged by torpedoes that you could drive a truck through the side. We repaired ships that had only 1 per cent flotation when they arrived in port. We repaired ships that had the whole bottom knocked off of them, that had the whole bottom out of them. They were brought in by our salvage vessels. I always went on the theory with regard to our force over there, that there was no limit; there was the limit, and we would do everything that was put up to us and make our best effort; and fortunately we always succeeded.

The CHAIRMAN. Were those repairs made by the Navy?

Admiral WILSON. Yes; by the American Navy.

The CHAIRMAN. And not by foreigners, at all?

Admiral WILSON. No, sir. The French had turned their arsenals there practically into a munitions plant. Of course we had the benefit of their shops and everything they could do in that way, and the drydock.

The CHAIRMAN. What did you do about the docking and the repairing of destroyers?

Admiral WILSON. We had several good docks in the French arsenals that we used for the purpose. All major repairs for destroyers, what we called overhaul, were made in England, as also to the Queenstown destroyers.

The CHAIRMAN. They were docked in England, you say?

Admiral WILSON. The overhaul; at what we called the overhaul period—general overhaul.

The CHAIRMAN. Were there any adequate docking facilities in France for that?

Admiral WILSON. As to the *Mount Vernon*, when she was torpedoed we brought her into the French dock and put her in the dock, heeled her over to the side, and repaired her and went over her bottom, in cooperation with the French.

The CHAIRMAN. But, as a general rule, they were docked in England?

Admiral WILSON. Not docked, but they were sent there for overhaul. Repairs we did ourselves.

The CHAIRMAN. The docking was done in France?

Admiral WILSON. Yes.

The CHAIRMAN. Now, in the general carrying out of your duties in France, were you given the necessary initiative in the discharge of your duties by Admiral Sims?

Admiral WILSON. A free hand. I was only told to make good.

The CHAIRMAN. Were you at any time embarrassed by the activities of officers sent abroad by the department without your knowledge?

Admiral WILSON. What is that?

The CHAIRMAN. Were you at any time embarrassed by the activities of officers sent abroad by the department without your knowledge?

Admiral WILSON. No, sir.

The CHAIRMAN. Who did not report to you?

Admiral WILSON. No, sir. I often had people come in, but they never bothered me.

ne 15, and troop convoys turned over to me. The first of our convoys reached the coast of France on June 18.

The practice had been to bring regular troop convoys to France about every 10 days (escorted by Queenstown destroyers) with a fast group in between (generally handled by vessels based on Brest) but the flow of troop convoys was speeded up, and after the whole charge of such convoys had been transferred from Queenstown to Brest, five separate troop convoys, in addition to merchant convoys arriving in the same period, were met and escorted to France in safety in a period of nine days. And what is also important to note is that by this increase to our force we were able to speed up turning ships around for home—and tonnage at this time was in great demand for transporting troops and stores. Each day saved counted for much. Then again we were able to give much better protection to our convoys.

The CHAIRMAN. Well, that is very interesting, Admiral. Now, will you tell me about the fuel and repair facilities at Brest—whether they were adequate?

Admiral WILSON. Mr. Senator, I just read that, sir. They were never adequate, the whole time I was there, but they were sufficient with good management to do anything that the American Navy wanted to do on the coast of France.

The CHAIRMAN. Did you make any recommendations about increasing those?

Admiral WILSON. Oh, yes; I went ahead and did them. I increased them four times. The oil tanks came from the United States and were erected by the American blue jackets.

The CHAIRMAN. Did you make any recommendations through Admiral Sims?

Admiral Wilson. Every communication I ever made to the Navy Department went to and through Admiral Sims. I never wrote an official letter nor a personal letter all the time I was abroad to anybody connected with the Navy Department that did not go through the force commander's office, except once I wrote to Admiral Benson, the Chief of Naval Operations, something about his boy, who was a lieutenant under my command.

The CHAIRMAN. What action did Admiral Sims take on your recommendations?

Admiral WILSON. He approved the recommendation, and sent it on to Washington, and in consequence we got the material to erect the tanks.

The CHAIRMAN. The department followed your recommendation?

Admiral WILSON. Absolutely, sir. I do not know of any recommendations that I ever made that were turned down, except the recommendation to try to get more ships.

The CHAIRMAN. That is, the repair and fuel facilities were supplied as they were needed, were they?

Admiral WILSON. Just as fast, I guess, as they could send them to us, sir.

The CHAIRMAN. Then there was no trouble about fuel and supplies at Brest?

Admiral WILSON. No, sir; we never had an adequate amount. I was worried at times. For instance, if a tanker was coming to Brest and outside of Brest she was torpedoed, we might have been counting

on that much oil, and we might have been worried about it. It never happened. I used to worry about it; but I learned then that this worrying business does not do much good.

The CHAIRMAN. Were the repair facilities at your disposal sufficient to take care of the repair of transports?

Admiral WILSON. Mr. Senator, we repaired ships that were badly damaged by torpedoes that you could drive a truck through the side. We repaired ships that had only 1 per cent flotation when they arrived in port. We repaired ships that had the whole top knocked off of them, that had the whole bottom out of them. They were brought in by our salvage vessels. I always went on the transport with regard to our force over there, that there was no limit; the money was the limit, and we would do everything that was put up to us and make our best effort; and fortunately we always succeeded.

The CHAIRMAN. Were those repairs made by the Navy?

Admiral WILSON. Yes; by the American Navy.

The CHAIRMAN. And not by foreigners, at all?

Admiral WILSON. No, sir. The French had turned their arsenal there practically into a munitions plant. Of course we had the benefit of their shops and everything they could do in that way, and the drydock.

The CHAIRMAN. What did you do about the docking and the repairing of destroyers?

Admiral WILSON. We had several good docks in the French arsenal that we used for the purpose. All major repairs for destroyers, what we called overhaul, were made in England, as also to the Queenstown destroyers.

The CHAIRMAN. They were docked in England, you say?

Admiral WILSON. The overhaul; at what we called the overhaul period—general overhaul.

The CHAIRMAN. Were there any adequate docking facilities in France for that?

Admiral WILSON. As to the *Mount Vernon*, when she was torpedoed we brought her into the French dock and put her in the dock, heeled her over to the side, and repaired her and went over her bottom, in cooperation with the French.

The CHAIRMAN. But, as a general rule, they were docked in England?

Admiral WILSON. Not docked, but they were sent there for overhaul. Repairs we did ourselves.

The CHAIRMAN. The docking was done in France?

Admiral WILSON. Yes.

The CHAIRMAN. Now, in the general carrying out of your duties in France, were you given the necessary initiative in the discharge of your duties by Admiral Sims?

Admiral WILSON. A free hand. I was only told to make good.

The CHAIRMAN. Were you at any time embarrassed by the activities of officers sent abroad by the department without your knowledge?

Admiral WILSON. What is that?

The CHAIRMAN. Were you at any time embarrassed by the activities of officers sent abroad by the department without your knowledge?

Admiral WILSON. No, sir.

The CHAIRMAN. Who did not report to you?

Admiral WILSON. No, sir. I often had people come in, but they never bothered me.

The CHAIRMAN. The department did send officers over to investigate?

Admiral WILSON. Not to investigate me.

The CHAIRMAN. To investigate naval conditions, I say; who were not to report to you, did they?

Admiral WILSON. I do not remember anybody except the Chief of Operations, sir. He came over there and looked around. Admiral Mayo came and looked around—my commander in chief.

The CHAIRMAN. You do not recall any officers sent abroad under orders by the department, who were not ordered to report to you?

Admiral WILSON. No, sir; nobody embarrassed me.

The CHAIRMAN. Do you recall that anybody was sent over who was not ordered to report to you?

Admiral WILSON. No, sir.

The CHAIRMAN. Admiral Sims in his testimony referred to the tendency of the department to demand full and detailed explanation of all recommendations before approval. Were you required by the department to explain in such detail any of your recommendations?

Admiral WILSON. I was not required by the department, because I made no recommendation to the department; but I was required by Admiral Sims, to whom I made my recommendations, to do the same thing. That, I think, is general, that when you make a recommendation, if you are putting it up to a person to make a decision, you ought to give him full data. I never felt that that was anything wrong.

The CHAIRMAN. Did you have any difficulty in getting authorization to establish barracks on shore for the housing of personnel?

Admiral WILSON. No, sir; we did that ourselves. We took some old French barracks, with permission from the French admiral, and we took any old material we could get around the place to do that and did it ourselves. We had a fine outfit there in an old chateau.

The CHAIRMAN. You made recommendations to Admiral Sims about that?

Admiral WILSON. No, sir; we did not make any recommendations. We did it ourselves.

The CHAIRMAN. You did that without any recommendations?

Admiral WILSON. Oh, yes.

The CHAIRMAN. You think that the American naval forces contributed materially, do you not, to winning the war?

Admiral WILSON. I know they did.

The CHAIRMAN. There is no question about that?

Admiral WILSON. No question about it; and I have had many, many prominent French people tell me the same thing.

The CHAIRMAN. The committee has asked a number of questions of officers about the question of reorganizing certain plans in the Navy, and we would like to ask you a few questions in that regard.

Admiral WILSON. May I say something before you start, sir?

The CHAIRMAN. Yes.

Admiral WILSON. I said in my statement that I had read the summary of recommendations by Admiral Mayo on the subject of the policy of reorganization, and that I was heartily in accord with that and if I made any further answers, if I made any further replies to any of your questions, I could not go any further.

The CHAIRMAN. Yes; but Admiral Mayo at the request of the committee is coming back later to present a plan of reorganization.

Admiral WILSON. I would like to wait for that plan, and I would probably be just as much in accord with him in that as I am already, because Admiral Mayo is a man in whose judgment I have the greatest confidence, and if he is going to present any plan, I would like to see it before I took it upon myself to present any plan.

The CHAIRMAN. But the committee would like to get the ideas of number of officers in the Navy in order that they might have definite plans to go ahead on.

Admiral WILSON. I always felt that the answer was right there, sir.

The CHAIRMAN. And we have confidence enough in you, Admiral, to ask you to give us some of your ideas.

Admiral WILSON. All right, sir; go ahead.

The CHAIRMAN. In the first place, do you consider that the organization of the Navy Department as at present existing is entirely satisfactory?

Admiral WILSON. No, sir. May I say how I think it is wrong?

The CHAIRMAN. That is what I want you to give.

Admiral WILSON. I think that the Secretary of the Navy should have a naval advisor, now called the Chief of Naval Operations; that he should be the adviser to the Secretary on all matters of preparation of the Navy for war and be held responsible for the execution of the plans. I do not for one instant mean that this officer who is Chief of Naval Operations shall in any way take the place of the Secretary of the Navy. I realize that the Navy would be not properly administered if a naval officer were Secretary of the Navy. Such a person, if he were Secretary of the Navy, would naturally be a political naval officer, and I do not think he would be near as successful as Secretary of the Navy as a civilian. But the civilian who is Secretary of the Navy having selected by his own selection the naval adviser, should place responsibility upon him, and naturally give him the authority that goes with the responsibility. I do not, again, mean for one instant that this naval adviser shall in any way mix in and try to do the job of every chief of bureau. I am informed. I think correctly, that on the breaking out of the war, I think by mutual consent, the Chief of Naval Operations and the bureau got together and cooperated in a very efficient manner during the war. Now, if in war time they got together by mutual consent and cooperated for efficiency in war, I say that the law should be such that in peace times they will have the same cooperation, in order that they can be prepared for war. Now, as to details, I know no more about it.

The CHAIRMAN. You say that the Chief of Naval Operations should have the responsibility of executing the plans. Should he have the responsibility of drawing the plans?

Admiral WILSON. Yes. He has now the authority for the preparation of plans.

The CHAIRMAN. He should have the responsibility?

Admiral WILSON. Yes; he should have the responsibility of drawing the plans and getting the Navy ready for war, and the responsibility of the execution of the plans; and the man who has responsibility for a thing should have the authority that goes with it. I do not mean for a moment that this man should take the place of the Secretary.

the Navy. I recognize that it is the salvation of the Navy to have a civilian at its head, and if the Secretary of the Navy is not satisfied with his naval adviser, he can get another naval adviser. He is not held down to that one; because this man would be his own confidential man, charged with responsibility, and the law should be made such that the work that was done during the war by cooperation will be made the practice during peace times.

The CHAIRMAN. And, in general, you do not think that a civilian Secretary who has never studied or had experience of naval warfare could be reasonably expected, without the advice of some such man who has had experience, to prepare a navy or a fleet for war?

Admiral WILSON. Are you referring to the present Secretary of the Navy, sir?

The CHAIRMAN. Oh, no; I am just speaking in general. In general, a civilian Secretary of the Navy needs the advice and assistance of an expert naval officer?

Admiral WILSON. Yes; certainly.

The CHAIRMAN. To draw up plans?

Admiral WILSON. Yes, sir. The man appointed Secretary of the Navy has not got to have any naval knowledge to be an administrator. That is what you want, an administrator, there as Secretary of the Navy; a man who handles policies, on good terms with Congress, and such things as that. I do not think it was ever expected, and I do not think any Secretary ever expected to go down and do the details and say how war should be carried out.

The CHAIRMAN. Plans for military operations should be drawn, of course, by military experts?

Admiral WILSON. I think every one recognizes that, sir; even the Secretary of the Navy. The trouble with this business is that it is not the system, it is the individual, and if he gets in there and tries to make his job too big at the expense of anybody else, and not to the best interests of the service and everybody concerned, they ought to get somebody else who can keep within his limits, and keep happiness here, and not discord.

The CHAIRMAN. You believe in a centralized control of responsibility and a decentralized authority over the execution of plans?

Admiral WILSON. I do not understand that.

The CHAIRMAN. You believe in a centralized control of general policy?

Admiral WILSON. I believe in a centralized control of getting ready for war and carrying on war. I do not think this man ought to be meddling with—

The CHAIRMAN. Then, after the plan is made you believe in the department having authority to carry out their particular plans?

Admiral WILSON. Exactly; not meddling with navy yards and trivial things of that sort. He ought to be on big things. He never ought to get down to the level.

The CHAIRMAN. What would you say, in general, about the preparedness of the Navy at the beginning of the war? Would you say that it was adequately prepared from stem to stern?

Admiral WILSON. Senator, I never saw it any better prepared. Of course, as Admiral Rodman told you yesterday, you could never get 100 per cent efficiency; but I have been going along from a boy until my age, now, and I think I can say with great certainty that every year I have seen better results and more preparedness.

The CHAIRMAN. Then you are prepared to state that you think the Navy was prepared from stem to stern at the outbreak of the war?

Admiral WILSON. Oh, well, that is just an expression.

The CHAIRMAN. Well, I am asking you.

Admiral WILSON. Well, now, you know even Admiral Wilson, from the position he occupied, is not in a position to answer that question, and no one officer is able to answer that question.

The CHAIRMAN. Then you decline to answer the question.

Admiral WILSON. I say I am unable to answer the question, and I decline nothing. But I want to say, Mr. Senator, that the force I was attached to was in a fine condition.

The CHAIRMAN. That was not the question, Admiral.

Admiral WILSON. I know it was not. I am not able to answer.

The CHAIRMAN. Have you any questions to ask, Senator Keyes?

Senator KEYES. Yes; I would like to ask Admiral Wilson the question: You made the statement, as I got it, that the Navy was on the job from the start.

Admiral WILSON. Yes, sir.

Senator KEYES. Now, would you mind telling us what time you had in mind as the time of the start?

Admiral WILSON. Well, the force I was attached to, sir, received the order and went south after Christmas. We were carrying on our evolutions and maneuvers and target practice and everything the same as we always did, and we continually have maneuvers on the war basis, and from the time that the German ambassador was given his passports the fleet was handled as if on a war basis, and when we came north the force I was attached to was in excellent condition. I went to the Navy Department and took the patrol force, and the force I had there were on their toes from the start. I went to Gibraltar, and I went to Brest, and I have been fortunate, probably, in seeing nothing but successful performances of the work assigned to different people. I knew nothing about, and know nothing about, the administration of the Navy Department at that time, if you refer to that. I was at sea.

Senator KEYES. When you referred to the Navy being on the job you had no reference to the Navy Department?

Admiral WILSON. When I say the "Navy," I mean the fighting force.

Senator KEYES. You did not refer to the Navy Department at all in making that statement, did you?

Admiral WILSON. I referred to the fleet.

Senator KEYES. That is what I wanted to find out.

Admiral WILSON. Well, I will change it and say that the fleet was on its toes from the start, or, say, in 1916, and has been so ever since, and I know about what was going on here. May I say this: You asked Admiral Rodman something about the fleet at the present time. May I read a little memorandum that I prepared when I called the admirals and captains together in conference to get their views of conditions at the present time, in order that I might have such a memorandum in case I came up here and was asked the question? It is my point of view, but it is a point of view that meets with favor by all my senior officers down below.

The CHAIRMAN. Admiral Rodman took the ground that information about the fleet at the present time should be given confiden-

ally, and yesterday afternoon he appeared before the full Committee on Naval Affairs of the Senate and gave us a talk on that.

Admiral WILSON. Anything that I have to say here is nothing but what everybody can hear.

The CHAIRMAN. It, of course, has nothing to do with the purposes of this investigation?

Admiral WILSON. But you asked me what the condition of the fleet was to-day.

The CHAIRMAN. Yes.

Admiral WILSON. Now, I have another fleet, and I would like to tell you.

The CHAIRMAN. I said at the time it has nothing to do with that. I should be very glad to hear it if it has nothing in it that should be kept private.

Senator PITTMAN. I am perfectly sure that the admiral knows what is important, and he knows more than we do.

The CHAIRMAN. I have no objection. Have you any objection, Senator?

Senator BALL. I would be glad to hear it. I think it has a bearing on the future.

Admiral WILSON. It is not to be expected that following the demobilization which took place between the signing of the armistice and the 1st of January, 1920, the fleet would be in the condition it was during the war and during the period immediately preceding the war.

At the present time the material condition of the battleships is, as a whole, good. Judging by the previous high standard insisted upon in the Navy, the material condition of the battleships has somewhat deteriorated and is even, perhaps, still slowly deteriorating; but if the fleet can hold our present enlisted personnel as a nucleus around which to develop, we will soon reach our low ebb and begin to improve. To do so, however, it is essential that we hold what we now have.

When the fleet sailed for southern waters—and I would like to say that I have down there 8 dreadnaughts and something over 30 destroyers and an aviation force and submarine force—when the fleet sailed for southern waters, 10 knots was considered the maximum sustained speed which the battleships could maintain, and as a result of the two months' work subsequent to that time it mounted considerably. The oil burners can of course sustain more, but further training, development, and hardening of the newly recruited firemen is necessary before coal-burning battleships can increase this speed. This process is, however, continuously going on.

The morale of the fleet has steadily improved since leaving home. The reason that I wanted to give you this, Mr. Senator, is that we hear so much about the Navy being all shot to pieces, and everything going to pot, and everybody lying down on his job. This naval personnel that I have in the force down below do not know what it is to lie down on a job. They do not know any argument that is going on. They are only attending to their business.

The cruise has been beneficial. A schedule is being followed which will accomplish much and yet takes into consideration the large number of untrained men. This schedule is such that it is believed

that more can probably be accomplished than was originally contemplated, and that nothing planned will be left undone.

As an example of the recent development, the eight battleships held a 4½ power trial on March 4, which resulted in their averaging over 17 knots, the highest speed of about 17.8 knots being made by the *Delaware*. During this trial conditions improved continually and the speed during the last hour was the highest of the entire trial.

Many of the officers, particularly the watch officers, are young and inexperienced. The watch officers themselves are almost without exception of the classes of 1916 and subsequent.

The same is true of the men. As an example, 52 per cent of the crew of one of the battleships are less than 19 years old. These men make splendid material for ultimate development, but by reason of their age and inexperience, require more supervision and training than did the men we had prior to and during the war.

As it is essential that we retain the older men still remaining in the Navy, it is absolutely necessary that a pay bill be definitely passed in the near future in order to hold them.

The morale of the fleet is surprisingly good. The Navy will always do, and endeavor to make the best of things. The fleet has, due to an unbroken record of success and victory, throughout its entire history, come to expect that no matter what happens to the Navy—its first line of defense (and the Navy is proud of its title)—it will find a way to accomplish its mission. While the spirit and determination of the older officers and men is as firm as ever, the country must realize that they have nearly reached their limit. They feel that they are in the position so often portrayed by a paper cartoonist, "When a fellow needs a friend."

We had a big reserve of efficiency, with a fine personnel, but we have drawn heavily upon it of late.

My only object in bringing that to your attention is to counteract the statement that the morale of the Navy has gone to pieces, that the Navy is all shot to pieces, and so on. In fact, the only thing now is to increase the pay of the men. They are doing splendidly, but the married ones have their troubles. With the demand for outside for enlisted men with the experience our men have, they get three times the pay outside. You do not realize, sir, the value of these men that we are losing. Millions of dollars are involved there. Take the electric plant of the *Pennsylvania*, a \$1,000,000 plant, and because they do not increase the pay of the enlisted men on the 1st day of July she will have 14 per cent of her electric plant look out for.

The CHAIRMAN. I am glad you brought this matter up.

Admiral WILSON. I do not think the people realize how the morale and morale is affected by that; and at the present time we have got to the place where a fellow needs a friend.

The CHAIRMAN. With the consent of the committee, after we have heard Admiral Fletcher to-morrow, I am going to call Admiral Wilson to Washington, the Chief of the Bureau of Navigation—

Admiral WILSON (interposing). Yes.

The CHAIRMAN. To come before this committee and to give some information about the present personnel conditions of the Navy and the question of pay in the Navy.

Admiral WILSON. That is the one question. That is the only question.

The CHAIRMAN. I think that is a very important matter for us to get something on.

Admiral WILSON. That is the only question that exists to-day, the pay of the men. Of course everybody wants more pay, but it is vital with us.

The CHAIRMAN. I agree with you fully about the importance of settling that matter.

Have you any questions, Senator Pittman?

Senator PITTMAN. I would like to ask one or two questions.

Admiral Sims has charged before this committee that the Navy Department, through unpreparedness and delay in sending to Europe the ships that were available, prolonged the war four months, thereby causing the loss of 2,500,000 tons of shipping, 500,000 lives, and need-expenditure of \$15,000,000,000. I ask you, in your opinion, based on your experience and knowledge of this war, is that charge true?

Admiral WILSON. I do not believe this to be true. On the contrary, I believe that our naval forces from the start cooperated in a most successful manner with the naval forces of our associates in many portions of the seas, and by their splendid and efficient work materially aided in shortening the war, and in this manner saving old life and property, as stated in my conclusions.

To further show the faulty reasoning of Rear Admiral Sims, I ask attention to that part of the testimony before the committee contained in a memorandum prepared in the London office on August 1918, for the information of the House Naval Committee. At that time we had about 300 vessels of all kinds in European waters. The memorandum states in part that "of all the total craft operating against enemy submarines in British and eastern Atlantic waters, the American patrol force constitute less than 5 per cent of the total number."

If, after 16 months of effort, we had less than 5 per cent of the total forces operating against the enemy (as the Naval Committee is informed), it is not probable that during the first six months we could have aided with more than 2 per cent of the total allied forces, and I fail to see how such a small percentage of the total number of vessels operating against the enemy's submarines could have had serious influence upon the duration of the war or upon the loss of life and shipping.

The CHAIRMAN. You think, however, that it had a certain effect, do you not, Admiral?

Admiral WILSON. No, sir. I say the opposite. I say, sir, that I believe that our naval forces from the start—and I say this here, fully recognizing that I am under oath, and from my experience and everything—I believe absolutely that our naval forces from the start cooperated in a most successful manner with the naval forces of our associates in many portions of the seas, and by their splendid and efficient work materially aided in shortening the war, and in this manner saving untold life and property.

The CHAIRMAN. Well, Admiral, if we had been able to get ships there sooner than we did, it would have been a good thing? Whether we could have done it or not, it would have helped, would it not?

Admiral WILSON. I do not think that the Navy is ever satisfied with the word "ample." They would always like to have a little more in their sleeves.

Senator PITTMAN. It was sufficient?

Admiral WILSON. But I think we would have had no fear of any other Navy besides the British Navy.

Senator PITTMAN. That is very wise, in regard to the use of that word "ample," because we have other appropriation bills coming.

The CHAIRMAN. Do you think that would have been true in April 1917, if the British Navy had not cooped up the German fleet?

Admiral WILSON. Mr. Senator, we never gave that one thought because I knew that after that German fleet had made an attempt to get through the British fleet it would not have taken much to fix it.

The CHAIRMAN. So that you depended on the English fleet as the real safeguard.

Admiral WILSON. Of course, I guess everybody did.

The CHAIRMAN. And our fleet was not prepared to meet the German fleet at that time if it had had a free exit and could have gotten over here?

Admiral WILSON. I never stopped to think about that, because I knew that was never going to happen.

Senator PITTMAN. But you have already stated that if the German fleet had come 3,000 miles over here, the victory would have been ours.

Admiral WILSON. I was not worried about their fleet coming 3,000 miles across the ocean.

The CHAIRMAN. Do you think that would have been true with the English fleet over there, if the German fleet had met the English fleet, at that time?

Admiral WILSON. Yes, or any other time. After you have traveled 3,000 miles across the ocean with those vessels, and have a fellow there ready to snap you as soon as you get there, you are not in very good shape.

The CHAIRMAN. Then for purposes of defense—and I presume that would be the only way we would go to war—why do we need these lighter vessels?

Admiral WILSON. Mr. Chairman, you must never ask a naval officer what he is going to do on the defensive. He only does that when he is up against it. We always have our studies on offense.

The CHAIRMAN. But I assume that the war will not be a war of aggression on our part.

Admiral WILSON. No; but after you decide on war, we are not going to sit around and wait for the other fellow to come to us. We are going to hit him.

The CHAIRMAN. For purposes of defense you do not think that we need any of these adjuncts of the fleet?

Admiral WILSON. I never looked into the subject of defense. That is only a last resort.

The CHAIRMAN. Of course these are matters that are of great importance to the committee on the question of appropriations for the future.

Admiral WILSON. Mr. Senator, may I make a suggestion?

The CHAIRMAN. Certainly.

Admiral WILSON. If Congress wants to have a Navy, and if they will always approve the recommendations of the Navy Department.

Admiral WILSON. We adopted the convoy plan in ample time. I was in Gibraltar when the convoy plan first started, and at the time that the convoy plan started from Gibraltar, do you know what the convoy from Gibraltar was? They went out and took sometimes 20 and 30 ships to England. One little coast guard cutter was the escort for the convoy. When you have such little things as that, all that that escort did was to navigate convoy up the coast, and take it into port.

The CHAIRMAN. But the testimony of others is that the convoy system was a very important system.

Admiral WILSON. Absolutely.

The CHAIRMAN. And that it had a great deal to do with the winning of the war?

Admiral WILSON. Absolutely.

The CHAIRMAN. And the testimony is that it was not adopted as soon as it might have been.

Admiral WILSON. How about England? She did not adopt it until long after the war started?

The CHAIRMAN. I think the testimony showed on that that if we had been able to cooperate with our vessels she could have adopted it sooner.

Admiral WILSON. I do not think that you have heard all the testimony on that yet.

The CHAIRMAN. That may be.

Admiral WILSON. When you have heard all the testimony you may change your opinion.

The CHAIRMAN. But no one man decides that fact.

Admiral WILSON. Oh, that is what I think. There has been an effort to make an impression that one man decided it, and I do not think that is fair.

The CHAIRMAN. We have had testimony from other officers, and we are asking you for yours.

Admiral WILSON. I am giving it to you pretty straight.

The CHAIRMAN. Yours is one part of the general testimony.

Admiral WILSON. I am giving it to you pretty straight.

The CHAIRMAN. Yours is only the opinion of one officer.

Admiral WILSON. I have given you first-hand information, too, Mr. Senator.

The CHAIRMAN. We are getting information from all sides, and of course when we have all this information we shall weigh these things.

Admiral WILSON. Yes, sir.

The CHAIRMAN. Giving due weight to every part of it.

Admiral WILSON. O, Mr. Senator, I hope you will give due weight to everything that is told you here.

The CHAIRMAN. That is exactly what we shall do.

Admiral WILSON. I hope so, sir. I hope it will be given.

The CHAIRMAN. What we are working for is the good of the Navy.

Admiral WILSON. Well, Mr. Senator, I believe that it would have been good for the Navy if you had shut up shop after the first few days. It would have been better.

The CHAIRMAN. Unfortunately, that is not within your province to decide.

Admiral WILSON. I know, but I just said that was my opinion, that is all.

engineer and one a naval constructor), with a commander as member and recorder, conducted all acceptance and final trials of our new vessels, and in addition made periodical inspections of our vessels in service. As representatives of the Navy Department in connection with contract work, our recommendations were made only after the most careful consideration, and always met with the approval of the Navy Department. This work often brought me in personal contact with the Secretary of the Navy. I soon learned that he had confidence in the board's professional judgment and that it would have his staunch support, which it always did have during my tour of duty.

In 1915 I think it was in 1915—two members of the board and myself, together with the aid for material, were called in conference with the Secretary of the Navy to discuss trials of submarines with a view to the improvement of the boats and the early delivery of those for which contracts had already been let. The members of the board made several suggestions which were approved. The board had been having differences with contractors at time of trials of submarines. The results of the conference indicated to us that the board could count on the full and active support of the Secretary in such matters, and conditions improved greatly—all to the gain and advantage of the Government, and especially the Navy.

Senator KEYES. You do not think that answers my question, do you?

Admiral WILSON. I think that answers the question in this way: that I believe that that part of the Navy I was attached to at sea was well prepared: that the only thing I know about the Navy Department was the work that came under my cognizance on the board of inspection, which was submarines, and that was the result, that we made suggestions on the improvement of them, which were carried into the future types. We made suggestions as to the speeding up trials, and getting the boats into service, which did some good, for the Navy.

Senator KEYES. I hoped to get your opinion, but I have not got it.

Admiral WILSON. Mr. Senator, I am placed in no position to give an opinion.

Senator KEYES. You have been giving us opinions, and said that you were very glad to, and I hoped that you would give us one more.

Admiral WILSON. I have based every opinion I have given on my information and things that I was cognizant of. You are going to have officers come before you who handled those matters in the Navy and who can tell you more about it than I can.

The CHAIRMAN. Admiral, you have told us about the condition of the fleet at the beginning of the war, that is of force No. 2. Do you know how many battleships there were in that fleet?

Admiral WILSON. Sixteen.

The CHAIRMAN. How many destroyers were there?

Admiral WILSON. When we came north in the latter part of March—

Senator PITTMAN. That was in 1917?

Admiral WILSON. In 1917; we came north in formation, and with plans laid in case we should meet the enemy. I remember the formation well. I remember we had quite a screen of destroyers around us. The number I can not tell you.

(4) Second, as to the accusation that we should have immediately sent all available small craft to the war zone to combat the submarine. The reasons for this course of action at first sight appear plausible and attractive. They strongly appeal to the impulse for the initiative and the offensive and are in accordance with sound military principle to strike quickly and overcome the enemy. I will not enter into a discussion of the merits of this phase of the controversy, but content myself with the following observation: In the summer of 1916—the summer previous to our entry into the war—a German submarine demonstrated its ability to pass through the war zone, cross the Atlantic Ocean, enter a port of the United States, return to Germany without refuelling on this side, and, incidentally, to sink a number of valuable merchant ships in plain sight of our own coast line.

(5) Let us assume for a minute that immediately upon the commencement of war the United States had sent to Europe all available small craft capable of fighting the submarine menace, leaving wholly unprotected our long stretch of coast line and the adjoining ocean covered with thousands of unarmed ships with their valuable cargoes. Let us further assume that under these conditions several German submarines had appeared in this rich field of operations, as they did subsequently appear, but too late.

(6) As to the alarm that would have been caused in this country had such a situation occurred and the influence it would have had in again sending our small craft across to fight the submarine menace in the war zone, you gentlemen can form as accurate an opinion as any military or naval expert.

(7) In reference to the accusation that “if all of our antisubmarine forces had been immediately sent to the war zone it would have resulted in the saving of 2,500,000 tons of shipping.” The calculations upon which this statement is made are founded upon a hypothetical condition, and, like all such methods of reaching a conclusion, the results are unsatisfactory, not being susceptible of proof. Equally so, if you attempt to expose the fallacy of the calculations in this method of reaching a conclusion, it is unsatisfactory to the opposing view, not being susceptible of proof on a basis of facts. Without entering into an academic discussion and challenging the various assumptions that must necessarily have been made, I may assist the committee in arriving at an estimate of the value and credibility of the statement through a shorter route by placing the problem in this form:

It has been stated that the maximum American forces that could have been sent or were sent to the war zone to combat the submarine were about 5 or 6 per cent of the combined total force.

If the American forces consisting of, say, 5 per cent of the total force combating the submarines could have saved 2,500,000 tons of shipping, as claimed, then how many million tons should have been saved by the allied forces consisting of 95 per cent of the total force?

(8) I will now make some comment from a viewpoint as a member of the General Board of the Navy upon the statement that “We entered the war with no well-considered policy or plans.” The criticism that we have no adequate war plans has often appeared. There is no doubt but that, in the minds of many officers well qualified to know, our plans for conducting foreign wars are far from being

is complete as they should be, and we have given much less attention to this subject than is believed to be the case in foreign countries. Nevertheless, we have collected a great deal of data upon this subject and many plans have been made and are on file, and to show you that we are not so badly off as has been made to appear, it may be of interest for the committee to know that nearly two years before our entry into the war the General Board prepared a comprehensive war plan for conducting war against a central power of Europe. This plan covered every phase of naval operations under the assumed conditions of war. It deals with the mobilization, organization, and composition of the fleet, its disposition and employment, maps and strategic positions, employment of auxiliaries and submarines, protection of the coast, bases of supplies on our coast and the West Indies, routes across the Atlantic, enemy's forces and probable course of action, etc. This war plan with its statistical data and modifications of details from time to time to bring it up to date comprises nearly 300 pages of typewriting. Rear Admiral Badger of the General Board, who, I understand, will appear before you, can give you more detailed information upon this subject if desired.

(9) I will now continue my testimony as seen from the viewpoint of a member of the War Industries Board, and what I am now going to say from this viewpoint leads up to an estimate of the value and credibility of the accusation in reference to the Navy's responsibility for the prolongation of the war and consequent sacrifice of so many lives.

(10) When this war came upon us it was soon found that the Government machinery for conducting the affairs of peace was entirely too small and inadequate for conducting a great war. As you know, it was through legislation enacted by Congress that various so-called "war boards" were created to meet the emergency. Of these boards the War Industries Board was entrusted with the work of producing through the resources and industries of the country the necessary supplies and manufactured material required for carrying on the war. The total productive and manufacturing capacity of this country was astonishingly inadequate to meet requirements. It became necessary for the Government to take charge of or exercise control over all raw materials in the country, such as coal, fuel, oil, iron, steel, copper, zinc, nickel, and other materials entering into manufactured products. It became necessary to mobilize and control practically the entire industrial capacity of the country in order to meet the requirements of the war. The facilities and capacity of every manufacturing plant were known and the location of every machine tool in the country was tabulated. Many manufacturing plants were required to curtail their output for civil use and devote their energies to the manufacture of guns and shells and ammunition. When a plant in Detroit or Buffalo or Providence was unable to complete a rapid-fire gun or shaft for a submarine chaser on contract time through inability to obtain a proper size of lathe, a telegram would go to Knoxville or Springfield or Chicago that machine tool (blank) in the Standard Iron Works was commandeered; express immediately to blank manufacturing company, Providence, R. I.; signed, Priority Board. I mention these details to inform this committee how this country had to curtail the wants of a great civil population and to strain every

nerve to equip our Army to get to the battle front at the earliest possible date. After our industries were completely mobilized they would not have been able to reach their maximum productive output until the spring of 1919—two years after the commencement of the war. It was not until this date, the spring of 1919, that we would have been able to have fully equipped and supplied the Army that was contemplated to be placed in France. You will thus see how completely the creation of an army was dominated by the output of our factories at home, and I will refer to this subject later.

(11) With your permission I would like to digress here a little from the continuity of my statement and refer to the work of the Navy in connection with the War Industries Board. In the creation of this board there was called to Washington some of the ablest men in this country and experts from practically every line of industry. Commencing with such men as Judge Robert M. Lovett, Mr. Robert Brookings, Mr. Daniel C. Willard, and others, and culminating in a completed organization under the directing genius of Mr. Bernard M. Baruch, I regard the task of these men and the industrial experts associated with them in mobilizing and directing the industries of this country to obtain the maximum output for military and naval requirements in the minimum amount of time as one of the greatest achievements of the war.

(12) In my association with these men of affairs and of business I heard from all sides the most complimentary references to the efficiency with which the officers of the Navy Department carried on their work from the business point of view. It was frequently remarked that the able officers at the head of the material bureaus of the Navy Department, Admirals Griffin, Taylor, Earle, McGowan, Braisted, Gen. Barnett, and others, always knew what they wanted, how much they wanted, when they wanted it, and, still more, how to get it. These bureau chiefs had their representatives on practically every industrial committee of the board and their assistants never lost a point in furthering the ends of their bureaus.

(13) In this connection I would like this Senate Committee to know that one of the first acts of the Council of National Defense decreed that all material entering into the construction of destroyers, submarine chasers, auxiliaries, and other craft intended for operations against submarines and everything required by the Navy to combat the submarine menace should take precedence over every other military or naval requirement of the war. There was never any wavering from strict compliance with the policy throughout the war.

(14) I will now revert to the question of war supplies, with the view of emphasizing the fact that in the conduct and progress of the war the action of our military and naval authorities was determined by and practically dominated by the output of war material from our factories. You will understand that my ideas upon what follows are given from a point of view overlooking the general progress of the war rather than from the necessarily more limited military or naval point of view.

(15) Two years or more before the termination of the war more than one military expert of Europe expressed the conviction that the war would be decided on the western battle front in France. This opinion was given in the face of activities of apparently great and determining importance covering the whole theater of the war, from

has the recommendations drawn up by the best minds we have in the Navy, then I think they will do no wrong; but when we are without trying to be in any way offensive—made up of cynical men—endeavor to say what we shall have except on question of policy, then I think they get mixed up.

CHAIRMAN. Admiral, as we are going to have Admiral Washington here to-morrow to talk to us about personnel, if it is convenient to you I would like to have you postpone leaving Washington until after he has testified.

MR. PITTMAN. I would ask that the Admiral also be invited here to-morrow to hear Admiral Washington's testimony.

CHAIRMAN. Yes.

ADMIRAL WILSON. All right, sir.

CHAIRMAN. I think that is all, Admiral.

The committee will now adjourn.

Reupon, at 12.30 p. m., the subcommittee adjourned until to-morrow, Friday, April 9, 1920, at 10 o'clock a. m.)

Admiral FLETCHER. No, sir; I did not consider it probable; but I did consider, of course, that it was possible.

The CHAIRMAN. Did you consider that it was so very possible that it was advisable to take steps to have our Navy thoroughly prepared?

Admiral FLETCHER. That is a question of policy, Mr. Chairman, that the department and the administration deal with, and I, of course, am always an advocate of taking steps to be prepared for war, at any time.

The CHAIRMAN. I want to find out the feeling of the officers of the Navy after the outbreak of the World War, whether it was probable or not that we would get into the war, and I have asked you what your opinion was at that time.

Admiral FLETCHER. I did not think at that time that it was probable, although I fully recognized that it was possible that we might be drawn into it.

The CHAIRMAN. Did you think that it was so very possible that we should prepare in every way for it?

Admiral FLETCHER. Well, Mr. Chairman, in regard to preparation for war, that requires years. The preparation for war consists in building battleships and battle cruisers and building up a fleet, and it covers years of time. Now, after you have got your fleet, with the fleet that you have got the question of preparing for war is only a question of a few months, the time required to dock the ships and mobilize them and get them together and see that the repairs are up to date; that is, to utilize and assemble all material that you already possess in the fleet, and in addition, seeing that the complements of ships are up to date. All of that is a question of a very short time.

The CHAIRMAN. I find that the record is of no value, Admiral, unless the questions which I ask are answered.

Admiral FLETCHER. Yes.

The CHAIRMAN. And I want to know whether or not at the time you thought that war was so imminent that we should prepare the Navy for it. You can answer that by yes or no.

Admiral FLETCHER. I do not think——

Senator TRAMMELL. I think the Admiral ought to be allowed to answer the question in his own way.

Admiral FLETCHER. The question hinges on what you mean.

The CHAIRMAN. Whether extra precautions should have been taken at that time to prepare the Navy for war on account of the war being on.

Admiral FLETCHER. Not at the time, no, sir.

The CHAIRMAN. When did you first look upon the war, as far as we were concerned, as imminent?

Admiral FLETCHER. I did not think that it was imminent until, I should say, around about 1916.

The CHAIRMAN. What part of 1916?

Admiral FLETCHER. It was the latter part.

The CHAIRMAN. Towards the latter part?

Admiral FLETCHER. Yes.

The CHAIRMAN. And after that you did think that it was imminent, and that we should do everything to get ready.

Admiral FLETCHER. I think that is correct; yes, sir.

The CHAIRMAN. Did you make any report to the department or to the Secretary with regard to the steps which should be taken to prepare for such an event?

Admiral FLETCHER. As I remember, I was a member of the General Board at that time.

The CHAIRMAN. That was after you had left the fleet?

Admiral FLETCHER. Yes, sir; and they sent several communications to the Navy Department pointing out and recommending steps that should be taken in anticipation of war. I do not know exactly what action was taken by the Navy Department, except that I remember a return indorsement on one of them, that these recommendations of the General Board were approved, and would be carried out as far as possible. These recommendations were in accordance with the general war plan that I have referred to in my testimony.

The CHAIRMAN. But that was a report of the board. Did you, personally, make any report to the department or to the Secretary?

Admiral FLETCHER. No; I was a member of the General Board and I personally made no report to the Secretary.

The CHAIRMAN. You personally made no report.

Admiral FLETCHER. No, sir.

The CHAIRMAN. What were the recommendations made to the General Board to assure greater preparedness?

Admiral FLETCHER. There were no recommendations made to the General Board by anybody that I can remember.

The CHAIRMAN. Was the General Board called on to draw up a plan?

Admiral FLETCHER. I can not state that accurately, but my recollection is that they were asked for recommendations. I think Admiral Badger will be able to give you full information on that.

The CHAIRMAN. These recommendations that were made by the General Board, were they approved by the department?

Admiral FLETCHER. I do not know what action was taken by the department, except, as I say, on one indorsement, on one of our recommendations that came back from the department, in which it stated that all these recommendations of the general board were approved by the department, and steps would be taken to carry them out as far as possible.

The CHAIRMAN. What were those recommendations?

Admiral FLETCHER. Well, I am sorry, Mr. Chairman, but I can not specifically state them. But they are on record.

The CHAIRMAN. Could you get a report of those recommendations so that we can put them in the record?

Admiral FLETCHER. Yes; they are on file in the department.

The CHAIRMAN. Could you furnish us a copy?

Admiral FLETCHER. Admiral Badger will be prepared to give you all those recommendations.

The CHAIRMAN. I would like to get a copy to put in the record here.

Admiral FLETCHER. Yes.

The CHAIRMAN. You state they were approved by the department?

Admiral FLETCHER. This one that I know of. The others, I do not know what action was taken.

The CHAIRMAN. I mean this one you speak of. I would like to have that go into the record here, if possible.

Admiral FLETCHER. Yes, sir; I will see that that is——

The CHAIRMAN. You will see that that is furnished to the stenographer?

Admiral FLETCHER. Yes, sir.

The CHAIRMAN. Capt. Taussig in his testimony referred to your report of the spring target practice in the spring of 1915, when you were in command of the fleet, and in that you called attention to the deplorable personnel conditions of the fleet. Do you recall such a report?

Admiral FLETCHER. Yes, sir; I recall the report in which I pointed out that the complements of ships were not up to modern requirements, and we were quite short in personnel.

The CHAIRMAN. What action was taken on your report?

Admiral FLETCHER. That I do not know, Mr. Chairman. I know that the thing was thoroughly discussed here in Congress and taken up and investigated by committees of the House, and what action was subsequently taken by Congress I could not state, exactly.

The CHAIRMAN. Was the matter remedied while you were in command of the fleet?

Admiral FLETCHER. I left so soon after that, that it was impracticable to have remedied it in that short time. We did not have the personnel.

The CHAIRMAN. Have you a copy of that report?

Admiral FLETCHER. I have not a copy myself, but it is on file in the Navy Department, and I think it has been printed in public documents here in the Senate.

The CHAIRMAN. Do you recall what the substance of it was, and how far the personnel was lacking?

Admiral FLETCHER. I can only make a rough estimate. As I remember, the battleship fleet, as it was composed at that time, was about 5,000 men short of what would be required for an efficient modern complement.

The CHAIRMAN. That is, 5,000 officers and men?

Admiral FLETCHER. Yes, sir. I am not sure that the officers could be included in that, but that would be a very small item.

The CHAIRMAN. What did the battleship at that time comprise?

Admiral FLETCHER. It comprised—I am speaking from memory only—16 battleships and about 20 destroyers, and a number of auxiliaries in the shape of supply vessels, colliers, tugs, and so forth.

The CHAIRMAN. Any submarines?

Admiral FLETCHER. Yes; we had about 12 submarines.

The CHAIRMAN. Any light cruisers?

Admiral FLETCHER. Yes; we had a cruiser squadron.

The CHAIRMAN. As part of the fleet?

Admiral FLETCHER. As part of the fleet.

The CHAIRMAN. Any other screening vessels?

Admiral FLETCHER. No; those represented the general types. We did not have any fast scout cruisers or general scout cruisers or vessels of that type at that time. The fast battle cruisers which would more nearly approach to the class of battleships were not in commission with the fleet at that time.

The CHAIRMAN. We did have some fast armored cruisers at that time?

Admiral FLETCHER. I think we had some in commission in the Pacific, but not actually employed with the fleet.

The CHAIRMAN. You say that you did make a report about the personnel, and that you do not know what action was taken in regard to it, because you left the fleet?

Admiral FLETCHER. I do not know what was the final action taken by the department or by Congress.

The CHAIRMAN. In your hearings before the House Naval Committee, on March 2 and 3, 1916, you called attention to the great shortage of personnel, and pointed out that there was little or no reserve available for the manning of ships not in commission with the fleet, did you not?

Admiral FLETCHER. I did.

The CHAIRMAN. What action was taken by the department to meet the conditions which you outlined?

Admiral FLETCHER. That I do not know.

The CHAIRMAN. The fact that you made that report would indicate that no action was taken in regard to your report of the year before 1915, would it not?

Admiral FLETCHER. Oh, if my testimony referred to conditions at that date; but as I remember it referred back to the date upon which I made my report. The record will show on that.

The CHAIRMAN. What recommendations for increases in the personnel were made by the General Board?

Admiral FLETCHER. I think that about that time the provisions to that time—I am not sure, but I think that the General Board made some recommendations relative to the total personnel that would be required to properly man the fleet, and the necessary reserves that would be required.

The CHAIRMAN. Will you repeat that, Admiral? I did not get it.

Admiral FLETCHER. We had made recommendations in regard to the shortage of personnel, and had recommended an increase which would cover this shortage and supply sufficient reserves. I do not remember just what number they recommended, but it was something like 15,000 men. Of course, that included the 5,000 which I had pointed out as short in the fleet.

The CHAIRMAN. Were these recommendations approved by the department?

Admiral FLETCHER. I do not know what action was taken on that. Mr. Chairman. I was not in the department at that time, nor had I any duty in connection with it, as I remember.

The CHAIRMAN. And you do not recollect the action that was taken?

Admiral FLETCHER. I do not recollect. I know the matter was discussed in Congress and in the committees of the House; but the final outcome of it I do not know.

The CHAIRMAN. Do you recall whether the Secretary of the Navy approved the recommendation of the board in making his recommendation to Congress?

Admiral FLETCHER. That I do not know. I was not a member of the board at that time.

The CHAIRMAN. If it was not done, you do not recollect why it was not done, whether it was because of the Secretary not recommending it, or because Congress turned down the Secretary's recommendation?

Admiral FLETCHER. No; I am not familiar with that phase of it. I was not here at that time. But I assume all of that is on record, some place, because the thing was thoroughly discussed, as I saw by reading the press reports.

The CHAIRMAN. What plans, other than the old mobilization plan, had been prepared by the Navy Department before April, 1917, to govern the action of the Navy in the event of a war?

Admiral FLETCHER. The plans for making war are in the hands of the Chief of Operations, under his direction. I do not know what plans were made in Operations. I have nothing to do with them. It was as a part of the General Board we made a number of specific recommendations to the department which practically consisted on supplementary war plans as relating to this particular phase of war, and were in pursuance to the general war plan.

The CHAIRMAN. That is, you made a war plan which was drawn up to meet the situation which actually developed in 1917?

Admiral FLETCHER. We made recommendations to them that covered—that practically amounted to a plan of operations.

The CHAIRMAN. And your recommendations had to do with the question of submarines?

Admiral FLETCHER. I do not remember just what specific recommendations we made in regard to submarines; but, as I say, those papers can be placed before you.

The CHAIRMAN. You were on the General Board at that time?

Admiral FLETCHER. I was on the General Board at that time.

The CHAIRMAN. Is it a fact that the question of submarines was one of principal importance in making any such plans, as far as our naval forces were concerned?

Admiral FLETCHER. I would not say that the question of submarines was one of principal importance, one of the principal forces that could be brought into play at that particular phase of the war.

The CHAIRMAN. That is, at the outbreak of the war?

Admiral FLETCHER. At the outbreak of the war. The condition that we were confronted with, more than anything else, was the submarine menace, and of course our submarines—it was not clearly seen at that time just what part they could play; so that I do not think that we necessarily made any specific recommendations with regard to submarines.

The CHAIRMAN. Although it was the critical menace at that particular time in the whole situation?

Admiral FLETCHER. In regard to recommendations against enemy submarines?

The CHAIRMAN. I referred to the use of our Navy against the enemy's submarines.

Admiral FLETCHER. Oh, yes; we made recommendations. I remember there were some 18 or 20 specific steps that we should take, and it referred to the patrol of our coast, protection against submarines, utilization of small craft, employment of yachts for that purpose, and the outfitting and equipment to send against submarines, and various other steps.

The CHAIRMAN. Did the General Board consider it probable that our naval forces would be restricted to warfare of this kind in general?

Admiral FLETCHER. They did not consider that our main fleet at that time would probably be called to fight a battle at sea with the German fleet, but that the special employment would be directed against the submarine menace with our small craft.

The CHAIRMAN. Upon what information were the recommendations of the General Board based?

Admiral FLETCHER. Based upon their general knowledge of conditions and the progress of war and the form that it was taking.

The CHAIRMAN. Simply on general knowledge?

Admiral FLETCHER. On general lines; yes, sir.

The CHAIRMAN. Did you have any reports from officers who had been over to investigate the matter on the other side?

Admiral FLETCHER. The General Board recommended that officers be sent over there to get in thorough touch with the situation and give all necessary information. This was in addition to the regular machinery for doing that through the naval attaché.

The CHAIRMAN. You had previously made the recommendation to the General Board—or, that was in your plans?

Admiral FLETCHER. It was made just previous to or at just about the time that hostilities were threatened.

The CHAIRMAN. That was in 1916?

Admiral FLETCHER. No, sir; in the spring of 1917; in February, to be more exact. Two or three months before the commencement of hostilities.

The CHAIRMAN. And were such officers sent abroad to study the situation?

Admiral FLETCHER. Such officers were sent abroad.

The CHAIRMAN. At that time?

Admiral FLETCHER. About that time; yes.

The CHAIRMAN. And they brought back reports that you acted on when you made your plans?

Admiral FLETCHER. No, sir; the plans were not made on their special reports. The plans were made on information much broader than their special reports; but I do not doubt, if there is anything in their reports that bore upon these subjects, it would naturally—

The CHAIRMAN. That is, they had made reports before you issued your plan?

Admiral FLETCHER. Well, I do not think, Mr. Chairman, that those reports were of such a character as to affect the plans.

The CHAIRMAN. Do you recall what officers were sent over to study the submarine situation, as you say, about February 10?

Admiral FLETCHER. I do not. I remember that we recommended that Admiral Sims and Admiral T. S. Rogers be sent abroad, with assistants.

The CHAIRMAN. Admiral Sims went over after the outbreak of the war?

Admiral FLETCHER. My impression is that he was sent over there before hostilities commenced, before the outbreak of war.

The CHAIRMAN. Well, before the outbreak of war?

Admiral FLETCHER. Yes.

The CHAIRMAN. I think you are correct.

Admiral FLETCHER. Yes.

The CHAIRMAN. Did Admiral Rogers go over?

Admiral FLETCHER. I do not think he went over. He had an important command in the fleet at that time, and he was not sent.

The CHAIRMAN. Do you recall any other officers who were recommended for this duty?

Admiral FLETCHER. We did not recommend any other officers specifically by name, but by rank.

The CHAIRMAN. And you do not know whether any such were sent or not?

Admiral FLETCHER. No, sir; I did not consider it probable; but I did consider, of course, that it was possible.

The CHAIRMAN. Did you consider that it was so very possible that it was advisable to take steps to have our Navy thoroughly prepared?

Admiral FLETCHER. That is a question of policy, Mr. Chairman, at the department and the administration deal with, and I, of course, am always an advocate of taking steps to be prepared for war at any time.

The CHAIRMAN. I want to find out the feeling of the officers of the Navy after the outbreak of the World War, whether it was probable that we would get into the war, and I have asked you what your opinion was at that time.

Admiral FLETCHER. I did not think at that time that it was probable, although I fully recognized that it was possible that we might be drawn into it.

The CHAIRMAN. Did you think that it was so very possible that we should prepare in every way for it?

Admiral FLETCHER. Well, Mr. Chairman, in regard to preparation for war, that requires years. The preparation for war consists in building battleships and battle cruisers and building up a fleet, and it takes years of time. Now, after you have got your fleet, with the fleet that you have got the question of preparing for war is only a question of a few months, the time required to dock the ships and overhaul them and get them together and see that the repairs are up to date; that is, to utilize and assemble all material that you already have in the fleet, and in addition, seeing that the complements of the ships are up to date. All of that is a question of a very short time.

The CHAIRMAN. I find that the record is of no value, Admiral, in the questions which I ask are answered.

Admiral FLETCHER. Yes.

The CHAIRMAN. And I want to know whether or not at the time you thought that war was so imminent that we should prepare the Navy for it. You can answer that by yes or no.

Admiral FLETCHER. I do not think.

Senator TRAMMELL. I think the Admiral ought to be allowed to answer the question in his own way.

Admiral FLETCHER. The question hinges on what you mean.

The CHAIRMAN. Whether extra precautions should have been taken at that time to prepare the Navy for war on account of the war being

Admiral FLETCHER. Not at the time, no, sir.

The CHAIRMAN. When did you first look upon the war, as far as we are concerned, as imminent?

Admiral FLETCHER. I did not think that it was imminent until, I should say, around about 1916.

The CHAIRMAN. What part of 1916?

Admiral FLETCHER. It was the latter part.

The CHAIRMAN. Towards the latter part?

Admiral FLETCHER. Yes.

The CHAIRMAN. And after that you did think that it was imminent, and that we should do everything to get ready.

Admiral FLETCHER. I think that is correct; yes, sir.

The CHAIRMAN. Did you make any report to the department or to the Secretary with regard to the steps which should be taken to prepare for such an eventuality?

Admiral FLETCHER. As I remember, I was a member of the General Board at that time.

The CHAIRMAN. That was after you had left the fleet?

Admiral FLETCHER. Yes, sir; and they sent several communications to the Navy Department pointing out and recommending steps that should be taken in anticipation of war. I do not know exactly what action was taken by the Navy Department, except that I remember a return indorsement on one of them, that these recommendations of the General Board were approved, and would be carried out as far as possible. These recommendations were in accordance with the general war plan that I have referred to in my testimony.

The CHAIRMAN. But that was a report of the board. Did you personally, make any report to the department or to the Secretary?

Admiral FLETCHER. No; I was a member of the General Board and I personally made no report to the Secretary.

The CHAIRMAN. You personally made no report.

Admiral FLETCHER. No, sir.

The CHAIRMAN. What were the recommendations made to the General Board to assure greater preparedness?

Admiral FLETCHER. There were no recommendations made to the General Board by anybody that I can remember.

The CHAIRMAN. Was the General Board called on to draw up a plan?

Admiral FLETCHER. I can not state that accurately, but my recollection is that they were asked for recommendations. I think Admiral Badger will be able to give you full information on that.

The CHAIRMAN. These recommendations that were made by the General Board, were they approved by the department?

Admiral FLETCHER. I do not know what action was taken by the department, except, as I say, on one indorsement, on one of our recommendations that came back from the department, in which it stated that all these recommendations of the general board were approved by the department, and steps would be taken to carry them out as far as possible.

The CHAIRMAN. What were those recommendations?

Admiral FLETCHER. Well, I am sorry, Mr. Chairman, but I can not specifically state them. But they are on record.

The CHAIRMAN. Could you get a report of those recommendations so that we can put them in the record?

Admiral FLETCHER. Yes; they are on file in the department.

The CHAIRMAN. Could you furnish us a copy?

Admiral FLETCHER. Admiral Badger will be prepared to give you all those recommendations.

The CHAIRMAN. I would like to get a copy to put in the record here.

Admiral FLETCHER. Yes.

The CHAIRMAN. You state they were approved by the department.

Admiral FLETCHER. This one that I know of. The others, I do not know what action was taken.

The CHAIRMAN. I mean this one you speak of. I would like to have that go into the record here, if possible.

Admiral FLETCHER. Yes, sir; I will see that that is—

The CHAIRMAN. You will see that that is furnished to the stenographer?

Admiral FLETCHER. Yes, sir.

PITTMAN. The record will disclose the fact that whenever any subject and another Senator said that he would like to ask questions on that before going to another, I desisted at once.

CHAIRMAN. I beg your pardon; I think you will find that that sort happened. The original plan was carried out.

PITTMAN. Does the Chairman object to my questioning him?

CHAIRMAN. I would like to have that put off until later.

PITTMAN. It is apparent why you object to it.

At that point Admiral Fletcher temporarily left the stand. At the conclusion of the testimony of Admiral Washington, Admiral Fletcher resumed the stand.)

TESTIMONY OF ADMIRAL F. F. FLETCHER—Resumed.

CHAIRMAN. Admiral, had any plan been discussed before our entry into the war for sending antisubmarine craft to the war?

ADMIRAL FLETCHER. I did not know just what were sent.

CHAIRMAN. I say, had any plans been discussed as to sending antisubmarine craft?

ADMIRAL FLETCHER. We discussed it in the General Board and made recommendations pertaining to that subject in regard to sending the craft over.

CHAIRMAN. When did you make those recommendations, do you recall?

ADMIRAL FLETCHER. I think it was just previous to and subsequent to our entry into the war.

CHAIRMAN. That is, you kept on making recommendations at various times?

ADMIRAL FLETCHER. We made a number of different recommendations pertaining to that subject.

CHAIRMAN. To whom did you make those recommendations?

ADMIRAL FLETCHER. To the Navy Department.

CHAIRMAN. To the Secretary or to the Chief of Operations?

ADMIRAL FLETCHER. Those communications are addressed officially to the Navy Department.

CHAIRMAN. To the Navy Department?

ADMIRAL FLETCHER. Yes, sir.

CHAIRMAN. Do you recall when the first one was made in regard to submarines?

ADMIRAL FLETCHER. No, I can not tell you accurately, but I think the first ones were made in February. Another one was made in March—

speaking only from memory—and I remember that one was made in the early part of April, shortly before war was declared.

CHAIRMAN. And that was the final plan that was made by the General Board about the submarine situation?

ADMIRAL FLETCHER. I do not remember how many were made subsequent to that. As I said before, I can not answer these questions in detail because my duties about that time were transferred over to the War Industries Board, and I only had general connection with the work of the General Board.

The CHAIRMAN. Of course, modifications would have

Admiral FLETCHER. Modifications would have to be made

The CHAIRMAN. As conditions came up. But what I know was, was that the plan in the Navy, and was it sent to the different bureau chiefs, and to the various fleet commanders of the Navy could act as a homogeneous whole?

Admiral FLETCHER. Yes; that plan made provision for that we could use our forces at any time, or to suit the various phases that war might assume.

The CHAIRMAN. And the bureau chiefs, and the higher officers of the Navy were aware of this plan, and were made acquainted with it so that they could act under it, were they?

Admiral FLETCHER. That I could not say. That was a matter of execution which I had nothing to do with. I assume that they all had it, if it was necessary.

The CHAIRMAN. But you do not know whether they did or not?

Admiral FLETCHER. No, sir.

The CHAIRMAN. And you never came across any instance where you found that plan especially in operation?

Admiral FLETCHER. We have a rule in the department—speaking from memory now—that the chiefs of bureaus are required to make frequent reports as to the condition of their bureaus, pointing out all the shortages.

The CHAIRMAN. Admiral, yesterday we suggested that we would like to have Admiral Washington come up here to give us some information about the personnel of the Navy, and with your permission, we will let him take the stand now, and then put you on the stand soon as he has finished; and of course we will put your statement in consecutive form.

Admiral FLETCHER. I will be very pleased to, Mr. Chairman. Before leaving the stand, I would like to make a statement. I am aware that my answers in regard to many of your questions as to what conditions were around the department, are not satisfactory. As stated in my testimony, my duties during this war were principally concerned with the War Industries Board which took up practically all my time, so that I am not as familiar with all those details upon which you questioned me as you will find Admiral McKee and other officers whom you will call before you.

Senator PITTMAN. Just one question before you go. Did not the Navy Department and the naval officers do everything in their power with the money that Congress furnished them to do with?

The CHAIRMAN. Excuse me, Senator; I want to finish my own set of questions before you take up yours, if you have no objection. That was the order we agreed upon. We are simply putting Admiral Washington in here in an emergency case.

Senator PITTMAN. As a matter of fact, when we had our first meeting, it was agreed that each one of the committee should finish his cross-examination before interruption. We started and proceeded upon that line, when, at your instance, the committee thought they should finish one subject at a time.

The CHAIRMAN. Yes; and you refused to adopt that plan.

Senator PITTMAN. No; I was compelled to adopt it.

The CHAIRMAN. I beg your pardon, you refused to adopt it. You did not adopt that plan. In every case we finished with the cross-examination before the other side went on.

PITTMAN. The record will disclose the fact that whenever any subject and another Senator said that he would like to questions on that before going to another, I desisted at

CHAIRMAN. I beg your pardon; I think you will find that that sort happened. The original plan was carried out.

PITTMAN. Does the Chairman object to my questioning ss?

CHAIRMAN. I would like to have that put off until later.

PITTMAN. It is apparent why you object to it.

At this point Admiral Fletcher temporarily left the stand. At the conclusion of the testimony of Admiral Washington, Admiral resumed the stand.)

TESTIMONY OF ADMIRAL F. F. FLETCHER—Resumed.

CHAIRMAN. Admiral, had any plan been discussed before our entry into the war for sending antisubmarine craft to the war?

Admiral FLETCHER. I did not know just what were sent.

CHAIRMAN. I say, had any plans been discussed as to sending antisubmarine craft?

Admiral FLETCHER. We discussed it in the General Board and made recommendations pertaining to that subject in regard to sending the craft over.

CHAIRMAN. When did you make those recommendations, do you recall?

Admiral FLETCHER. I think it was just previous to and subsequent to our entry into the war.

CHAIRMAN. That is, you kept on making recommendations at different times?

Admiral FLETCHER. We made a number of different recommendations pertaining to that subject.

CHAIRMAN. To whom did you make those recommendations?

Admiral FLETCHER. To the Navy Department.

CHAIRMAN. To the Secretary or to the Chief of Operations?

Admiral FLETCHER. Those communications are addressed officially to the Navy Department.

CHAIRMAN. To the Navy Department?

Admiral FLETCHER. Yes, sir.

CHAIRMAN. Do you recall when the first one was made in regard to submarines?

Admiral FLETCHER. No, I can not tell you accurately, but I think the first one was made in February. Another one was made in March—I am speaking only from memory—and I remember that one was made in the early part of April, shortly before war was declared.

CHAIRMAN. And that was the final plan that was made by the General Board about the submarine situation?

Admiral FLETCHER. I do not remember how many were made subsequent to that. As I said before, I can not answer these questions in detail because my duties about that time were transferred over to the War Industries Board, and I only had general connection with the work of the General Board.

The CHAIRMAN. Was a general plan to govern antisubmarine operations ever drawn up in the Navy Department so far as you know—a general plan which the department was to use?

Admiral FLETCHER. I do not know that there was any general plan prepared in Operations. I do not know that any general plan would be required under those conditions.

The CHAIRMAN. You simply made general recommendations from the General Board?

Admiral FLETCHER. No, sir.

The CHAIRMAN. And you do not know whether those recommendations were adopted or not, and whether there was any general plan based on those recommendations?

Admiral FLETCHER. No, I can not tell you in detail what steps were actually taken. My knowledge is confined to that indorsement which said that the department had approved these plans and they would be carried out.

The CHAIRMAN. And up to the time that war was declared such a plan was based simply on general information and not on the special reports of any officers who had been sent over to examine the European situation in regard to submarines?

Admiral FLETCHER. Yes. Well, those recommendations were all based upon our knowledge of the situation of the war at that time.

The CHAIRMAN. Your general knowledge of the situation?

Admiral FLETCHER. Based upon all knowledge and all information that we could collect.

The CHAIRMAN. I asked you if you had any special reports from any special officers that you sent over to find out about the situation, and you stated that you recommended that Admiral Sims and Admiral Rogers be sent over to look into the situation.

Admiral FLETCHER. Yes.

The CHAIRMAN. Well, Admiral Rogers was not sent over. Admiral Sims was sent over immediately before the commencement of the war, and as far as you know, he made no recommendations to the General Board which were used in making up plans, did he?

Admiral FLETCHER. No; he made no recommendations to the General Board directly. All his recommendations would be made to the department, naturally.

The CHAIRMAN. To the department?

Admiral FLETCHER. And referred to the General Board for use. But these plans and these recommendations or these communications to the department were based upon all knowledge that could be obtained up to that time from reports of naval operations.

The CHAIRMAN. That could be obtained from the available information that you had on hand?

Admiral FLETCHER. All available information.

The CHAIRMAN. Is it not essential in warfare that all operational plans be based upon full information and a full consideration of the situation by the responsible person?

Admiral FLETCHER. Certainly; as full information as it is possible to obtain.

The CHAIRMAN. And you feel that such information and such discussion with the heads of the allied navies was possible in Washington?

Admiral FLETCHER. Yes, sir.

The CHAIRMAN. Without having anyone in the field?

Admiral FLETCHER. No; I think the more sources of information at you have, of course the more valuable it is; and the more accurate our information is apt to be.

The CHAIRMAN. And the most accurate information would come from the field, would it not?

Admiral FLETCHER. Very probably. It depends somewhat upon conditions. Our sources of information are through the different departments of the governments abroad, and particularly through our naval and military attachés, or through the foreign embassies.

The CHAIRMAN. Do you feel that that information and the discussion that you had with the heads of allied navies here in Washington and what you got from your naval attachés, was of more importance than what you got from Admiral Sims?

Admiral FLETCHER. Undoubtedly. At the same time, Admiral Sims's information was very important, and a great deal of dependence was placed upon it. But that was not the only source of information.

The CHAIRMAN. And you feel that these other sources were of more importance than his information?

Admiral FLETCHER. Well, I will not say that they were more important. They are all equally important, according to the character of the information and the details and the accuracy of it. They have all got to be taken into consideration.

The CHAIRMAN. And yet the General Board had recommended that Admiral Sims go abroad to investigate the submarine and anti-submarine conditions?

Admiral FLETCHER. Their recommendations included more than that. Their recommendations included that an officer be sent—I am speaking only from memory—to get in touch with the Allies—the military or naval forces of the Allies—and to get any information that was of value, and to see what steps we should be prepared to take in case we entered the war. That is my recollection of the general tenor of the instruction.

The CHAIRMAN. Would not a sound policy have required that all detailed operational plans should be drawn up in the war zone?

Admiral FLETCHER. No, sir.

The CHAIRMAN. Not the detailed plans?

Admiral FLETCHER. The detailed plans for carrying out any general instructions in the war zone would be made in the war zone, naturally. The execution of some general plan which was turned over to the commander in the war zone for execution, or the details of that execution, the plans necessary to carry it out, would be there.

The CHAIRMAN. That is, the detailed plans for operation would be conducted in the war zone?

Admiral FLETCHER. Yes; just like the commander-in-chief is ordered to engage the enemy in battle. All the details of that battle would have to be planned out by the commander-in-chief, and all the details of execution would have to be made by him; but that would be all under the general plans prepared in the department.

The CHAIRMAN. And the recommendations for the carrying out of the detailed plans would naturally be up to the officer in charge of the war zone?

Admiral FLETCHER. No; they would not be apt to interfere.

The CHAIRMAN. Was a general plan to govern antisubmarine operations ever drawn up in the Navy Department so far as you know—a general plan which the department was to use?

Admiral FLETCHER. I do not know that there was any general plan prepared in Operations. I do not know that any general plan would be required under those conditions.

The CHAIRMAN. You simply made general recommendations from the General Board?

Admiral FLETCHER. No, sir.

The CHAIRMAN. And you do not know whether those recommendations were adopted or not, and whether there was any general plan based on those recommendations?

Admiral FLETCHER. No, I can not tell you in detail what steps were actually taken. My knowledge is confined to that indorsement which said that the department had approved these plans and they would be carried out.

The CHAIRMAN. And up to the time that war was declared such a plan was based simply on general information and not on the special reports of any officers who had been sent over to examine the European situation in regard to submarines?

Admiral FLETCHER. Yes. Well, those recommendations were all based upon our knowledge of the situation of the war at that time.

The CHAIRMAN. Your general knowledge of the situation?

Admiral FLETCHER. Based upon all knowledge and all information that we could collect.

The CHAIRMAN. I asked you if you had any special reports from any special officers that you sent over to find out about the situation, and you stated that you recommended that Admiral Sims and Admiral Rogers be sent over to look into the situation.

Admiral FLETCHER. Yes.

The CHAIRMAN. Well, Admiral Rogers was not sent over. Admiral Sims was sent over immediately before the commencement of the war, and as far as you know, he made no recommendations to the General Board which were used in making up plans, did he?

Admiral FLETCHER. No; he made no recommendations to the General Board directly. All his recommendations would be made to the department, naturally.

The CHAIRMAN. To the department?

Admiral FLETCHER. And referred to the General Board for use. But these plans and these recommendations or these communications to the department were based upon all knowledge that could be obtained up to that time from reports of naval operations.

The CHAIRMAN. That could be obtained from the available information that you had on hand?

Admiral FLETCHER. All available information.

The CHAIRMAN. Is it not essential in warfare that all operational plans be based upon full information and a full consideration of the situation by the responsible person?

Admiral FLETCHER. Certainly; as full information as it is possible to obtain.

The CHAIRMAN. And you feel that such information and such discussion with the heads of the allied navies was possible in Washington?

Admiral FLETCHER. Yes, sir.

“ N. Without having anyone in the field?

Admiral FLETCHER. No; I think the more sources of information that you have, of course the more valuable it is; and the more accurate your information is apt to be.

The CHAIRMAN. And the most accurate information would come from the field, would it not?

Admiral FLETCHER. Very probably. It depends somewhat upon conditions. Our sources of information are through the different departments of the governments abroad, and particularly through our naval and military attachés, or through the foreign embassies.

The CHAIRMAN. Do you feel that that information and the discussion that you had with the heads of allied navies here in Washington and what you got from your naval attachés, was of more importance than what you got from Admiral Sims?

Admiral FLETCHER. Undoubtedly. At the same time, Admiral Sims's information was very important, and a great deal of dependence was placed upon it. But that was not the only source of information.

The CHAIRMAN. And you feel that these other sources were of more importance than his information?

Admiral FLETCHER. Well, I will not say that they were more important. They are all equally important, according to the character of the information and the details and the accuracy of it. They have all got to be taken into consideration.

The CHAIRMAN. And yet the General Board had recommended that Admiral Sims go abroad to investigate the submarine and anti-submarine conditions?

Admiral FLETCHER. Their recommendations included more than that. Their recommendations included that an officer be sent—I am speaking only from memory—to get in touch with the Allies—the military or naval forces of the Allies—and to get any information that was of value, and to see what steps we should be prepared to take in case we entered the war. That is my recollection of the general tenor of the instruction.

The CHAIRMAN. Would not a sound policy have required that all detailed operational plans should be drawn up in the war zone?

Admiral FLETCHER. No, sir.

The CHAIRMAN. Not the detailed plans?

Admiral FLETCHER. The detailed plans for carrying out any general instructions in the war zone would be made in the war zone, naturally. The execution of some general plan which was turned over to the commander in the war zone for execution, or the details of that execution, the plans necessary to carry it out, would be there.

The CHAIRMAN. That is, the detailed plans for operation would be conducted in the war zone?

Admiral FLETCHER. Yes; just like the commander-in-chief is ordered to engage the enemy in battle. All the details of that battle would have to be planned out by the commander-in-chief, and all the details of execution would have to be made by him; but that would be all under the general plans prepared in the department.

The CHAIRMAN. And the recommendations for the carrying out of the detailed plans would naturally be up to the officer in charge of the war zone?

Admiral FLETCHER. No; they would not be apt to interfere.

The CHAIRMAN. But you just said that the detailed plans should be in his hands.

Admiral FLETCHER. Oh, the detailed plans should be in his hands.

The CHAIRMAN. That is what I say; and you agree with that.

Admiral FLETCHER. Yes, in general; but it depends very much upon the conditions. If I would take a specific case I could more clearly explain just where the work of the department ends and where the execution by the commander in the field begins.

The CHAIRMAN. Wherever the recommendations of the commander in the field could reasonably be followed as to detailed plans, it should be the policy of the department to follow them, should it not?

Admiral FLETCHER. If it does not interfere with their general plans and the policy; yes.

The CHAIRMAN. Now, what was the policy followed in regard to action taken on recommendations made by Admiral Sims?

Admiral FLETCHER. Mr. Chairman, as I said before I was not connected with the detailed plans or the execution or carrying out of those plans; but that information can be gotten from the officers in the Navy Department, and I was very little associated with that, had practically nothing to do with it.

The CHAIRMAN. In a general way were not Admiral Sims' recommendations on all important matters ultimately adopted by the Navy Department?

Admiral FLETCHER. Well, when he makes recommendations, of course the Navy Department would naturally take them into consideration and attach great importance to them, and I have no doubt but what they would carry them out as long as they did not interfere with their general plan or their general policy of carrying on the war.

The CHAIRMAN. The fact that the department adopted these recommendations proves that they were sound in the judgment of the department, does it not?

Admiral FLETCHER. I should say it did; yes, sir.

The CHAIRMAN. If that was so, what justification was there for the delay of the department in acting on them?

Admiral FLETCHER. I do not know what delay you refer to.

The CHAIRMAN. The delay in carrying out the recommendations of Admiral Sims; for instance, about the sending of ships over there, and sending tugs over, and not supplying him with personnel, and other matters.

Admiral FLETCHER. Oh, yes; I assume that that delay, if there was any delay, was purely a matter of policy in the methods that the department may have adopted and approved of, in carrying on the war.

The CHAIRMAN. Well, if his recommendations were not sound, why should the department have adopted them; and if they were sound, why should not the department have adopted them as soon as possible?

Admiral FLETCHER. If they approved his recommendations, I assume that they acted upon them. I do not know the particular conditions to which you refer.

The CHAIRMAN. You are familiar with the Admiral's letter of January 7th and the various things that he touches upon in that letter, are you not?

Admiral FLETCHER. Oh, yes; yes. Now, do you refer to his recommendation that the Navy Department should have sent immediately to the war zone all available small craft in this country? I do not think that the department approved that, so far as I know.

The CHAIRMAN. He made specific recommendations, and those specific recommendations I think that Admiral Sims shows in practically every case were followed by the department, but at a later date during the war.

Admiral FLETCHER. Yes.

The CHAIRMAN. Of what importance is the time element in warfare?

Admiral FLETCHER. It is often very important. Many times it is of vital importance.

The CHAIRMAN. As a general rule, it is of vital importance, is it not?

Admiral FLETCHER. Yes; not vital, but sometimes vital; but as a general rule it is of great importance.

The CHAIRMAN. On important matters, as a rule it is vital, is it not?

Admiral FLETCHER. Yes; I agree to that.

The CHAIRMAN. Was the critical character of the submarine campaign in 1917 recognized by the Navy Department?

Admiral FLETCHER. It was recognized as a very important factor in the war.

The CHAIRMAN. Do you recall how many tons of shipping were sunk during the month of April, 1917?

Admiral FLETCHER. I am speaking from memory when I say that I think it was about 500,000 ton—600,000 tons.

The CHAIRMAN. It was 800,000 tons.

Admiral FLETCHER. I will accept that.

The CHAIRMAN. Do you know what was the cause of the delay in sending antisubmarine forces over as Admiral Sims had recommended?

Admiral FLETCHER. No; I know nothing about the execution of the operations. That was entirely in the Navy Department, and the Bureau of Operations; but I called attention to the subject in my statement there as to the desirability of sending all our antisubmarine craft away from this coast, leaving it entirely undefended.

The CHAIRMAN. And you think that the defending of this coast at that period of the war was of more importance than the sending of as many craft as we could over to the other side to stop the submarine menace over there where it actually existed?

Admiral FLETCHER. I think I have given an answer to that in my testimony, and I am quite willing to repeat that now as an answer to that question.

The CHAIRMAN. Well——

Admiral FLETCHER. It is a conditional matter, and the conditions I stated there in my testimony to this effect, that the question arises, shall we send all our small craft at once to Europe and leave our own coast entirely unprotected, or shall we just wait until we find out the development of the war, what phase it is going to take, how important it is, and how much risk we should take?

The CHAIRMAN. But at that particular time, Admiral, when these requests were being made, during the month of April, 1917, 800,000 tons of shipping were being sunk, and that was the maximum month during the whole war when shipping was being sunk by submarines.

Admiral FLETCHER. Yes, sir.

The CHAIRMAN. But you just said that the detailed plans show in his hands.

Admiral FLETCHER. Oh, the detailed plans should be in his hands.

The CHAIRMAN. That is what I say; and you agree with that.

Admiral FLETCHER. Yes, in general; but it depends very much upon the conditions. If I would take a specific case I could clearly explain just where the work of the department ends and where the execution by the commander in the field begins.

The CHAIRMAN. Wherever the recommendations of the commander in the field could reasonably be followed as to detailed plans, should be the policy of the department to follow them, should it not?

Admiral FLETCHER. If it does not interfere with their general plan and the policy; yes.

The CHAIRMAN. Now, what was the policy followed in regard to action taken on recommendations made by Admiral Sims?

Admiral FLETCHER. Mr. Chairman, as I said before I was not connected with the detailed plans or the execution or carrying out of those plans; but that information can be gotten from the office of the Navy Department, and I was very little associated with it, and had practically nothing to do with it.

The CHAIRMAN. In a general way were not Admiral Sims's recommendations on all important matters ultimately adopted by the Navy Department?

Admiral FLETCHER. Well, when he makes recommendations, of course the Navy Department would naturally take them into consideration and attach great importance to them, and I have no doubt but what they would carry them out as long as they did not interfere with their general plan or their general policy of carrying on the war.

The CHAIRMAN. The fact that the department adopted his recommendations proves that they were sound in the judgment of the department, does it not?

Admiral FLETCHER. I should say it did; yes, sir.

The CHAIRMAN. If that was so, what justification was there for the delay of the department in acting on them?

Admiral FLETCHER. I do not know what delay you refer to.

The CHAIRMAN. The delay in carrying out the recommendations of Admiral Sims; for instance, about the sending of ships over to the coast and sending tugs over, and not supplying him with personnel, and other matters.

Admiral FLETCHER. Oh, yes; I assume that that delay, if there was any delay, was purely a matter of policy in the methods that the department may have adopted and approved of, in carrying on the war.

The CHAIRMAN. Well, if his recommendations were not sound, should the department have adopted them; and if they were sound, why should not the department have adopted them as soon as possible?

Admiral FLETCHER. If they approved his recommendations, I assume that they acted upon them. I do not know the particular conditions to which you refer.

The CHAIRMAN. You are familiar with the Admiral's letter of January 7th and the various things that he touches upon in that letter, are you not?

Admiral FLETCHER. Oh, yes; yes. Now, do you refer to his recommendation that the Navy Department should have sent immediately to the war zone all available small craft in this country? I think that the department approved that, so far as I know.

CHAIRMAN. He made specific recommendations, and those recommendations I think that Admiral Sims shows in practice were followed by the department, but at a later date in the war.

Admiral FLETCHER. Yes.

CHAIRMAN. Of what importance is the time element in warfare?

Admiral FLETCHER. It is often very important. Many times it is of importance.

CHAIRMAN. As a general rule, it is of vital importance, is it not?

Admiral FLETCHER. Yes; not vital, but sometimes vital; but as a rule it is of great importance.

CHAIRMAN. On important matters, as a rule it is vital, is it not?

Admiral FLETCHER. Yes; I agree to that.

CHAIRMAN. Was the critical character of the submarine campaign in 1917 recognized by the Navy Department?

Admiral FLETCHER. It was recognized as a very important factor in the war.

CHAIRMAN. Do you recall how many tons of shipping were being sunk during the month of April, 1917?

Admiral FLETCHER. I am speaking from memory when I say that I think it was about 500,000 tons—600,000 tons.

CHAIRMAN. It was 800,000 tons.

Admiral FLETCHER. I will accept that.

CHAIRMAN. Do you know what was the cause of the delay in moving our antisubmarine forces over as Admiral Sims had recommended?

Admiral FLETCHER. No; I know nothing about the execution of the orders. That was entirely in the Navy Department, and the Joint Chiefs of Operations; but I called attention to the subject in my report there as to the desirability of sending all our antisubmarine forces away from this coast, leaving it entirely undefended.

CHAIRMAN. And you think that the defending of this coast at the end of the war was of more importance than the sending of our small craft as we could over to the other side to stop the submarine campaign over there where it actually existed?

Admiral FLETCHER. I think I have given an answer to that in my report, and I am quite willing to repeat that now as an answer to your question.

CHAIRMAN. Well —

Admiral FLETCHER. It is a conditional matter, and the conditions set forth there in my testimony to this effect, that the question arises, whether we send all our small craft at once to Europe and leave our own coast entirely unprotected, or shall we just wait until we find out the development of the war, what phase it is going to take, how important it is, and how much risk we should take?

CHAIRMAN. But at that particular time, Admiral, when these recommendations were being made, during the month of April, 1917, 800,000 tons of shipping were being sunk, and that was the maximum month of the whole war when shipping was being sunk by submarines.

Admiral FLETCHER. Yes, sir.

Admiral FLETCHER. That had reference to the old organization before we established a Chief of Operations.

The CHAIRMAN. When you had an aid for Operations?

Admiral FLETCHER. When we had an aid for Operations and an aid for Material and an aid for Personnel.

The CHAIRMAN. You stated: "While the general staff features of the organization would be made effective by the modifications in that law which I have suggested." That was in regard to the new method?

Admiral FLETCHER. Yes.

The CHAIRMAN (continuing reading): "There are other features in the organization of the Navy Department which, in my opinion, do not conform to the general principles of sound organization."

To what other features did you refer?

Admiral FLETCHER. I do not know just what I had in mind then, but the general idea that was in my mind was to establish a Chief of Operations.

The CHAIRMAN. Yes, but that——

Admiral FLETCHER. Around which the organization of the Navy Department would be built, and that the staff part of it should be under control so as to meet the military requirements.

The CHAIRMAN. You do not recall what other features there were that you spoke about, particularly at that time, that you were alluding to particularly at that time.

Admiral FLETCHER. No; I do not recall the connection with that quotation you have just made.

The CHAIRMAN. Do you recall any other matters in regard to the organization that should have been changed?

Admiral FLETCHER. I can explain, in a general way, Mr. Chairman, what you wish me to say in regard to the organization of the Navy Department. I must say that I am prejudiced in favor of the Meyer organization as tentatively put into effect by Secretary Meyer. There was appointed a commission about that time, known as the Moody Commission, to study the question of organization of the Navy.

The CHAIRMAN. Was that the commission on which Admiral Mayhan served?

Admiral FLETCHER. Yes. There had been so much dissatisfaction about the organization of our Navy Department that this commission was appointed to make recommendations, particularly with reference to the general principles of sound organization as applied to naval establishments. They gave a thorough study to that, and laid down the general principles that should be followed.

Subsequent to that there was appointed the so-called Swift Board, which made a thorough study of the organization of the Navy Department, of the organization of every navy department in Europe, and sent an experienced officer over to Europe to study at first hand the working of every organization in the countries of Europe, and based upon the Moody Commission report and all the information available, they got up the so-called Meyer plan of organization. You may know the general principle. It was to establish a Chief of Operations responsible for the operation of the fleet in war and in peace, a chief of material who should be responsible for the condition and the preparation and the maintenance of

the material of the fleet, and after that was finished, it was turned over to Operations. They had complete control. And the other feature was a chief of personnel, who had similar duties in regard to personnel, and a chief inspector. So that this organization would relieve the Secretary of the Navy of a thousand details which he is tempted to carry out himself; and in principle he deals with these four principal units.

The present organization, the essential feature of it, I believe, is found in the Meyer plan, that is the establishment of a Chief of Operations. The so-called chief of material, I think, now is under Operations as a subordinate officer who deals with the various bureaus of the department, and in the same way the personnel is handled. I understand that there is a difference of opinion amongst officers in the Navy as to whether the Chief of Operations should handle the bureau work through a subordinate in his office, or whether he should do it through a chief of material who is over the heads of all the bureaus, who is responsible for the coordination of their work, and who deals directly with the Chief of Operations. There is a difference of opinion on that subject, and I believe that either plan will work well, although personally I am inclined to favor the organization which places the chief of material as responsible for the whole question of material, so that the Chief of Operations, instead of having to deal with all these separate bureaus, will deal with one single man; and the same way with the Secretary of the Navy.

The CHAIRMAN. Admiral, we hope that this committee will be able to do something that will be for the ultimate good of the Navy. Now, the other day Admiral Mayo in his testimony made some suggestions about changes in the organization of the Department, or stated, at any rate, that there were remedies that could be applied to the present organization, and I asked Admiral Mayo to come back at a later period before this committee and submit his views about a general plan for the reorganization of the Navy, if it seemed to him necessary. I have spoken to several other officers and have asked them to do the same. We should like very much to have you, if you think there are matters that should be changed in the organization of the department—and it is inconceivable, in a war like this, that new matters should not come up where changes should prove to be necessary—we should like very much to have you come before us at a later period and submit any plans that you may have in this respect; and among the other officers that we would like to have come will be Admiral Badger, who is chief of the board, and Admiral McKean, and Admiral Knight; and we think we shall ask the Assistant Secretary of the Navy if he will submit anything; provided that they have ideas about any reorganization. And we shall also ask the Secretary of the Navy to submit any plans that he may have.

Now, this committee, it is needless to say, is not made up of experts on naval matters, and my idea and the idea of several of the members of the committee with whom I have talked, is that the best thing to do would be, after we get these different recommendations, if the facts seem to warrant it, to suggest the appointment of a commission such as the Moody Commission, to which you have referred this morning, a commission of the experts on

naval matters, civilian experts such as were included on the mission, and I believe, and I hope that the committee will with me, that if we do that, a plan for reorganization, if it is to be necessary, will be drawn up which will be of great value to the Navy of the United States.

Admiral FLETCHER. I think that would be of great value, especially as we have just gone through a war; and if there are defects and changes necessary, they should show up now better than at any other time.

The CHAIRMAN. I think so. Admiral, was any general plan adopted for coordinating the operations of the various bureaus of the department that you know of?

Admiral FLETCHER. I can not answer that, Mr. Chairman. I am not familiar with the detailed workings of the department for six or seven years.

The CHAIRMAN. And you do not know of any such plan?

Admiral FLETCHER. No, sir; I do not know of any.

The CHAIRMAN. If such a plan had been in existence, would you not have seen it?

Admiral FLETCHER. No, sir; I would not come in contact with it in the work that I have been doing the last three years.

The CHAIRMAN. Upon whom rested the chief responsibility for coordinating the operations of the bureaus?

Admiral FLETCHER. I am not speaking from accurate knowledge, but only from general impressions and hearsay. I think that the work of the bureaus is now coordinated by an aid for material under the Chief of Operations.

The CHAIRMAN. And the aid for material coordinates the activities of the bureaus and the chiefs of bureaus?

Admiral FLETCHER. The Assistant for Material is his title.

The CHAIRMAN. It is not "aid," but "assistant" for material?

Admiral FLETCHER. Yes; and he is acting under the Chief of Operations.

The CHAIRMAN. Do you know of any difficulties that arose during the war on account of any lack of coordination?

Admiral FLETCHER. I have heard of none.

The CHAIRMAN. And you observed no delays, you stated, during the war, any faults of organization?

Admiral FLETCHER. No, sir.

The CHAIRMAN. In your testimony before the House committee in 1916, you stated that you had appointed boards to recommend complements for battleships, and as a part of their report recommended large increases, on the ground that the efficiency of a fleet depends on such increases. Were these increases authorized, do you know, before our entrance into the war?

Admiral FLETCHER. My impression is that the complements were increased before we entered the war.

The CHAIRMAN. But you do not have any accurate knowledge about it?

Admiral FLETCHER. I have no statistics on it.

The CHAIRMAN. Who would have been the one responsible if this was not done?

Admiral FLETCHER. Well, the Secretary of the Navy is responsible.

ers, who is responsible to the Secretary of the Navy in regard to personnel, would be the Chief of the Bureau of Navigation.

THE CHAIRMAN. The light forces that we had in the Navy at the beginning of the war were in a state of unpreparedness, were they not; light cruisers and armored cruisers and vessels of that sort?

ADMIRAL FLETCHER. So far as I know, they were in good condition.

THE CHAIRMAN. They were in a good state of preparedness?

ADMIRAL FLETCHER. So far as I know. I was not familiar with the details of that.

THE CHAIRMAN. But you do not know?

ADMIRAL FLETCHER. No, sir.

THE CHAIRMAN. And you do not know of any efforts that had been made to put these vessels into condition before the war?

ADMIRAL FLETCHER. I can not give you facts on that, Mr. Chairman, but it is my general impression that all those ships connected with the fleet were in good condition.

THE CHAIRMAN. And there was plenty of personnel for them?

ADMIRAL FLETCHER. No; I can not say that. I was not familiar with the data in regard to the fleet at that time. My information that I refer to there in the testimony dates back to 1916.

THE CHAIRMAN. I am asking you now about matters at the beginning of the war.

ADMIRAL FLETCHER. At the beginning of the war? I can not give you facts on that.

THE CHAIRMAN. So that you are not familiar with the personnel conditions or the material conditions of the Navy at the beginning of this war?

ADMIRAL FLETCHER. No, sir; not at that time.

THE CHAIRMAN. Do you know of any particular efforts to secure additional personnel that were made?

ADMIRAL FLETCHER. I know nothing except from general hearsay, that the Navy was always making great efforts to get more men enlisted.

THE CHAIRMAN. In general, Admiral, if the Navy was not prepared at the beginning of the war, on whom would rest the responsibility for the lack of preparedness?

ADMIRAL FLETCHER. I suppose it depends upon wherein the defect occurred. If it occurred in any particular department, such as personnel or material or lack of ships, the officer charged with that department is responsible to the Secretary of the Navy, and the Secretary of the Navy is responsible for all defects and shortages of the Navy.

THE CHAIRMAN. Then, as far as the law allows him——

ADMIRAL FLETCHER. As far as the law allows him.

THE CHAIRMAN (continuing). The Secretary is responsible?

ADMIRAL FLETCHER. He is responsible.

THE CHAIRMAN. For unpreparedness?

ADMIRAL FLETCHER. And I suppose I might go further and say that Congress is responsible for the general policy of building up the Navy and making the appropriations.

THE CHAIRMAN. Are you familiar, generally speaking, with the composition of the British and German Fleets when they met at the battle of Jutland?

ADMIRAL FLETCHER. In a general way; yes, sir.

THE CHAIRMAN. You are familiar?

naval matters, civilian experts such as were included on that commission, and I believe, and I hope that the committee will agree with me, that if we do that, a plan for reorganization, if it is found to be necessary, will be drawn up which will be of great value to the Navy of the United States.

Admiral FLETCHER. I think that would be of great value, particularly as we have just gone through a war; and if there are any defects and changes necessary, they should show up now better than at any other time.

The CHAIRMAN. I think so. Admiral, was any general plan ever adopted for coordinating the operations of the various bureaus of the department that you know of?

Admiral FLETCHER. I can not answer that, Mr. Chairman. I am not familiar with the detailed workings of the department for the last six or seven years.

The CHAIRMAN. And you do not know of any such plan?

Admiral FLETCHER. No, sir; I do not know of any.

The CHAIRMAN. If such a plan had been in existence, would you not have seen it?

Admiral FLETCHER. No, sir; I would not come in contact with that in the work that I have been doing the last three years.

The CHAIRMAN. Upon whom rested the chief responsibility for coordinating the operations of the bureaus?

Admiral FLETCHER. I am not speaking from accurate knowledge, but only from general impressions and hearsay. I think that the work of the bureaus is now coordinated by an aid for material acting under the Chief of Operations.

The CHAIRMAN. And the aid for material coordinates the activities and the chiefs of bureaus?

Admiral FLETCHER. The Assistant for Material is his title.

The CHAIRMAN. It is not "aid," but "assistant" for material?

Admiral FLETCHER. Yes; and he is acting under the Chief of Operations.

The CHAIRMAN. Do you know of any difficulties that arose during the war on account of any lack of coordination?

Admiral FLETCHER. I have heard of none.

The CHAIRMAN. And you observed no delays, you stated, through any faults of organization?

Admiral FLETCHER. No, sir.

The CHAIRMAN. In your testimony before the House committee, in 1916, you stated that you had appointed boards to recommend complements for battleships, and as a part of their report recommended large increases, on the ground that the efficiency of a fleet demanded such increases. Were these increases authorized, do you know, before our entrance into the war?

Admiral FLETCHER. My impression is that the complements were increased before we entered the war.

The CHAIRMAN. But you do not have any accurate knowledge about it?

Admiral FLETCHER. I have no statistics on it.

The CHAIRMAN. Who would have been the one responsible in case this was not done?

Admiral FLETCHER. Well, the Secretary of the Navy is responsible for everything; and the subordinate officer having charge of such

matters, who is responsible to the Secretary of the Navy in regard to personnel, would be the Chief of the Bureau of Navigation.

The CHAIRMAN. The light forces that we had in the Navy at the beginning of the war were in a state of unpreparedness, were they not; the light cruisers and armored cruisers and vessels of that sort?

Admiral FLETCHER. So far as I know, they were in good condition.

The CHAIRMAN. They were in a good state of preparedness?

Admiral FLETCHER. So far as I know. I was not familiar with the details of that.

The CHAIRMAN. But you do not know?

Admiral FLETCHER. No, sir.

The CHAIRMAN. And you do not know of any efforts that had been made to put these vessels into condition before the war?

Admiral FLETCHER. I can not give you facts on that, Mr. Chairman, except it is my general impression that all those ships connected with the fleet were in good condition.

The CHAIRMAN. And there was plenty of personnel for them?

Admiral FLETCHER. No; I can not say that. I was not familiar with the data in regard to the fleet at that time. My information that you refer to there in the testimony dates back to 1916.

The CHAIRMAN. I am asking you now about matters at the beginning of the war.

Admiral FLETCHER. At the beginning of the war? I can not give you facts on that.

The CHAIRMAN. So that you are not familiar with the personnel conditions or the material conditions of the Navy at the beginning of this war?

Admiral FLETCHER. No, sir; not at that time.

The CHAIRMAN. Do you know of any particular efforts to secure additional personnel that were made?

Admiral FLETCHER. I know nothing except from general hearsay, that navigation was always making great efforts to get more men enlisted.

The CHAIRMAN. In general, Admiral, if the Navy was not prepared at the beginning of the war, on whom would rest the responsibility for the lack of preparedness?

Admiral FLETCHER. I suppose it depends upon wherein the defect occurred. If it occurred in any particular department, such as personnel or material or lack of ships, the officer charged with that part is responsible to the Secretary of the Navy, and the Secretary of the Navy is responsible for all defects and shortages of the Navy.

The CHAIRMAN. Then, as far as the law allows him——

Admiral FLETCHER. As far as the law allows him.

The CHAIRMAN (continuing). The Secretary is responsible?

Admiral FLETCHER. He is responsible.

The CHAIRMAN. For unpreparedness?

Admiral FLETCHER. And I suppose I might go further and say that Congress is responsible for the general policy of building up the Navy and making the appropriations.

The CHAIRMAN. Are you familiar, generally speaking, with the composition of the British and German Fleets when they met at the battle of Jutland?

Admiral FLETCHER. In a general way; yes, sir.

The CHAIRMAN. You are fami

Admiral FLETCHER. Yes.

The CHAIRMAN. Then what is your definition of a fleet that is in all respects ready for battle against a fleet like that of the Germans in 1916, at the date of the battle of Jutland; that is, in May, 1916?

Admiral FLETCHER. In May, 1916?

The CHAIRMAN. What is your definition of a fleet that is in all respects ready for battle against a fleet like that of the Germans in May, 1916; that is, what units are necessary in addition to battleships?

Admiral FLETCHER. In addition to the battleships there should be units of battle cruisers, equal to and preferably superior to that of the enemy; there should be scout cruisers equal or superior to that the enemy possesses; and there should be destroyers more numerous than those of the enemy; and there should be submarines as strong and powerful and as numerous as those of the enemy.

The CHAIRMAN. Should there be light cruisers?

Admiral FLETCHER. There should be light cruisers.

The CHAIRMAN. Should there be armored cruisers?

Admiral FLETCHER. I do not know the particular conditions of that battle called for armored cruisers. The composition of every fleet, to be effective against the enemy, is based entirely, almost, upon the composition of the enemy's fleet. If the enemy has battle cruisers, you have got to have them. If he has not battle cruisers, it is not absolutely essential that you should have them in order to obtain a superiority. The composition of your fleet, and in the building up of the Navy, depends entirely upon what the possible enemy may have.

The CHAIRMAN. Would you think that a fleet composed entirely of battleships and destroyers, no matter how efficient they might be, was ready for war or battle against a fleet like that of the Germans at the battle of Jutland?

Admiral FLETCHER. That would not be sufficient. They would be at a great disadvantage.

The CHAIRMAN. Would you say that a fleet was ready for battle if it has no scouts and no screening vessels and no submarines and no air service, and a very few destroyers?

Admiral FLETCHER. It would not be at all ready, under modern conditions of war. It would not be fitted to carry on a war.

The CHAIRMAN. Would it be ready for war if its ships were not fully officered and manned?

Admiral FLETCHER. It would not be ready.

The CHAIRMAN. You can not state, of your own knowledge, whether the Navy of the United States was fully officered or manned in 1917, when war was declared?

Admiral FLETCHER. Yes. Mr. Chairman, I would like to say here that I think there is a great deal of misunderstanding in regard to the expression "Is the Navy prepared for war?" You can answer that by saying yes or no, and either answer will be correct, depending upon what you mean. If you say "Is this country prepared for war, and has it a Navy large enough to overcome the enemy?" I would say no. But if you asked "Is the Navy as it is constituted and built up under the appropriations of Congress, ready for war," I would say yes, as far as it goes.

The CHAIRMAN. Yes, but you can not say that a battle fleet is a prepared and ready battle fleet unless it is filled up with all of its necessary units, can you?

Admiral FLETCHER. Yes; that is the point that is subject to two interpretations. You see, our fleet is composed now of battle cruisers and submarines and destroyers as well as battle ships; but it has no battle cruisers and other fast scout cruisers like other navies of the world have, and if anybody asked you "Is our fleet ready for war," I would say yes, as far as it is constituted. But the country is not ready for war in that it is not a properly built up fleet, being short in battle cruisers and other elements that go to make up a fleet.

The CHAIRMAN. That is, if you are going to say that it is ready for war, you mean that it is ready as far as the available resources of the country allow it; and if it is short of destroyers and the country has destroyers to supply their places, and the country or the department does not supply their places, then it is not ready as a battle fleet; and the same with regard to other units; is that correct?

Admiral FLETCHER. Yes; in that way.

The CHAIRMAN. That is according to your understanding?

Admiral FLETCHER. Yes, sir; when the testimony has been given here, saying that our fleet was ready for war, what was meant by that was that our fleet, as far as it goes, was prepared for war.

The CHAIRMAN. You mean that the individual ships of the fleet are prepared?

Admiral FLETCHER. Yes; and the individual units of ships, and the combinations of ships, as far as it went; but I do not think that those officers who so testified meant to say or to imply that our Navy was built up and was complete in every respect.

The CHAIRMAN. Then do you mean that there were no other vessels in the United States that would be used in an ordinary navy for screening, vessels that could have been in the fleet but were not with the fleet? Because the testimony has shown as to the battle fleet that it consisted entirely of battle ships and of a few destroyers.

Admiral FLETCHER. Yes.

The CHAIRMAN. If there had been other vessels in our Navy that could be used for screening vessels, and that were not used for screening vessels because they were not in a state of preparedness, would you still say that the battle fleet was in a state of preparedness and ready for war?

Admiral FLETCHER. No; I should say that if we had cruisers that could have been put immediately into the fleet and ready to fight with us, that we were not fully prepared.

The CHAIRMAN. And the same way with destroyers?

Admiral FLETCHER. Yes, sir. But of course when we are not at war, we must necessarily keep a large percentage of the fleet in reserve or at navy yards. We can not afford either financially or through a lack of personnel, to keep our whole forces mobilized.

The CHAIRMAN. But you would hardly say that while you have a battle fleet out presumably prepared for battle, that this battle fleet itself should be kept in reserve, would you?

Admiral FLETCHER. In time of peace, yes. But, of course, when war is declared, as soon as you are permitted to after diplomatic relations do not interfere, why, of course you must try to bring out every resource that you have got.

The CHAIRMAN. That is, from February 2, 1917, certainly. In April 2, 1917, every effort should have been made to build up the battle fleet as completely as possible, and all vessels that could have been of use in building up a battle fleet should have been put in the fleet, should they not, if possible?

Admiral FLETCHER. Yes.

The CHAIRMAN. To make it a prepared fleet?

Admiral FLETCHER. To what event in February do you refer?

The CHAIRMAN. When passports were given to the German ambassador.

Admiral FLETCHER. And that it became inevitable that we were going into the war?

The CHAIRMAN. I think you will agree that it was inevitable then that we were going into war.

Admiral FLETCHER. Well, I would say, if I was confronted with a condition of that kind, of course I would make every effort to get ready for war; but I do not know just how far our diplomatic correspondence made it inadvisable to take any steps toward hostilities. That is always a very important factor in the commencement of war.

The CHAIRMAN. You personally do not know what ships were available for scouting or screening at that time?

Admiral FLETCHER. No, sir.

The CHAIRMAN. In general, would you say that the Navy of the United States was in all respects ready for war in April, 1917?

Admiral FLETCHER. As constituted, and as fast as a ship in reserve could be gotten out and put into operation, it was prepared.

The CHAIRMAN. Could be gotten out after what date; after the date of the declaration of war?

Admiral FLETCHER. No; I should say after the war became inevitable.

The CHAIRMAN. But you stated some time ago that war became practically inevitable after the latter part of 1916.

Admiral FLETCHER. Well, that is in the opinions of outsiders, but that is a matter for the administration.

The CHAIRMAN. That was in the opinion of the men in the Navy Department who were the ones to determine about preparing the Navy.

Admiral FLETCHER. The probability of war, Mr. Chairman, is a matter that the administration, the President of the United States, is better informed about than we are.

The CHAIRMAN. Therefore, if you did not prepare the Navy for war, it was the fault of the administration?

Admiral FLETCHER. For war; yes, sir.

The CHAIRMAN. And of the Secretary of the Navy? Because he was the one directly to effect it.

Admiral FLETCHER. Well, the Secretary of the Navy, of course carries out the policy of the Government, and if the policy of the Government is not to prepare for war, of course he is not responsible for the date when they commenced the preparations, as a matter of policy. But after the policy of the country decides that we should commence to prepare for war, then that preparation, of course, is up to the Secretary of the Navy and the officers under him.

The CHAIRMAN. You stated this morning that our Navy was as well prepared as any other navy at the time of the outbreak of the war. You mean as the British or the French Navy in 1914?

Admiral FLETCHER. That is right; yes, sir.

The CHAIRMAN. Do you think we had as many screening vessels in proportion to the size of our Navy, for instance, at that time, as the British?

Admiral FLETCHER. Yes, sir.

The CHAIRMAN. That were in an active state of preparedness?

Admiral FLETCHER. That just brings up a question, what is meant by the term "prepared." We are not prepared in battle cruisers, and in the number of scout cruisers, and in other elements of the fleet which we should have, you see, to be on an equality with the enemy; but so far as our fleet was constituted it was prepared for war just as well as any other navy in the world.

The CHAIRMAN. But, Admiral, I think you have stated that when you were in command of the fleet and you came up from southern waters, you had some screening vessels with you at the time, did you not?

Admiral FLETCHER. We had what?

The CHAIRMAN. You had some screening vessels with you?

Admiral FLETCHER. Yes.

The CHAIRMAN. That shows that there were some screening vessels in our Navy?

Admiral FLETCHER. Yes.

The CHAIRMAN. Were there not a great many screening vessels out on the Pacific coast that were not in active commission when war broke out?

Admiral FLETCHER. Yes, sir.

The CHAIRMAN. Therefore we had them, we had them in our Navy, but we did not have them ready to use. Therefore we were not ready as far as we could be.

Admiral FLETCHER. We did not have any men to put on board of them. Congress had not appropriated money for the men.

The CHAIRMAN. Therefore we were short of personnel?

Admiral FLETCHER. We were short of personnel; yes, sir.

The CHAIRMAN. You do not know the circumstances? Other witnesses have already gone into that, about the shortness in personnel at that time.

Admiral FLETCHER. No, sir; I do not know at that time.

The CHAIRMAN. You do not know the circumstances in regard to the recommendations by the department, and the recommendations by the Secretary of the Navy to Congress about that?

Admiral FLETCHER. No, sir; I do not know about that question.

The CHAIRMAN. In general, do you think that our battle fleet at the beginning of the war, in April, 1917, would have been able to meet and to overcome the German fleet that fought at the battle of Jutland, if they had met in mid-ocean?

Admiral FLETCHER. I think they would have, without difficulty. That is my opinion.

The CHAIRMAN. If the German fleet was fully equipped with screening vessels and submarines and everything of that sort, you think our fleet would have been able to defeat them with nothing but battleships and destroyers that we had?

Admiral FLETCHER. We had a superior battle force to what the Germans had at that time, and I think that in an open contest at sea we would have been superior to the Germans.

The CHAIRMAN. Then you do not regard the screening forces that they had as of any great value as an adjunct to the fleet?

Admiral FLETCHER. Oh, no; I am just regarding—all those auxiliaries, you see, are advantages that are of use in leading up to the battle; but when you come to the final battle conditions, you put battleships right against battleships, and then it is a question of gun power.

The CHAIRMAN. Yes; but might not the battleships be destroyed by submarines or other methods, before you came to battleships against battleships?

Admiral FLETCHER. Oh, yes, of course; and we had submarines at that time. But it is very difficult——

The CHAIRMAN. I am talking about the battle fleet as it was constituted, and it had no submarines. and it had nothing but battleships and a few destroyers.

Admiral FLETCHER. Yes.

The CHAIRMAN. Now you say that you think that that fleet of battleships accompanied by a few destroyers could have overcome the German fleet as it fought the British at the battle of Jutland with all the screening boats and other auxiliaries that they had?

Admiral FLETCHER. Now, Mr. Chairman, it is a very difficult matter to answer a hypothetical question of that kind.

The CHAIRMAN. I would simply like your opinion.

Admiral FLETCHER. I can tell you, in a general way, that our fleet as constituted in 1917——

The CHAIRMAN. Our battle fleet?

Admiral FLETCHER. Battleships; yes, sir.

The CHAIRMAN. Our battle fleet: you mean the battleships and destroyers?

Admiral FLETCHER. Yes, sir; we were inferior to the German fleet in regard to battle cruisers and in regard to other types of vessels, but we were superior to them in other ways; and, on the whole I think that in a battle at sea we would have been superior to the Germans.

The CHAIRMAN. And you think, then, that the screening vessels were not of any great consequence?

Admiral FLETCHER. I think so; of great consequence.

The CHAIRMAN. I do not quite follow you. You say they are of great consequence? Do you mean that we had such a preponderating superiority of dreadnaughts that we could have overcome that?

Admiral FLETCHER. Mr. Chairman, it depends so much upon the conditions that it is difficult to answer. I can answer it in a general way, that I believe that our fleet at that time was just as powerful as the German fleet, considering everything.

The CHAIRMAN. Then it was more powerful in battleships and less powerful in destroyers and had not the screening vessels?

Admiral FLETCHER. Yes.

The CHAIRMAN. But we were so much better in battleships that we were better than they, on the whole?

Admiral FLETCHER. Yes; I think so.

The CHAIRMAN. And so that, if we had met in midocean, the victory would have been ours?

Admiral FLETCHER. When it came right down to an actual duel that our forces would have been superior to theirs. Now, all these things that take place preliminary to that, it is too difficult to formulate any plan unless you lay down specific conditions.

The CHAIRMAN. How would we have been able to screen our battleships, for instance in a fog, at night, or anything of that kind? How would we have been able to screen the battleships with what we had?

Admiral FLETCHER. In the same way that Germany would screen hers, by destroyers and cruisers.

The CHAIRMAN. Well, but we had no cruisers. I am talking about the fleet as it was constituted.

Admiral FLETCHER. Oh, as mobilized?

The CHAIRMAN. Yes; simply with the battleships and destroyers. I said that right along.

Admiral FLETCHER. Yes. Well, we could have had a number of cruisers there with our fleet.

The CHAIRMAN. I am not talking about that. I am not talking about what we might have had or would have had. I am talking about the fleet as it was actually constituted, made up, as a battle fleet, of battleships and a few destroyers.

Admiral FLETCHER. I must admit, Mr. Chairman, that it is a little confusing.

The CHAIRMAN. I do not think so. I have stated that over and over again, right along. I have particularly spoken about the fact that we had only battleships and a few destroyers; and you have stated, I think, that it would not make any difference that the fleet consisted of only those ships. Your testimony will show that.

Senator TRAMMELL. I do not think that his testimony will show that. The testimony will show that he said it would make some difference. I insist on confining it to the Admiral's answers, and not trying to make it appear that he said something different from what he did say.

The CHAIRMAN. The testimony will show clearly that I was speaking about the fleet as it was then, such as I am speaking of now.

Senator TRAMMELL. I think you are trying to make it appear that all they had was what they had assembled there when they did not expect to have a fight. If they had expected to have a fight, they could and would have had some more destroyers and cruisers.

The CHAIRMAN. I am talking about the time in April, 1917, when the war broke out. May I ask, how many cruisers did we have available on the Atlantic coast at that time?

Admiral FLETCHER. I should say, in answer to your question, Mr. Chairman, under the conditions that would bring us in contact with the German fleet off our coast in the ocean, that we had enough cruisers and enough destroyers and enough submarines and enough auxiliaries of the various types——

The CHAIRMAN. Then will you give me the make-up of the Atlantic fleet at that time—of the battle fleet?

Admiral FLETCHER. That they were available on this coast.

The CHAIRMAN. I am talking about the vessels that were with the fleet at that time.

Admiral FLETCHER. Well, that is, not with the fleet, We consider a vessel with the fleet if it is within call.

The CHAIRMAN. That were mobilized, with the fleet?

Admiral FLETCHER. Yes, sir.

The CHAIRMAN. Because I have asked you, and all the others, and I think that they all say the fleet consisted simply of battleships and a few destroyers.

Admiral FLETCHER. Yes.

The CHAIRMAN. And none of these other vessels.

Admiral FLETCHER. We may have cruisers up in Boston and cruisers down in Charleston, and within a few hours call of the fleet, and we call that being with the fleet, in that sense; if they are where they can be assembled and be with the fleet on short notice.

Senator PITTMAN. The chairman wants to know whether one unit of our fleet could lick the whole German fleet.

The CHAIRMAN. Not one unit; two units.

Admiral FLETCHER. I think, had the Germans come over here with what force they would have had when they crossed the ocean, we would have been at no disadvantage, at that particular time.

The CHAIRMAN. I asked you, if they met in midocean, with equal advantage.

Admiral FLETCHER. If we had been at no disadvantage?

The CHAIRMAN. No disadvantage; that is, if we had gone out simply with battleships and destroyers. Nobody else has testified that any larger number of our fleet was ready except battleships and a few destroyers.

Admiral FLETCHER. We would not have gone out if no others were within call.

The CHAIRMAN. We would not have gone out?

Admiral FLETCHER. That is, if the cruisers were not ready and manned and prepared, they could not have gone out.

Of course, if they were not with the fleet. I think I see the point you are making, that on the outbreak of war we were not fully mobilized; that there were not enough men, and a great deal had to be done to actually engage in hostilities. I agree with that.

The CHAIRMAN. The question was, was our battle fleet prepared; and when we came to sift it, so far as we have been able to tell, it was prepared with battle ships and destroyers, but in no other way was it fully prepared.

Admiral FLETCHER. Yes.

The CHAIRMAN. Now, what I wanted to find out was whether the fleet, so prepared, with simply battle ships and destroyers, could have held its own against the German fleet, which was perfectly prepared. It is a perfectly simple question.

Admiral FLETCHER. Yes. Well, I will say "yes" to that question.

The CHAIRMAN. You will say yes, that it could?

Admiral FLETCHER. Yes.

The CHAIRMAN. Have you any further questions?

Senator BALL. No.

Senator KEYES. I have none.

Senator PITTMAN. I have some questions that I want to ask the admiral.

TESTIMONY OF ADMIRAL THOMAS WASHINGTON, UNITED STATES NAVY.

The CHAIRMAN. Admiral Washington, yesterday, in the course of the hearing, Admiral Wilson made a statement about the personnel of the Atlantic Fleet, and after his statement I suggested that I thought it would be appropriate for you to come before the committee and give us any information that you can about the present condition of the personnel of the Navy, and we would be very glad to hear from you on that point.

Admiral WASHINGTON. The demobilization since the armistice has been going on very rapidly, and Congress passed certain laws which gave the enlisted force inducements and reasons for getting out, and naturally we were desirous of discharging and letting go back to their regular vocations all of those whom we could spare. We demobilized from about 500,000 down to the present number of about 104,000.

This bonus of \$60 which Congress authorized for these men who accepted their discharge was an inducement for them to leave the service and not to return. Had it been the other way we would not have been so badly off. The only way in which these discharged men could accept it was to accept their discharge, leave, get the \$60, and go home; and, of course, the wages outside were such that the probability of their return became less and less as the 30 days or 60 days went on, the result being that all our old-timers, that is, the reenlisted, continuous-service men—not all of them but a great percentage of them—like the reserves and others, took advantage of it and left us. We had to expand our recruiting efforts greater than they have been before, and we have more men now engaged in recruiting throughout the country, probably double or treble the number, and with very poor success. The reason for that is that the wages outside are necessarily, under present circumstances, very much larger; and in the matter of the seafaring part of it, the Shipping Board and the Army Transport Service pay men for a similar class of work anywhere from two to three and one-half times the amount that the Navy pays. These men, naturally, under those circumstances, will not come back to us.

The situation as to officers has been affected in the same way. We have had thousands of applications for discharges of officers. I say thousands, with full knowledge of what it means. We have accepted a total of about 1,450. Of these officers some, but not many of them, were Naval Academy graduates. We have kept that down to the lowest limit possible.

There are now pending about 88 applications for resignation. The number of resignations is, I am glad to say, decreasing; but with a limited number such as we have, about 2,850 graduates of the Naval Academy, the loss of 150 to 200 is a very great factor to us, and we can not fill up the line of the Navy other than through the Naval Academy. The regular Navy now consists of 4,301 officers line and staff combined. Since the armistice the resignations of 439 regular officers have been accepted. There are a total of 124 of whom 88 are line officers, now pending. If these are accepted, there is no question but that many more will come in, and the only deterrent is either not to accept them, or to accept them as slowly as possible.

Of officers temporarily commissioned in the regular Navy, that is warrant officers, civilians, and enlisted men who were commissioned in the temporary Navy, and who could, if they had so wished, have held on to their commissions, over 11,300 have resigned from the line alone. These officers were in the grades of lieutenant, lieutenant junior grade, and ensign. They could have held these commissions if they had so desired; but the inducements were greater outside than the Navy offered them, so that they left us. Many of them were very excellent men, whom we were very desirous of keeping; but on a comparison between the conditions in the Navy and on the outside, it would seem that two-thirds of the officers who were commissioned into the regular service from sources other than the regular Naval Academy source, resigned in order to accept civilian employment, 200 of the medical officers of the regular service have resigned and the Medical Corps is to-day probably worse off than it has ever been.

It may be accepted as a fact that naval officers are not paid enough to induce them to remain in the service under present conditions, and in order to insure any rate of competency it will be necessary to pass some sort of a pay bill. That not only applies to the officers, but it applies tenfold to the men. Under present rates of pay, you can, of course, get officers in the lower grades, of ensign and junior lieutenant, officers of a kind; but they are not the officers we wish to keep and to promote on up through to higher grades.

None of our ships at the present time can be considered well officered. I think I might say that not one in the service is properly officered to-day, and not one can be considered as properly manned.

The condition is worse than it probably ever has been in the history of the Navy with reference to officer and enlisted man personnel. Officers of mature age, who have families, unless they have independent means, can not, under present circumstances, leave until they are assured of some employment outside, and for that reason we are holding the married ones more extensively than the single ones, who go out with no other ties to bind them.

Practically all the officers feel keenly their present financial condition. Increased rank, due to war promotion of all officers of over eight years' service, has made an increase of pay of from 11 to 15 per cent. This increase has been effective only since July 1, 1918, and has afforded utterly inadequate relief.

Prior to 1918 the last material raise of pay that the officers had was in 1899.

In general, the officers are in straitened circumstances, and are getting deeper and deeper involved. This can not result in effective service.

Most of the younger officers who are young enough to entertain the idea of accepting outside employment, are devoting their spare time in endeavoring to obtain this employment, and I have no doubt but if the resignations of those now pending are accepted, we will have a good many applications from others coming in right afterwards. At the present time the Secretary is holding up all of those who have had less than eight years' service. On the 1st of July we will have a large number of those 8-year men who will complete their service—of the class that graduated eight years ago.

The CHAIRMAN. The policy is to allow those who have had more than eight years service to resign if they see fit to do so?

Admiral WASHINGTON. The policy is, and my effort has been, to induce them to stay, and when they have come up to talk to me about it, I have held out the hope that something would be done, and in a short time they could probably get on their feet again. That has been my personal effort with them, because the Navy at the present time has practically one-half of the allowed number of officers, of Naval Academy graduates. It is just about one-half. We are allowed 5,449, and we have about 2,820; and we have this large number of resignations, about 88, now pending, which will practically reduce us to less than one-half; and that has been after four years to build it up from the Naval Academy. The Naval Academy will not fill up the line of the Navy for 10 years under the present circumstances.

In the matter of desertions among enlisted men it has become within the last six months appalling, and it has affected a class that we have never had show up that way before; that is, the petty officers and chief petty officers. During the last six months of 1919 there were 4,666 desertions from the Navy. Among these were 1,057 petty officers and senior rated men, of whom 60 were chief petty officers. We have never had a condition like that before. It has been a rare thing, indeed, that a chief petty officer would desert; but they are going now at the rate of so many a month.

During January of the present year there were 898 desertions, including 103 petty officers, of whom 13 were chief petty officers.

In February the number was smaller, due no doubt to the fact that the Atlantic Fleet was in southern waters, where desertion is very difficult; that is, there was no chance for them to leave the ship. Had they been north, I have every reason for believing that desertions would have been greater than in January. The total for the month of February, however, was 765, including the desertions of 60 petty officers, of whom 7 were chiefs.

I do not think that the history of the Navy will afford a condition of the enlisted personnel to parallel anything like that.

During the present year, 1920, the loss by expiration of enlistment of trained men will be, by actual expirations, 16,931, and of that 16,931, from the present outlook, I do not think we are going to get 10 per cent to stay with us.

During the year 1921 there will be 30,814 whose enlistments will expire, and if conditions continue, it may be that we will not get any of them. The result will be that we will have the Navy possibly 90 per cent manned by men on their first enlistments, and from those first enlistment men we have to make up our petty officers and chief petty officers.

We have at the present time, roughly, 101,000 men in the Navy. Of those nearly 70,000 are on their first enlistment—recruits. Now, if we add to that 70,000 these 30,000 who go out in 1921 and the 16,000 who go out in 1920, the present year, we will have left with us about 65,000 men who will have had less than three years' service in the Navy to-day. It is impossible to run efficiently a Naval Establishment on that basis.

The CHAIRMAN. You will lose most of your best men?

Admiral WASHINGTON. We lose all of our best men. I do not say all of them, but we lose so many that I can almost say it is all. The reenlistments are very small.

These men write, and their families write, the most appealing letters to let them out; that they have not got enough money to support their families and they can not do it. They come to me daily, and the number of letters will probably run up in the hundreds every day.

In addition to that, you gentlemen probably know about the number that appeal to you.

We discharge daily an average of probably 30 on the requests of Members of Congress because of dependency. We examine each one of these cases, go into it as thoroughly as we can, and we do not let them go unless the dependency is shown to exist subsequent to their enlistment, or unless something for which this man is not really responsible has occurred since enlistment; and then we invariably let him go. I will read to you from the last two or three days' daily reports. I have only brought three with me, I see. Here is the one of March 25. We had 49 desertions. We discharged 161.

On April 6 there were 6 desertions and 77 discharged.

On April 7 there were 52 desertions and 124 discharged.

So that the Navy has shown since July of 1919 a rapid going down hill. It has been to a large extent due to desertions. The number of recruits that we get in just about balances the number that are discharged for one reason and another. It has hung around 101,000 to 104,000 now for about three months. The recruits that we get are not comparable in ability, capability, and development with what we had prior to the war. It is getting a little better in caliber now, but the good men are not coming into the Navy at \$32 per month. Most of our enlistments—practically 80 per cent of them—are for two years, because the men will not come for longer periods.

Now, I will take these reports I have just read to you, beginning with the one on March 25. These reports were picked up at random from the reports on my desk as I left.

Out of 91 recruits 70 enlisted only for two years. We can not develop a man—the best in the world—in two years and get any good out of him.

On April 6, out of 121, 61 of them were for two years, and only 1 of them was for four years.

On April 7, out of 74 recruits 54 were for two years and 3 for four years.

That has been the general run of them. I do not think the two, three, and four year ratios will in any manner change. They are practically holding at 75 to 80 to 85 per cent of two-year men. That means that we can not really send these men on a foreign cruise. We give them four years' training at a training station, and we are tempted to send them on a foreign cruise. If we sent them to a foreign station, we would have to bring them back within six months after they had arrived on the station, because of expiration of enlistment. The sole cause of this, or rather the cause of 95 per cent of it, is the low rate of pay which these men get. The department has repeatedly written to both committees of Congress and called attention to this going-down-hill condition of the enlisted personnel, once on August 28, to the chairman of the Committee on Naval Affairs; on the 9th of September—

Senator TRAMMELL. What year; last year, 1919?

Admiral WASHINGTON. 1919.

The CHAIRMAN. You refer to the Committee on Naval Affairs of the House?

Admiral WASHINGTON. No; of the Senate. On the 9th of September we wrote to the chairman of the Committee on Naval Affairs of the House, and on the 13th of November again to the House, and on the 20th of December to the Speaker of the House, and on the 13th of February to the Chairman of the House committee, and in these letters we endeavored to express to them—to the two committees—the unfortunate condition in which the enlisted personnel was getting.

I would not be so very much concerned about it if these desertions were not taking place from the petty officers. A petty officer of the Navy leaving us, disguising himself, and going into the Shipping Board or the Army Transport Service, can always get from three to four times the amount of clear pay that he would get from the Navy. He leaves us, and he goes alongside of a transport within 50 yards of him, and his pay is trebled. We can not increase our pay except by act of Congress. The other branches of the Government service, such as the Shipping Board and the Army Transport Service, to which I refer, have lump-sum appropriations, and they therefore can change their rates of pay to agree with the existing conditions.

In the foreign services they have realized this condition since the war, and all of the important foreign navies have raised the pay of their services from one and one-half to two and one-half times, and, as I understand it, they have done it largely with money borrowed from this country.

The reenlistments among the old men are practically nil. They are so small that they are practically negligible, and, furthermore, they are not the most desirable men who reenlist with us. The best men can get better jobs elsewhere.

The number of enlistments, notwithstanding the greatly increased efforts that we make throughout the country, has been going down since the armistice, beginning with January, 1919. We began voluntary enlistments in December of 1918, so that I have taken my figures from 1919. Our reenlistments have gone down from well up into the thousands to the present time, when the figure is only 813 for a month—that is, 813 out of a Navy of 104,000. That is an awful showing. The number of desertions has increased almost from month to month. The largest number of desertions was in December—1,035. The number for March—last month—was 882. The number of two-year enlisted men was 29,834, as against 2,126 for three years.

The number that we are giving their discharges to for one cause or another, but always sufficient and good, that is principally family dependency, was in January over 3,000, in February about 2,100, and in March about the same number, 2,400.

Now, in giving those discharges I have endeavored throughout to keep it down to the lowest limit possible, because we need the services of these men. We have brought them in at the Government expense and we have given them four months' training at the training stations; and yet I have got to let them go, because of the strong appeals of their families and dependents. We have stopped enlisting men who have any dependents, so far as we can find out at the time of enlistment; but many develop afterwards, and we have to let them go.

I think we let go possibly something about 30 per day on account of applications of Members of Congress from their districts.

The officer personnel has gone down not to as great an extent as the enlisted men, not in the same ratio; but as officers are harder to get and it takes longer to train them, the general effect has been much worse than that in the case of the men. We are at the present time short of regulars in the line of the Navy, 2,638 officers, 414 doctors 98 dentists, 380 supply officers, 57 chaplains, 155 constructors, 23 civil engineers. In other words we are short 3,765 officers, and we have got a total of about 4,300 left. We have afloat on the different ships in the dreadnaught class, 954 officers. We should have about 1,500.

On the predreadnaughts we have got 444. We should have about the same number, 1,500 there.

On the armored cruisers we have 207. They need about 1,200.

On the gunboats they have 60. They should have 150.

On the destroyers they have 875; they should have about 1,800.

On the submarines they have 269; we need about 400.

Those are line officers I am speaking of now.

The staff are proportional. I am just referring to the number of the line we need.

The Naval Academy this year will turn out about 290 officers, and resignations will pull that down to somewhere in the neighborhood of 200. At the present time we are short in the enlisted force, the authorized enlisted force, 68,529 men.

The monthly loss—that is, the loss by discharges in excess of recruits—is about 440.

On their first enlistment, on the 1st day of March, their first four-year period, there were 79,471 men out of a total of 101,911. In other words, we had about 21,000 men who had served in the Navy more than four years, and of these 21,000 men there are practically not more than 15 per cent of them reenlisting.

We polled one of the ships a short time ago, to get the petty officers who would be discharged within the next six months or a year, and out of the total number of petty officers on board that ship there was only one who announced his intention to reenlist. That was on one of the dreadnaughts.

I have here, if the committee wishes to hear it, the proportion of men forming the complements of these ships. It is very unsatisfactory reading; it is all adverse.

Senator TRAMMELL. I do not think it is necessary in order to get a general idea of the conditions. I think he has given us a pretty good general idea of the deplorable conditions.

The CHAIRMAN. If you can sum it up in a general way, I think that would be enough.

Admiral WASHINGTON. I can sum it up in a general way, or I can read off some of these figures to show the unfortunate condition that we are in with reference to them.

In the Pacific Fleet—that is under the command of Admiral Wilson—the percentage of complements by ratings which will be left on board that squadron on the 1st of August, 1920, is shown here. I have taken one battleship as a sample, and that will be a fair sample of the rest of them, to give you an idea of how the petty officers will run after August 1, when their discharges take place, the balance of

those petty officers will be discharged before July 1, 1921. That is by the expiration of the enlistment of the rest of them—but on August 1, 1921, of boatswain's mates, first class, there was 61 per cent; boatswain's mates, second class, 30; coxswains, 22; gunners' mates, first class, 5 per cent; second class, 6 per cent; third class, 16 per cent; turret captains, 86; quartermasters, first class, 16 per cent; second class, 32 per cent; third class, 56; seamen, 21 per cent, seamen, second class—that is, new recruits—23 per cent (that is where we make up as much as possible for the deficiency); chief electricians, 70 per cent; electricians, first, second, and third class, average about 20 per cent; radio men, 47 per cent; carpenters, about 30 per cent; shipwrights, 93 per cent; shipfitters, 69 per cent; plumbers and fitters, 25 per cent; painters, about 50 per cent; chief machinist's mates, 67 per cent; machinists, first and second class, 60 per cent; engine men, about 35 per cent; water tenders, about 70; boilermakers, 80 per cent; blacksmiths, 25 per cent; coppersmiths, first class, none; second class, 37; firemen will run about 60 per cent.

That is typical of that battle fleet to-day. Our battleship fleet to-day we have manned by about 70 per cent of a crew, and we have destroyers turned over to us almost from week to week, and many of them probably have not more than two to four or six men on board. We have not got the men to put on to keep the machinery in order.

The CHAIRMAN. And about what percentage of officers?

Admiral WASHINGTON. We have just slightly above one-half of the number of line officers allowed by law.

Big destroyers should have six line officers, and that would require, roughly, about 1,800 officers. Our total of Naval Academy graduates to-day is about 2,120.

The CHAIRMAN. And the percentage of officers that the battle fleet has?

Admiral WASHINGTON. The percentage of Naval Academy officers is about 60 per cent. I did not figure it out, but that is small. We try to keep at least three Naval Academy graduates on each big destroyer, and fill up the complement by taking former warrant officers, or from the reserves.

The CHAIRMAN. You have stated that the pay in foreign navies is from one and one-half to two and one-half times what it was before the war.

Admiral WASHINGTON. Yes.

The CHAIRMAN. Ours is how much more than it was before the war?

Admiral WASHINGTON. None.

The CHAIRMAN. Before the war?

Admiral WASHINGTON. I do not think it is anything. We have not had any raise in pay since 1917.

The CHAIRMAN. The bills that are before Congress provide for an increase in pay. Do you think they would have the effect of stopping these desertions in the Navy and getting enlistments in the Navy?

Admiral WASHINGTON. It is the only way. You can take this table graphically represented here, and show the effect. When it seemed that Congress was going to pass a bill in December, you can see how the enlistments and reenlistments went up [indicating on table]; and then when the issue was sort of side-stepped, you can see

how it went back. You can see that curve there, which indicates how more favorable action was anticipated by the men.

At Bay Ridge, N. Y., we had some 1,200 to 1,400 men whose enlistments had expired or were about to expire. We are allowed to keep them two months. There were men there who had been 12 years to 16 years in the Navy, and we tried to get them to stay on the score that Congress was about to pass a bill for them so that they could make both ends meet; and these fellows held on there and that station was more or less crowded by these men waiting; and I intended to put them on Admiral Wilson's fleet in January. When Congress adjourned in December without any action several hundred of these men immediately asked for their discharge and it was given to them. We could not break faith with them. Others held on in the hope, that as we had stated, something would be done early in January to better their condition. January came and passed, and none of them went; and then the desertions began, and the desertions came of chief petty officers; and as I stated before, that is the most appalling feature of that to-day, to lose those petty officers in the way they are going. It hurts the morale. It has such a bad effect on these new men coming in, to see a petty officer or a chief petty officer, men who have been in the Navy from 8 years to 16 years, leaving it; and we do not get these men back. Rarely, indeed, does a chief petty officer come and surrender himself, and it is not really right, under the circumstances, to try to chase them up and punish them. The human side of the thing enters pretty largely into it.

The CHAIRMAN. You have shown us very largely and conclusively the critical condition of the personnel of the Navy, and your idea is that the remedy that must be applied and should be applied at once, is the increasing of the pay of both officers and men?

Admiral WASHINGTON. Yes.

The CHAIRMAN. And we can not be too quick about doing it?

Admiral WASHINGTON. Mr. Chairman, it ought not to be delayed an hour. I am holding out inducements to these men from day to day, almost, to stay, in the hope that Congress is going to do something. As I said before, about 1,400 of these men, as I recollect, were willing to hold on. They are old-timers and they were holding on at the receiving ship in New York, with the hope that by December, before the adjournment of Congress—and we had every reason for hoping that—a bill would be passed. I let the information go out very generally, because I had been informed by the members of the House committee that that bill was very likely to go through before the Christmas recess. Those men were willing to stay and ship over and go south with Admiral Wilson's fleet.

The 1st of January came and no action, and the fleet went south and they were separated from their families, and their Navy pay is not enough to meet their expenses, and they naturally asked for their discharge, and it was given to them. And then, to make matters worse, the comptroller rendered an opinion to the effect that those men who went out of service and then reenlisted with us could not get the \$60 bonus that Congress gave them, so that by going out and leaving us as they did, they got \$60 to start with, and that is where I say that this \$60 bonus is an inducement for those men to leave. They have at least had \$60 to start in life with.

I can get many of those men to come back, I think, and if they come back within 60 days they will get the benefit of their previous service, which is a matter of great importance to them; and I believe they will come back, many of them, and it is the only outlook I have that is favorable at this time. I do not believe that the recruits we are getting are going to develop into proper naval men under four years' service, and 70 to 80 per cent of those men are two-year men, and we can not train a man in two years and make a chief petty officer of him.

The CHAIRMAN. Have you any questions, gentlemen?

Admiral WASHINGTON. I believe that the only solution of this personnel matter is to have immediate action on the pay bill. It must be taken if we are going to hold the men. A man will not stay with us for \$32 when the Shipping Board or the Army Transport Service will give him \$100 plus his subsistence.

I do not know whether the committee is aware of the different rates of pay which the Navy has to compete with, because it is quite illuminating. I have a few of them here. First, take the apprentice seaman. That is when we enlist a man for the first time, and we give him \$32.60 a month. That man can go to an Army transport or to a Shipping Board vessel and he immediately gets \$75, and then he gets \$1.50 to \$2 a day for subsistence and other expenses. I am sorry that I have not the complete tables here.

A seaman, second class, which is the next rating, gets with us \$35.60. With the Army Transport Service and the Shipping Board he gets \$100 plus his allowance.

In the engine room, boiler room, or fire room force we start them in the first rates at \$48.70. They start them at \$130 a month.

A ship cook with us, a first-class man that is qualified and has been with us possibly 4, 8, or 12 years, we try to retain him at \$52. They immediately start him at his initial employment at \$135.

A chief commissary steward with us, who is a man who has been probably 4 years to 16 years in service in the Navy, is started at \$83. The Shipping Board and the Transport Service start that same man at \$135, and in addition to that he gets allowances which figure up to some \$60. In other words, he gets more than three times his Navy pay. And those people bid for our trained men. I believe if the Congress were to pass a bill, at least so far as the men are concerned, I believe that this condition in the enlisted personnel would be immediately cured.

Admiral Wilson shows that on one of the battleships in his fleet 62 per cent of the crew are only 19 years of age. Now, that is the best we can do. They are mere boys.

Senator TRAMMELL. The Bureau of Navigation and the Secretary of the Navy have been urging this raise in Congress, as I understand; have you?

Admiral WASHINGTON. They have urged it in writing and urged it in person. The Secretary himself made recommendations as far back as last November, and since then he has followed them up by three letters to the chairman of the House Naval Affairs Committee and to the Speaker of the House and the chairman of the Naval Affairs Committee, and there were others.

Senator TRAMMELL. He recommended increased pay both for the officers and enlisted men?

Admiral WASHINGTON. Yes, sir.

Senator TRAMMELL. The remedy, then, is for Congress to pass a pay bill increasing the salaries for both officers and enlisted men? That ought to correct this, in your opinion?

Admiral WASHINGTON. That is the only thing, so far as I can see, that will have an immediate effect, and I believe that that effect will be strictly beneficial. The pleas that come in to me from day to day there—and they run up into the scores—are heart-rending on the part of these men. They are separated from their families and their families are away at home, and they can not make both ends meet. Their wives are at work, and they can not even make all that is necessary, under those circumstances, and it appeals to me to such an extent that almost invariably I let them go. It is better to have fewer men, possibly, that are contented, than a lot of men that are discontented; but you can not let them all go.

The CHAIRMAN. Are there any recommendations as to legislation as to bonuses or terms of enlistment that you would make now, or is this other the critical question?

Admiral WASHINGTON. This is the critical question, sir.

The CHAIRMAN. Then you would not interfere in any way with the present law?

Admiral WASHINGTON. No, sir; I think that if Congress will pass the measures that are now before the House and Senate conferees. I believe that the problem will be to a considerable extent solved. At least, it should be tried. The conditions are approaching a condition almost that portends disaster. We have not got now, to-day, a ship that is thoroughly and efficiently manned. Well, that is possibly putting it a little strong.

Admiral WILSON. That is right.

Admiral WASHINGTON. But there is not a vessel in there that is manned as we would have her manned if it was possible to do otherwise; but the circumstances are such that you can not do otherwise, and the whole difficulty lies, I think, with Congress' inaction on that measure. These men have been in the service anywhere from 4 to 20 years, and they can not stay any longer.

The CHAIRMAN. I want to say that I had a talk yesterday with the Secretary of the Navy about our plan to have Admiral Washington come before us, and he heartily approved of the plan.

Senator TRAMMELL. I have no further questions.

The CHAIRMAN. Have you any other questions, Senator?

Senator BALL. No.

Senator KEYES. I have none.

The CHAIRMAN. We are very much obliged to you, Admiral Washington, for the very valuable information you have given us.

Admiral WASHINGTON. Not at all, sir. I would like to insert in this record these valuable tables, which I have not referred to, but which I think will be very illuminating on the subject.

The CHAIRMAN. Very well.

(The tables referred to are here printed in the record as follows:)

Officer personnel, Mar. 1, 1920.

| | Allowed regular and temporary until June 30, 1920. | Allowed regular and temporary for 137,485 enlisted men. | Regulars in service Mar. 1, 1920. | Temporaries in service Mar. 1, 1920. | United States Naval Reserve Force on active duty. | Shortage of regulars Mar. 1, 1920. | Shortage of regulars Jan. 1, 1920. | Average monthly loss from Jan 1, 1920, to Feb. 28, 1920. |

(At 1 o'clock p. m., the subcommittee adjourned until to-morrow Saturday, April 10, 1920, at 10'clock a. m.)

NAVAL INVESTIGATION.

SATURDAY, APRIL 10, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE
ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, in room 235, Senate Office Building, at 10 o'clock a. m., Hon. Frederick Hale (chairman), presiding.

Present: Senators Hale (chairman), Keyes, Pittman, and Trammell.

The CHAIRMAN. The committee will come to order.

Admiral Fletcher, will you resume the stand? Senator Pittman, you have some questions, I believe, to ask Admiral Fletcher.

TESTIMONY OF ADMIRAL F. F. FLETCHER—Resumed.

Senator PITTMAN. In virtue of the way the cross-examination seems to be drifting, and the statement of the chairman with regard to the purposes of the committee, I wish to read the authority of the committee in this investigation. The resolution adopted constituting this committee for this last investigation reads as follows:

That the subcommittee heretofore appointed to investigate the matter of awards made by the Navy Department for distinguished and heroic services be, and it hereby is, authorized and directed, on making its reports on the matter referred to, to investigate and report on the matters referred to in the letter of Admiral Sims to the Navy Department in criticism of its action touching operations during the war, introduced before the said subcommittee.

The chief charge in the letter of Admiral Sims touching operations during the war was to the effect that the course of the Navy Department delayed the war four months, and caused the loss of 2,500,000 tons of shipping and 500,000 lives, and the needless expenditure of \$15,000,000,000. In your opinion, is that true?

Admiral FLETCHER. In my opinion that statement is without any foundation upon facts, and is wholly without value.

Senator PITTMAN. The cross-examination by the chairman yesterday seemed to have two purposes; in the first place, to establish the inferiority of our Navy, and in the second place, to establish that at some particular period of time prior to the war the Navy Department had not done exactly what it ought to do. What was the Navy's chief problem in carrying out this war?

Admiral FLETCHER. The chief problem of the Navy was to see that we got an Army across the Atlantic into France, where the war would be terminated on the western battle front.

Senator PITTMAN. The chief problem, then, was transportation?

Admiral FLETCHER. The chief problem was to afford transportation to our Army across the Atlantic.

Senator PITTMAN. What Army did we have on the beginning of the war?

Admiral FLETCHER. We had a comparatively small Army: very insignificant as compared to the requirements of this war.

Senator PITTMAN. Were you present at any conference with Admiral DeChair with reference to the necessity for the immediate transportation of food supplies to the Allies, or to England?

Admiral FLETCHER. I do not remember any conversation upon that specific point, except that we discussed in general the conditions with which we were confronted at that time when he was over here, and I think that was just a short time before we entered the war.

Senator PITTMAN. Did you make any effort to ascertain what length of time England could hold out with the food supplies she was then receiving?

Admiral FLETCHER. That matter was discussed, because in my estimation that was a very important point. Of course, I naturally wanted information upon that. I was upon the committee appointed by the Government to receive the English commission headed by Mr. Balfour, who brought over from England all the latest information as to the situation and the conditions and requirements. I remember of having a conversation upon that subject, of just how long England could hold out against the submarine menace. It was a very important point, and I think it had been very carefully considered. The information that I received was to the effect that if the submarine menace had continued as serious as it was at that time, England would have been able to have held out until the following March; that is, the March of 1918.

Senator PITTMAN. What was the principal object of your making that inquiry of the English authorities?

Admiral FLETCHER. It bore on this fact, that it gave some indication as to the urgency of what we ought to do under those conditions.

Senator PITTMAN. Of course there was an urgency for us to get into the war as fast as we could, was there not, Admiral?

Admiral FLETCHER. I do not quite catch that.

Senator PITTMAN. I say there was an urgency that we should throw all the forces we could into this fight as soon as possible!

Admiral FLETCHER. That we should throw all the forces we could into the fight?

Senator PITTMAN. Yes.

Admiral FLETCHER. And that we should do everything we could in our power, to stop the submarine menace at the earliest possible date; but in doing so you must weigh the risk that you take as to the gain that you obtain from it. In other words, it depends upon how urgent the situation is and just how far, in this particular case, you should leave your own shores entirely unprotected.

Senator PITTMAN. As a matter of fact, Admiral, there were a great many things we were required to do all at once, and in many cases we had to determine which was the most urgent, did we not?

Admiral FLETCHER. Exactly. It was a question of judgment and policy.

Senator PITTMAN. In your opinion, what was the greatest problem that our Government had to face in its preparation to win this war?

Admiral FLETCHER. I would say, to throw all our energy into combating the submarine menace, which at that time was the most critical part of the war on the sea.

The CHAIRMAN. Did our Navy Department do that?

Admiral FLETCHER. As far as I know, they did. I do not know just what they did, because I was not connected with the operations of the fleet.

Senator PITTMAN. Was the preparation of an army one of our chief problems in this war?

Admiral FLETCHER. The creation of a trained and well-equipped army in France was, to my mind, the great problem of the war, and the mission of this country.

Senator PITTMAN. And you have already outlined in your testimony the tremendous obstacles that were to be overcome in the creation of that army?

Admiral FLETCHER. I have.

Senator PITTMAN. In other words, as I understood your conclusions, the chief obstacle to the creation of that army was the lack of production?

Admiral FLETCHER. That is correct. There were other causes, such as the time required to train the men. But that did not come under my direct observation.

Senator PITTMAN. There had to be places to house them and places prepared in which they might be trained, which bore on the question of production?

Admiral FLETCHER. And of training; yes, sir.

Senator PITTMAN. I gathered from Admiral Sims's testimony before this committee that he is of the opinion that all the naval operations should have been directed from London. What is your opinion in regard to that?

Admiral FLETCHER. I will say that that is an erroneous opinion, and to my mind impracticable.

Senator PITTMAN. Why do you think it is impracticable?

Admiral FLETCHER. Because the military or naval operations of a country depend very much upon the policy of the country; and, furthermore, it must be directed from some central source; that is the advantage of situation, grasping the whole theory of war, and all that is required, and should not be viewed from any one point of view; that for a military or naval officer in the field, so to speak, he is there to carry out the policy—the military operations required by the policy—of the Government, as directed by the Navy Department.

Senator PITTMAN. During my cross-examination of Admiral Sims touching the policy on the beginning of the war, of the Navy Department in protecting our own coast, I suggested that that was a technical question upon which the naval experts might differ, and the Admiral said that it was only a matter of common sense; that we might know that this coast was not subject to an attack, and there was no such intention. Now, what is your opinion in regard to that?

Admiral FLETCHER. Well, I will agree that it is a matter of common sense and good judgment.

Senator PITTMAN. I would like to know what your judgment is in regard to the policy that was pursued on the beginning of the war of protecting our own coast?

Senator PITTMAN. What Army did we have on the beginning of the war?

Admiral FLETCHER. We had a comparatively small Army: insignificant as compared to the requirements of this war.

Senator PITTMAN. Were you present at any conference with Admiral DeChair with reference to the necessity for the immediate transportation of food supplies to the Allies, or to England?

Admiral FLETCHER. I do not remember any conversation upon the specific point, except that we discussed in general the conditions with which we were confronted at that time when he was over here, and I think that was just a short time before we entered the war.

Senator PITTMAN. Did you make any effort to ascertain what length of time England could hold out with the food supplies she was then receiving?

Admiral FLETCHER. That matter was discussed, because in my estimation that was a very important point. Of course, I naturally wanted information upon that. I was upon the committee appointed by the Government to receive the English commission headed by Mr. Balfour, who brought over from England all the latest information as to the situation and the conditions and requirements. I remember of having a conversation upon that subject, of just how long England could hold out against the submarine menace. It was a very important point, and I think it had been very carefully considered. The information that I received was to the effect that if the submarine menace had continued as serious as it was at that time, England would have been able to have held out until the following March; that is, the March of 1918.

Senator PITTMAN. What was the principal object of your making that inquiry of the English authorities?

Admiral FLETCHER. It bore on this fact, that it gave some indication as to the urgency of what we ought to do under those conditions.

Senator PITTMAN. Of course there was an urgency for us to get into the war as fast as we could, was there not, Admiral?

Admiral FLETCHER. I do not quite catch that.

Senator PITTMAN. I say there was an urgency that we should throw all the forces we could into this fight as soon as possible?

Admiral FLETCHER. That we should throw all the forces we could into the fight?

Senator PITTMAN. Yes.

Admiral FLETCHER. And that we should do everything we could, in our power, to stop the submarine menace at the earliest possible date; but in doing so you must weigh the risk that you take as to the gain that you obtain from it. In other words, it depends upon how urgent the situation is and just how far, in this particular case, you should leave your own shores entirely unprotected.

Senator PITTMAN. As a matter of fact, Admiral, there were a great many things we were required to do all at once, and in many cases we had to determine which was the most urgent, did we not?

Admiral FLETCHER. Exactly. It was a question of judgment and policy.

Senator PITTMAN. In your opinion, what was the greatest problem that our Government had to face in its preparation to win this war?

Admiral FLETCHER. I would say, to throw all our energy into combating the submarine menace, which at that time was the most critical part of the war on the sea.

The CHAIRMAN. Did our Navy Department do that?

Admiral FLETCHER. As far as I know, they did. I do not know just what they did, because I was not connected with the operations of the fleet.

Senator PITTMAN. Was the preparation of an army one of our chief problems in this war?

Admiral FLETCHER. The creation of a trained and well-equipped army in France was, to my mind, the great problem of the war, and the mission of this country.

Senator PITTMAN. And you have already outlined in your testimony the tremendous obstacles that were to be overcome in the creation of that army?

Admiral FLETCHER. I have.

Senator PITTMAN. In other words, as I understood your conclusions, the chief obstacle to the creation of that army was the lack of production?

Admiral FLETCHER. That is correct. There were other causes, such as the time required to train the men. But that did not come under my direct observation.

Senator PITTMAN. There had to be places to house them and places prepared in which they might be trained, which bore on the question of production?

Admiral FLETCHER. And of training; yes, sir.

Senator PITTMAN. I gathered from Admiral Sims's testimony before this committee that he is of the opinion that all the naval operations should have been directed from London. What is your opinion in regard to that?

Admiral FLETCHER. I will say that that is an erroneous opinion, and to my mind impracticable.

Senator PITTMAN. Why do you think it is impracticable?

Admiral FLETCHER. Because the military or naval operations of a country depend very much upon the policy of the country; and, furthermore, it must be directed from some central source; that is the advantage of situation, grasping the whole theory of war, and all that is required, and should not be viewed from any one point of view; that for a military or naval officer in the field, so to speak, he is there to carry out the policy—the military operations required by the policy—of the Government, as directed by the Navy Department.

Senator PITTMAN. During my cross-examination of Admiral Sims touching the policy on the beginning of the war, of the Navy Department in protecting our own coast, I suggested that that was a technical question upon which the naval experts might differ, and the Admiral said that it was only a matter of common sense; that we might know that this coast was not subject to an attack, and there was no such intention. Now, what is your opinion in regard to that?

Admiral FLETCHER. Well, I will agree that it is a matter of common sense and good judgment.

Senator PITTMAN. I would like to know what your judgment is in regard to the policy that was pursued on the beginning of the war of protecting our own coast.

Admiral FLETCHER. My opinion is that we should have sent all available small craft that we could reasonably spare from this coast across to fight the submarine menace; but I think it would have been a very bad policy to have left this coast without any protection before we saw what phase this problem would assume, and I think that if we had left our coast entirely unprotected, and several submarines had appeared off our coast, it would have been very unfortunate; that the slight delay that may have been—if there was any—was of very minor importance as compared to the disaster that might otherwise have occurred.

Senator PITTMAN. Germany did possess submarines that she could have placed on this coast at that time, did she not?

Admiral FLETCHER. They did have submarines that they could have sent over here and it was incomprehensible to all the naval men on this side as to why she did not send them.

Senator PITTMAN. If she had sent over submarines right on the beginning of the war to our coast, what might have been the effect of it if our coast had been unprotected?

Admiral FLETCHER. Well, I think it would have caused, to put it mildly, great consternation in this country, and would have had a very unfortunate influence upon subsequent operations. You could imagine that had we sent all our small craft abroad, and had the German submarines then appeared, they would have had to have been called back from across the Atlantic; and I doubt that this country would have been satisfied to have again sent them across the Atlantic without a great deal of difficulty. It would have delayed our subsequent operations.

Senator PITTMAN. It is very probable that Germany was very well informed as to our actions on this side at the beginning of the war. is it not?

Admiral FLETCHER. There is no doubt about it.

Senator PITTMAN. And if we had denuded our coast of protection. Germany would have known it?

Admiral FLETCHER. I believe she would, unquestionably.

Senator PITTMAN. And she would have been more apt to have sent her submarines over in that event than in the condition that actually existed?

Admiral FLETCHER. Yes, sir.

Senator PITTMAN. So that I think your answer, then, explains what you mean by saying that it was a matter of common sense.

You state that in your opinion we should have spared all of the destroyers that we could to meet the submarine menace. Did we do so, in your opinion?

Admiral FLETCHER. I did not go into that problem in detail at the time, but my general impression is that we took prompt steps toward sending destroyers over there in the course of the first few days, within the first month or more of the commencement of hostilities. But you can get that information, I think, from Admiral McKean.

Senator PITTMAN. We have had some testimony on that, of course.

Admiral FLETCHER. Yes. Mine is only general.

Senator PITTMAN. Was there any extensive enlargement of the Navy prior to 1916?

Admiral FLETCHER. I beg your pardon?

Senator PITTMAN. What I am getting at is, the cross-examination here seems to attempt to arouse a criticism that our Navy was not large enough.

The CHAIRMAN. I do not think it is proper for the Senator to impute a motive in the cross-examination.

Senator PITTMAN. I naturally thought that you had some intention, and if that is not it, I do not know what it is.

The CHAIRMAN. That is your lookout.

Senator PITTMAN. I am looking out. The opinion I gathered from the cross-examination—and of course if I am wrong the chairman can correct me—was that it was an attempt to develop the fact that the Navy Department had been derelict in its duty in not having a larger naval force upon the outbreak of this war. Now, that is what I was getting at. You have already testified that it takes years to build up a Navy. Do you know, prior to 1916, what progress there was made toward building up the Navy?

Admiral FLETCHER. The progress that we made in building up the Navy has been determined absolutely by the appropriations by Congress.

Senator PITTMAN. In 1916, I believe it was, the General Board of the Navy recommended certain increased personnel for the Navy, and under date of November 9, 1916, placed the number of men we should have during the fiscal year 1917 for all requirements, the smallest number, at 67,000, and in 1917, with a full complement for all ships ready for service in 1917, and the minimum number for shore stations, that we should have 74,700.

Subsequently the board revised those figures to 67,865. In other words, the General Board of the Navy reported almost a double increase in personnel at that time, as I take it.

On October 10, 1916, the Chief of the Bureau of Navigation made the following report to the Secretary of the Navy:

Appreciation of the immediate needs of the service has been shown to be nationwide, and in the recent naval appropriation bill Congress carried out the wishes of the people by enacting legislation of far-reaching importance. This includes a provision for an immediate "authorized enlisted strength" of 68,700 men and 6,000 apprentice seamen, a total of 74,700. Preparation for the future was not neglected and the same bill authorized the President in emergency to increase the authorized enlisted strength to 87,000. It is evident that Congress considered the present needs of the Naval Service in deciding on this number at this time, as the usual additional allowance of apprentice seamen, 6,000, would provide for an actual enlisted strength of the Regular Navy of 93,000.

It is interesting to note that the above figure closely approximates the bureau's preliminary estimate of 93,957, which provides for the number of enlisted men (including average sick allowance) necessary to fill the billets in 1921, the year of completion of almost all of the present program. From 5 to 10 per cent should be added to this for increased complements and working surplus, and the authorized enlisted strength should be increased to this number in time for the necessary recruiting and training.

In your opinion does not that indicate that the recommendations of the General Board were put into force by Congress in 1916?

Admiral FLETCHER. I am speaking only from memory, and my general knowledge that the General Board recommended something like an increase of 30,000 men, and by act of Congress they increased the personnel of the Navy by 28,000 men, about, I think, August, 1916.

Senator PITTMAN. Yes; so that at that time the personnel of the Navy was in good condition?

Admiral FLETCHER. Yes.

Senator PITTMAN. Was the personnel of the Navy continued in good condition until we entered the war in 1917?

Admiral FLETCHER. I think it was considered in good condition. The active personnel engaged in operations afloat were well trained and well drilled and up to a high standard.

Senator PITTMAN. In 1916 the General Board recommended a Navy program; did it not?

Admiral FLETCHER. I believe they did.

Senator PITTMAN. That program involved a great increase not only in the personnel of the Navy but in the ships of the Navy, did it not?

Admiral FLETCHER. The program, I think, that you refer to, is what is known as the five-year program, and that provided——

Senator PITTMAN. Which Congress made the three-year program out of? That is the one I refer to.

Admiral FLETCHER. A three-year program?

Senator PITTMAN. Yes.

Admiral FLETCHER. And that did provide for quite a considerable increase.

Senator PITTMAN. Our Navy protected to its full capacity and ability the transportation of food and materials and soldiers to the allies, did it not?

Admiral FLETCHER. Yes, sir.

Senator PITTMAN. That was the duty and the obligation of the Navy in the war—the chief duty and obligation?

Admiral FLETCHER. Under the conditions of this war, that was the principal objective of the Navy.

Senator PITTMAN. And without regard to the advisability of whether we should have had a larger Navy or not, the Navy we did have fully performed its services?

Admiral FLETCHER. Yes; I think that is a correct statement.

Senator PITTMAN. That is all.

The CHAIRMAN. Have you anything, Senator Trammell?

Senator TRAMMELL. I do not think that I have any questions.

The CHAIRMAN. Senator Pittman has made a statement as to what the principal charges were in the letter of Admiral Sims to the department, and I would like to insert in the record here section 78 of Admiral Sims's letter, which sums up the charges that are made in this letter of Admiral Sims. I think it will appear very evident that there are other matters contained in the letter besides the charge that the war was delayed for a specific period.

(The section of the letter referred to is here printed in the record as follows:)

78. The above brief account of the manner in which our naval operations were conducted clearly shows that the following grave errors were committed in violation of fundamental military principles; and it is manifestly desirable that such violations should be avoided in the future:

(1) Although war with Germany had been imminent for many months prior to its declaration there were nevertheless no mature plans developed or naval policy adopted in preparation for war, in so far as its commander in Europe was informed.

(2) The Navy Department did not announce a policy until three months after war was declared—at least, not to its representatives and the commander of its forces in Europe.

(3) The Navy Department did not enter whole-heartedly into the campaign for many months after we declared war, thus putting a great strain upon the morale of the fighting forces in the war area by decreasing their confidence in their leaders.

4) The outbreak of hostilities found many important naval units widely dispersed, and in need of repairs before they could be sent to the critical area.

Destroyers arriving in the war zone had been cruising extensively off our seaboard and in the Caribbean, and when war was declared were rushed through a brief and inadequate preparation for distant service.

(5) During the most critical months of the enemy submarine campaign against the allied lines of communication the department violated the fundamental strategical principle of concentration of maximum force in the critical area of the conflict.

(6) The department's representative with the allied admiralities was not supported during the most critical months of the war, either by the adequate personnel or by the adequate forces that could have been supplied.

(7) The department's commander in the critical area of hostilities was never allowed to select his principal subordinates and was not even consulted as to their assignment. A fundamental principle of the art of command is here involved.

(8) The Navy Department made and acted upon decisions concerning operations that were being conducted 3,000 miles away, when the conditions were such that full information could not have been in its possession, thus violating an essential precept of warfare that sound decisions necessarily depend upon complete information.

(9) Instead of relying upon the judgment of those who had had actual war experience in this particular warfare, the Navy Department, though lacking not only this experience, but also lacking adequate information concerning it, insisted upon a number of plans that could not be carried out.

(10) Many of the department's actions so strongly implied a conviction that it was the most competent to make decisions concerning operations in the war zone that the result was an impression that it lacked confidence in the judgment of its representative on the council of the Allies and its responsible commander in the "field."

It is a fundamental principle that every action on the part of superior authorities should indicate confidence in subordinates. If such confidence is lacking, it should immediately be restored by ruthlessly changing the subordinate.

(11) "To interfere with the commander in the field or afloat is one of the most common temptations to the Government—and is generally disastrous." (The Influence of Sea Power upon History, Mahan.)

The Navy Department did not resist this temptation, and its frequent violation of this principle was the most dangerous error committed during the naval war.

The CHAIRMAN. Admiral, you have stated that our coast was subject to attack by German submarines at the outbreak of the war?

Admiral FLETCHER. Yes, sir.

The CHAIRMAN. And that therefore it was necessary to keep vessels over here to protect our coast; and that it would have been inadvisable to have sent them abroad, because later they would probably have had to be brought back to this country. Now, Admiral Sims in his recommendations explained to the department that the critical place where the submarines should be attacked by our Navy, and the critical place that should be defended by our Navy was over on the other side, and he took the ground that we should send our ships over—all available ships—as soon as possible, in order to handle the situation over there. His recommendations were not immediately followed. Subsequently, however, they were followed, and his recommendations were adopted. Does that not indicate to you, Admiral, that he was right, and that the people on this side who had charge of the plans of the department were wrong?

Admiral FLETCHER. No; I can not say that that necessarily follows. It is so easy to say that if you had done something else, things would have been different, and better. I can readily understand how Admiral Sims, from his point of view, which was necessarily limited under the conditions which surrounded him, would do, as you state, and as he recommended, would put them all right where they could carry out his ideas, on the task that confronted him immediately; but I do not think that, reviewing the whole broad situation, that was a correct view.

The CHAIRMAN. But the department subsequently adopted his plans.

Admiral FLETCHER. Yes.

The CHAIRMAN. And his recommendations.

Admiral FLETCHER. Yes.

The CHAIRMAN. And we won the war.

Admiral FLETCHER. As the war developed, we saw and could readily determine the probability of submarines coming to this coast, and we very rapidly developed a defense to meet them, and as rapidly as we developed that defense every available craft we could operate here was sent abroad.

The CHAIRMAN. Now, Admiral, you say that if we had sent these ships over very early in the war Germany would then have undoubtedly sent more submarines over to this country to attack our shipping over here, and that that would have caused us to bring back our ships from the other side. If that is true, why did not Germany send some submarines over here so as to prevent our sending ships over there?

Admiral FLETCHER. As I stated before, it was incomprehensible to us why she did not do it, and the only reason we can assume for her not doing it was because we retained enough craft on this coast to provide against any contingency of that kind.

The CHAIRMAN. You did not do it; and if you judge from events Admiral Sims's recommendations were right, were they not?

Admiral FLETCHER. I think not. I can not agree with that view.

The CHAIRMAN. Well, I have not heard an explanation why not.

Senator PITTMAN. We did not send all our ships over there.

The CHAIRMAN. You say that in your opinion operations should not have been directed from the other side. I think you mean by that that the general plan should be dictated from this side, and that the carrying out of the operations should be made on the other side. Is not that so?

Admiral FLETCHER. That is right; yes, sir. The carrying out of the details of the plan should be left, as far as practicable, to the superior officer in the field of operations.

The CHAIRMAN. And do you not think that the recommendations of the superior officer in the field of operations, about ships that he would need to carry out his detailed operations, should carry very great weight?

Admiral FLETCHER. I do.

The CHAIRMAN. You say that the chief problem was to get a thoroughly equipped army over on the other side.

Admiral FLETCHER. That was the chief mission of this country in the war; yes, sir.

The CHAIRMAN. And the only way to do that was by transporting them over to the other side, was it not?

Admiral FLETCHER. That was a very important feature.

The CHAIRMAN. It was an essential element of their being on the other side?

Admiral FLETCHER. Yes, sir.

The CHAIRMAN. You would give it as your opinion that those troops should be thoroughly trained on this side before they were carried over?

Admiral FLETCHER. They should be trained as far as practicable, and the amount of training that they would receive would depend upon the urgency of the situation.

The CHAIRMAN. But you are not a military expert as far as land troops are concerned?

Admiral FLETCHER. No, sir.

The CHAIRMAN. You do not attempt to maintain that?

Admiral FLETCHER. No, sir; I am speaking only from a general point of view.

The CHAIRMAN. I understand.

Admiral FLETCHER. I would say that the amount of training that our troops received on this side depended upon the urgency with which they were needed on the other side. If the situation became very urgent, of course we would send them over with less training than we would like to give them.

The CHAIRMAN. And an equally important item, so far as those troops are concerned, would be the feeding of them, the supplying them with provisions and whatever they needed while they were over there, would it not?

Admiral FLETCHER. That is very essential, particularly in war.

The CHAIRMAN. It is equally important with carrying them over?

Admiral FLETCHER. Yes, sir.

The CHAIRMAN. So that anything that would delay the transportation of the troops, if they were otherwise ready, or that would prevent us supplying them after they got over there, would essentially tend to protract the war, would it not?

Admiral FLETCHER. Naturally, yes, sir; that would. Any delay in getting our Army over there, speaking generally, would cause a prolongation of the war.

The CHAIRMAN. In your statement you say you do not think that the failure to send ships over or to follow out Admiral Sims's recommendations, prolonged the war a single day?

Admiral FLETCHER. That is correct.

The CHAIRMAN. You say that because the troops were not in your opinion ready to go over at that time in large numbers?

Admiral FLETCHER. Were not equipped and not supplied. I repeat that we could have sent a million men over there four or five months sooner than we did, and they would not have constituted an army.

The CHAIRMAN. What was the most effective work that the Navy did during the war, in general?

Admiral FLETCHER. The most effective work, I should say, was combating the submarine menace, the protection of the transportation of our troops across the Atlantic, and the laying of the North Sea barrage. Those were the three outstanding features.

The CHAIRMAN. And you think they did a good deal to combat the submarine menace?

Admiral FLETCHER. A great deal; yes, sir. They did very active and very efficient work.

The CHAIRMAN. And you think, after they took hold over there that that had a great deal to do with checking the losses on account of submarines?

Admiral FLETCHER. A great deal to do.

The CHAIRMAN. Would you not say, therefore, that the sooner they got at it the better?

Admiral FLETCHER. Certainly.

The CHAIRMAN. And, in view of the fact that during the first two months of the war the submarine losses were greater than at any

other time during the war, if we had been able to send ships over there it would have done a great deal to cut down those losses, would it not as it did later on?

Admiral FLETCHER. It would have done a great deal. The sooner we got into it, of course, the more shipping would have been saved. But, in addition to our getting into it, there are a great many other features that tended to decrease the submarine menace, besides the active operations of our forces.

The CHAIRMAN. But that had a great deal to do with it, had it not?

Admiral FLETCHER. It had a great deal to do with it; yes, sir.

The CHAIRMAN. Do you recall when Mr. Balfour was over here? You referred in your testimony to Mr. Balfour's visit to this country. Do you recall when that was?

Admiral FLETCHER. I was appointed on a committee with Assistant Secretary Long of the State Department and Gen. Wood representing the Army, to go to Halifax and receive the commission, and I was with that commission several days; yes, sir.

The CHAIRMAN. When was that?

Admiral FLETCHER. I am speaking from memory, but I think it was in March, 1917. I will have to verify that date.

The CHAIRMAN. April, 1917?

Admiral FLETCHER. It must have been April, Mr. Chairman, yes.

The CHAIRMAN. Did you talk with him personally, at that time—with Mr. Balfour?

Admiral FLETCHER. I had some conversation with him, but only of a general nature; nothing of a specific or of a detailed character that pertained to naval matters.

The CHAIRMAN. Did he not bring out, when he was over here, the extreme importance of the putting down of the submarine menace? Was that not one of the principal things that he was advising our country upon?

Admiral FLETCHER. I think that is correct. That is my impression, that that commission did emphasize very strongly the importance of the submarine menace.

The CHAIRMAN. Now, you say that England could have held out with the supplies that she had on hand, until the following March? I do not want to quote you incorrectly.

Admiral FLETCHER. Yes, that is correct, except as to limiting it to the supplies on hand. It not only included the supplies on hand, the supplies in reserve, the supplies in the warehouses and the stores, but it included the supplies of the harvest that was coming on in the next year, it included the supplies that could be gotten through the submarine zone, the war zone, and all the imports that would come into the country for the next year.

The CHAIRMAN. Oh, you mean if she could bring her supplies in without interference from submarines, she could have kept up?

Admiral FLETCHER. It meant that in spite of the loss of shipping that was taking place, a certain amount of supplies could always be gotten into England until the shipping was reduced——

The CHAIRMAN. What do you base that on; upon what losses per month?

Admiral FLETCHER. I presume that was based upon what was taking place at that time.

The CHAIRMAN. What rate was that?

Admiral FLETCHER. About 800,000 tons, I think, a month.

The CHAIRMAN. And at the rate of loss of 800,000 tons per month, you think that England could have kept up until the following March?

Admiral FLETCHER. That is correct.

The CHAIRMAN. A short time ago we had Mr. Hoover before us, and I think Mr. Hoover was fairly familiar with food conditions at that time.

Admiral FLETCHER. Yes.

The CHAIRMAN. And he said, "It is obvious that the war would have come to an end in almost a month if the supplies were cut off."

Admiral FLETCHER. If the supplies were cut off the war would come to an end very promptly.

The CHAIRMAN. That England had no supplies, practically, on hand and that would enable her to go on; that she depended entirely upon the supplies that she got in from the outside.

Admiral FLETCHER. And upon what she could have raised during the summer.

The CHAIRMAN. Did you have anything to do with a conference which was held in this country, where the officers, the representatives of the foreign Governments, were here?

Admiral FLETCHER. I was present at that conference which took place in the room of the general board, and at which were present the Secretary of the Navy, the Chief of Operations, the admiral representing the English Government, Admiral Browning, and Admiral Grassot, of the French Navy, Admiral Mayo, and several other officers.

The CHAIRMAN. Do you recall anything that happened at that conference?

Admiral FLETCHER. I recall in a general way that there was a discussion of the situation as it existed at that time, and as to what steps we could most effectively take to aid the Allies, and I recall particularly the discussion in reference to the situation in the Atlantic and the North Atlantic and the Caribbean and the South Atlantic, and that we arranged then and there what part of the patrol of the ocean we should take and the part assigned to the French and the part assigned to the English.

We also discussed the question of convoy and how best the ships to carry supplies could be protected, whether by single armaments, or by convoys. That is what I remember, in general, of the conference—the ground that it covered.

The CHAIRMAN. Do you recall whether anything was said about the gravity of the submarine menace at that time, and whether any demand was made on us that we do everything we could to help out?

Admiral FLETCHER. We discussed the submarine menace in general but no stress was laid upon the gravity of it in that conference. It was generally recognized that that was a very important and serious matter to deal with, and I think that the steps that were taken subsequently in detail to carry out our general ideas were taken by arrangement with the Chief of Operations and in conference with these officers. That I can not tell you in detail.

The CHAIRMAN. But that was not looked on as a particularly important part of the conference—that question?

Admiral FLETCHER. Not that, except in a general way.

The CHAIRMAN. In his testimony the other day Admiral Wilson said, referring to this conference:

Before the conference ended, the Secretary of the Navy turned to the visiting flag officers and told them that he had noted the facts and suggestions given in the communications from their admiralties which they had read; that they could inform their admiralties that our Navy Department "accepted them in principle," and agreed that vessels of our Navy would be sent overseas to cooperate with the naval forces of our associates.

These communications, as I recollect them, while suggesting the manner in which our Navy could best help the Allies, and stating their needs as to types of ships, did not express any dire need for help or great urgency for it.

You agree with that statement, do you?

Admiral FLETCHER. As I have just said, we discussed it in general but there was no particular stress laid upon the urgency of the case as regards submarines.

The CHAIRMAN. In his testimony of March 30, 1920, Admiral Mayo states—and the admiral was present at that meeting, was he not?

Admiral FLETCHER. Admiral Mayo and Admiral Wilson, as I remember it, were present at this conference.

The CHAIRMAN. Rear Admiral Mayo testified as follows:

At this conference Vice Admiral Browning explained the mission of his force, and read a communication from the British Admiralty interrogating the representatives of the United States as to the nature of the assistance the United States Navy was prepared to render, and stating the desire of the British Admiralty for assistance especially in antisubmarine craft. Rear Admiral Grasset explained the mission of his division and requested that the United States assist in the patrol of the Caribbean.

Admiral FLETCHER. That is right.

The CHAIRMAN. That is the language of the statement in Admiral Mayo's testimony?

Admiral FLETCHER. Yes.

The CHAIRMAN. That would indicate that they called very special attention to the submarine situation, would it not?

Admiral FLETCHER. Not very especially, I should say.

The CHAIRMAN. I have read it.

Admiral FLETCHER. But they did call attention to it. Now, I recall—I am speaking only from memory, I made no notes at that time—I think that the French did ask, and all they asked for was 12 vessels, small craft, to go to the coast of France.

The CHAIRMAN. But the British were the ones that were handling the submarine situation principally on the other side, were they not?

Admiral FLETCHER. Principally; yes.

The CHAIRMAN. That is, whatever the French were doing was practically under the British?

Admiral FLETCHER. Principally; but it also included the French coast.

The CHAIRMAN. Oh, yes; under British command everywhere, was it not?

Admiral FLETCHER. It centered around the British Isles more than it did in the other theaters of war; yes, sir.

The CHAIRMAN. The allied naval command was British, was it not?

Admiral FLETCHER. The allied naval command?

The CHAIRMAN. Was under the British?

Admiral FLETCHER. No, sir; I do not think it was.

The CHAIRMAN. On the other side, in European waters; in war-zone waters?

Admiral FLETCHER. Yes. I think the commands were independent; but that they coordinated with each other to a common end. I do not think that the French Navy was placed under British command at all. It was entirely independent, and so was the Italian Navy.

The CHAIRMAN. Practically as ours was?

Admiral FLETCHER. No, sir; it was not placed under the control of the British as ours was.

The CHAIRMAN. It was not?

Admiral FLETCHER. No, sir. Admiral Wilson can tell you more accurately than I can; but that was my impression.

The CHAIRMAN. Your testimony does not quite agree with Admiral Mayo's, then, about the importance that was laid upon the submarine menace at this conference.

Admiral FLETCHER. I do not think that my testimony differs very much, Mr. Chairman; but we did recognize the importance of the submarine menace.

The CHAIRMAN. The Admiral states in his account of this meeting, and of the communications from the other side, that Admiral Browning, who, of course, represented the British, read a communication from the British Admiralty interrogating the representatives of the United States as to the nature of the assistance the United States Navy was prepared to render, and stating the desire of the British Admiralty for assistance especially in antisubmarine craft.

Admiral FLETCHER. Yes, sir.

The CHAIRMAN. That is an account of the statement of Admiral Browning?

Admiral FLETCHER. Yes; I will accept that statement of Admiral Mayo. That accords entirely with my impression.

The CHAIRMAN. And therefore that was a very important matter, was it not?

Admiral FLETCHER. I always recognized the submarine menace, as I said before, as a very urgent and important matter.

The CHAIRMAN. And it was brought before that conference that it was a question of great importance?

Admiral FLETCHER. Oh, yes; it was brought before that conference, and certainly considered.

The CHAIRMAN. Now, Admiral, if there was any delay in sending ships over that were needed, upon the recommendations of Admiral Sims, and if there was any delay following his other recommendations—any delay that could have been avoided—on whom would the responsibility rest?

Admiral FLETCHER. If there was an unnecessary delay?

The CHAIRMAN. Any unnecessary delay; yes.

Admiral FLETCHER. In sending our craft abroad when they were not needed on this coast, the responsibility for that is fully up to the Navy Department.

The CHAIRMAN. What do you mean by the Navy Department?

Admiral FLETCHER. Well, the Navy Department—this particular question that we are discussing refers to the question of the operations of the fleet. It would come under that general head.

The CHAIRMAN. It was a question of policy, rather, was it not?

Admiral FLETCHER. Of policy, and the operation of the fleet; yes, sir. And that, of course, would be up to the Chief of Operations and

the Secretary of the Navy, or the Secretary of the Navy and his advisers.

The CHAIRMAN. But the ultimate responsibility under the organization now would be with the Secretary of the Navy?

Admiral FLETCHER. The ultimate responsibility would be with the head of the department; yes, sir.

The CHAIRMAN. You have made certain statements to-day, Admiral, about the question of the personnel of the Navy.

Admiral FLETCHER. Yes, sir.

The CHAIRMAN. I shall want to look over your statement on that matter, and it is probably that at some future date the committee may want you to come before them again to explain certain matters connected with your statement.

Admiral FLETCHER. Very well, sir.

The CHAIRMAN. And also any other matters, of course, that may occur to us at the time.

I have already spoken to you about submitting recommendations for any plans you may have for a necessary reorganization.

Admiral FLETCHER. Yes, sir.

Senator PITTMAN. Now, Mr. Chairman, I am going to object to that, not because I would not be interested in it—

The CHAIRMAN. Object to what?

Senator PITTMAN. I am going to object to the preparation of any plans for the reorganization of the Navy Department, on the ground that it is beyond our jurisdiction. I read the resolution upon which this subcommittee was created. My only objection to it is that I desire to complete this work that we are doing, and if another subcommittee is to be appointed, it may be very well to do that. I am not passing on that question. That is a matter for the general Naval Affairs Committee to determine. But we have certain specific duties to perform, and there seems to be an effort, or rather an inclination, to get away from that and to drift off into another subject. This will be the third time we have drifted away from the subject, and I raise the point of order. Of course I know that it will not be decided favorably at the present time, but I am going to take it before the full Committee on Naval Affairs of the Senate, so that we may be able to make a report upon the subject which we were appointed to consider and report on, and not have it interminably dragged out all summer, dealing with subjects that we are not authorized to consider.

The CHAIRMAN. We shall undoubtedly, Senator Pittman, report on the matters which we are authorized to act upon here; but I consider that it is entirely a part of that report, if we find anything that should be remedied in the organization or in any other way in connection with the department, and I consider it entirely proper for us to make recommendations; and I consider that it will be of great help to us in making such recommendations if we could get expert advice from expert officers in the department.

Senator PITTMAN. I will just read once again, here, to support my protest, the language of this resolution:

To investigate and report on the matters referred to in the letter of Admiral Sims to the Navy Department in criticism of its action touching operations during the war.

Now, you can see, if this committee is going into the question of the reorganization of the Navy, I will be deprived of the privilege of

ere. because I have other matters to perform during the rest of the year.

CHAIRMAN. I do not think we will decide, probably, how the committee is to be reorganized, but I think it is entirely germane for us to make recommendations by expert officers in the department; and I do not conceive of anyone who has the best interests of the Navy at heart wanting to head off any such recommendations.

SENATOR PITTMAN. I do not want to head them off.

CHAIRMAN. If our report is to be of real value, we want to get all the information we can, and hear all the objections we can; and in line with my suggestion.

SENATOR PITTMAN. I understand, but there is no use in ducking the matter that is before us on any patriotic theory.

CHAIRMAN. I do not think we are ducking the issue, because we are going to report on all those other matters as well.

SENATOR PITTMAN. We would be under the suspicion that we have ducked enough of this subject and want to get into another. As a matter of fact, I think it is a good idea to report on this subject and let the chairman recommend to the full committee with these suggestions, and then have another subcommittee formed. The subcommittee here is not the whole Naval Affairs Committee, there may be some of the members of that Committee who are more qualified to act than we are on that broad subject.

CHAIRMAN. Certainly; but what we proposed to get is the testimony from experts as to what will be the best thing to do, and I do not think that we need to fear the suspicion that we are not going into the matter as thoroughly as we can.

SENATOR PITTMAN. I shall certainly make my protest.

CHAIRMAN. You can make your point of order.

SENATOR PITTMAN. I do.

CHAIRMAN. I take it you have no objection to our counting Senator Ball as being present, although he is not here to-day, and to voting for him.

SENATOR PITTMAN. No; I have no objection at all, except that there is doubt but what we are expanding the thing away beyond our authority, and not only that, but I think all of us have served rather badly in this long drawn-out matter, considering the benefits that have been derived, and I, for one, desire to be relieved of any further participation of this matter after this matter is terminated. I think it is perfectly fair that any member of this committee, after termination of his duties under this authorization should be permitted to perform other senatorial work, and I am not going to act on the committee beyond its authority, and certainly, if another committee is created I shall present my excuses why I should not.

CHAIRMAN. Do you object to the hearing of these officers about the desirability of a reorganization?

SENATOR PITTMAN. No. I would be charmed to hear from them at any proper time and under proper authority. I should like to have them at dinner, and I would like to hear every one of the British admirals and every one of the French admirals on this subject. There are many interesting things in regard to this war in naval matters and if I had nothing else to do I think I could enjoy myself for 12 hours upon it.

The CHAIRMAN. You can make your objection before the committee. You suggested that we go ahead, I think, Senator?

Senator KEYES. Yes.

Senator TRAMMELL. I would be glad to have the chairman cite his authority for going into the question of investigating the plans for reorganization of the Navy, under the authority granted to this committee.

The CHAIRMAN. I think we are here to investigate the charges made in the letter of Admiral Sims, and having investigated the charges made in the letter of Admiral Sims it seems to me entirely pertinent for us to make recommendations, and we can best make those recommendations after we have had advices from expert officers in the department.

Senator TRAMMELL. I do not think the scope of our authority, though, embraces the question of reorganization of the Navy, and that is what we are going into, when you request the expert opinions of different naval officers as to their ideas of reorganization of the Navy. That has nothing to do with Admiral Sims's criticisms of the charge that the war was not properly carried on by the Navy Department. I do not think it has anything to do with it.

The CHAIRMAN. I do not agree with you, gentlemen, and I do not think you will carry your point about not having these reports.

Senator PITTMAN. I am perfectly confident we will not carry it here.

The CHAIRMAN. I am perfectly confident that you will not in the full committee. However, you have made objection, and we will put the matter to a vote, and those in favor of asking Admiral Fletcher to appear with suggestions for a reorganization will say aye. I understand you have no objection to our counting Senator Ball's vote?

Senator TRAMMELL. No, sir.

Senator PITTMAN. If the chairman feels perfectly confident that Senator Ball would vote that way.

The CHAIRMAN. I have already talked with Senator Ball upon the matter.

Senator PITTMAN. Then of course there would be only a delay if we objected.

The CHAIRMAN. Yes. Have you any objection, Senator Trammell?

Senator TRAMMELL. I have no objection to inquiry or investigation being made into the opinions of different naval officers as to their ideas of reorganization of the Navy, because we want to better the service if it can be bettered; but I do not think it is within the province of this committee under its authority under this resolution, and the subcommittee was never designated for that purpose. That is the reason that I vote against it.

The CHAIRMAN. Have you anything further, Senator?

Senator KEYES. No, sir.

The CHAIRMAN. I think that is all, Admiral Fletcher, and you may be excused.

Admiral FLETCHER. Yes, sir; thank you.

TESTIMONY OF ADMIRAL HENRY B. WILSON—Resumed.

Admiral WILSON. Mr. Chairman, I ask to have two corrections made in the record of my testimony of the other day.

The CHAIRMAN. Will you state them?

Admiral WILSON. Yes, sir. On page 2197, in the answer to the fourth question from the top; the question and answer read as follows:

The CHAIRMAN. You have no knowledge of Admiral Sims's communications?

Admiral WILSON. All I know was that the decision was made before he communicated, because he could not have communicated until after he had arrived there, and that decision was made prior to his arrival.

The CHAIRMAN. I will have to see the record, Admiral.

Admiral WILSON. The reason I wanted to correct my answer was, I thought that I was right, but I looked it up, and I find the meeting took place on the 11th, and Admiral Sims arrived in London on the 10th; and his first communication was dated in London the 14th.

The CHAIRMAN. It is simply a question of verifying the fact as to the dates?

Admiral WILSON. Yes. I said there in my cross-examination—not in my main testimony, or I would have had it a little better—that the decision was made prior to his arrival. It was made a few hours after his arrival.

The CHAIRMAN. Yes.

Admiral WILSON. Then on page 2204 of the typewritten record, the fifth question, there is a rather serious mistake. In the original manuscript of my statement, I spoke of "cold storage," but when it was copied by the typewriters in the department an error was made, so that it was made to read "coal storage," in the several copies furnished to the committee.

The CHAIRMAN. That accounted for my questions about coal storage, then.

Admiral WILSON. Yes; and that is what I was confused about. I remembered that we had a little coal there. I looked it up and found that mistake out. Therefore, I wish to make the answer to the question read:

We never had any trouble with coal. My statement refers to "cold storage," and not "coal storage."

You asked me this question:

The CHAIRMAN. You say that you increased the coal storage at Brest from 350 tons to a capacity of 750 tons?

I said that we never had any trouble with coal; and then I turned to my aid, who was sitting beside me here, and he looked at the copy before him, and the word in it was "coal," and he became confused; so that my statement refers to "cold storage," and not to "coal storage." That corrects the whole thing and makes it look right.

The CHAIRMAN. Put something in your statement there to the effect that it was a clerical error.

Admiral WILSON. Yes; I have made my statement here.

The CHAIRMAN. Very well. Admiral, you stated in your testimony that as president of the board of inspection just prior to the war you were acquainted with the condition of the United States vessels, and that the Navy so provided by Congress was ready for war.

Admiral WILSON. I did, sir.

The CHAIRMAN. Now, can you state that the vessels available for scouting and screening duty with the fleet were ready and manned in all respects for war?

Admiral WILSON. Oh, no, sir; they were not.

The CHAIRMAN. Then, how do you say that the Navy as provided by Congress was ready for war?

Admiral WILSON. Well, they were ready when they were called upon for use. They did not keep them going all the time. The gunboats were doing duty in the West Indies. As I told you, one of the cruisers was on duty in the Mediterranean, and some of our vessels were coast guard vessels. In my statement, sir, I take up the question that war was declared on April 6, and of the forces assigned to me, or I should say assigned to the patrol force, of the 55 vessels definitely assigned to the patrol force, 24 were on station by April 16.

The CHAIRMAN. Admiral, I asked you definitely whether the Navy as provided by Congress was ready for war on April 6, and you have stated that the Navy was ready for war.

Admiral WILSON. I think so.

The CHAIRMAN. Then, I ask you if you can state if the vessels available for scouting and screening duty with the fleet were ready and manned in all respects for war?

Admiral WILSON. They were not all manned, but they were ready for war.

The CHAIRMAN. In what respects were they ready for war?

Admiral WILSON. They were ready as ships.

The CHAIRMAN. But without crews?

Admiral WILSON. Without crews, probably some of them.

The CHAIRMAN. Then, they were of no value until the crews had been provided?

Admiral WILSON. No ship is of any value until the crew is on board.

The CHAIRMAN. Please answer my question.

Admiral WILSON. I am answering you.

The CHAIRMAN. I wish you would give direct answers to my direct questions. I find that on going over the record some of the answers are not as clear and succinct as they should be. In order for your testimony to be of any value, we have got to have direct answers to the questions asked.

Now, will you name the vessels in the Navy in May, 1917, that might have been ready for scouting and screening duty?

Admiral WILSON. I will name the ships that were assigned to the patrol force in the mobilization plan of March 21, 1917.

The CHAIRMAN. And in doing so, please state whether they were ships that could have been used for scouting and screening duty in each case, please.

Admiral WILSON. Yes, sir. The *Olympia*, scout; *Chester*, scout cruiser; the *Des Moines*, cruiser; the *Androscroggin*, coast guard vessel, scout; the *Birmingham*, scout cruiser; the *Sacramento*, gunboat; the *Ossipee*, coast guard, cutter; the *Dolphin*, gunboat; the *Chenango*, cruiser; the *Gresham*, coast guard vessel; the *Tacoma*, cruiser; the *Denver*, cruiser; the *Seneca*, coast guard vessel; the *Cleveland*, cruiser.

The CHAIRMAN. What was the *Cleveland*, an armored cruiser?

Admiral WILSON. No, sir; a cruiser.

The CHAIRMAN. You have not named any armored cruisers?

Admiral WILSON. No armored cruisers were assigned to my force. The *Raleigh*, cruiser; the *Onondaga*, gunboat; the *Albany*, cruiser; the *New Orleans*, cruiser; the *Apache*, I think a Coast Guard vessel.

In addition to these vessels I know we had in the service about eight armored cruisers. I could not say from memory what duty they were performing at that date, except that I remember there were two or three in the Pacific, and that there was one in the Mediterranean.

Now, the vessels that I have named from the mobilization sheet refer to the part of my statement in which I say that of the 55 vessels definitely assigned to the patrol force, 24 were on station by the 5th of April, 13 more joined by the 20th of April, and on the latter date 18 had not reported, and that 5 of these were Coast Guard vessels being fitted out for service in the Navy, while others were still on foreign stations, and some were undergoing extensive repairs. I have no data to go into any more detail about it. I suppose that can be found from the Division of Operations.

The CHAIRMAN. Were you Chief of the Board of Inspection?

Admiral WILSON. Yes, I was president of it.

The CHAIRMAN. What were your duties as Chief of the Board of Inspection?

Admiral WILSON. We inspected all ships for material, upkeep, and reported on what we thought were necessary repairs.

The CHAIRMAN. Of ships of the Navy?

Admiral WILSON. Of ships of the Navy, which we were ordered to inspect by the Secretary of the Navy.

The CHAIRMAN. That is, he assigned particular ships you were to inspect?

Admiral WILSON. Yes, sir.

The CHAIRMAN. You did not inspect the ships generally, of the Navy?

Admiral WILSON. I got around pretty well to all the ships on the Atlantic coast.

The CHAIRMAN. On the Atlantic coast?

Admiral WILSON. Most of our ships were on the Atlantic coast.

The CHAIRMAN. You had nothing to do with the inspections on the Pacific coast?

Admiral WILSON. The ships on the Pacific coast were inspected by a subboard, the papers of which came to our office.

The CHAIRMAN. So that they were to report to you?

Admiral WILSON. In that general sense.

The CHAIRMAN. So that you should have had, and probably did have, a report on all of the vessels of the Navy, no matter where they were?

Admiral WILSON. Yes, sir; and I think we had a pretty good report and a pretty good idea of what they were. In addition to that, we inspected and ran the acceptances and final trials of all new ships on contract work.

The CHAIRMAN. Now, Admiral, can you give the committee, for insertion in the record, a full statement of all of the ships of the Navy at the outbreak of the war, and of the degree of preparedness that they were in, both as to material and to personnel?

Admiral WILSON. No, sir; I can not; but it can be done, up in the Division of Operations, very well, sir. I have got other duties now that occupy me——

The CHAIRMAN. Have you not records that show your reports at the time the war broke out or at the time——

Admiral WILSON. This board of inspection made individual reports, so far as the Material Division of the Navy Department was concerned, the aid for material, when I was on the board of inspection, was my chief, Admiral Winterhalter, afterwards transferred to Admiral McKean. I think Admiral McKean could give you that from reports.

The CHAIRMAN. But you can not give that yourself?

Admiral WILSON. No, sir; not in detail.

The CHAIRMAN. And you do not personally know?

Admiral WILSON. Ah!

The CHAIRMAN. If you personally know, you can give it to us now.

Admiral WILSON. But you are going back now and trying to trip me up on the question of what I said about the preparedness.

The CHAIRMAN. I want the information. The committee is not trying to trip anybody up, and we do not care for such accusations.

Admiral WILSON. Yes, sir.

The CHAIRMAN. Now, I ask you if, of your personal knowledge you can tell me about the ships in the Navy which could have been used for scouting and screening duty with the fleet at the beginning of the war?

Admiral WILSON. Yes, sir.

The CHAIRMAN. Oh, I have a number of questions to ask you about it.

Admiral WILSON. I have told you the names of the ships.

The CHAIRMAN. You have given all of those with which you are familiar?

Admiral WILSON. I have given you all of the ships which I think were available. There may be others. If I should take the reports of the chiefs of the bureaus, I might find more. But all that I have with me to-day is this report on the mobilization of the patrol force.

The CHAIRMAN. When you say "available," you mean ready?

Admiral WILSON. No, I mean that were built.

The CHAIRMAN. That were of a nature to be used as scouts or screening vessels?

Admiral WILSON. Exactly.

The CHAIRMAN. The list that you have given comprises all the vessels in the fleet—in the Navy—that at the outbreak of the war which in your opinion could have been used for scouting or screening duty?

Admiral WILSON. I did not say so, sir.

The CHAIRMAN. That is what I asked you.

Admiral WILSON. I said it comprises a list of the ships that were mobilized in the patrol force.

The CHAIRMAN. That is not what I asked you.

Admiral WILSON. I am not able to answer your question, sir.

The CHAIRMAN. You are not able to answer it?

Admiral WILSON. No, sir; in detail; because I have forgotten what ships—that has been three years ago, now, and I do not remember the names of all the ships.

The CHAIRMAN. I think you stated the other day that the reason that there were not sufficient scouting and screening vessels with the fleet was because Congress did not appropriate for them.

Admiral WILSON. Why, to come right down to a straight answer—

The CHAIRMAN. That is what I want.

Admiral WILSON. Yes; you can not by any reason call these vessels scouting and screening vessels, in the sense that it is applied to.

The CHAIRMAN. Which vessels?

Admiral WILSON. That I have named.

The CHAIRMAN. You can not?

Admiral WILSON. Scouting and screening; they are only slow vessels. Battleships move at high speed these days. The only three vessels in all that force that an Admiral would care to have along with him for scouting and screening, that we had in service there, were the *Birmingham*, the *Chester*, and the *Salem*. They made high speed.

The CHAIRMAN. How about the *St. Louis*?

Admiral WILSON. I do not think the *St. Louis* is very speedy.

The CHAIRMAN. What is her speed?

Admiral WILSON. I have forgotten; 22 knots. But she is hard on coal burning. She is a killer of the people down below in handling coal, and very hard to get at.

The CHAIRMAN. And as far as speed is concerned, a 22-knot vessel would be of use?

Admiral WILSON. Yes; but that is what she is put down for. I do not know how lately they have gotten 22 knots out of her.

The CHAIRMAN. How about the *Charleston*?

Admiral WILSON. The *Charleston* is a cruiser.

The CHAIRMAN. How about her speed?

Admiral WILSON. I imagine she is about the same thing.

The CHAIRMAN. How about the *Columbia*?

Admiral WILSON. The *Columbia* is in my command now, and she is used for carrying the captain of the train around, the man who has charge of the auxiliaries and supply.

The CHAIRMAN. What was her speed?

Admiral WILSON. It was very good at the time she was built; but she would noway make that now. She is a very old craft.

The CHAIRMAN. What was her approximate speed at the time of the outbreak of the war?

Admiral WILSON. If I threw my flag on board of her, of course she could make—I guess she is good for 16 knots.

The CHAIRMAN. How about the *Minneapolis*?

Admiral WILSON. The *Minneapolis* is in the same class. I suppose they could get 16 knots out of her.

The CHAIRMAN. And at the time of the outbreak of war, the same?

Admiral WILSON. Yes, I suppose so.

The CHAIRMAN. How about the *New Orleans*?

Admiral WILSON. I have forgotten the *New Orleans* and the *Albany*. So, I have given you those names. I read you the *New Orleans* and the *Albany* off of this list of mobilization.

The CHAIRMAN. Well, I can not carry that all in my mind. I simply want to know, what was the speed of those boats?

Admiral WILSON. They are of pretty good speed. We took them at the time of the Spanish War. I suppose they are 20-knot boats.

The CHAIRMAN. We had about 8 armored cruisers?

Admiral WILSON. Yes; the armored cruisers were some of them in the Pacific, and one in the Mediterranean, and they took such large

numbers of men to man them that they were held in reserve. I inspected them materially, and they were in pretty fair shape.

The CHAIRMAN. Would you not say that the eight armored cruisers and the *Chester*, the *Birmingham*, and the *Salem*, the *St. Louis*, the *Charleston*, the *Columbia*, the *Minneapolis*, the *New Orleans*, and the *Albany*, 18 ships in all, were the best if not the only loose cruisers available for sea-going scouts at that time?

Admiral WILSON. Exactly. I say that.

The CHAIRMAN. Were any of those vessels with the battleship forces when war was declared?

Admiral WILSON. No, sir. No, I take that back. I do not know. I know that in the mobilization plan of March 21 there was a large part of what you speak of there assigned to the patrol force, and I gave you the names.

The CHAIRMAN. But they were with the battleship force.

Admiral WILSON. I say, a part of that with the commander-in-chief's fleet; I mean Admiral Mayo's fleet. He was my commander in chief.

The CHAIRMAN. Which of those armored cruisers and which of those other ships I have spoken of were with you as a part of the battleship force?

Admiral WILSON. Oh. None.

The CHAIRMAN. None?

Admiral WILSON. You mean before I went to the patrol force?

The CHAIRMAN. I mean just before the outbreak of the war.

Admiral WILSON. I do not remember that any were, sir.

The CHAIRMAN. Were any or all of these ships that had been provided by Congress, ready and fully manned for battle?

Admiral WILSON. Not fully manned; but they were ready if manned.

The CHAIRMAN. They were all ready?

Admiral WILSON. They were ready if manned.

The CHAIRMAN. How do you mean, manned?

Admiral WILSON. They were ready from a material point of view. I had nothing to do, as president of the board of inspection, with putting enlisted men on the ships. All I did was to inspect them to be put in commission, or to be put in full commission or in reserve.

The CHAIRMAN. Whereabouts were they stationed, do you know?

Admiral WILSON. As I said before, some of the armored cruisers. I think three or maybe four, were in the Pacific, one was in the Mediterranean, and I do not remember about the others. You could get all that from the Navy Department, I think.

The CHAIRMAN. But they were not with the fleet?

Admiral WILSON. With the fleet? Oh, no, sir.

The CHAIRMAN. And therefore, although these ships has been provided by Congress, they were not with the fleet, and it was not through lack of action on the part of Congress that these ships were not with the fleet?

Admiral WILSON. No, sir.

The CHAIRMAN. Immediately before the war?

Admiral WILSON. But they were mobilized as soon as we went into war.

The CHAIRMAN. You stated that the Navy was not willing to act solely on the defensive. Do you think that the fleet as a whole was

in readiness to cross the Atlantic or to meet the German fleet in the middle of the Atlantic?

Admiral WILSON. Yes.

The CHAIRMAN. And make as good a showing against it as the British did at the Battle of Jutland?

Admiral WILSON. No; for the reason that the British had a very much larger force than ours would have been, in fighting ships.

The CHAIRMAN. But, in comparison to the size of our forces, you think they were in equally good condition to meet the Germans as the British were to meet the Germans in the Battle of Jutland?

Admiral WILSON. They were large enough in size to meet them.

The CHAIRMAN. They were what?

Admiral WILSON. They were large enough in numbers to whip them.

The CHAIRMAN. Without any screening vessels?

Admiral WILSON. Oh, screening vessels are not of much use to you when you get into contact—when you get into a duel. They are useful in getting you there and getting you into your proper formation.

The CHAIRMAN. Would they not have been somewhat of a help if we had had them to help us get there?

Admiral WILSON. Oh, they are very desirable, but because you have not got them are you going to lay down when you meet the enemy?

The CHAIRMAN. Not lay down, but it is a great drawback not to have them?

Admiral WILSON. Yes; exactly, and that is the reason we want to get them now. There have been some appropriated for, and if we get them we will be in very good shape.

The CHAIRMAN. Then, you state these vessels that I have spoken about, at the outbreak of hostilities were not ready for battle?

Admiral WILSON. Except personnel.

The CHAIRMAN. Well, that is a rather important item.

Admiral WILSON. Every vessel. I had nothing to do, sir; mine was material—president of the board of inspection.

The CHAIRMAN. Oh, we are not accusing you of anything.

Admiral WILSON. Oh, I do not expect anything like that. I do not feel that I am guilty of anything.

The CHAIRMAN. Nobody is accusing you, Admiral, of any dereliction in your duty.

Admiral WILSON. No; I know they are not. I do not want you to.

The CHAIRMAN. Therefore, if they were not in condition, you could not say that the whole Navy, as it existed in April, 1917, was ready for battle, could you?

Admiral WILSON. Well, sir, if we kept every craft——

The CHAIRMAN. I asked you a direct question, Admiral.

Admiral WILSON. I will have to answer that in an indirect way, if you want any answer at all.

The CHAIRMAN. I want you to answer it so that I can have a direct answer.

Senator PITTMAN. I think it is very unfair to an admiral in the Navy, from whom you are trying to get information——

The CHAIRMAN. I want something direct and definite.

Admiral WILSON. Let the question be read, Mr. Senator. I will give you an answer.

Senator PITTMAN. There are some questions, you know, that can not be answered directly by yes or no.

The pending question was read by the stenographer, as follows:

The CHAIRMAN. So that if they were not in condition, you could not say that the whole Navy as it existed in April, 1917, was ready for battle, could you.

The CHAIRMAN. Why, Admiral, if a component part of the Navy was not ready, of course the whole Navy was not.

Admiral WILSON. I can not answer that question.

The CHAIRMAN. Very well.

Senator PITTMAN. That is, by yes or no?

Admiral WILSON. Yes; I would be silly if I gave a yes or no answer to a question like that, and have it printed and go out to the service of my fellow officers to read, that I answered a question like that yes or no.

Senator PITTMAN. I think the chairman ought to appreciate that.

The CHAIRMAN. Are you accusing the committee of asking you silly questions, Admiral?

Admiral WILSON. No, sir; but you are not technical enough to understand it. My brother officers would consider it silly if I answered yes or no to that. It is not readily recognized that the Navy, doing their duty to the country and to the taxpayers, can not keep every craft we have, at all times, during peace, up to top notch in regard to personnel. But on the threatened outbreak of the war—which actually occurred on the 6th of April—then everything went with a “biz,” as I told you, and we started off and put in everything we had; and anything that had any speed at all, and could drop a depth charge, was valuable.

The CHAIRMAN. I asked you if a certain important part of the Navy was ready, and from your testimony I gathered that they were not ready for battle. Then I asked you whether you could say as a general thing, that the whole Navy was ready for battle.

Admiral WINSLOW. I could not give you an answer that would be satisfactory to you.

The CHAIRMAN. Well, I can not see but what that is perfectly plain English, Admiral, and it is a perfectly simple question to answer.

Admiral WILSON. I regret that I am unfortunate in not being able to answer that.

The CHAIRMAN. You stated, I think, the other day that in your opinion the whole Navy was ready for battle.

Admiral WILSON. Yes; and I repeat that.

The CHAIRMAN. You will repeat that?

Admiral WILSON. Yes.

The CHAIRMAN. That is what I wanted.

Admiral WILSON. Oh; but you said battle.

The CHAIRMAN. I asked you for battle.

Admiral WILSON. Yes; but you asked me the other day if it was ready for war, and I said yes.

The CHAIRMAN. Ready for war?

Admiral WILSON. Yes.

The CHAIRMAN. But not for battle?

Admiral WILSON. Oh, no; you take a ship and put her in commission, and go out for battle. There is a celebrated case like that in the Revolutionary War—when they were not ready, the crew had not

been trained, but they took the chance, manned the vessel and went out, and down they went. Suicide!

The CHAIRMAN. And the fact of some of the vessels having been laid up at the navy yards, vessels which were important for work in the fleet, that they were not manned, and that there was not sufficient personnel to man them, would not interfere with the statement that the whole Navy was ready for war?

Admiral WILSON. No, sir; because you as a Senator would not give the Navy enough money to man everything we had.

The CHAIRMAN. That has nothing to do with my question, Admiral. Now, you are familiar with the battle of Jutland?

Admiral WILSON. Only the small bit that I read, sir, and I have not been able to get much. I have been waiting until we got something from both sides, so that I could put things together and study them up.

The CHAIRMAN. Did the English battleships do any considerable amount of execution in the battle?

Admiral WILSON. No, sir.

The CHAIRMAN. What ships did?

Admiral WILSON. Battle cruisers, at first. The Germans were never keen or anyway anxious to get those two battleship forces together. They would have been silly if they had.

The CHAIRMAN. Did the English battleships attempt to get up to the front?

Admiral WILSON. Oh, I think they made every effort.

The CHAIRMAN. Was there any attack made on them by the German torpedo boats?

Admiral WILSON. Yes, sir; and they were protected by their own torpedo boats—their own destroyers.

The CHAIRMAN. What did the battleships do when they were attacked by torpedoes?

Admiral WILSON. I do not remember, exactly. I remember one time they turned away from the destroyer attack. I remember that, on one occasion; which is a proper maneuver. It depends on what protection they had.

The CHAIRMAN. A battle is hardly a question of maneuvering. It is a pretty serious question.

Admiral WILSON. Yes, sir; a very serious question; and it is so easy for anybody to criticize what was done then by that British admiral, with all that responsibility upon his shoulders, I think he is a remarkable man. People that do not go to sea do not know what it is, especially when you get in a little mix up.

The CHAIRMAN. Then you would say that a large number of destroyers were of considerable value to a fleet fighting even against battleships?

Admiral WILSON. Oh, yes, sir; destroyers. We want all we can get. I have now 8 battleships and about 32 destroyers down south, and our allowance is 54. I think we have about 32 destroyers. I think I said that yesterday.

The CHAIRMAN. Admiral Mayo stated in his testimony as follows:

However, it should be pointed out that this fleet was lacking in types of vessels essential to efficiency, such as battle cruisers, scout cruisers, light cruisers, and fleet submarines; and, furthermore, there are none even now available.

Admiral WILSON. I am in accord with that, sir.

The CHAIRMAN. And in spite of that, in spite of the fact that there were not sufficient destroyers with the fleet, you think that they were in a condition to go abroad and to fight, to go out in the middle of the ocean and fight the German fleet as it was at that time, and to be more effective than the German fleet?

Admiral WILSON. I said that I would go across the ocean and fight the German fleet, and we would whip her.

The CHAIRMAN. I have no doubt you would go across.

Admiral WILSON. No, but anyone would.

The CHAIRMAN. I mean, any officer would. They would do anything in the world to whip the enemy. That is the tradition of the Navy, and a splendid tradition; no doubt about that.

Admiral WILSON. Thank you, sir. I recognize, as well as anybody else, that the more of the accessories, of the auxiliaries, and everything like that you have, the better off you are; but any man who can not play the game until he has got everything perfect, I do not count him worth much.

The CHAIRMAN. Have you anything else, Senator Keyes?

Senator KEYES. No.

The CHAIRMAN. Have you any questions to ask?

Senator PITTMAN. Yes. Admiral, Admiral Mayo testified in effect that his fleet was in the best state of preparedness that it had ever been in. Is that your opinion?

Admiral WILSON. That is my opinion. From all my experience in the Navy, I have never seen the force as it is, as constituted, in better shape than it was in the spring of 1917.

Senator PITTMAN. That is all.

The CHAIRMAN. I will read into the record at this time Admiral Mayo's statement about preparedness of the fleet, which appears on page 1451 of the typewritten record:

When the active fleet arrived in Hampton Roads about the first of April after its training period in Cuban waters, it was in the best state of preparedness that it had ever been, and there was a feeling of confidence in the personnel of being able to cope with any emergency; the personnel was however on a peace basis and the transfer of trained personnel for armed guard and other duty was already being felt in a decrease in efficiency. The destroyers that were first despatched to the war zone, though they were assigned to operations for which they had not been especially trained, showed the effect of their general training by the efficiency with which they at once entered into their new duties.

However, it should be pointed out that this fleet was lacking in types of vessels essential to efficiency, such as battle cruisers, scout cruisers, light cruisers, and fleet submarines; and, furthermore, there are none even now available.

Admiral WILSON. The Admiral is also talking about crews and destroyers, after war has been declared.

The CHAIRMAN. I think that is all, Admiral, and you may be excused.

Admiral WILSON. May I leave town, sir?

The CHAIRMAN. You may.

(Thereupon, at 12 o'clock m, the subcommittee adjourned until Monday, April 12, 1920, at 10 o'clock a. m.)

NAVAL INVESTIGATION.

MONDAY, APRIL 12, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, in room 235, Senate Office Building, at 10 o'clock a. m., Hon. Frederick Hale presiding.

Present: Senators Hale (chairman), Keyes, Pittman, and Trammell.

The CHAIRMAN. Admiral Niblack, have you a statement to make about matters connected with this investigation?

Admiral NIBLACK. I have, sir.

The CHAIRMAN. Will you proceed?

STATEMENT OF REAR ADMIRAL A. P. NIBLACK, UNITED STATES NAVY, DIRECTOR OF NAVAL INTELLIGENCE, NAVY DEPARTMENT.

Admiral NIBLACK. My official interest in this investigation is in its historical aspect as a whole rather than a controversy which deals with specific charges limited to a certain period, for Admiral Sims, in a statement as to the period of the war covered by his letter of January 7, states that "the period which it covers is almost wholly concerned with those critical months immediately preceding our entry in the war and the first year, or less, of our participation in the war," and later he corrected this testimony to say "my entire letter of January 7, 1920, refers to this early period of the war, practically all of it refers to the first six months, hardly any of it refers to anything out of the first year, 1917."

As Director of Naval Intelligence in the Division of Operations, Navy Department, I also have charge under my office of the "Office of Naval Records, and Library," which is maintained under the legislative, executive, and judicial appropriation. One of the items of this appropriation reads:

Toward the collection or copying and classification, with a view to publication, of the naval records of the war with the Central Powers of Europe, including the purchase of books, periodicals, photographs, maps, and other publications, documents and pictorial records of the Navy in said war, clerical services in the District of Columbia or elsewhere, and other necessary incidental expenses, \$20,000: *Provided*, That no person shall be employed hereunder at a rate of compensation exceeding \$1,800 per annum.

The point of view which I therefore wish to lay before this committee is that historical facts rather than opinions are important. I am not here to defend any person, but am defending the United States Navy, which is now under fire, not of its enemies, but of its friends.

In connection with the work of collecting and classifying the naval records of the war with the Central Powers of Europe I am in a

position to be informed as to the magnitude and scope of the efforts and activities of the Navy Department and the United States Navy during the war. As I served as a member of the General Board for several months and 10 days before our declaration of war, and went to sea on April 7, 1917, when the fleet was mobilized, serving in command of a division of four battleships and part of the time of a squadron of eight battleships on our coast, until October, 1917, and, moreover, as I was then transferred to the command of Squadron 2, Patrol Force, and of the United States patrol squadrons based on Gibraltar from November, 1917, to the conclusion of the war, I am in a position to bear first-hand testimony of a personal nature to some of the matters which Admiral Sims has brought before this committee in his letter.

While in the battleship fleet, the squadron I commanded was charged with the organizing and the duty of intensively training the men of the engineer's force of the Navy, as testified to by Admiral Grant, and as commander of the patrol forces in the Mediterranean I cooperated in the antisubmarine operations in protecting the vast amount of merchant shipping which passed through the Straits of Gibraltar, representing one-fourth of the total allied tonnage of the world. I therefore have first-hand information as to the means employed for the protection of this shipping and the merits of the much-discussed convoy system for merchant shipping which Admiral Sims says was one of the principal things which enabled the Allies to win the war. I also became familiar at first hand with the performance at sea of the armed guards on merchant vessels and have since become familiar with the historical data on file. From my own personal experience I can bear testimony to the great things which were accomplished by our Navy from the very outbreak of hostilities until the war was won, although I know little of my own knowledge of what is claimed the Navy Department does not do. I was in London in November, 1917, and received my instructions from Admiral Sims at the same time Admiral Benson arrived on his first visit, which marks the time when Admiral Sims says his troubles were more or less over, because he ceased to be almost alone in London and got an adequate staff, which a year later consisted of a total personnel of 1,200 at his headquarters including the following officers and civilians on his personal staff:

| | Officers. | Civilians. |
|----------------------------------------------------|-----------|------------|

On the 20th of November, 1918, just after the armistice, Admiral Sims issued an order to the commanders of all bases in Europe and to the commanders of all forces, air stations, and principal port areas, to prepare a historical sketch of the activities during the war. This order was as follows:

1 The department, sometime since, directed the force commander to undertake preparation of an official history of United States naval activities in European waters during the war, not to interfere in any way with the prosecution of the war. It has been wholly impossible of accomplishment owing to lack of adequate properly equipped staff, and this is so even under present circumstances.

2 It is extremely important that as much as possible toward preparing such a history be done before the present forces and bases are demobilized and officers who have been engaged in the various duties are separated from the records and files.

3 It is therefore desired that each base and separate detachment undertake at once a brief general historical sketch of its activities from the time it was initiated to the present. It is thought that a general sketch covering the principal activities and the difficulties encountered can be prepared in a short time and with much less delay now than later. Where war diaries are accessible, the work would be comparatively easy.

4 In addition to this sketch all statistical data that can be compiled before demobilization should be submitted covering the following subjects:

1. Number of ships engaged by periods.
2. Engagements with the enemy.
3. Commendable service.
4. Number of ships escorted.
5. Other classes and character of duty (tabulated).
6. Casualties; material and otherwise.
7. Data showing volume of administrative work, communications, and so forth.
8. Financial statistics.
9. Statistics concerning number of inexperienced personnel handled. Changes in personnel.
10. Any other statistics or compilations which will give a correct idea of the amount of work involved in our operations abroad.

5 It is realized that there have been many important questions involved in the work of the Navy abroad, particularly in difficulties encountered and surmounted, which are not matters of official record. All such questions should be brought out in some way in the historical sketch above mentioned.

The commanders of all the various units in the naval forces in Europe have submitted the required historical sketch, copies of which are now on file in the historical section, with the sole exception of Admiral Sims himself, who has never submitted any report to the department of the operations of the forces as a whole, similar to that submitted by Gen. Pershing to the War Department, nor has he submitted any personal narrative except such as has appeared in the World's Work, and as expressed in his letter of January 7, 1919, is now the subject of this investigation.

On July 28, 1919, the Navy Department wrote a letter to Admiral Sims asking him to write the history of the operations of the United States naval forces in European waters, and of all of our activities in Europe and our relations with European admiralities, not merely a technical report but an account that would give the American people a clear conception of what was accomplished and form an important part of the history of the war.

Admiral Sims replied, in a letter dated July 30, 1919, the closing paragraphs of which are:

"It would, of course, be wholly impossible for me to undertake it even if I gave up my position at the War College and devoted my whole attention to it, and this for the simple reason that I have no capacity or aptitude for such work.

However, I do not know of any officers in the United States Navy who is sufficiently experienced as an historian to do this work. The literary side of it alone is

of the highest possible importance, and the job as a whole could be done creditably only by competent historians acting in collaboration with naval officers. I would not attempt, myself, to put out anything for the public to read which had not had the benefit of such literary advice.

I think you will recognize from the above brief summary of the situation that we can not hope for anything satisfactory unless this whole matter is taken up in a methodical way and put in the hands of competent people who are given the assistance and facilities that would be required.

As I have only \$20,000 for next year to get together the facts as to this war, and as this committee is not limited in its expenses, I am glad it has the opportunity of getting the facts out of Admiral Sims and others. The proper perspective to write the real history of the war can only come with time and study, and this committee is apt to get more personalities and opinions than it does historical facts. In the sequence of events, the "critical months immediately preceding our entry into the war" are characterized by Admiral Sims as being worthy of special investigation. It is an interesting historical fact that Admiral Sims became president of the Naval War College on January 7, 1917, and left on his mission to England on March 28, 1917, during which entire time he was a member of the General Board and attended at least one of the monthly meetings. My services on the General Board covered exactly this same period, with a week before and a week after, and I, therefore, share with Admiral Sims the responsibility for any neglect in the critical days of 1917 in formulating any plans or making any recommendations looking toward our entry into the war. Neither Admiral Sims nor myself had been on duty in the Navy Department for many years prior to the critical days of 1917, but it should be noted that the General Board is the board of the Navy Department charged by law with the following duties:

1. The General Board shall devise measures and plans for the effective preparation and maintenance of the fleet for war and shall advise the Secretary of the Navy as to the disposition and distribution of the fleet and of the reinforcements of ships, officers, and men of the Navy and Marine Corps.

2. It shall prepare and submit to the Secretary of the Navy plans of campaign, including cooperation with the Army and the employment of all the elements of naval defense, such as the Naval Militia?, Coast Survey, Lighthouse Service, Coast Guard, and merchant vessels, and shall constantly revise these plans in accordance with the latest information received.

3. It shall consider the number and types of ships proper to constitute the fleet, the number and rank of officers, and the number and ratings of enlisted men required to man them, and shall advise the Secretary of the Navy respecting the estimates therefor (including such increases as may be requisite) to be submitted annually to Congress.

4. It shall advise the Secretary of the Navy concerning the location, capacity, and protection of fuel depots and supplies of fuel, and of navy yards and naval stations; also in regard to the establishment and maintenance of reserves of ordnance and ammunition and depots of supplies; and shall advise as to the delivery of provisions and stores of every kind required by the fleet.

5. It shall consider and report upon naval operations, maneuvers, tactics, organization, training, and such other subjects as the Secretary of the Navy may lay before it.

There is nothing in the records of the General Board to show that Admiral Sims made any suggestions as to preparation for war, but the records do show that he participated in only one discussion, and that was the location of a naval base in the vicinity of Narragansett Bay. On the other hand, the General Board was working continuously on programs and plans of various kinds, which Rear Admiral C. J. Badger can tell you all about.

On February 4, 1917, the General Board had submitted to the Chief of Naval Operations a special war plan entitled "Steps to be

taken to meet a possible condition of war with the Central European Powers."

On March 6, 1917, the General Board recommended that our fleet be recalled from Cuba by March 15 and assembled in Chesapeake Bay.

On April 5 the General Board submitted to the department a report on "assistance the United States can give the Allies upon declaration of war." It will be noted that while the law places the responsibility for the formulation of plans upon the General Board, the responsibility for the adoption of these plans and their enforcement rests upon the Navy Department, as the General Board is without executive authority. If the testimony before this committee can be made to fix that responsibility, it can not be fixed on the General Board.

Prior to the outbreak of the war a proposition was submitted by the General Board to the Chief of Naval Operations recommending that we invite naval representatives of the Allies to come to Washington, and a proposition was made to send the following naval officers to London and Paris:

London: Rear Admiral W. S. Sims, Capt. W. V. Pratt, Commander Yates Stirling, Commander F. H. Clark, Lieut. F. A. Daubin, Lieut. G. L. Caskey, Lieut. S. C. Hooper, Naval Constructor E. S. Land.

Paris: Rear Admiral T. S. Rodgers, Capt. H. H. Hough, Commander D. F. Sellers, Lieut. H. H. Crosby, Lieut. Wadleigh Capehart, Naval Constructor H. G. Gilmor.

However, before this suggestion was made or acted upon Admiral Sims had been secretly sent abroad with his aid, Commander Babcock, and no additional officers were sent. Admiral Sims in his testimony says:

It is due to Admiral Benson alone that I was given the opportunity to serve in this war as commander of the forces abroad. He said his insistence upon this assignment had brought upon him the enmity of pretty much all the senior officers of the Navy.

Admiral Sims was the logical man for this position, as he himself admits and this testimony verifies. On April 28 he was ordered to command the destroyers and on June 14 was made force commander, with headquarters in London.

On April 10, 1917, a few days after the declaration of war, Vice Admiral Browning, of the British Navy, and his staff, and Rear Admiral Grasset, of the French Navy, arrived in Washington and had a session on April 11 with the General Board, the Secretary of the Navy and the Chief of Naval Operations being present. Vice Admiral Browning stated that the British Navy had had the task for three years of patrolling the Atlantic coast of North America from Halifax to Panama, and suggested that the United States Navy take over this patrol, thereby releasing a great number of British ships for duty in the war zone. This was agreed to and immediately done. He also suggested sending two or three destroyers to England as an evidence of good intentions, stating that of course our fleet naturally would not be willing to part with or weaken its screen of destroyers. On the strength of this suggestion a few days later arrangements were made for the dispatch of a division of six destroyers, which arrived in Queenstown on May 4.

We come now to the actual declaration of war. Whatever the plans were, or whatever any plans ever are, the execution depends upon resources at hand and the magnitude of

presented. Whatever may be assumed to have been the mission of the United States Navy at the outbreak of the war, the problem the Navy had to face was the unrestricted submarine campaign announced by Germany in violation of the terms of international law in February, 1917, which ultimately caused our entry into the war, and which presented an entirely different problem than that which had existed for the Allies previously in the war. The sudden realization that the Navy had to be responsible for the safe transport to Europe of an Army of 2,000,000 men with millions of tons of supplies and munitions presented a problem which might well stagger the imagination. It, however, being at once evident that there was little chance for our fleet to have to encounter that of the enemy on the high seas, the fleet became available for training the thousands of officers and men to meet these new demands.

The first and most important demand was providing additional crews for the crews of ships in reserve and for the armed guard gun on merchant vessels, which alone required over 7,000 men; to provide crews for the interned merchant ships and other vessels acquired by purchase or charter for naval transports over 45,000 men were required; for the antisubmarine vessels, consisting of yachts, destroyers, subchasers, and various kinds of patrol vessels. Thousands of officers and men for the mine force to lay the great North Sea mine field; thousands of officers and men were required; finally, to take over the American merchant marine, built and building, as organized Naval Overseas Transport Service (N. O. T. S.), which was strong when the war ended, many officers and men were required. This will be explained later.

Providing and training these officers and men became, then, the great problem for the Navy to solve during the first six years of the war. To conduct this training it was necessary to expand old training stations in the United States, to build new ones, and to put all the old battleships of little fighting value into commission, and, as previously stated, this required thousands of officers and men.

As, on April 1, 1917, the personnel of the United States Navy consisted of 4,377 regular officers and 877 reserve officers, 1,109 reserve service, and 62,677 regularly enlisted men and 1,109 reserve, a total of 5,154 officers and 63,776 men, it can be readily seen that the task of training was prodigious, because going to sea is a new occupation and bears little relation to what the average shore know much about.

The question of a reserve created and fostered in time of peace is too well demonstrated to need elaboration. We did not have such a reserve at the beginning of this war, and the Navy had to create one. However, the war history of the United States from its colonial days, is a continuous story of war-time extravagance and injudicious peace-time economy. The pendulum swings to and fro, and now that the whole world is in ferment and war is possible we are going to sleep again.

Unquestionably, on July 1, 1917, the outlook was far from reassuring, but at least a big start had been made along the line of defense, and we had smacked of the offensive. By July 1, 1917, we had 10 destroyers operating from Queenstown as a base, and we had 4,594 regular officers and 3,344 reserve in service in the Navy.

26,260 enlisted men and 32,379 reserves, or a total of about 8,000 officers and 158,600 men. The additional officers and men, after July 1, 1917, were largely absorbed in manning the transports to the Army across, the German interned ships, the purchased merchant vessels, and above all, the newly constructed cargo ships which not enough is known to the public, or at least realized in relation to their operation by the Navy. These particular supply vessels, or cargo ships, were organized into what was known as the Naval Overseas Transport Service, or the N. O. T. S. Eventually, nearly every merchant vessel under the American flag was regularly commissioned in the Navy with officers and crew of the Regular Volunteer Navy, but the N. O. T. S. did not really get going until January 1, 1918.

When the armistice was signed, on November 11, 1918, the N. O. T. S. fleet consisted of 347 ships in actual operation and 106 other ships ready to be turned over to the Navy as soon as crews could be provided and the ships fitted out. This made a total of 453 ships credited to the N. O. T. S. Of the 31,186 officers and 99,696 men in the United States Navy on November 11, 1918,, 45 per cent was absorbed in shore activities at naval stations, naval bases, training stations, aviation camps, etc. Those at sea abroad the 40 battleships, 9 armored cruisers, 23 first, second, third class cruisers, 7 monitors, 95 destroyers, 15 torpedo boats, 13 submarines, 13 tenders to torpedo vessels, 28 gun-boats, 5 regular transports, 5 supply ships, 1 hospital ship, 22 regular fuel, 14 converted yachts, 51 tugs, 37 mine sweepers, 4 special type, 300 submarine chasers, 43 transports for American troops, 147 N. O. T. S. carrying supplies, or a total of 1,441 regular commissioned naval vessels manned and operated by the Navy, not including yard craft and the various tenders to all the naval stations and naval bases on shore. On the cessation of hostilities there were approximately 81,000 officers and men serving in Europe. This represented only about 15 per cent of the total naval personnel. This has to do with the question of what the United States had to do on the outbreak of war, and that was to intensify the additional men needed. This was done also by the patrol on the coast under command of Rear Admiral H. B. Wilson, who had relieved the British patrol. At the time we entered the war the British were using a patrol system of patrolling various areas distinguished from the convoy system, and the placing of guards on board was then understood to be the best policy for the protection of single ships in conjunction with the use of convoys.

It has been frequently stated before this committee that keeping patrol squadrons on our coast in the first few months of the war was justifiable. As indicated, they were originally assigned to this duty at the request of Vice Admiral Browning. In the early part of the war the forces were undergoing thorough organization, and assisting in training additional men, and when the call came for ships to inaugurate a convoy system, these ships were sent to escort convoys to France and the Mediterranean. This may not have been the best arrangement, possibly, but the ships were better fitted and organized for their peculiar services by the delay. The first of Admiral Wilson's ships arrived in Brest on July 3, 1917, and the first of

Admiral Wilson's ships arrived in Gibraltar on August 6, 1917, which was four months after war was declared.

In discussing the convoy system it is necessary to understand the difference between the "convoy" and the "escort." The "convoy" means the group of merchant ships or troop ships which are sent together in formation, while the "escort" means the men-of-war which, due to their armament and speed, are able to form a screen around the convoy to protect it from attack by raiders or submarines.

Before we entered the war and up to the time the convoy system got in working order, the Allied losses in merchant tonnage were as follows:

| Year. | Ships. | Tonnage. |
|------------|--------|----------|
| 1914..... | 67 | 1,310 |
| 1915..... | 685 | 2,377 |
| 1916..... | 1,310 | 4,434 |
| 1917..... | 2,377 | 8,310 |
| Total..... | 4,434 | 8,310 |

By the adoption of the convoy system it was expected:

(a) That a relatively small number of escort vessels could protect more ships if they were in convoy than in any other way.

(b) That ships in convoy could not be visited and sunk by bombers as were single ships.

(c) That ships in convoy would not be attacked by gunfire from submarines.

(d) That convoys, being few in number, would be difficult to find and consequently fewer attacks could be made by torpedo.

(e) That in the danger zones near ports where submarines were to lay for convoys the escort by antisubmarine craft could be made strong as to make the risk to submarines very hazardous.

The escort of cargo convoys to and from the United States and from the United Kingdom and the Mediterranean consisted usually of only one man-of-war, whose principal function was to regulate the radio communication and prevent the ships from straggling. It would have been futile to have regarded the escort as able to keep off a raider except where battleships were used. The great advantage of the convoy was that the ships arrived in the danger zone collectively and at a definite time, where an adequate danger zone escort could be assembled, which was fitted with depth charges and was in such numbers as to make the chances of a submarine extremely small if it attempted to attack the convoy. The point to wish to emphasize and elaborate is that with the slow-moving cargo ships the virtue of the convoy system was entirely dependent upon the efficiency of the danger zone escort at one of the terminal points and not in the accompanying vessels during the voyage. This remark must be qualified when we speak of the Mediterranean, because the entire Mediterranean was a danger zone, and therefore the escort had to be as heavy as there were ships available to assign to this duty, generally only two-thirds of what was required.

It has been repeatedly emphasized that the size of our Army in Europe and the time of its arrival there depended on merchant tonnage, not only for the transport of troops, but for the transport

supplies. The ratio of troop tonnage to cargo tonnage was 15 to 85; therefore the vastly larger number of ships required for supplies emphasizes that the protection of cargo ships was really the vital question.

From July, 1917, to November, 1918, inclusive, our Army in 628 ships of various types sent 5,706,551 tons of cargo to France and England in the service of supply to the American Expeditionary Forces. I mean, that is War Department. It has nothing to do with the Navy Department. That is the Army on its own ships, which we had nothing to do with, ships of various types, sent 5,706,551 tons. A great deal of this cargo was carried in Army transports, but it remains for the historical section to develop the actual statistics as to how much of this cargo—this is Army cargo—actually came across in convoys, but only part of it did.

Admiral Sims states that our failure to send all of our antisubmarine vessels to the war zone immediately on the outbreak of war resulted in prolonging the war four months. A study of the vast problem of protecting the cargo ships of the Allies will show that the number of protecting vessels which we might have sent, and did not send, to Europe at once was so small that the results could not have been materially different. In a statement made in London in 1918 Admiral Sims stated that we had only 3 per cent of the antisubmarine forces in Europe that the Allies had.

I want to say that that figure of 3 per cent applies to the early part of the war. Afterwards the statistics were shown to be 6 per cent, finally; but this is the figure for the period we are discussing.

It is difficult to figure that with a maximum of only 3 per cent we could have shortened the war so greatly as four months; moreover, the small increase in the number of escorting vessels which we sent over between July and October could not have resulted materially in increasing the amount of protection furnished the cargo-ship convoys, since it is here pointed out that the protection in the way of escort to the cargo ships was of the very scantiest character. It has been repeatedly stated that the size of our army in Europe depended as much upon the amount of cargo we could transport as upon the number of men we could furnish, and I do not think in discussing the convoy system we realize how little protection was given the cargo ship as compared with that lavished upon the troop convoys, whereby no troop transports were sunk, whereas the loss of cargo ships was very considerable, as will be shown.

Admiral Sims himself testified that nobody had had any previous experience in the form of submarine warfare which the Germans sprung, and "if we could have imagined it we would have prepared for it and built destroyers galore, if we could have persuaded Congress to give us the money." Certainly the patrol squadrons, made up as they were, of the older gunboats, Coast Guard vessels and yachts, were a poor substitute for destroyers as escorts, but this brings out one vital point in the discussion which has come before this committee as to the convoy system in general.

I think we are apt to exaggerate the effect of the convoy system in lessening the number of sinkings, because I think we should take into consideration, as Admiral Mayo also points out, the employment of new and offensive measures through the use of depth charges, mystery ships, airships, kite balloons, the laying of mine barrages,

the firing of torpedoes from allied submarines, combined with the use of organized patrols fitted with listening devices and hunting the submarine systematically.

At the outbreak of war, in August, 1914, Germany had only 28 submarines, but she built 340 additional ones during the war. As there were about 200 of these submarines put out of action during the war, it transpires that there were 168 submarines available for service at the time the armistice was signed. The average stay at sea of a submarine was about 27 days for the U-boats and 20 days, or less, for smaller types, of which one-third of its time was spent in going, one-third in operating, and one-third in returning to its base, and the trip generally resulted in the sinking of from 6,000 to 10,000 tons of shipping. It is estimated that each enemy submarine averaged about 40,000 tons of shipping sunk before it itself succumbed to attack. The sinking of submarines was, however, not attributable to any one method employed against them, but was the result in pretty equal proportions of the various means employed against them.

But before dismissing the question of the convoy system, it is well to consider the question of the armed guard ships.

Our allies allotted only one gun to each merchant ship with only a trained gun pointer and sight setter, relying on the rest of the ship to furnish the rest of the gun crew, but from the start we furnished two guns to our merchant ships and full crews, amounting to some 20 or more men, together with radio operators and signalmen in addition. The commander of this armed guard on each ship was either a chief petty officer of great experience or a regular commissioned officer of the Navy.

There were 384 cargo ships of the American merchant marine during the war which had armed guards furnished from the enlisted personnel of the United States Navy to man the two guns with which each ship was fitted. Of these ships 2 were sunk by the gunfire of enemy submarines, 1 was sunk by bombs placed on board, and 33 were sunk by enemy torpedoes. I do not think that from this data we are justified in saying that it was futile to arm ships, because statistics show they drove off 113 submarine attacks by gunfire. That is a rather strong statement. I do not know that they actually drove them off. They had encounters in which they used their guns, and they escaped. Of course the chances for such ships to use their guns when sailing in convoy were not good, and it was of more importance for the ships which went singly. One very important phase of the discussion of the convoy system which has been entirely overlooked is that during the entire war only one escorted convoy crossed from the United States to Gibraltar, and this was the one escorted by the U. S. S. *New Orleans*. This convoy was dispersed by heavy weather, and was not regarded as entirely successful, because the ships came into Gibraltar subsequently singly. All the rest of the million tons of shipping which crossed from the United States to Gibraltar went across as single ships, going "on their own" as it were. These ships depended on their armed guard gun crews, and were independent of the convoy system. They actually encountered submarines, but they relied on their guns for protection.

As practically all of the ships came across the Atlantic to Gibraltar unescorted, I sent the following cablegram on May 24, 1918, to the several authorities concerned:

Strongly recommend American merchant ships carrying armed guards and sailing from United States for Italy be fitted with a few depth charges prior to sailing. Such ships capable of acting as escorts to slower convoys. Am representing to Malta with cooperation of Admiral Grant and Italian liaison officer here undesirability sending such ships in slow convoys in Mediterranean where value of their speed is lost through zigzagging. Sinking of *Tyler* good illustration. Malta fixes speed at 13 knots or sailing independently. My opinion ships which can make 11 knots much safer independently than with slow convoys unless utilized as escorts and allowed to zigzag.

This recommendation of mine was not approved, but Vice Admiral Halthrop at Malta cabled as follows:

United States vessels over 11 knots speed, when well armed, may be sailed independently without escort between Gibraltar and Genoa and Marseille.

This was in accordance with the wishes of American merchant captains who preferred to take chances zigzagging as single vessels rather than joining the slow convoys, the theory being that the longer time they were at sea the more danger they were in.

The convoy system required that ships be assembled and dispatched from some definite port. The four great Atlantic ports were Hampton Roads, New York, Halifax, and Cape Sydney (Cape Breton). Every 8 or 16 days a great convoy was dispatched from these ports, escorted across the Atlantic by a battleship or cruiser to protect it from an enemy raider, to be met on the European side by a danger zone escort of destroyers to fetch it into port. Ships bound for the Mediterranean were, however, dispatched singly to Gibraltar, also ships from the Cape of Good Hope, Montevideo, Buenos Aires, Bahia, and Rio de Janeiro were assembled singly at Terra Leone or Dakar and dispatched to Gibraltar. When by the Admiralty order of July 22, 1917, the convoy system was applied to the Mediterranean, Gibraltar became the principal convoy port of the world, with about one-quarter of all the allied tonnage touching there to be formed up into convoys in every direction. Before this date nearly every available ship had been pretty well utilized in escorting convoys to Northern Europe, it was a great task to scare up enough escort ships to send to Gibraltar.

The date of the inauguration in the Mediterranean is when the British admiral, on July 22, 1917, telegraphed to Gibraltar to commence collecting British and allied cargo ships with speed of between 10 and 11 knots bound for ports in the United Kingdom with view to forming them into convoys, and on the 27th of July, 1917, the first regular convoy consisting of 14 ships with an ocean escort sailed from Gibraltar for the east coast of England, and thereafter these convoys sailed every four days from Gibraltar for ports on the east and west coasts of England alternately, and sailed from England for Gibraltar at regular periods from Falmouth and Milfordhaven. As previously stated, the first American man-of-war for escort duty arrived in Gibraltar on August 6. As fast as our ships arrived they were assigned to duty with allied vessels as escorts to convoys and as danger-zone escorts. The American ships differed from other nationalities based at Gibraltar in that other nationalities were employed almost exclu-

took also practically all escort work in the Atlantic between Gibraltar and the United Kingdom. For instance, of the ships which sailed between Gibraltar and the United Kingdom during the entire war, 200 of them, or almost 90 per cent, totalling and representing 12,000,000 gross tons, were escorted solely by American escort ships from our forces based on Gibraltar. This point is important because it made my headquarters rather than Malta. There was a further reason for choosing Gibraltar because of the enormous number of unescorted merchant ships which arrived singly in Gibraltar from the United States.

This has to do with the importance also of each ship having an armed guard on board, as this whole traffic was independent of the convoy system. The total number of ships convoyed in the Mediterranean traffic by American forces amounted to about 100,000 tons bound for Mediterranean and Far Eastern ports, such as the American Army through Marseilles, French forces in North Africa, allied forces at Salonika, British forces in Egypt and Palestine, and the entire supply of Italy. According to tentative figures from the historical section our cruisers and warships based on the United States escorted only 82 convoys other than troop convoys in the Atlantic during the entire war. The participation of the United States Navy in the convoy system seems historically to have begun about one month later than when that of the Allies began. This was important in its bearing on the charge that the delay of the United States Navy in sending ships across prolonged the war.

It has been officially stated in a publication compiled in the commander's office in London that:

In general transports were assigned a destroyer escort, which was as strong as the escort assigned to cargo vessels.

In some cases of particularly valuable transports, the escort was twice as strong as the escort assigned to cargo vessels.

As only 15 per cent of the vessels in Atlantic convoys carried troops, it was desirable, so far as practicable, to route troop transports in special lanes. As cargo convoys did not pass. This greatly increased the safety of troop transports, as it practically forced submarines to concentrate their efforts in the attack on cargo vessels (comprising 85 per cent of the shipping) passed.

If a German submarine took station in a troop-transport lane and remained for weeks without sighting a troop convoy. This failure to find troop lanes forced the submarine into cargo lanes and so gave a lesson to the protection of troop convoys. If the submarines had known the positions of the troop lanes and had concentrated on them, they would have found a regular number of ships, all of high speed, hence difficult to attack. Furthermore, they have encountered a destroyer escort three times as strong as the escort assigned to cargo vessels.

Having taken the foregoing steps for the protection of troops, it is certain that submarines would be forced to confine their attacks to cargo vessels, and this was borne out by the experience of the war.

This statement really shows more the advantages of the convoy system, because with the high speed of the destroyers and of the destroyer escorts the speed element was also present. Unquestionably the cargo ships bore more the brunt of the submarine attacks than the troop ships. In the four years of war the British merchant fleet had much more experience in submarine attacks than the United States. In the four years of war the British merchant fleet had 14,000 merchant ships of 7,819,240 gross tons and had 14,000 on the roll of honor.

I would like to add there also that they had 1,518 on the roll of honor.

It is very difficult to give accurate figures for the losses of American merchant ships during the war, because of the transition stage from unarmed merchant ships to armed guard ships and then to N. O. T. S. vessels. Roughly speaking, prior to our entry into the war we lost ships of 67,815 gross tons. After we entered the war we lost 125 merchant vessels of 225,865 gross tons. In addition to these, there were lost 13 N. O. T. S. cargo ships of 67,020 gross tons, thus making total of 159 ships of 360,700 gross tons.

Admiral Sims cabled the Navy Department on June 22, 1917, saying:

As previously reported, convoys are in successful operation from the Mediterranean to Hampton Roads.

I merely wish to point out historically that while it is true that on June 10, 1917, the first experimental convoy was dispatched from New York to England, the next convoy, which was the first regular, was not dispatched until June 27. His cablegram of the previous day, June 21, 1917, is a lucid explanation of the situation. He says that "the convoy system is merely a plan that obliges a submarine to fight antisubmarine craft in order to attack merchantmen." This is, however, an important point of view which is apt to be overlooked, and that is, with the slow-moving cargo ships in convoy with escorts made up of yachts, gunboats, and a heterogeneous group of vessels, the escort was powerless to prevent the sinking of at least one cargo ship, and what they could hope for was that if the submarine showed its presence by torpedoing the ship, the most the escorts could do was to drop depth charges and keep the submarine down and therefore from sinking a second ship. No cargo ship that could make 11 knots was put in convoy for this reason, and she was considered much safer, even in the Mediterranean, by going on her own and zigzagging, and, moreover, much of the success of the escorting of cargo vessels in the Mediterranean was due to the absence of submarine activity, due to the measures taken to limit their activity.

It was not until the introduction of the new measures that it was possible to introduce finally, in the share of enumerated activities of the Navy in the war, the question of the Naval Overseas Transport Service, which was really not established until January 1, 1918, after which Admiral Sims has discussed, because I think it has bearing on how hard the Navy was pushed in other directions by the demands made upon it by Admiral Sims.

The N. O. T. S. service, as it was called, was assigned 73 vessels and was established, to be regularly operated with complete crews of officers of the reserve force and enlisted men of the Regular Navy and the reserve force. Of the original number, 16 were for transport stores for the American Expeditionary Force, 12 for Navy account for transporting supplies to the naval forces operating in European waters, and 5 were named to be put in commission as soon as practicable. Before the armistice was signed, 16 ships had been assigned to the Army account as cargo vessels, and the Navy to carry supplies to the Army overseas. Every merchantman that the American vessels which carried troops to Europe was manned by the Navy, but few knew there were so many merchant ships carrying cargoes, also manned by the Navy. It was when a merchant ship, having an armed guard, was taken over by the Regular Navy to include the armed guard in the complement

took also practically all escort work in the Atlantic between Gibraltar and the United Kingdom. For instance, of the 225 convoys which sailed between Gibraltar and the United Kingdom during the entire war, 200 of them, or almost 90 per cent, totalling 4,269 ships and representing 12,000,000 gross tons, were escorted both ways solely by American escort ships from our forces based on Gibraltar. This point is important because it made my headquarters Gibraltar rather than Malta. There was a further reason for my being at Gibraltar because of the enormous number of unescorted American merchant ships which arrived singly in Gibraltar from the United States.

This has to do with the importance also of each ship having an armed guard on board, as this whole traffic was independent of the convoy system. The total number of ships convoyed in local Mediterranean traffic by American forces amounted to about 4,245 ships bound for Mediterranean and Far Eastern ports, supplying the American Army through Marseilles, French forces in North Africa, allied forces at Salonika, British forces in Egypt and Palestine, and the entire supply of Italy. According to tentative figures in the historical section our cruisers and warships based on the United States escorted only 82 convoys other than troop convoys across the Atlantic during the entire war. The participation of the United States Navy in the convoy system seems historically to have begun about one month later than when that of the Allies began. This is important in its bearing on the charge that the delay of the United States Navy in sending ships across prolonged the war four months.

It has been officially stated in a publication compiled in the former commander's office in London that:

In general transports were assigned a destroyer escort, which was about three times as strong as the escort assigned to cargo vessels.

In some cases of particularly valuable transports, the escort was ten times as strong as the escort assigned to cargo vessels.

As only 15 per cent of the vessels in Atlantic convoys carried troops, it became desirable, so far as practicable, to route troop transports in special lanes through which cargo convoys did not pass. This greatly increased the safety of troop transports and it practically forced submarines to concentrate their efforts in the areas through which cargo vessels (comprising 85 per cent of the shipping) passed.

If a German submarine took station in a troop-transport lane he might have remained for weeks without sighting a troop convoy. This failure to find shipping in troop lanes forced the submarine into cargo lanes and so gave a large measure of protection to troop convoys. If the submarines had known the positions of these lanes and had concentrated on them, they would have found a relatively small number of ships, all of high speed, hence difficult to attack. Furthermore, they would have encountered a destroyer escort three times as strong as the escort protecting cargo vessels.

Having taken the foregoing steps for the protection of troops, it was practically certain that submarines would be forced to confine their attacks almost exclusively to cargo vessels, and this was borne out by the experience of the war.

This statement really shows more the advantages of escorting troops than of the convoy system, because with the high speed of the transports and of the destroyers the speed element was also a great factor. Unquestionably the cargo ships bore more the brunt of the war and had much more experience in submarine attacks than any man-of-war did. In the four years of war the British merchant marine lost 3,141 merchant ships of 7,819,240 gross tons and had 14,000 men killed.

I would like to add there also that they had 1,519 officers and men on the roll of honor.

It is very difficult to give accurate figures for the losses of American merchant ships during the war, because of the transition stage from chartered merchant ships to armed guard ships and then to N. O. T. S. vessels. Roughly speaking, prior to our entry into the war we lost 21 ships of 67,815 gross tons. After we entered the war we lost 125 merchant vessels of 225,865 gross tons. In addition to these, there were lost 13 N. O. T. S. cargo ships of 67,020 gross tons, thus making a total of 159 ships of 360,700 gross tons.

Admiral Sims cabled the Navy Department on June 22, 1917, saying:

As previously reported, convoys are in successful operation from the Mediterranean and Hampton Roads.

I merely wish to point out historically that while it is true that on May 10, 1917, the first experimental convoy was dispatched from Gibraltar to England, the next convoy, which was the first regular one, was not dispatched until June 27. His cablegram of the previous date, June 21, 1917, is a lucid explanation of the situation. He says in it that "the convoy system is merely a plan that obliges a submarine to fight antisubmarine craft in order to attack merchantmen." There is, however, an important point of view which is apt to be overlooked, and that is, with the slow-moving cargo ships in convoy and with escorts made up of yachts, gunboats, and a heterogeneous lot of vessels, the escort was powerless to prevent the sinking of at least one cargo ship, and what they could hope for was that if the submarine showed its presence by torpedoing the ship, the most the escort vessels could do was to drop depth charges and keep the submarine down and therefore from sinking a second ship. No cargo vessel that could make 11 knots was put in convoy for this reason, as it slowed her down, and she was considered much safer, even in the Mediterranean, by going on her own and zigzagging, and, moreover, much of the success of the escorting of cargo vessels in the Mediterranean was due to the absence of submarine activity, due to offensive measures taken to limit their activity.

I want to introduce finally, in the share of enumerated activities of the Navy in the war, the question of the Naval Overseas Transport Service, which was really not established until January 1, 1918, after the period which Admiral Sims has discussed, because I think it has a great bearing on how hard the Navy was pushed in other directions than by the demands made upon it by Admiral Sims.

The N. O. T. S. service, as it was called, was assigned 73 vessels when it was established, to be regularly operated with complete crews of officers of the reserve force and enlisted men of the Regular Navy and the reserve force. Of the original number, 16 were for Army account to transport stores for the American Expeditionary Forces, 52 for Navy account for transporting supplies to the naval forces operating in European waters, and 5 were named to be put in commission as soon as practicable. Before the armistice was signed 213 vessels had been assigned to the Army account as cargo vessels, manned by the Navy to carry supplies to the Army overseas. Everyone knows that the American vessels which carried troops to Europe were manned by the Navy, but few knew there were so many merchant ships carrying cargoes, also manned by the Navy. It was

of the ship, so that the armed-guard character of the special detachment was entirely lost. These considerations are important because of the difficulty in giving statistics for merchant marine ships, armed-guard ships, and N. O. T. S. ships, as they merged from one into the other. At the time of the armistice there were approximately 4,158 officers and 28,047 men on board of N. O. T. S. vessels and 514 officers and 1,128 men of the N. O. T. S. service at shore stations, making a total of 4,672 officers and 29,175 men in the N. O. T. S. service at the close of actual hostilities. Of these, only 12 were regular naval officers, the remainder being reserves, of which four-fifths were commissioned from green material. The latter, however, almost without exception, had been graduated from training camps and obtained a good deal of their first seagoing experience when they joined the ships. Of the enlisted men, however, some 18,000 were regulars and 11,000 were reserves, so this indicates why the dilution was not as great as may have been inferred. The average complement of the N. O. T. S. vessels during the war was 11 officers and 70 men.

Admiral Sims inserted in his testimony as addendum the following telegram from the Navy Department, which he received on July 10, 1917:

The following letter from the Secretary to the Secretary of State is quoted for your information and guidance as an index of the policy of the department in relation to cooperation of our naval forces with those of our allies. "After careful consideration of the present naval situation taken in connection with possible future situation which might arise, the Navy Department is prepared to announce as its policy, in so far as it relates to the Allies: First, the most hearty cooperation with the Allies to meet the present submarine situation in European or other waters compatible with an adequate defense of our own home waters; second, the most hearty cooperation with the Allies to meet any future situation arising during the present war; third, the realization that while a successful termination of the present war must always be the first allied aim and will probably result in diminished tension throughout the world, the future position of the United States must in no wise be jeopardized by any disintegration of our main fighting fleet; fourth, the conception that the present main military rôle of the United States naval force lies in its safeguarding the line of communications of the Allies. In pursuing this aim there will be, generally speaking, two classes of vessels engaged—minor craft and major craft—and two rôles of action, first offensive, second defensive; fifth, in pursuing the rôle set forth in paragraph four, the department can not too strongly insist that in its opinion the offensive must always be the dominant note in any general plans of strategy prepared. But as the primary rôle in all offensive preparations must perforce belong to the allied powers, the Navy Department announces as its policy that in general it is willing to accept any joint plan of action of the Allies deemed necessary to meet immediate need; sixth, pursuant to the above general policy the Navy Department announces as its general plan of action the following: One, its willingness to send its minor fighting forces, composed of destroyers, cruisers, submarine chasers, auxiliaires in any number not incompatible with home needs, and to any field of action deemed expedient by the joint allied admiralities which would not involve a violation of our present State policy; two, its unwillingness, as a matter of policy, to separate any division from the main fleet for service abroad, although it is willing to send the entire battleship fleet abroad to act as a united but cooperating unit when after joint consultations of all admiralities concerned the emergency is deemed to warrant it and the extra tension imposed upon the line of communications due to the increase of fighting ships in European waters will stand the strain imposed upon it; three, its willingness to discuss more fully plans for joint operations."

In commenting on this Admiral Sims says:

I wish here merely to state that the policy, as herein stated, is only to be judged by actual results in carrying it out, and they speak for themselves. I particularly wish to stress the point that this first definite statement of policy was received on July 10, a few days over three months after we had declared war, as stated in my original letter of January 7. The astounding features of this policy, however, were that, while it stated our intention to cooperate to the fullest degree, still such cooperation was con-

ditioned upon, first, an adequate defense of own waters, and second, the future position of the United States after this war was finished. I am wholly unable to conceive of any war policy, particularly in a world war of this nature, which was certain to exhaust all participants, with the possible exception of ourselves, being based upon the requirements of any possible future war.

I wish to say that in my opinion history will demonstrate and has demonstrated that this policy, as above outlined, actually resulted in what we all know to have been the successful termination of the war, with the United States retaining a commanding position, which it now does, and when Admiral Sims says that the war was certain to exhaust all participants, with the possible exception of ourselves, he leaves out of consideration a number of the Allies and other associated powers who were not exhausted by the war, namely, Cuba, Brazil, China, and Japan.

Admiral Sims, in his testimony, says:

I am convinced that our failure to give adequate support with the means at our disposal during these first six months unnecessarily jeopardized the whole war. In my opinion it resulted in lengthening the war by several months through the increased losses in merchant shipping that resulted therefrom. I believe that this failure, combined with the equally grave one of neglecting to prepare adequately during the few months previous and the few months subsequent to our declaration of war probably postponed victory four months.

This, in my opinion, is the contention for which Admiral Sims's whole testimony stands. Historically, however, it is manifestly impossible in the few months preceding the outbreak of any war to prepare on a large scale for war without precipitating the war, which is the great argument in favor of preparedness. Whether in the few months subsequent to the war adequate steps were not taken by the Navy Department is a matter for careful and painstaking inquiry, and the testimony I have given is merely data which shows the wonderful way the naval personnel responded to its responsibilities once that war was declared. The elements which entered into the collapse of the German offensive were so numerous, so varied, and so incapable of sweeping generalizations that it is impossible, historically, to accept Admiral Sims's offhand statement.

Mr. HOOVER stated in his testimony:

The length of the war is one of the most complex questions that one can go into, as it embraces the question of land operations and the collapse in Germany of hundreds of factors that may have had something to do with bringing the war to its end and which broke down the morale of the German army, etc.

This indicates that the question is a complex one.

It is believed that a possible valuable result of the investigation now being conducted by this committee may be the development of means for accurately fixing responsibility for preparation for war, such as the present personnel situation, which is admittedly much worse than it was prior to our entry into the war.

This can be accomplished by the enactment of legislation which will make the Chief of Naval Operations responsible for making to the Secretary of the Navy such recommendations regarding building program, personnel, material afloat and ashore, and plans for national defense as will maintain the Navy in an adequate condition of preparedness to meet any probable enemy; and which will also make the Chief of Naval Operations responsible for the execution during peace and war of all plans that have been approved by the Secretary of the Navy.

The CHAIRMAN. But their personnel was not such that they were in battle condition at the outbreak of the war?

Admiral NIBLACK. They were not intended to be, because they were equipped solely for the purpose of training engineers. They had been maintained in condition to be used to their maximum capacity in case of battle.

The CHAIRMAN. But at the outbreak of the war they were not in actual condition for battle service, were they?

Admiral NIBLACK. They were not equipped with modern fire-control or director firing, or many of the other adjuncts of modern battleship equipment; but they were meant to do their very level best for what they were worth, which was very slight.

The CHAIRMAN. They did not have the personnel to go into battle, did they?

Admiral NIBLACK. They did not; and in my statement I stated that it was necessary to train a great many men originally to put in commission some of the ships that were in reserve.

The CHAIRMAN. The first duty of those ships was to be in condition, as I remember one of the witnesses stated, as a fighting force, and second as a training force?

Admiral NIBLACK. At first it was as a fighting force, when I first joined.

The CHAIRMAN. And later that was changed?

Admiral NIBLACK. Later that was subordinated, taking a reasonable chance that the German Fleet had been knocked out sufficiently in the battle of Jutland not to risk a general fleet encounter, that we were justified in using the ships for the important problem with which the Navy was face, which was to expand ten times.

The CHAIRMAN. But they were to be used in a secondary way as a fighting force?

Admiral NIBLACK. They were, because they were kept always having target practice for that purpose. They had limited deck force, and merely enough men to man the guns, because they were loaded up with engineer force for training. We went to sea constantly with the fleet and went on with our training just the same, with the engineers. We went through all the motions.

The CHAIRMAN. You have no special knowledge about the fighting force of force number two?

Admiral NIBLACK. They were engaged in training men, I guess; and all of us were engaged in training radio men and signal men for the armed guard ships. I wish to state that the problem that the fleet encountered on the jump was armed guards for merchant ships, and that problem was dumped right onto the fleet. I got the engineer part of it only. I did not have to train men except for radio. I had radio schools on board all the ships I commanded.

The CHAIRMAN. That was even prior to the war, was it not? I am talking about the taking away of men from the ships of the Navy for the armed guards. That was done before the war?

Admiral NIBLACK. That was done before the war. It was begun before the outbreak of war.

The CHAIRMAN. I think Admiral Mayo testified that it was begun at that time.

Admiral NIBLACK. It was done while the ships were still in Guantanamo.

The CHAIRMAN. Please let me finish my question, for the record.

Admiral NIBLACK. Yes.

The CHAIRMAN. Admiral Mayo has stated, I believe, that before the outbreak of the war the personnel on his ships was being diminished in order to put armed guards on merchant ships.

Admiral NIBLACK. While the fleet was still at Guantanamo men and officers were sent north from the fleet to compose the armed guards of important, fast merchant ships like the *St. Paul* and the *St. Louis* and various other American ships.

The CHAIRMAN. About what date?

Admiral NIBLACK. February. I was cognizant of it as being a member of the general board.

The CHAIRMAN. That is February, 1917?

Admiral NIBLACK. February, 1917.

The CHAIRMAN. In your testimony, Admiral, you state that on February 4, 1917, the General Board had submitted to the Chief of Naval Operations a special war plan entitled "Steps to be taken to meet a possible condition of war with the central European powers"

Can you tell me what became of that war plan?

Admiral NIBLACK. Whether this paper is on file or not in the department, I am unable to state.

The CHAIRMAN. Have you a copy of that plan with you?

Admiral NIBLACK. I have not. I have no copy, but I presume the general board has.

The CHAIRMAN. Can you get it?

Admiral NIBLACK. I will see if it is available; yes.

The CHAIRMAN. And will you give it to the committee? I would like to put it in the record.

Admiral NIBLACK. Admiral Badger will come before the committee, and he can answer that question specifically. It was February 4.

The CHAIRMAN. If possible, I would like to get a copy of that report. I would like to see it, myself, before Admiral Badger comes before us.

Admiral NIBLACK. Yes, sir.

The CHAIRMAN. So that if you can furnish it to the committee so that we can put it into the record, I would like to have it.

Admiral NIBLACK. I will do so.

The CHAIRMAN. Senator Pittman has suggested that it might be a secret report. Will you furnish it to the committee, and then we will take the proper steps about putting it in the record?

Admiral NIBLACK. Yes, sir.

The CHAIRMAN. Can you tell me what became of that report?

Admiral NIBLACK. I do not know, sir.

The CHAIRMAN. What action was taken on it?

Admiral NIBLACK. I do not know, sir.

The CHAIRMAN. Was it a war plan in connection with a war with any specific power?

Admiral NIBLACK. It was suggesting that—it was a general plan of procedure of the department, recommending that we do certain things in view of the outlook. It was at the time of the unrestricted sinkings by submarines, which made it very probable, or possible, that we would be drawn in.

The CHAIRMAN. What was the date of that?

Admiral NIBLACK. February 4, 1917.

The CHAIRMAN. At that time it was perfectly evident that we would be drawn into the war, was it not?

Admiral NIBLACK. It was not, apparently, to a lot of people.

The CHAIRMAN. Was it not to you?

Admiral NIBLACK. I thought so.

The CHAIRMAN. Had you thought so at any time prior to the period after the outbreak of hostilities?

Admiral NIBLACK. I was twice naval attaché in Germany. I was not asleep. I came from there just before the war, so I knew the situation pretty well.

The CHAIRMAN. You were stationed in Germany just before the war?

Admiral NIBLACK. I came back in July, 1913; yes, sir.

The CHAIRMAN. You do not know, then, whether that was used as a general war plan throughout the Navy?

Admiral NIBLACK. This was not, in a sense, a war plan. It was a suggestion as to steps to be taken. A general war plan is a moving target. It is drawn up and then amended from time to time to suit conditions.

The CHAIRMAN. Do you know whether there was any general war plan or not?

Admiral NIBLACK. Oh, yes; I know that well. Certainly there was.

The CHAIRMAN. When was that drawn up?

Admiral NIBLACK. It was drawn up when I was a boy, I think.

The CHAIRMAN. It was drawn up when you were a boy?

Admiral NIBLACK. I think so, sir. I have been familiar with it ever since.

The CHAIRMAN. Were there any changes made in it since you were a boy?

Admiral NIBLACK. I made many in it, myself.

The CHAIRMAN. You mean that was——

Admiral NIBLACK. I mean to say there is nothing new about a war plan.

The CHAIRMAN. That was a general war plan?

Admiral NIBLACK. Ever since we had had a Naval War College we have been studying the art of war, and they have been drawing up plans. We used to make them at the War College and then turn them over to the General Board. Now they are in Operations.

X [I want to call attention to this question. No war plan was worked out much that was drawn up prior to February 4, 1917, because the whole plan was based on fights between battleships. Battleships are the backbone of the Navy, and we had always gone in for strong battleships, battleships whether we got anything else or not. Our battleships were not given great speed, but they were given heavy armament and great gun power in order to have to run away from anything, but so that they could go where they wished and everything else would have to move off unless they wanted to get in trouble. The general idea had been, battleships that everybody would be afraid of. All of our plans were based on battleships, and when the unrestricted sinkings, which nobody dreamed of, took place, I point out in my testimony that a complete change in everybody's ideas took place. We saw then that we had to man the ships with armed guards, to provide escorts for convoys; that we had to put our own crews and officers on board transports in order not

to trust to merchant captains to go into convoys; because they had no training. The problem as it faced us on February 4 is n by the fact that the General Board says such measures were to ken, because the whole aspect of the war was completely changed. ie Allies themselves were not prepared for war, with all the war had been in, on February 4, 1917. They could not be prepared use unrestricted sinking was unheard of. Nobody dreamed that e would be unrestricted sinking. It bouleversed the whole d. Nobody knew what to do, exactly.

he CHAIRMAN. Then this special war plan you speak of, submitted February 4, 1917, did not cover that sinking of ships?

Admiral NIBLACK. I never said that it was a war plan. I said it entitled "Steps to be taken to meet a possible war with the tral European Powers." I did not say it was a war plan.

he CHAIRMAN. Your testimony calls it a special war plan.

Admiral NIBLACK. Where do I say that?

he CHAIRMAN. Look on line 1.

Admiral NIBLACK. It says "Steps to be taken."

he CHAIRMAN. There is the language used, "Special war plan." as using your own language, Admiral.

Admiral NIBLACK. That was to meet a special phase of it; the uation on February 4. It was not a war plan. I mean to say that had a war plan, but that was not our war plan. Our war plan was battleships.

The CHAIRMAN. By February 4 did they know about the conditions that they could submit a special plan for them?

Admiral NIBLACK. By February 4 we knew about the unrestricted sinkings. We knew there was something else, and we had been getting ready for it.

The CHAIRMAN. This covered the unrestricted sinkings?

Admiral NIBLACK. Yes; it was as to steps to be taken.

The CHAIRMAN. Then it was a war plan for that particular purpose?

Admiral NIBLACK. Steps to be taken to meet the situation, because fter all a war plan, Mr. Chairman, is a general scheme which is accompanied by all the information necessary to change the plan if ou have to; because it is all based on information.

The CHAIRMAN. At all times in getting up a general, war plant you could want to take all the things you had before and add to them?

Admiral NIBLACK. Chapter 1, section 1, page 1, paragraph 1, of the Naval Regulations, says that the Office of Naval Intelligence "shall urnish intelligence on all the operations of any body or organization. That is all based on information.

The CHAIRMAN. So that on February 4 when you put in this special plan it was to be added to the plan that you already had before, and the two together made up the war plan that you had at that time?

Admiral NIBLACK. It made up for the change in situation due to the unrestricted sinkings.

The CHAIRMAN. Yes; but I say that with what you had before, that made up a war plan that we had in the department then?

Admiral NIBLACK. Yes, certainly; because a war plan is a plan to meet any situation at a given time. It varies from day to day; it varies from time to time. A war plan is not a canned object, or something that is finished. It is a product that goes on from day to day, based on information, and it is subject to change.

The CHAIRMAN. Prior to February 4, 1917, and between August, 1914, and February, 1917, had the war plan, or the plan that was on hand in the department, been changed in any respect?

Admiral NIBLACK. You see, I would not possibly know that, because it is secret, in the first place, and all done there, and I had no reason to seek to modify it, because I was not in a position to do so.

I would like to make one explanation, if you please, about the difference between troop transports and cargo transports, because it is very vital that speed was the great protection to the troop transports; the speed of the destroyers and the speed of the transports themselves. No ship was allowed to be a transport that could not make 15 knots. A submarine could not see an approaching convoy far enough off to get into position and stay there with these fast ships zig-zagging, because it was too perilous, and the speed itself was the protection to the convoy, and the zig-zagging was a protection because the submarine could not have the nerve to put itself close enough to a zig-zagging boat like that, going at high speed, and run the risk of being run down; to a certain extent it had that element of speed in it. And, further than that, the speed of an escorting ship was a fearful thing to a submarine, because these escorting ships were very fast, and they carried depth charges, and they could reach the spot where the submarine was and drop depth charges on it before it could reach a safe distance in submerging.

The cargo ships were slower and their escorts were slow ships anyway, because those escorts were maintained by danger zone escorts, bringing the ships into port, which was the main thing; and if cargo ships were attacked, the most those escorting ships could do would be to move over as fast as they could in the general direction of where the submarine was, and drop depth charges. In my opinion the depth charges had more to do with upsetting the morale of the German submarines than anything else.

The CHAIRMAN. I want to ask you one or two more questions about the war plans. Do you recall any other special plans submitted by the General Board excepting the recommendations that appeared in your testimony on page 8?

Admiral NIBLACK. There were three. I do not recall them, but Admiral Badger, who is coming before this committee, as I understand, knows about, in a general way, for any number of years back, all of the recommendations of the General Board.

The CHAIRMAN. Do you recall what was done with the "Report on assistance the United States can give the Allies upon the declaration of war"?

Admiral NIBLACK. I do not recollect that paper thoroughly. I left on the 7th of April, and I did my best to render assistance.

The CHAIRMAN. Can you give the committee a copy of that report on assistance the United States can give the Allies upon the declaration of war?

Admiral NIBLACK. I will see what I can do, sir.

The CHAIRMAN. As I understand it, the General Board makes its plans and makes its reports to the Chief of Naval Operations?

Admiral NIBLACK. It does.

The CHAIRMAN. And he, in turn, makes a report to the Secretary of the Navy.

Admiral NIBLACK. And the Secretary himself may ask directly for a report. The Naval General Board is advisory in its functions, and

even can, at the request of any bureau, investigate questions and make report.

The CHAIRMAN. May the Chief of Naval Operations suppress the report, if he sees fit?

Admiral NIBLICK. The Chief of Naval Operations is himself, ex officio, a member of the General Board, and attends meetings frequently. I suppose anybody could do anything in that line, if they were so inclined. It is rather a dangerous proposition, but I suppose it could be done.

The CHAIRMAN. What I wanted to know was, in the general organization of the Navy would it be advisable for the Board to report to the Secretary of the Navy instead of reporting through the Chief of Naval Operations, who might be voted down by a majority of the Board in making the report?

Admiral NIBLACK. Do you mean to amend the law?

The CHAIRMAN. To have the law amended, yes. I do not know that it would. I simply wanted your opinion about it.

Admiral NIBLACK. I think that under the law now the Chief of Naval Operations is charged with certain duties, with which the law charges the General Board in a certain sense, and in that way the General Board is now an adjunct of Operations more than it was previously; but to what extent the recommendations of the General Board are heeded by the administration or by Congress depends very largely on how well it suits their policy of the moment. It does not alter the General Board's duty in the matter.

The CHAIRMAN. In your testimony you suggest that legislation might be an advantage which would make the Chief of Naval Operations responsible for making to the Secretary of the Navy such recommendations regarding building program, personnel, material afloat and ashore, and plans for national defense, as will maintain the Navy in an adequate condition of preparedness to meet any probable enemy, and which will also make the Chief of Naval Operations responsible for the execution during peace and war of all plans that have been approved by the Secretary of the Navy.

Admiral NIBLACK. You see, the law says that the General Board has certain responsibilities in preparing these plans, and the Chief of Naval Operations should be responsible—should share the responsibility. Specifically what I mean is that the administration may have a program based upon expediency, upon the financial outlook, or upon the next election, or whatever you choose. That does not alter the duty of the General Board to prepare a plan. If Congress is willing to accept its share of the responsibility for turning down the General Board, there ought to be on record what the General Board recommends, and that is through the Chief of Naval Operations in this case, in addition to what there is in writing from the Secretary of the Navy, concerning the administration's plans. I think many of the recommendations of the General Board are impracticable, because we have not got the money, or it does not suit the book, etc. But that does not alter the duty of the General Board. The Navy Department does work all right and has worked all right. The bureau system is a splendid system, and has stood the test of war. The bureaus provided us with everything that we asked for, more or less, and I think that the bureau system is sound in every way. Personally, I never wanted to see it particularly modified except to be

materially controlled in the recommendations they made, by the central, responsible person, the Chief of Naval Operations.

The CHAIRMAN. But you do think that the General Board and the Chief of Naval Operations should have the responsibility so that they would be entitled to present their views to Congress as well as those of the Secretary of the Navy?

Admiral NIBLACK. I think if Congress would be willing to stand for it; but I do not think that Congress would love that, sir—that thing.

The CHAIRMAN. I am trying to get your ideas.

Admiral NIBLACK. I would like that very much. I think we would like to see that, very much, that when anything is turned down, when any recommendation is turned down, the responsibility is just as clear as daylight.

The CHAIRMAN. But you would think that the Board should report to the Chief of Naval Operations?

Admiral NIBLACK. I think that the Chief of Operations should be the responsible person, and that his recommendations should go hand in hand, in writing, at the same time that the Secretary of the Navy goes, to the Senate Committee and the House Committee on Naval Affairs, so that we would know where the responsibility really rested in the end.

The CHAIRMAN. You stated in your testimony that it is difficult to figure out how Admiral Sims could state that our failure to send all of our anti-submarine vessels to the war zone immediately on the outbreak of war resulted in prolonging the war four months, that with a maximum of only 3 per cent, we could have shortened the war so greatly as four months.

Admiral NIBLACK. Yes, sir; I think that was later on, that it was 5 or 6 or 7 per cent, as testified by Admiral Sims in his testimony.

The CHAIRMAN. Later on it was 6 or 7 per cent?

Admiral NIBLACK. Yes, sir.

The CHAIRMAN. In April, 1917, the submarine sinkings amounted to 800,000 tons, I believe: and when did we first commence to help the submarine situation?

Admiral NIBLACK. Six or eight days after the outbreak of war they started the first division of destroyers across. We had only about 50 destroyers, you must remember, all told.

The CHAIRMAN. They arrived and took part the 1st of May?

Admiral NIBLACK. The 1st of May. But when they first went over it is very important to note that the work they undertook was the patrolling of certain areas. The Allies were committed to the patrol system, of having areas patrolled by ships, which patrol system broke down and the convoy system was adopted: not suddenly, but piecemeal. The great proposition to the convoy system came from the captains of the merchant vessels themselves. They did not feel that they could sail their ships in convoy. Impossible things were done during the war. Our own division of battleships went over and joined the British battleship fleet, the Grand Fleet, and went to sea under conditions that everybody in the British Navy and in our Navy regarded as impossible, to keep the position in thick weather, with the strong currents and with the screens and all; but just as soon as they tried it, it worked. It is pretty hard to say what is impossible.

The CHAIRMAN. Is it not true that shortly after our force went over and assisted in the submarine situation, the submarine situation became less acute?

Admiral NIBLACK. Well, that is what you call a coincidence. It was due to the adoption of the depth charge.

The CHAIRMAN. Do you think it was due altogether to the adoption of the depth charge?

Admiral NIBLACK. I have testified in my testimony that the sinking of submarines can not be laid to any one cause, because some were sunk by kite balloons, or by airships, where they dropped the depth charge in the vicinity of the submarine where its situation was betrayed. Some of them were sunk on the surface at night. No one thing was solely responsible for success. Some were hunted by little motor launches, with listening devices, which dropped depth charges on them. It was everything, the science of war in every direction closing in on the submarine. What the main thing was is immaterial.

The CHAIRMAN. But do you not think that the addition of our forces had a great deal to do with stopping the submarine menace?

Admiral NIBLACK. I certainly do. We brought the best listening devices and the best depth charges, and a number of improvements in regard to the submarine.

The CHAIRMAN. And therefore would you not say that the sooner we could have gotten our forces over, the better?

Admiral NIBLACK. The sooner we could have gotten our forces over the better, provided we decided to send them over; but as you see, in the end, the maximum was only 15 per cent of our personnel.

The CHAIRMAN. But do you not think they did more than that proportion; if they were 3 per cent in practice, do you not think they did more than 3 per cent of the work of checking the submarine menace? That is not my idea of what the Navy did during the war.

Admiral NIBLACK. I certainly do. And, moreover, I call attention to the fact, and in my testimony, that at the very time that Admiral Sims was saying we had only 3 per cent of the antisubmarine forces that were in Europe, 90 per cent of all the shipping that was going between Great Britain and the Mediterranean, which meant the supply of the Far East and everything else, was escorted solely by American ships under my command at Gibraltar. Of course, that is 90 per cent, because you have got to bring the thing down, now, to percentages. But this is that one phase of it. Statistics can be made to prove almost anything, if you work them right.

The CHAIRMAN. And any advantage in sending those forces over, if the plan could be followed out, would have been greater, would it not?

Admiral NIBLACK. I have no doubt. I would have been glad to have gone over much sooner, myself, Mr. Chairman; but that is not the question. The question is absolutely a question of statistics.

The CHAIRMAN. I know, but that is the question I am asking you.

Admiral NIBLACK. The question is one of statistics. I say, and others have said, that that statement of Admiral Sims is indefensible historically. I would be very glad to help my friend Sims out on it, but I can not.

The CHAIRMAN. Other witnesses have testified in a different manner.

Admiral NIBLACK. But they have not given any statistics; they have not given any data.

The CHAIRMAN. But it is simply a question of weighing the evidence.

Admiral NIBLACK. That is all I ask you to do, sir, because I am very glad to get any testimony that helps us out in the historical section. All this testimony means more than \$20,000 in value to the historical section, because we will use it. I am very glad we have taken this method of arriving at the real history of the war. I hope the report of this committee will help us out in the historical section in placing responsibilities.

The CHAIRMAN. I hope that it will. You state in your testimony that during the entire war only one escorted convoy crossed from the United States to Gibraltar, and this was the one escorted by the U. S. S. *New Orleans*.

Admiral NIBLACK. The *New Orleans*.

The CHAIRMAN. Of course a great many convoys were escorted to France, were they not?

Admiral NIBLACK. I said that as far as the Army cargo or supply ships were concerned I could not get the data; but I did say later in my testimony that there were 82 escorted convoys of cargo ships, as far as our records show, from the Mediterranean.

The CHAIRMAN. Of course, the reason there were so few to Gibraltar was that it was so far away from the German base that it would have been harder for them to operate there than farther north.

Admiral NIBLACK. Submarines were operating in the Mediterranean from the Adriatic and from Germany both. The Austrians had a naval submarine base at Pola and also at a port called Cattaro, and the Germans also had a big base at

After the war I went into the Adriatic and I visited those three ports. The activities there were enormous in regard to ships. The Germans shipped submarines down in sections and put them together there.

The CHAIRMAN. Were many of the submarines of the Germans lying in wait around the Straits of Gibraltar?

Admiral NIBLACK. Never.

The CHAIRMAN. Never?

Admiral NIBLACK. They were too afraid. That was the neck of the bottle. The system of the German submarines was to submerge, stop their engines, and come in with the current. The current runs out through the straits on the top and comes in at the bottom, and all that a submarine had to do was to submerge and stop her engines and come in with the current, and the patrol would pass over them listening, but as they were not using their machinery it was rather difficult to hear them; and they never, during the entire war, made an attack on Gibraltar. They were anxious and willing enough to get through without any trouble.

The CHAIRMAN. You state in your testimony:

Historically, however, it is manifestly impossible in the few months preceding the outbreak of any war to prepare on a large scale for war without precipitating the war, which is the great argument in favor of preparedness.

Admiral NIBLACK. I will say further than that, what I have not said before, that prior to the outbreak of this war it was announced policy of the administration. Congress then did not question that we should by word or thought be neutral, and we were cautioned

and we were not permitted to prepare for war openly. What we could do in the general board, and whatever we could do——

The CHAIRMAN. That was up to the time of the declaration of war?

Admiral NIBLACK. Up to the time that war was declared.

The CHAIRMAN. That is, not of the general war, but the time of our going into the war?

Admiral NIBLACK. Yes, up to the time of our going into the war. That is entirely a matter of policy of the Government. That, I understand, was the policy of the Government at the time. I think it would have been very difficult for the Navy to have gotten authority to do things that might have been judged advisable to do; but, on general principles, the argument for preparedness is to be ready, to make the preparation before the war. But I want to explain one thing very definitely, and that is that the Navy is always on a war footing. Its transition from peace to war is very slight.

The CHAIRMAN. But you would say, on account of the fear of precipitating the war, that we were not justified during the time——

Admiral NIBLACK. That war or any war.

The CHAIRMAN (continuing). From 1914 until the declaration of war, in making any open preparation for war?

Admiral NIBLACK. That is generally accepted as a pretty good action. But, in addition to that, we were prevented by the policy of the Government at the time; and now it is the policy of the Government—the avowed policy of the Government.

The CHAIRMAN. And you rather approve of that?

Admiral NIBLACK. I approve of anything that is preparedness for war. I am not involving myself in a discussion as to the policies of this Government, and I am an adviser of the Government in my official capacity, and I can give this committee any information it wants; but I am not prepared to state that we behaved badly before the war, or that we behaved well. I can give you the facts and the committee can judge of the results.

The CHAIRMAN. Then you would not reply “yes” to my question?

Admiral NIBLACK. I would not reply “yes” to your question, and would not reply “no,” because I do not know what the question is aiming at.

The CHAIRMAN. You are not obliged to know what the question is aiming at. You are a witness before this committee.

Admiral NIBLACK. Is the question, “Do I approve of the policy of the Government”?

The CHAIRMAN. Do you approve of the general policy that the Government adopted before the war of not allowing anything to be done to prepare for war, on the ground that it might precipitate war?

Admiral NIBLACK. I do not think it would have made much difference in the declaration of war in this particular case, whether we prepared or not, because I do not think we had very much to say, ourselves, about entering the war.

The CHAIRMAN. You stated in your testimony that at a meeting at which Vice Admiral Browning of the British Navy made a statement, he also suggested sending two or three destroyers to England, as an evidence of good intentions, stating that of course our fleet could not be willing to part with or weaken its screen of destroyers. What was the principal purpose, was it, of Vice Admiral Browning's appearance over here?

Admiral NIBLACK. I gather it so, from the evidence.

The CHAIRMAN. Were you at that meeting?

Admiral NIBLACK. I was not at that meeting. I was just simply speaking of the General Board's view of the matter.

The CHAIRMAN. Then you do not know anything personally about that?

Admiral NIBLACK. I do not know anything personally, except what has been testified in a general way before the committee; and Admiral Wilson said that there was one officer—the trouble was, the conversation was general.

The CHAIRMAN. Then you have nothing personal to testify to about that?

Admiral NIBLACK. No, sir; I have nothing to testify.

Senator TRAMMELL. In regard to those plans that were recommended on February 4, 1917, Admiral, your language is that you submitted special war plans; and then you designate the title of the plans.

Admiral NIBLACK. Yes.

Senator TRAMMELL. You did not mean to state, of course, that it was a general war plan, at all? It was just what you said it was: it was a special plan on the question of submarines?

Admiral NIBLACK. On the question of unrestricted sinkings.

Senator TRAMMELL. You said: "That was a special war plan entitled 'Steps to be taken to meet a possible condition of war with the Central European Powers.'"

You did not mean to convey the idea that it was a new general plan, but it was dealing with that general subject?

Admiral NIBLACK. Dealing with unrestricted sinkings; the problem presented by the change in the method of warfare by the Central Powers.

Senator TRAMMELL. I believe you stated that the Navy Department has had war plans from time immemorial, practically?

Admiral NIBLACK. Since the establishment of the War College, in 1888.

Senator TRAMMELL. Yes; but that these plans were not a canned proposition, but that they had to be changed and altered upon conditions as they changed, and to meet the emergencies as they arose. But, as a matter of fact, they did have plans—war plans!

Admiral NIBLACK. Oh, yes; they had war plans.

Senator TRAMMELL. Now, you were in command at Gibraltar. Did you cooperate with the British there?

Admiral NIBLACK. Absolutely. We consolidated with them.

Senator TRAMMELL. Did you have any pretty general latitude in your command there, or did somebody else furnish you all the details?

Admiral NIBLACK. I operated under a general mission of the forces in Europe, and operated under whoever happened to be the senior naval officer present.

Senator TRAMMELL. Did Admiral Sims frequent your post there—your command there—during the war?

Admiral NIBLACK. He never visited Gibraltar during the war, and nobody visited Gibraltar during the war; that is, in the way of official inspection.

Senator TRAMMELL. So far as you were concerned, you were in command there—did you cooperate with the British, whoever was in command of the forces?

Admiral NIBLACK. The allied forces in the Mediterranean were under the command of Admiral Gauchet, of the French Navy at Corfu. To that extent I was under him. Vice Admiral Calthorp, at Malta, was in charge of the Mediterranean convoy system, and to that extent I was on the staff of Vice Admiral Calthorp, because there was a Japanese rear admiral, an Italian rear admiral, and a French rear admiral at Malta, and I should, under the general scheme, have been at Malta; but I did all my voting as a member of the commission at Malta by letter and by cable, and the necessity for my being at Gibraltar was due to the fact, as I say, that we had an Atlantic convoy system as well, and that was more directly under the Admiralty in London as a general proposition, and therefore Gibraltar was the half-way point. That is why I had to make Gibraltar my headquarters to cover all the ground.

Senator TRAMMELL. I think that is all the questions I want to ask.

The CHAIRMAN. When did you receive your orders for European duty?

Admiral NIBLACK. The 28th of October, 1917, and I was detached within 24 hours and ordered to report to the Chief of Naval Operations in Washington.

The CHAIRMAN. What was the character of your orders?

Admiral NIBLACK. I was ordered to proceed to Gibraltar, after I had reported to the General Board, and assume command of the forces there, and report to the senior officer present.

The CHAIRMAN. At Gibraltar?

Admiral NIBLACK. To the senior officer in Europe.

The CHAIRMAN. Through Admiral Sims?

Admiral NIBLACK. My orders at first were not to report to Admiral Sims, but implied so, because it said, "Report to your immediate superior in command for duty." Admiral Sims would have been my immediate senior in command in London.

The CHAIRMAN. No specific orders to report to Admiral Sims?

Admiral NIBLACK. No specific orders; but subsequently, at my own request and in consultation, it was agreed that I would go by way of London in order to familiarize myself with the situation, and I arrived in London in November, and received from Admiral Sims the general instructions which he gave to all of his forces, which I have here and which I can embody in the record.

The CHAIRMAN. If you had not gone to London, would you still have had to report to Admiral Sims?

Admiral NIBLACK. Absolutely; no question about it. But the advantage in going to London was that I spent time in the Admiralty offices to familiarize myself with the submarine situation and the convoy system, and talking to the convoy officers, so as to be perfectly in accord with the entire system; and I did the same in Paris, and it was a very valuable thing to have done and a very important thing to have done.

The CHAIRMAN. Before you left this country, did you receive full information from the department as to the department's plans and policies?

Admiral NIBLACK. I received orders—I familiarized myself with the situation in Paris as regards our forces abroad, and the sinking situation, the situation as regards submarines sinkings, and as regards the convoy system and the general idea.

The CHAIRMAN. That was what you did, but I say, did you receive from the department full information about its policies and plan for that work?

Admiral NIBLACK. No; I received orders to command a particular force.

The CHAIRMAN. With no specific information about any plans or policies of the department?

Admiral NIBLACK. No specific plan about any policy or forces, except as embodied in the instructions I got in London from Admiral Sims.

The CHAIRMAN. And did you receive any full instructions from the department about your mission?

Admiral NIBLACK. Only in the short time, several days, that I was in Washington, I familiarized myself with the situation. but I got no definite orders as to how I was to conduct the war, personally. I was simply to cooperate.

The CHAIRMAN. Under whose operation orders were the forces under your command?

Admiral NIBLACK. Admiral Sims's.

The CHAIRMAN. Operation orders, I asked.

Admiral NIBLACK. Operation orders?

The CHAIRMAN. Yes.

Admiral NIBLACK. Largely my own; and in conference with the Mediterranean officers. The convoys were under the regulations of the senior convoy officer in the Mediterranean, that is, Admiral Calthorp.

The CHAIRMAN. Was this situation satisfactory?

Admiral NIBLACK. Entirely so.

The CHAIRMAN. Did your forces, the forces that were under your command, become, therefore, an integral part of the British Navy?

Admiral NIBLACK. Not in the slightest degree.

The CHAIRMAN. You never lost your identity as a separate organization?

Admiral NIBLACK. On the contrary, when Vice Admiral Calthorp came to Gibraltar to inspect our forces I had to invite him especially to inspect mine, and he was very willing and very pleased to do it but he did not assume that he had any right to do it.

The CHAIRMAN. Did you have any objection to this policy of unity of command, and did you ever make any report on it?

Admiral NIBLACK. No. There was something in London about a unity of command in the Mediterranean, but it had nothing to do with my forces. It was rather a general question of the French, Italian, and British and Japanese forces, in a general way. It had no reference to the convoy system or to my forces, which were actively cooperating.

The CHAIRMAN. Did you make a report on it?

Admiral NIBLACK. None at all; only to ask what it was all about: just a personal letter to ask what the unity of command was about.

The CHAIRMAN. A personal letter to whom?

Admiral NIBLACK. I think it was to the force commander. It did not concern my forces at all. We were in the convoy business, and this other was the question of the emergence of the the *Goeben* and the *Breslau* in a raid in the Mediterranean.

The CHAIRMAN. Was any action taken on this report you made?

Admiral NIBLACK. I did not make any report. Nothing was done——

The CHAIRMAN. Well, on this personal letter you wrote?

Admiral NIBLACK. No; no action was taken about it.

The CHAIRMAN. Which country had the greatest number of naval forces at Gibraltar?

Admiral NIBLACK. The British had about 60,000 tons of naval shipping at Gibraltar, and we had about 33,000 tons, but we had a great many ships, because our ships were relatively small.

The CHAIRMAN. Would it have been preferable to have kept the American forces as a completely separate and independent unit at Gibraltar?

Admiral NIBLACK. Oh, no; no, indeed.

The CHAIRMAN. It would have had a bad effect upon the cooperation against submarines during the war?

Admiral NIBLACK. It would. We had at Gibraltar what was called a hat pool, and every morning at a conference the Italian, British, and French officers present drew out of the hat the ships that were available and distributed them for escort work, and if we would enter a ship to sail and something would happen, we would have to substitute another.

The CHAIRMAN. Did the plan work satisfactorily?

Admiral NIBLACK. Beautifully.

The CHAIRMAN. In your general opinion, what is your opinion of the unity of command in a war such as this?

Admiral NIBLACK. I do not think that the unity of command ought to be distributed around among a number of people.

The CHAIRMAN. You say this worked satisfactorily at Gibraltar?

Admiral NIBLACK. Yes; there and in every place. But the question is whether the unity of command is local or general. They had a unity of command in France when they put Gen. Foch in command. They did not have it before that. It was a very desirable thing, and it worked beautifully.

There is a difference between a command and a task. A task is to do a certain piece of work which you have a force for. Now, who is the directing power in that case is a different matter. As I explained to you, our forces were in the Mediterranean area under one set of orders and rules and methods of procedure and everything, which were determined at Malta by this commission, which I was relatively a member of, but the meetings of which I never attended, but voted by letter or cable. On the other hand, the Atlantic convoys were on an entirely different system, and they were regulated more or less from London, except the convoys to the United States. For the west Atlantic convoys and ships which went back to the United States we had a convoy system which we ran from Gibraltar.

The CHAIRMAN. That general plan of unity of command was all right so far as you were concerned?

Admiral NIBLACK. That is a fundamental military principle which is perfectly sound, naturally.

The CHAIRMAN. Were you allowed satisfactory initiative by Admiral Sims?

Admiral NIBLACK. Absolutely.

The CHAIRMAN. Did he interfere in any way with the administration of your forces?

The CHAIRMAN. That was what you did, but I say, did you receive from the department full information about its policies and plans for that work?

Admiral NIBLACK. No; I received orders to command a particular force.

The CHAIRMAN. With no specific information about any plans or policies of the department?

Admiral NIBLACK. No specific plan about any policy or forces, except as embodied in the instructions I got in London from Admiral Sims.

The CHAIRMAN. And did you receive any full instructions from the department about your mission?

Admiral NIBLACK. Only in the short time, several days, that I was in Washington, I familiarized myself with the situation. but I got no definite orders as to how I was to conduct the war, personally. I was simply to cooperate.

The CHAIRMAN. Under whose operation orders were the forces under your command?

Admiral NIBLACK. Admiral Sims's.

The CHAIRMAN. Operation orders, I asked.

Admiral NIBLACK. Operation orders?

The CHAIRMAN. Yes.

Admiral NIBLACK. Largely my own; and in conference with the Mediterranean officers. The convoys were under the regulations of the senior convoy officer in the Mediterranean, that is, Admiral Calthorp.

The CHAIRMAN. Was this situation satisfactory?

Admiral NIBLACK. Entirely so.

The CHAIRMAN. Did your forces, the forces that were under your command, become, therefore, an integral part of the British Navy?

Admiral NIBLACK. Not in the slightest degree.

The CHAIRMAN. You never lost your identity as a separate organization?

Admiral NIBLACK. On the contrary, when Vice Admiral Calthorp came to Gibraltar to inspect our forces I had to invite him especially to inspect mine, and he was very willing and very pleased to do it. but he did not assume that he had any right to do it.

The CHAIRMAN. Did you have any objection to this policy of unity of command, and did you ever make any report on it?

Admiral NIBLACK. No. There was something in London about a unity of command in the Mediterranean, but it had nothing to do with my forces. It was rather a general question of the French, Italian, and British and Japanese forces, in a general way. It had no reference to the convoy system or to my forces, which were actively cooperating.

The CHAIRMAN. Did you make a report on it?

Admiral NIBLACK. None at all; only to ask what it was all about just a personal letter to ask what the unity of command was about.

The CHAIRMAN. A personal letter to whom?

Admiral NIBLACK. I think it was to the force commander. It did not concern my forces at all. We were in the convoy business, and this other was the question of the emergence of the the *Goeben* and the *Breslau* in a raid in the Mediterranean.

The CHAIRMAN. Was any action taken on this report you made?

Admiral NIBLACK. I did not make any report. Nothing was done——

The CHAIRMAN. Well, on this personal letter you wrote?

Admiral NIBLACK. No; no action was taken about it.

The CHAIRMAN. Which country had the greatest number of naval forces at Gibraltar?

Admiral NIBLACK. The British had about 60,000 tons of naval shipping at Gibraltar, and we had about 33,000 tons, but we had a great many ships, because our ships were relatively small.

The CHAIRMAN. Would it have been preferable to have kept the American forces as a completely separate and independent unit at Gibraltar?

Admiral NIBLACK. Oh, no; no, indeed.

The CHAIRMAN. It would have had a bad effect upon the cooperation against submarines during the war?

Admiral NIBLACK. It would. We had at Gibraltar what was called a hat pool, and every morning at a conference the Italian, British, and French officers present drew out of the hat the ships that were available and distributed them for escort work, and if we would enter a ship to sail and something would happen, we would have to substitute another.

The CHAIRMAN. Did the plan work satisfactorily?

Admiral NIBLACK. Beautifully.

The CHAIRMAN. In your general opinion, what is your opinion of the unity of command in a war such as this?

Admiral NIBLACK. I do not think that the unity of command ought to be distributed around among a number of people.

The CHAIRMAN. You say this worked satisfactorily at Gibraltar?

Admiral NIBLACK. Yes; there and in every place. But the question is whether the unity of command is local or general. They had a unity of command in France when they put Gen. Foch in command. They did not have it before that. It was a very desirable thing, and it worked beautifully.

There is a difference between a command and a task. A task is to do a certain piece of work which you have a force for. Now, who is the directing power in that case is a different matter. As I explained to you, our forces were in the Mediterranean area under one set of orders and rules and methods of procedure and everything, which were determined at Malta by this commission, which I was relatively a member of, but the meetings of which I never attended, but voted by letter or cable. On the other hand, the Atlantic convoys were on an entirely different system, and they were regulated more or less from London, except the convoys to the United States. For the west Atlantic convoys and ships which went back to the United States we had a convoy system which we ran from Gibraltar.

The CHAIRMAN. That general plan of unity of command was all right so far as you were concerned?

Admiral NIBLACK. That is a fundamental military principle which is perfectly sound, naturally.

The CHAIRMAN. Were you allowed satisfactory initiative by Admiral Sims?

Admiral NIBLACK. Absolutely.

The CHAIRMAN. Did he interfere in any way with the administration of your forces?

Admiral NIBLACK. Not except to help me. He interfered often to help me, and I needed it.

The CHAIRMAN. I think that is all.

Senator PITTMAN. Have you the instructions of Admiral Sims to you when you reached London?

Admiral NIBLACK. I have.

Senator PITTMAN. I wish you would read them.

Admiral NIBLACK. One is Campaign Order No. 1, of August 1. That was before I came. That did not really affect me. Then there is Force Instructions No. 1, dated August 11, 1917, which had gone out by the time I arrived.

Then I have Force Instructions No. 2, of September 22, 1917, in which the general mission was "cooperation with allied forces and destruction of enemy forces. Immediate mission: (1) Conservation of allied and neutral shipping. (2) Saving of life."

Then he gave his doctrine and his policies and routines.

Then on October 6, 1917, came Force Instructions No. 3, which did not affect my forces very much, as it had to do with duty free stores and gifts for United States naval forces operating in European waters. It was a customs house order, more or less.

Then came Operation Orders No. 2 (Campaign Order No. 2) of November 10, 1917.

Then his Operation Order No. 3 (Campaign Order No. 3) of April 2, 1918, which merely said:

The senior United States naval officer in each area shall be in immediate command of United States naval forces in that area (including personnel of bases) and shall be responsible for the efficiency of his command and for their operation, subject to the requirements of paragraph 2.

Senator PITTMAN. You have given the substance, then, of the instructions given you by Admiral Sims?

Admiral NIBLACK. Yes.

The CHAIRMAN. I move that they be put in the record in full.

Senator PITTMAN. Yes.

(The orders referred to are here printed in full, as follows:)

UNITED STATES NAVAL FORCES OPERATING IN EUROPEAN WATERS,
U. S. S. "MELVILLE," FLAGSHIP,
August 1, 1917.

Campaign Order No. 1.

Forces:

- (a) Destroyer flotillas based on Queenstown, Vice Admiral Sims.
- (b) Patrol squadrons operating on French coast, Capt. Fletcher.
 - (1) Based on Brest, Capt. Fletcher.
 - (2) Based on Bordeaux, commander to be designated.
- (c) Patrol squadron based on Gibraltar, Rear Admiral Wilson.

1. Enemy submarines operating against allied line of communication.
2. These forces operate under direct military control of senior allied commanders present, in accordance with general policies of force commander as set forth in "General instructions."

3. (x) The senior United States naval officer afloat in each area shall be in immediate command of United States naval forces in that area (including personnel of bases) and shall be responsible for the efficiency of his command and for their operation, subject to the requirements of paragraph 2.

(y) The force commander shall be kept informed of military operations performed or contemplated and state of military readiness for any possible duty of which the forces in question are capable.

4. Keep force commander informed of supplies needed from United States sufficiently in advance for necessary arrangements being made.

In the absence of United States supplies, make direct request on allied base facilities and obtain and submit to the force commander, through his staff representatives, periodic summary of financial indebtedness thereby involved.

5. Address, "Force Commander, 30 Grosvenor Gardens, London, S. W." Official cable and telegraph address, "Simsadus, London." Staff representative France, Capt. R. H. Jackson, Ministry Marine, Paris." Telegraph address, "Jackson Marine, Paris." Use codes and ciphers as directed from time to time. In absence of contrary instructions, communicate via allied official codes to insure secrecy. Utilize allied official mail routes.

WM. S. SIMS,
Vice Admiral, Commanding.

Copies to Secretary Navy, Operations, 1; commander in chief, 1; *Melville*, 40; patrol squadron commander, Gibraltar, 20; staff office, Paris, 50, for ministry of marine, patrol squadron commanders, bases, naval attaché, Paris; naval attaché, London, 1; Rome, 1; Madrid, 1; British Admiralty, 1.

FLAG SECRETARY.

UNITED STATES NAVAL FORCES OPERATING IN EUROPEAN WATERS,
U. S. S. "MELVILLE," FLAGSHIP,
August 11, 1917.

Force instructions No. 1.

Subject: Organization and communications.

1. The official designation of these forces is "United States naval forces operating in European waters"; they constitute a task force of the Atlantic Fleet. The flag officer commanding the forces is officially styled the "Force commander" and shall be so addressed in official communications.

2. The U. S. S. *Melville* is designated as the force flagship.

3. Destroyers and parent ships based on Irish ports are officially designated by the Navy Department as "United States destroyer flotillas operating in European waters." Yachts and trawlers based on French ports are officially designated by the Navy Department as "United States patrol squadrons operating in European waters," under the immediate command of Capt. W. B. Fletcher, United States Navy. Cruisers, gunboats, Coast Guard cutters, and destroyers based on Gibraltar are designated by the Navy Department as a patrol squadron and are under the immediate command of Rear Admiral H. B. Wilson, United States Navy.

4. Repair and supply bases at Brest and Bordeaux and communication office at St. Nazaire are in course of establishment under command of the senior officer of forces operating on the French coast.

5. A group of destroyers with parent ships based on the Azores is cooperating with this force, but does not at present form a part of it.

6. Task groups will be formed from time to time and duties assigned to them to meet the demands of the situation. All such dispositions of the force will be communicated to the force in campaign order.

7. For purposes of possible combined operations of the whole Atlantic Fleet, or of divers units thereof, the vessels of this force are assigned by Navy Department order of July 14, 1917 (Op.-17/20392-656) to the several forces of the Atlantic Fleet, but such assignments are not to be considered as effective for either administrative or operating purposes under existing conditions.

8. The destroyers based on Irish ports will, at an early date, be provisionally organized into divisions and flotillas as a measure of preparedness for their operation with the battleship forces, but such organization will have no effect on the execution of the duties now assigned to them.

9. The flagship *Melville* is stationed at Queenstown, Ireland. The force commander, in his additional capacity as naval representative of the United States in the allied European countries, has an office at No. 30, Grosvenor Gardens, London. A representative of the Navy Department, who is also a member of the force staff (at present Capt. R. H. Jackson, United States Navy), has an office at the ministry of marine, Paris.

10. All mail communications from vessels of the force for the force commander shall be addressed to him, and shall be forwarded as follows:

(a) From vessels based on Irish ports, via U. S. S. *Melville*.

(b) From vessels based on French ports, via the senior United States naval officer Brest, France.

(c) From vessels based on Gibraltar, via the senior United States naval officer, Gibraltar.

11. Naval attachés and others having occasion to address the force commander by mail should address to the London office. In France such communications should be forwarded via the staff representative at the ministry of Marine, Paris.

Queenstown. Senior officer at Brest, "Ampat," Brest. Senior officer at Bordeaux "Ambase," Bordeaux. Senior officer at St. Nazaire, "Amport," St. Nazaire.

For written communications utilize official routes and methods of transmission the allied forces with which our forces are operating.

WILLIAM S. SIMS,
Vice Admiral Commanding

Copies to: *Melville*, 40; senior officer, Brest, 30; senior officer, Gibraltar, 15; representative, Paris; Naval attachés, London, Paris, Madrid, Rome; commander in chief, 6; Navy Department, Operations.

UNITED STATES NAVAL FORCES,
OPERATING IN EUROPEAN WATERS,
U. S. S. "MELVILLE," FLAGSHIP,
September 22, 1917

Force instructions No. 2.

Subject: General instructions.

General mission: Cooperation with allied forces in destruction of enemy forces.

Immediate mission: (1) Conservation of allied and neutral shipping; (2) saving of life.

FLEET AND NAVY REGULATIONS.

The forces in European waters, being integral parts of the United States Navy and of the Atlantic Fleet, shall be governed by Navy and fleet regulations and instructions in so far as these may apply to the conditions under which the forces are operating.

The employment of the forces of this command shall be governed by such campaign orders and force instructions as may be issued from time to time.

FORCE INSTRUCTIONS.

Force instructions are not to be considered as military orders, nor are they to interfere in any way with the demands of situations which may not have been contemplated, nor with such military orders as may be issued by allied commanders under whose immediate control any vessels of the command may be operating.

The force instructions are designed to serve the following ends:

- (1) To impart the policies of the force commander to the forces under his command.
- (2) To facilitate administration in accordance with the actual war conditions under which the forces are operating; these conditions will, in many cases, necessitate departures from the methods of administration established for peace conditions.
- (3) To disseminate information regarding practices shown by experience to be successful.

POLICIES.

The following general policies of the force commander are announced, and they will be extended from time to time as necessity arises:

- (1) All other considerations should be subordinated to the one of most efficiency: cooperating with the allied forces. Operations should be carried out in accordance with the general plans of the senior allied commanders in the several areas in which the forces are operating.
- (2) The mobility of the United States forces should be such that they may be continuously ready to change their areas of operations as may be made necessary by the operations of the enemy or by orders of the Navy Department. To this end they must remain, to the extreme practicable degree, independent of shore bases and facilities.
- (3) The maximum degree of individual initiative should be encouraged. All forces, or divisions or units thereof, should be governed primarily at all times by the requirements of the particular situation confronting them. Commanders should act in accordance with their best judgment under such general policies of their seniors as have been previously made known to them. In making decisions the policies and wishes of the superiors upon whom responsibility will ultimately rest must be duly considered.
- (4) The force commander and subordinate commanders should be kept fully informed at all times of any facts known to any member of the forces which might affect the decisions and plans of such commanders.
- (5) Every officer and man should be encouraged to realize his personal share of responsibility in accomplishing the mission of the forces.
- (6) All subordinate commanders, commanding officers, other officers, and men should avoid falling into a way of thinking that duty is satisfactorily performed by

merely accomplishing the specific task assigned; they must always bear in mind the general and immediate missions of the force.

(7) The necessity for keeping the Navy Department informed of all matters which may in any way affect its responsibilities as regards these forces, and the service as a whole, must be constantly borne in mind by all.

DOCTRINE.

It is of paramount importance that each group of forces develop a doctrine covering basic tactical methods of procedure suitable for such group. Such a doctrine once developed and revised from time to time should govern all operations of the group, be thoroughly understood by all units, and provide a field within which individual initiative may be exercised with safety and with full confidence of mutual comprehension and cooperation. A doctrine to be of the maximum value must—

(a) Be brief.

(b) Be confined to fundamental essentials, having in view coordination of effort with minimum communication.

(c) Contemplate actual war conditions.

(d) Allow for the circumstances of sea, wind, weather, and navigation as practically encountered.

A doctrine must not be allowed to evolve into a mass of details which manifestly can not be standard or applicable to all situations that may arise.

Not only should all forces be prepared at all times for engagement with enemy submarines, but they should be prepared for the emergency of engagement with enemy ships of other types, either individually or in connection with fleet motions. It is essential, therefore, that such emergency be constantly borne in mind and that every preparation possible be made, based upon such information as is available or can be conjectured.

Pending the development of a doctrine for yachts and other types, the Destroyer Force Doctrine will be issued as a general guide.

Whenever any officer has any suggestions to make concerning the doctrine of the force to which he is attached, he should at once record it and make it known to his superiors. Group and division commanders should consult as frequently as possible for the purpose of making such revisions of the doctrine as may be suggested by experience.

ROUTINES—ROUTINE REPORTS.

All peace routine administration and practices should be subordinated to the requirements of war service as they develop.

It is manifestly important, both for efficient prosecution of the present war and for future professional and material improvement, that records, reports, and administrative practices be not too radically reduced. It is also important that as far as possible reports and records kept should be uniform for all vessels of a type. It is therefore desired that divisional and group commanders confer from time to time and come to an agreement as to suggested changes in established routines or practices or elimination of paper work and returns.

The senior commander of any unit or in any area should forward such recommendations to the force commander for his approval.

GROUP COMMANDER'S REPORTS.

Group commanders should periodically (weekly when practicable) submit to the force commander general reports covering military operations performed by the forces under their command. Such reports should be general in nature and as far as possible should give summaries and tabulations of important duty or data which will be of value or interest to the force commander or to the department. They should be designed primarily to assist the force commander in maintaining a general survey of operations performed without the necessity of going through war diaries and other correspondence in detail. They should also serve as a guide for the formulation of plans for the future.

WAR DIARIES.

War diaries should be kept by all commanding officers and group commanders in accordance with Atlantic Fleet Order No. 18.

A careful reading of this order shows that the war diary is not intended to be a copy of the ship's log. An inspection of some of the war diaries submitted shows that there has been some misunderstanding on this point, as many of them contain matter which is of no importance in such a diary. In the preparation of war diaries

care must be exercised to exclude nonessential items, such as concern the weather, exact time of getting under way and anchoring, movements of other vessels, etc., unless these have an important bearing upon the military operations in hand and are of importance as a matter of record in connection therewith.

Entries are frequently made in war diaries early knowledge of which by other members of the force would be advantageous. When an entry is made which is thought to be in this category the officer preparing the diary should, by any convenient means, bring the fact to the attention of the superior to whom the diary is forwarded; the superior should take immediate steps to disseminate the information if, in his judgment, such action is advisable or should take such steps as may be necessary to bring the matter to the attention of the force commander.

The information contained in war diaries should, so far as practicable, be so grouped under headings that their use by the force commander and the department may be facilitated. Such headings should be descriptive of the information they cover.

PARENT AND SUPPLY SHIPS.

Parent and supply ships should subordinate all other considerations to the efficient repair and supply of the vessels they may be serving and should simplify their methods of administration to this end.

READINESS FOR DUTY.

Regardless of the time that may be set aside in schedules for rest, boiler cleaning or overhaul, it is important that from the moment of arrival at an anchorage vessels undertake immediately all repairs or other work necessary to prepare them for sea and prosecute such work without interruption until completion. For example, if five days should be set aside for rest, boiler cleaning, or other purposes, and the work can be completed in two or three days, it should be so accomplished and the remainder of the time used for rest of the personnel. Such a course is a military necessity in order that the maximum number of vessels may be available at all times to meet any unexpected enemy operations.

LEAVE AND LIBERTY.

Until further notice it is desired that leave and liberty be so regulated that vessels can put to sea, in case of emergency, on a few hours' notice. It is realized that this policy may work some hardship, but the force commander is confident that every member of the force will appreciate the importance of our forces putting forth every effort for the accomplishment of our general and immediate mission. The far-reaching effect not only upon the allied cause but also upon the record and distinction of our service can not be foreseen at present. It therefore behooves this force to leave no stone unturned in putting forth every effort within the power of its personnel and material.

Wm. S. Sims,
Vice Admiral United States Navy.
Commanding.

Copies to: U. S. S. *Melville*; senior officer, Brest; senior officer, Gibraltar; staff representative, Paris; naval attachés, London, Paris, Madrid, Rome; commander in chief, Navy Department (Operations).

UNITED STATES NAVAL FORCES
OPERATING IN EUROPEAN WATERS,
U. S. S. "MELVILLE," FLAGSHIP,
October 6, 1917.

Force instructions No. 3.

Subject: Duty-free stores and gifts for United States naval forces operating in European waters.

The customs authorities of the United Kingdom have agreed to extend to the vessels of the United States Navy operating in European waters the same relaxation of customs formalities as is now granted to vessels of the British Navy. This courtesy having been extended upon the assumption that officers and enlisted men will regard themselves as in honor bound to avoid any abuse of the relaxations granted, and with the understanding that the United States naval authorities will accept the same responsibility as is accepted by the British naval authorities for the due observance of

regulations and the treatment of revenue offenses as a breach of naval discipline, is incumbent upon all concerned to observe most carefully the requirements of the war agreement:

IMPORTATION OF GOVERNMENT STORES.

Where dutiable Government stores are transhipped from the importing vessel direct into the naval vessel for which intended, if the importing vessel is a United States naval vessel no custom formalities are required. If, however, the importing vessel is a merchant ship, whether chartered as a Government transport or not, the stores may be transhipped without further formalities, and a commissioned officer of the naval vessel receiving the shipment will furnish the master of the importing vessel with a receipt giving sufficient details of the consignment to enable him to complete his accounts with the customs. In cases where the stores are not taken directly on board but are delivered to local agents for transportation from one ship to another, whether in the same port or elsewhere, the agent will take over the goods and carry them under bond in the proper manner, and a commissioned officer of the naval vessel will sign the form of receipt in the ordinary shipping bill which will be required. H. M. customs and excise Form No. 38, sale.

STORES ORDERED FROM MERCHANTS ASHORE.

The appropriate officer of the United States naval vessel making the purchase will fill out a special form of application for dutiable stores as in use for the British Navy, making the necessary alterations as required by the circumstances, and will send it to the merchant for delivery to the local customs and excise officer. They will similarly fill out and return the special shipping bill when received from the merchant. H. M. customs and excise Forms Nos. 61, special, and 101-102, sale).

PRIVATE GIFTS TO PERSONNEL OF UNITED STATES NAVAL VESSELS.

Where an imported parcel containing dutiable gifts is sent otherwise than by parcel post, the forwarding agent will deliver it to the ship, and in cases where the value would exceed 5 shillings, will present a shipping bill to be signed by the addressee and countersigned by a commissioned officer. In cases where the duty would not exceed 5 shillings or where the parcel is sent by parcel post, the countersignature of a commissioned officer is not required. On production of a declaration by the private donor, gifts of tobacco in quantities not exceeding 2 pounds per man per month or 2 pounds in any one parcel may be sent by parcel post duty free from bonded warehouses or from tobacco manufacturers' premises in the United Kingdom.

DUTIABLE GOODS LANDED FROM UNITED STATES NAVAL VESSELS.

Dutiable goods landed on United States Government service and accompanied by a permit signed by a commissioned officer, will be passed duty free subject to examination for inspection of customs authorities if challenged at the place of landing. Goods landed by naval personnel for individual private use will also be passed duty free without formalities if openly produced on challenge and reasonable in amount, on the general understanding that such goods will not be surreptitiously transported ashore, and that the amount of tobacco landed by any person going on board will not appreciably exceed the amount in force for the British Navy, viz: 8 ounces per seven nights or more. The following articles used on shipboard which are liable to duty in the United Kingdom are: tobacco, including cigars and cigarettes, tea, coffee, cocoa, dried fruits, sugar, and confectionery containing sugar, such as jam, and matches. Dutiable goods must not be landed except under the above rules, and should cases of deliberate smuggling be detected the customs authorities will communicate with the naval authorities so that appropriate disciplinary action may be taken.

Wm. S. Sims,

Vice Admiral, United States Navy,

Commanding.

Copies to: U. S. S. *McCall*, 40; senior officer, Brest, 10; senior officer, Gibraltar, 10; naval attaches, London, Paris, Rome, Madrid, Capt. R. H. Jackson, United States Navy, 3; aviation headquarters, Paris, France, 15; commander in chief, 6; War Department (Operations), 1.

UNITED STATES NAVAL FORCES,
OPERATING IN EUROPEAN WATERS,
U. S. S. "MELVILLE" FLAGSHIP.
November 10, 1917.

Campaign Order No. 2.

Forces:

- (a) Destroyer flotillas based on Queenstown—Vice Admiral Sims.
- (b) Patrol squadrons based on French coast—Rear Admiral Wilson.
 - (1) Based on Brest—Rear Admiral Wilson.
 - (2) Based on Bordeaux—Commander to be designated.
- (c) Patrol squadron based on Gibraltar—Rear Admiral Niblack.
- (d) Azores detachment—Senior officer present.
- (e) Naval aviation forces, foreign service—Commander Cone.

1. Enemy submarines operating against allied lines of communication.

2. These forces operate under direct military control of senior allied commander present, in accordance with general policies of force commander as set forth in instructions No. 2 of September 22, 1917.

3. (a), (b), (c) and (d): The senior United States naval officer afloat in each area shall be in immediate command of United States naval forces in that area (including personnel of bases) and shall be responsible for the efficiency of his command and their operation, subject to the requirements of paragraph 2.

(d) (Additional): Deny the Azores Islands to enemy submarines and operate offensively against such vessels when reported in the vicinity as far as the capabilities and radius of action of the available vessels permit. Do not operate in the vicinity of the Canary Islands east of longitude 20, and south of latitude 30, without first communicating with French naval forces in that area.

(e) Such seaplane and balloon stations as have been or may be established in France and in the British Isles shall be operated under the direction of the senior allied commander in the district in which they are located; the commander of naval aviation forces, foreign service, shall exercise general administrative and disciplinary control over all such stations.

(x) The force commander shall be kept informed of military operations performed or contemplated and state of military readiness for any possible duty of which the forces in question are capable.

4. Keep the force commander informed regarding supplies needed from the United States. Forces in France shall make requests through Paymaster J. F. Hatch, United States Navy, assistant in France to the aid for material, supplies, and repairs; all other forces shall make application for stores direct to the force commander.

When supplies can not be obtained from the United States within the necessary time, make direct requests on allied base facilities.

Local purchases may be made when it is necessary to obtain immediate delivery of supplies so procurable.

5. The force commander's mail address is 30 Grosvenor Gardens, London, S. W. Cable and telegraphic address, "Simsadus," London. Use codes and ciphers as may be directed from time to time; utilize allied official mail routes whenever possible.

This order becomes effective on receipt.

Wm. S. Sims,
Vice Admiral, Commanding

Copies to: Secretary of the Navy, Operations (1); commander in chief (5); U. S. S. *Melville* (5); Rear Admiral Wilson, for floating forces and bases (5); Rear Admiral Niblack (5); Commander Cone (5); senior officer, Ponta Delgada (5); Capt. R. H. Jackson (5); Paymaster Hatch (1); naval attachés, London (1), Paris (1), Rome (1), Madrid (1); British Admiralty (1); Admiral Bayly (1); files (5).

UNITED STATES NAVAL FORCES,
OPERATING IN EUROPEAN WATERS,
U. S. S. "MELVILLE," FLAGSHIP.
April 2, 1918.

Campaign Order No. 3.

Forces:

- (a) Destroyer flotillas based on Queenstown—Vice Admiral Sims.
 - (1) Submarine detachment—Capt. Hart.
- (b) Naval forces in France—Rear Admiral Wilson.
- (c) Patrol squadron based on Gibraltar—Rear Admiral Niblack.

- d*) Azores detachment—Rear Admiral Dunn.
- e*) Mining detachment—Rear Admiral Strauss.
- f*) Sixth battle squadron, Grand Fleet—Rear Admiral Rodman.
- g*) Naval Aviation Forces, foreign service—Capt. Cone.

1. Enemy submarines operating against allied lines of communication. Enemy high sea fleet contained in enemy home waters.
2. These forces operate under direct military control of senior allied commanders present, in accordance with general policies of force commander as set forth in force instructions No. 2, of September 22, 1917.
3. *(a)*, *(b)*, *(c)*, *(d)*, *(e)*, and *(f)*: The senior United States naval officer in each area shall be in immediate command of United States naval forces in that area (including personnel of bases) and shall be responsible for the efficiency of his command and for his operation, subject to the requirements of paragraph 2.
- (g)* (Additional): Deny the Azores Islands to enemy submarines and operate extensively against such vessels when reported in the vicinity as far as the capabilities and radius of action of the available vessels permit. Do not operate in the vicinity of the Canary Islands east of longitude 20, and south of latitude 30, without first communicating with French naval forces in that area.
- (h)* Such air stations as have been or may be established in France, and in the British Isles shall be operated under the direction of the senior allied commander in that district in which they are located; the commander of naval aviation forces, foreign service, shall exercise general administrative and disciplinary control over such stations.
- (i)* The force commander shall be kept informed of military operations performed and contemplated and state of military readiness for any possible duty of which the forces in question are capable.
4. Keep the force commander informed regarding supplies needed from the United States. Forces in France shall make requests through Paymaster J. F. Hatch, United States Navy, assistant in France to the aid for material and supplies; all other forces shall make application for stores direct to the force commander. Local purchases may be made when it is necessary to obtain immediate delivery of supplies so procurable.
5. The force commander's mail address is 30 Grosvenor Gardens, London, S. W. Cable and telegraphic address, "Simeadus," London. Use codes and ciphers as may be directed from time to time; utilize allied official mail routes whenever possible. This order becomes effective on receipt.

WM. S. SIMS,
Vice Admiral, Commanding.

Copies to Secretary of the Navy, Operations (1); commander in chief Atlantic Fleet (5); U. S. S. *Melville* (5); Rear Admiral Wilson, for floating forces and bases (10); Rear Admiral Niblack (5); Capt. Cone (5); Rear Admiral Dunn (5); Rear Admiral Rodman (5); Capt. Hart (3); Capt. R. H. Jackson (5); Paymaster Hatch (1); naval attachés, London (1), Paris (1), Rome (1), Madrid (1); British Admiralty (1); Admiral Bayly (1); files (5).

Senator PITTMAN. Those are all the instructions received by you from Admiral Sims?

Admiral NIBLACK. I suppose I got about 15 cablegrams a day of various kinds.

Senator PITTMAN. What was the substance of those?

Admiral NIBLACK. Sailings of ships, orders transferring officers, notification of sending me supplies and reserve officers and men, dispatch of materials, and all kinds of information that came through operations. He had a very large force in London that kept us informed. And then we got daily bulletins from Admiral Sims of all the happenings in our command and in the war zone, which were very nice to have and very illuminating, and we had a free interchange of information, so that we would all know what the other fellow was doing, as far as we could. The thing was beautifully managed; very efficient.

Senator PITTMAN. He gave you all of the information that he had at his command?

Admiral NIBLACK. And we, in return, gave all of ours. The situation of the submarines momentarily was given to us by radio and telegrams, and we had a great operating board in the office of the commandant, where every convoy was kept in position from hour to hour, relatively, on the chart, and there were dozens of convoys at sea all the time, and as soon as a submarine would be signaled at a certain spot, it would be placed on the board; and then if necessary a radio signal would be sent to the meeting convoy ship to change course a certain number of degrees, or to a certain definite course, to avoid this submarine.

Senator PITTMAN. Then, when you received this information it was up to you to operate your forces?

Admiral NIBLACK. To operate my forces at need. We never closed. Everybody was on watch, and the operating table was kept up to the minute of time.

Senator PITTMAN. Do you know whether or not the report of the General Board was before Congress in 1916 when, in the general naval appropriation bill, the personnel of the Navy was increased?

Admiral NIBLACK. I do not know. I was not in Washington for 14 years prior to the war—that is, on duty.

Senator PITTMAN. By whom is the policy of the Navy fixed?

Admiral NIBLACK. By the President of the United States.

Senator PITTMAN. Does the President of the United States decide the size of the Navy?

Admiral NIBLACK. No; but he decides upon the policy of the Government.

Senator PITTMAN. You mean as to neutrality or war?

Admiral NIBLACK. He can not declare war, but he can announce policies.

Senator PITTMAN. That was what I was trying to get at, what you meant by a policy, because of course as a matter of fact the length of time that we shall remain neutral is entirely dependent upon Congress, as I understand the law.

Admiral NIBLACK. Absolutely. The power to declare war rests with Congress.

Senator PITTMAN. The question as to whether we should arm merchantmen was a question of policy of Congress, was it not?

Admiral NIBLACK. It was a question of procedure. It was then the recognized procedure, and it had been determined that we should arm our ships to prevent these aggressions.

Senator PITTMAN. By whom was that determined?

Admiral NIBLACK. That was determined by the Government.

Senator PITTMAN. I understand, but "the Government" is a very broad expression. What department of the Government determined whether we should arm our merchantmen?

Admiral NIBLACK. I do not know who recommended it, but the executive authority of the United States vested by the Constitution rests broadly upon the President, because the Constitution does not mention the Cabinet. The Cabinet is a creation entirely of Congress, and of course the Constitution is entirely silent with respect to the authority of the Cabinet, but the executive authority rests in the President.

Senator PITTMAN. Then the arming of the merchant marine came through the President?

Admiral NIBLACK. That came through the executive authority, whatever that is. I do not know who gave the order. But it was really a matter of policy; because we began to arm ships before war was declared, because we resented this unrestricted sinking.

Senator PITTMAN. Well, that is what I was getting at.

Admiral NIBLACK. Yes.

Senator PITTMAN. I mean as a matter of fact we did not wait until we declared war?

Admiral NIBLACK. No; we began to do that before war was declared, and it was in resentment of this outrageous attitude that Germany took.

Senator PITTMAN. In other words, months before we declared war we commenced to prepare to defend ourselves?

Admiral NIBLACK. Well, we took certain steps to prepare ourselves; but how thoroughly I am not informed. As a matter of fact, you can not do much without money. Congress holds the purse strings.

Senator PITTMAN. Yes. As a matter of fact, Congress has rather restricted the enlargement of the Navy in accordance with the views of the General Board at all times, has it not?

Admiral NIBLACK. I would like to have that question read.

(The last question above was read aloud by the stenographer.)

Admiral NIBLACK. No; it has rather increased it in accordance with the views of the General Board, at all times.

Senator PITTMAN. Yes; I put it in an inverted way.

Admiral NIBLACK. Congress has not enlarged it in accordance with the recommendations of the General Board, but often the recommendations of the General Board have not been followed by the department, and there is no compulsion on the part of the department to publish or follow the recommendations of the General Board. The General Board is advisory merely. It is not infallible. It is a valuable board, but it makes mistakes, probably; but they are generally on the good side.

Senator PITTMAN. The question whether or not we shall have a large Navy or a small Navy is purely a question of governmental policy that is determined by Congress?

Admiral NIBLACK. A governmental policy, and often a political policy.

Senator PITTMAN. Well, all Governments are political.

Admiral NIBLACK. Yes, all Governments are political.

Senator PITTMAN. You can not have a large Navy unless you have the money to build a large Navy?

Admiral NIBLACK. You can not.

Senator PITTMAN. And you are restricted in personnel?

Admiral NIBLACK. At the present moment, do you mean?

Senator PITTMAN. No, not now; in preparation and everything else you are limited by the money that is furnished by Congress to perform those acts?

Admiral NIBLACK. Absolutely.

Senator PITTMAN. The reason I asked you that question, Admiral, is to whether the report of the General Board was before the committees of Congress is that at the time that Congress was considering the increase of personnel in 1916, and also when it was considering

the three-year naval program, the Senate Naval Affairs Committee had before it the report of the General Board, and ever since I have been a member of the Naval Affairs Committee we have had before us the report of the General Board.

Admiral NIBLACK. No; I think that that was a very exceptional case; that the General Board historically—its opinions have never been very definitely given to the committees, and this was rather exceptional.

Senator PITTMAN. In this way we have always, so far as I know, asked the Secretary, or whoever represents him there, the question as to what the opinion of the General Board was in regard to every recommendation.

Admiral NIBLACK. Yes, I think so. That is a question of history.

Senator PITTMAN. Sometimes we have been in accord with them and sometimes we have not; but I mean to say that the committee has had the benefit of that report, and the question is, dealing with the recommendation that you make, that it should be required by law that the report of the General Board should be submitted to Congress.

Admiral NIBLACK. No, that the opinion of the Chief of Naval Operations, who is to have certain power to execute these questions should be submitted. That is quite a different thing. That is quite a different proposition. The law now gives the General Board certain authority, which also is given to the Chief of Naval Operations. I think it is very important that this committee should have before it, as I have given, the law relating to the General Board, the law as now existing relating to the duties of the Chief of Naval Operations. If I may, I will read it. It is not very long. It has to do with exactly who is responsible and how far responsible he is.

The CHAIRMAN. Very well.

Senator PITTMAN. I have no objection to that.

Admiral NIBLACK. This is the law [reading]:

DUTIES OF CHIEF OF NAVAL OPERATIONS.

[Naval Regulations, chap. 2, art. 126.]

(1) The Chief of Naval Operations shall, under the direction of the Secretary of the Navy, be charged with the operations of the fleet and with the preparation and revision of plans for its use in war. (Act Mar. 3, 1915.)

(2) This shall include the direction of the Naval War College, the Office of Naval Intelligence, the office of gunnery exercises and engineering performances, the operation of the communication service, the operations of the aeronautic service, mines and mining, of the naval districts, Naval Militia, and of the Coast Guard when operating with Navy; the direction of all strategic and tactical matters, organization, maneuvers, gunnery exercises, drills and exercises, and of the training of the fleet for war; and the preparation and revision and enforcement of all drills books, signals codes, and cipher codes.

(3) The Chief of Naval Operations shall be charged with the preparation, revision, and record of regulations for the government of the Navy, naval instructions, and general orders.

(4) He shall advise the Secretary concerning the movements and operations of vessels of the Navy and prepare all orders issued by the Secretary in regard thereto and shall keep the records of service of all fleets, squadrons, and ships.

(5) He shall advise the Secretary in regard to the military features of all new ships and as to any proposed extensive alterations of a ship which will affect her military value, and all features which affect the military value of dry docks, including their location; also as to matters pertaining to fuel reservations and depots, the location of radio stations, reserves of ordnance and ammunition, fuel stores, and other supplies of whatsoever nature, with a view to meeting effectively the demands of the fleet.

(6) He shall advise the Secretary of the Navy on all business of the department in regard to foreign relations, and all correspondence in regard to these matters shall be presented for the department's action through his offices.

7) In preparing and maintaining in readiness plans for the use of the fleet in war, shall freely consult with and have the advice and assistance of the various bureaus, boards, and offices of the department, including the Marine Corps headquarters, in matters coming under their cognizance.

And, by the way, these war plans are always signed by the Secretary. [Continuing reading:]

After the approval of any given war plans by the Secretary it shall be the duty of the Chief of Naval Operations to assign to the bureaus, boards, and offices such parts thereof as may be needed for the intelligent carrying out of their respective duties in regard to such plans.

8. The Chief of Naval Operations shall from time to time witness the operations of the fleet as an observer.

Admiral Coontz is going down next week. [Continuing reading:]

9) He shall have two principal senior assistants, officers not below the grade of captain, one as assistant for operations and the other as assistant for material.

10) He shall ex officio be a member of the General Board.

There is a further provision of the law, as follows [reading]:

SECRETARY'S ADVISORY COUNCIL.

[Naval Regulations, chapter 2, article 105.]

The Secretary's advisory council will be composed of the following members:

The Assistant Secretary of the Navy.

The Chief of Naval Operations.

The Chief of the Bureau of Navigation.

The Chief of the Bureau of Ordnance.

The Chief of the Bureau of Steam Engineering.

The Chief of the Bureau of Construction and Repair.

The Chief of the Bureau of Yards and Docks.

The Chief of the Bureau of Supplies and Accounts.

The Chief of the Bureau of Medicine and Surgery.

The Major General Commandant of the Marine Corps.

The Judge Advocate General of the Navy.

The Secretary's advisory council will meet every Thursday at noon in the Secretary's office, unless otherwise directed, and at such other times as the Secretary may direct.

The Naval Regulations is composed of two parts, the blue book and the white part of it. Admiral McKean has called my attention to the fact that it is only where it is stated there that it is in the law, where the reference is given, "Act of March 3, 1915," and the other the regulations signed by the President. And what I have just said, it is stated where it is in the law. The regulations are signed by the President. They have executive force. They have all the effect of law, unsigned by the President.

Senator PITTMAN. Do you think that our Navy, from your knowledge of the situation, did its full part in the war?

Admiral NIBLACK. I think it did its full share in every way.

Senator PITTMAN. Admiral, is there not quite a difference in the acts that are essential for general preparation for war and the acts that are essential for a naval battle?

Admiral NIBLACK. There is a great difference. Naval battles are fought on what you might call general written, and on specific orders, which are given either in writing prior to the battle or by signal during the battle, or in the progress of the battle, and those are what you call dispositions and assignments of what you might call task groups and specific forces, as detailed for specific purposes. No plan can outline, ahead of time, what the battle is going to bring. Many orders, for instance, are given which change the disposition of forces and change previous orders.

Senator PITTMAN. Just one other question here, so that the record may not convey a wrong impression from the question asked by Senator from Florida. As I understand, you testified that war plans were in preparation when you were a boy.

Admiral NIBLACK. I mean by that, since 1888, when the War College was created. But I was more than a boy at that time.

Senator PITTMAN. The Senator from Florida asked you if war plans were not in preparation from time immemorial. I did not want to have any misunderstanding from leaving it that way.

Admiral NIBLACK. I think we have always had a plan. We had a war plan in the Civil War. We have had lots of war plans. But I meant to say, there was nothing new about a war plan.

Senator PITTMAN. Do you know of any proposal by the General Board during the war, from the commencement of it, that was not carried out by Congress?

Admiral NIBLACK. I can not answer that question, because it is rather historical than otherwise. It is a historical question that should be very readily taken up by the Historical Section of the Navy Department and definitely answered.

Senator PITTMAN. But, I say you know of none yourself, from the information you now have?

Admiral NIBLACK. Well, I mentioned aviation as a proposition of the General Board that has not materialized.

Senator PITTMAN. There was a considerable amount of money, however, appropriated for that. Congress did its duty in that particular, I believe, during the war.

Admiral NIBLACK. The General Board has to do with the rounding out of programs, and often they get only a part of the program. And of course it is not always a complete one, for that reason; but the Navy has gone on the theory that if we got battleships, it would be like having the necessities of life, and we could dispense with some of the luxuries.

Senator PITTMAN. Do you know what department of our Government had charge of the building of airplanes during the war?

Admiral NIBLACK. I do not know. They were very slow in getting them out. I do not know who it was.

Senator PITTMAN. Was it not under the War Department?

Admiral NIBLACK. I do not know.

Senator PITTMAN. I am not intending to criticise the War Department in that way, one way or another.

Admiral NIBLACK. I do not know what branch of the War Department is involved.

Senator PITTMAN. If there were any mistake in the matter, it is to be blamed upon the Navy, then?

Admiral NIBLACK. No, sir; I do not know about the War Department's organization during the war.

Senator PITTMAN. This report of 1913 you referred to was a report dealing solely with Navy planes, was it not?

Admiral NIBLACK. Solely; and my object in bringing that up was to show the fact that the General Board has been alive to the situation for a great many years, and we are still alive to it, and the building program submitted by the General Board is one that apparently is too large to swallow. It would be difficult to make it, in my opinion, small enough to have it swallowed.

The CHAIRMAN. Admiral, you stated that the Navy did its full share in the war. Everybody knows what splendid work the Navy did during the war; but do you not think that it would have been possible after 1914, and certainly after the sinking of the *Lusitania* in 1915, to put our Navy in a state of preparedness where we would have been able to do much more in the war than we did do?

Admiral NIBLACK. Well, politically it was not possible to do it. It was very desirable, but it was not politically desirable.

The CHAIRMAN. You do not allude to Congress?

Admiral NIBLACK. Just the situation; what you call the situation of our country. The views of our voters and the newspapers, and all that goes to make up the influential elements in any problem.

The CHAIRMAN. So far as Congress is concerned, I think the Senator from Florida is trying to bring out the idea that Congress is responsible in certain cases. As far as Congress is concerned, have you any doubt in your mind that if the Secretary of the Navy had put up with the Congress of the United States the fact that we needed certain vital changes, certain increases in ships and in personnel, and other changes—have you any doubt that Congress would have enacted legislation to carry out those changes?

Admiral NIBLACK. Very serious doubt.

The CHAIRMAN. After the sinking of the *Lusitania*?

Admiral NIBLACK. Very serious doubt.

The CHAIRMAN. Other witnesses have testified very differently from you.

Admiral NIBLACK. I am only giving you the idea that I do not think we can ever get what the Navy really requires to make it what our policy is at the present moment, equal to that of any other navy in the world.

The CHAIRMAN. That is a peace question; but after the sinking of the *Lusitania* it was evident to a great many people, I think to most people in this country, that eventually we were likely to get into war with Germany, and I think the feeling was very strong in this country that we should do everything possible to prepare for that war. Do you not agree with that?

Admiral NIBLACK. That was my impression from reading the newspapers. My own opinion was that the Navy is preparing for war all the time. It is preparing for war now. It is its business to prepare for war, and it should be prepared for war; and I am getting ready for the next war right now, and I am very loath to go into a post-mortem of the last war, because my interest is in the next one.

The CHAIRMAN. Precisely; but we can get a good many lessons from the past war, can we not?

Admiral NIBLACK. I hope so.

Senator PITTMAN. Admiral, the sinking of the *Lusitania* was in May, 1916. In December, 1915, and in 1916, we had a naval appropriation bill. Did the House Committee on Naval Affairs report as much as the Navy Department asked for?

Admiral NIBLACK. That is a historical question. I could very readily answer that by recourse to the records, and I hope that the history of the war will bring that out. The object of this \$20,000 I have is to accumulate information for writing the history and the classification of this information, but Congress refused to give us more than \$1,800 for the salary of any one person. I cannot get

Admiral NIBLACK. I think history will probably do full justice whoever was responsible.

The CHAIRMAN. Have you any questions, Senator Keyes?

Senator KEYES. No, Mr. Chairman; but this discussion as whether Congress was responsible for the action of 1915 or not is very interesting to me, and as we are recording historical facts, I would like to have the record show that I was not a Member of Congress in 1915.

The CHAIRMAN. Nor was I. I think the records will show that Senator Pittman was the only member of this subcommittee who was in Congress at that time.

Senator TRAMMELL. I was not a Member at that time, but all of us remember about that time; and I know that the present committee has not approved of all the recommendations made even by the Secretary of the Navy very recently, so that it is possible that the Secretary made some recommendations to Congress and could not get them through.

The CHAIRMAN. We are not at war now.

Senator TRAMMELL. We were not at war then. The Navy Department and the Secretary have made recommendations considerably larger than the committee has approved of at the present time. Hindsight is better than foresight, so that three years from now, if we should get into war again, they will come and say, "I told you so," again.

The CHAIRMAN. Is there anything else?

Senator TRAMMELL. That is all I have.

The CHAIRMAN. I think that is all, Admiral, and you may be excused.

(Thereupon, at 1 o'clock p. m. the subcommittee adjourned on Wednesday, April 14, 1920, at 10 o'clock a. m.)

whether we would need anything three or four years afterwards. There was no question in my mind, but there may have been in some peoples' minds.

As far as the armed guard question is concerned, that can not be taken as a definite step toward the increase of the Navy; but do you not recall that the General Board, I think it was in 1916, made a report to the Secretary asking for a certain number of men—for an increase in the personnel—and that at the Secretary's request the board withdrew the suggested increase of 20,000, before the matter was put up to Congress?

Admiral NIBLACK. That is a matter of official historical record, I hope, and I hope it will be available for historical purposes; and any information of that kind is very valuable. And, moreover, Admiral Badger is available as a member of the General Board. I know nothing about that proposition myself.

Senator PITTMAN. From the records of the General Board, to which you have access, is it not a fact that immediately after the sinking of the *Lusitania* the Secretary of the Navy asked the General Board to prepare a comprehensive building program, and that this was prepared and submitted to the Secretary of the Navy and that it was submitted by him to Congress?

Admiral NIBLACK. I shall look that matter up. I think that is very important.

Senator PITTMAN. And that it resulted in what is known as the naval program of 1915-16, or the three-year program, and the enlargement of personnel of the Navy?

The CHAIRMAN. And is it not a fact that that does not cover the immediate steps that I am speaking about, and which have been in use in the present war? Was not the naval program prepared held up in every possible way during the war with Germany?

Admiral NIBLACK. Well, I hope not; but I do not know.

The CHAIRMAN. I think the figures will show how much of it has been completed now, nearly four years after it has been prepared.

Admiral NIBLACK. I think that is very important as a historical fact.

Senator PITTMAN. The question that the chairman asks has been answered here several times; but I do not think it is fair to allow it to go into the record as an indication that the Navy Department laid down on its building program during the war. The testimony discloses the fact that the building of superdreadnaughts was postponed because it takes about three years to build a dreadnaught, and every navy yard in the country was necessary for the building of antisubmarine craft and vessels essential to transportation of food and soldiers to the Allies. Every dollar that was appropriated and every navy yard that was available was used, and the only slacking on building that is shown by the prior testimony was on our battle-ships, which could not be made available until after the war.

Admiral NIBLACK. That is a very interesting historical fact.

The CHAIRMAN. The Senator is bearing out exactly what I say, and that is that that three-year program was not an immediate step going into the war; that is, it was something in the future, and had nothing to do with the immediate steps, such as putting into effect the personnel increase for manning such ships as we had on hand.

Senator PITTMAN. But the personnel report was carried out.

Admiral NIBLACK. I think history will probably do full justice whoever was responsible.

The CHAIRMAN. Have you any questions, Senator Keyes?

Senator KEYES. No, Mr. Chairman; but this discussion as whether Congress was responsible for the action of 1915 or not is very interesting to me, and as we are recording historical facts, I would like to have the record show that I was not a Member of Congress in 1915.

The CHAIRMAN. Nor was I. I think the records will show that Senator Pittman was the only member of this subcommittee who was in Congress at that time.

Senator TRAMMELL. I was not a Member at that time, but all of us remember about that time; and I know that the present committee has not approved of all the recommendations made even by the Secretary of the Navy very recently, so that it is possible that the Secretary made some recommendations to Congress and could not get them through.

The CHAIRMAN. We are not at war now.

Senator TRAMMELL. We were not at war then. The Navy Department and the Secretary have made recommendations considerably larger than the committee has approved of at the present time. Hindsight is better than foresight, so that three years from now, if we should get into war again, they will come and say, "I told you so," again.

The CHAIRMAN. Is there anything else?

Senator TRAMMELL. That is all I have.

The CHAIRMAN. I think that is all, Admiral, and you may be excused.

(Thereupon, at 1 o'clock p. m. the subcommittee adjourned on Wednesday, April 14, 1920, at 10 o'clock a. m.)

NAVAL INVESTIGATION.

WEDNESDAY, APRIL 14, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, in room 235, Senate Office Building, at 10 o'clock a. m., Hon. Frederick Hale presiding.

Present, Senators Hale (chairman), Ball, Keyes, and Trammell.

The CHAIRMAN. The committee will come to order. Admiral Strauss, will you please take the stand and be sworn?

TESTIMONY OF REAR ADMIRAL JOSEPH STRAUSS, UNITED STATES NAVY.

The witness was sworn by the chairman.

The CHAIRMAN. Admiral, have you a statement to make about matters connected with this investigation?

Admiral STRAUSS. Yes, sir. When war was first declared in Europe I was on duty in the department as Chief of the Bureau of Ordnance, to which position I had been appointed in October of the preceding year. At that time the department was organized on the aid system. The chiefs of the material bureaus met almost daily in the office of the aid for material for conference where their work was coordinated by that aid.

Upon taking over the work of the bureau I was apprised of the policy of the department with respect to supply and reserve of ammunition, auxiliaries and their armament, reserve guns, supply and reserve of torpedoes, mines, etc. This policy had been recommended by the General Board and approved by the Secretary of the Navy, and the bureau was actually engaged in purchasing and manufacturing this material to the full extent of funds available. This was the part of preparedness for war that was assigned to the bureau of which I was the head, and I hope I will be pardoned for the personal reference, when I state that with the aid of an able staff of officers the work was pursued vigorously, so that at the end of 1915 in answer to an inquiry by the chairman of the House Naval Committee I was able to write him the following letter:

NAVY DEPARTMENT,
BUREAU OF ORDNANCE,
Washington, D. C., December 10, 1915.

Hon. L. P. PADGETT, M. C.,
*Chairman Committee on Naval Affairs,
House of Representatives, Washington, D. C.*

MY DEAR MR. CHAIRMAN: Referring to our conversation of yesterday with regard to ordnance material on hand, I will give you the following summary of conditions:

POWDER.

The powder situation is excellent. On June 30 of this year the total shortage of powder for all ships including the *Pennsylvania* and *Arizona* amounted to only 2,510,000 pounds. That is to say, this amount is not on hand or ordered. I told you yesterday that our average product at Indianhead for the year would be 5,000,000 pounds. Examining the latest returns from the factory I am afraid this is an overstatement. We are hoping to get everything working with the increased plant in February. It may not succeed. If we do succeed the rate, as I told you, from that time on will be 6,000,000 pounds per annum, which would make the average for the year 5,000,000 pounds. I am not counting on it, for the reason that it is not an accomplished fact.

I gave it out in my annual report that 5,000,000 pounds would be the product for the fiscal year 1916. We have had so many delays in obtaining material that I regret I made so optimistic a prediction.

However, to return to the question of powder supply; The 2,510,000-pound shortage could be made up, as I told you yesterday, by the time the *Pennsylvania* and *Arizona* went into commission and required their powder. We will not work it quite that way for reasons of expediency, but instead of supplying a full reserve for all the shortages embraced in the 2,510,000-pound shortage, we deem it advisable to begin the manufacture of powder for the *California* class, and will rest on this small shortage in that respect in order to be ahead on new construction.

This general statement can be made: That we have on hand or ordered all the powder and reserve for all capital ships of the Navy that are in commission or are about to be commissioned; that we have all the allowance of powder for all other guns in the service and nearly all of the reserves. The business in hand now in the powder department is to provide the supply and reserve for the five ships of the *California* class. The predicted capacity at Indianhead will be 6,000,000 pounds per year, which will take care of all this call, but will not take care of the new extended building program of the Navy per annum.

So I can repeat, that the powder situation leaves nothing to be desired.

PROJECTILES.

The supply of projectiles is not so satisfactory as that of powder. We have on hand and in process of manufacture in the 14-inch caliber, enough for the supply and reserve for all ships including the *Oklahoma* and *Nevada* about to be commissioned and the *Pennsylvania* and *Arizona*, which will be commissioned probably later in the summer.

The reason I say it is not so satisfactory is because we must now procure the projectiles for, and be diligent in having manufactured, projectiles for the *California* class, even the two 1916 ships which the Secretary yesterday decided would be built at the navy yards.

Of the 13-inch caliber we have all that will be required. Of the 12-inch caliber we have even a slight surplus. Of the 10-inch caliber we have enough; the same with the 8-inch and 7-inch calibers. In the 6-inch caliber we have a shortage; the number on hand and in process of manufacture constitutes 80 per cent of the total requirements as laid down. In other words, the shortage is 20 per cent. In the 5-inch caliber we are very short. The shortage amounts to about 50 per cent of the total requirements, but this shortage is tempered by the fact that we consider the reserve to apply to all the projectiles needed for ships under construction. Taking the three battleships of the *California* class and the two 1916 ships, five ships in all mounting 110 guns, from our shortage, we find that we have on hand and ordered about 61 per cent of 5-inch projectiles for all ships up to and including the *Pennsylvania* and *Arizona*. If we exclude all ships not ready to fight, which would exclude the *Pennsylvania* and *Arizona*, the shortage would be only 34 per cent in this caliber.

In the 4-inch caliber our total shortage amounts to nearly 49 per cent. Again excluding destroyers in process of construction, this shortage would be reduced to 41 per cent.

The shortage in the 3-inch caliber is 53 per cent. I do not consider this very seriously, but yet feel that it must be made up. If we could utilize the productive capacity of the country in producing these shells, the entire outfit could be supplied in a few weeks. It is presumable, therefore, that if the money is granted by the Congress this item can be excluded from the question of preparedness.

GUNS.

The guns on hand and in process of manufacture meet all requirements of the department as to armament and reserve guns, with two or three minor exceptions.

which are negligible. All of the 14-inch batteries and the reserve guns for these batteries are built or building. We are fully supplied with 13-inch guns, both mounted and reserve. There is a small shortage in 6-inch 50-caliber reserve guns. For certain reasons connected with this caliber, I do not deem it necessary to provide them. There is a small shortage in 5-inch 51-caliber guns which will require no special appropriation to make up. Current funds under "Ordnance and Ordnance stores" will, I believe, provide sufficient money to meet this small deficiency. Of course, this small shortage in reserve guns is more than made up by the fact that there is a shortage on the total number of 5-inch guns mounted and to be mounted. Some of them will not be mounted and in use for three or four years.

TORPEDOES.

The torpedo situation is well in hand. We have now actually on hand or in process of manufacture torpedoes sufficient for the full allowance and reserve for every ship that we possess or that has been authorized. The torpedoes being manufactured will be ready for the ships as soon as they are put in commission. In this year's estimates I did ask for a large sum of money to provide replacement torpedoes for the three battleships of the *Ohio* class, for the six armored cruisers, and for destroyers. The above-mentioned vessels now have 4,000-yard torpedoes, and it was my idea to replace them with torpedoes that would range seven or eight thousand yards. The 4,000-yard torpedoes would not be wasted, as they would be kept in stock for present and future submarines, a class of vessels upon which such torpedoes would be entirely efficient. The department cut this item out from the estimates. However, the estimates include \$800,000 which will be utilized for the manufacture of replacement torpedoes, principally to carry out a general scheme which we have had in hand now for two or three years, by which the pre-dreadnaught ships are to have their torpedoes changed from 4,000-yard range to about 8,000 yards. This money will complete that scheme and I hope will provide sufficient funds to give new torpedoes to the nine small submarines in the Philippines.

MINES.

We have actually ready for use at the present time two-thirds of the mines that prior to the European war were considered necessary for our needs. The remaining one-third are promised for delivery in the spring, and I believe this promise will be kept if the great dearth of material does not interfere. However, the tremendous use of mines abroad during this war has furnished an object lesson to us and to other nations as to the more extended use of the mines that is possible, and at the suggestion of this bureau, the department, upon the advice of the General Board, has placed a new figure on our needs, and has increased the previous number by 6,000 mines. If the money is made available, these 6,000 mines will be manufactured during the next fiscal year at the Norfolk Navy Yard, where the other mines are being built.

Respectfully,

J. STRAUSS, *Chief of Bureau.*

The word "shortage," used frequently in the above letter, should be explained: We counted ourselves "short" of ordnance material for a ship as soon as the ship was authorized, although the ship was not to be ready for the ammunition, for instance, for three or four years.

As the war in Europe progressed, many new things were learned, and as fast as possible these lessons were taken to heart and our plans expanded accordingly. For instance, it had long been assumed that reserves of small caliber shell (being of simple manufacture) could be produced very readily during the war as they were needed. As a result of our experience in the United States in the production of small shell for the Allies, we learned that the process would be much slower than we thought, so that I changed the policy and asked for and obtained sufficient funds to procure all the refills of ammunition that were stipulated in the General Board plans. When I left the bureau in December, 1916, these shell were being manufactured. While on this subject, I will refer to the manufacture of 12 and 14 inch armor-piercing shell. The difficulties surrounding the production of such

projectiles were great, and the margin of profit as compared with more easily manufactured steel products was probably small, so the steel makers were not very anxious to undertake the business. It became so apparent to me in 1915 that I recommended to the Secretary that we start a shell plant of our own. He approved this and obtained an appropriation for the purpose, so that now we have a plant in Charleston, W. Va., that is manufacturing forged-steel armor-piercing shell. The failure of one firm to fulfill its contracts for the 14-inch caliber, with penalties accruing through many months provided a shortage of reserve shell if they continued to fail in meeting the specifications. However, there were three large steel plants manufacturing them when I went to sea in 1916.

We had been alive to the importance of mines in modern warfare for a long time. In 1913 we adopted a type of mine after proper tests and as soon as possible a contract was entered into with Vickers to manufacture these mines, and at the same time we started to procure equipment to manufacture an equal number at the navy yard at Norfolk. With the completion of these mines we would have had the quantity that fulfilled the requirements recommended by the General Board. As time went on it was seen that very many more mines would be used should we be involved in the war, so that the number to be procured was trebled. When the North Sea barrage was projected, it involved the manufacture of something like a hundred thousand. A new type was invented and developed by the Bureau of Ordnance to that end in the spring of 1917. In the meantime I had left the bureau.

In 1913 we had only 900 mines. The task of getting mines was pushed as much as our limited funds would permit. We had asked for money for mines in 1912, again in 1913, and in 1914 the department asked for \$300,000 for this purpose, but no money was appropriated. So we had to get along as best we could, eking out the supply set by the war plans from money taken from other funds that could legally be so used. As an example of comparative preparedness I have been informed that at that time the British had no mines.

We had at the end of 1916 batteries of four guns each for 180 auxiliary ships. These batteries were housed at navy yards, and the full supply of powder, shell, primers, etc., were all prepared and ready for these ships at the nearest ammunition depots, so that in the event of war the guns could be secured on the ships and the magazines and shell rooms supplied at once.

In December, 1916, I took over the command of the battleship *Nevada* and early in January, 1917, proceeded with the fleet to Cuba for the winter exercises and maneuvers. We came north in March. The general feeling in the fleet was one of confidence inspired by the high morale and excellent condition of the ships and their personnel.

I remained on the *Nevada* until February, 1918, when I was promoted to rear admiral. I was detached in that month and ordered to command the mine force, with temporary duty in Washington, where I was apprised of the plans for constructing a barrier of mines across the North Sea to hem in the submarines. After spending a couple of weeks in studying the plans, inspecting the mine layers, then being prepared, I sailed for England, arriving at London on March 21. I reported to Admiral Sims and spent the next 10 days in discussing the problem with his staff, making the acquaintance of the Admiralty

Officials and getting their views on the task ahead of us. From London I proceeded to the two bases in Scotland. There was one at Inverness and another at Invergordon, 30 miles farther north. These bases consisted of immense assembly plants, then almost completed. After inspecting these bases I proceeded to Scapa Flow to make arrangements with Admiral Beatty by which the mine planters were to be provided with a destroyer screen and escort of capital ships when engaged in the operation of planting the mines.

The next six weeks were spent in organizing for the work so that when the mine layers arrived, in the latter part of May, they were loaded with mines, and on June 8 they planted 3,385 mines on the first trip.

The operation of planting the mines of the northern barrage involved 13 trips of the mine ships from the bases at Inverness and Invergordon. It had been arranged between myself and Admiral Beatty that four days before being ready the latter was to be notified by telegram that the planters would probably be ready on that date. Two days after that another telegram would be sent to Admiral Beatty by me giving the hour of readiness. Then Admiral Beatty would reply and set an exact hour when the ships were to rendezvous off the coast with the screen of British destroyers. Some hours before the time set the destroyer commander with his destroyers would arrive at the base. Admiral Beatty would furnish a routing order, principally as a guide to the swept channels on the coast. The operating order would be given by me after a consultation between the mine squadron commander, the destroyer commander, and the commander of the mine force.

When the expedition returned to harbor the navigation notes would be handed in from each ship at once and the location of the mines as handed in would be reconciled from the various data and a dispatch sent immediately to Admiral Beatty, Admiral Sims, and the Admiralty at London giving the location and number of mines planted on that expedition.

Any change affecting the plan of the barrage proceeded from the London office after consultation with the Admiralty, except on one occasion when an order was received direct from Admiral Beatty which seriously limited the barrage. Upon my making this known to Admiral Sims he had the limiting order rescinded at the Admiralty, although this took over three weeks to accomplish.

In general the British mine layers would proceed to the field from their base in the Firth of Forth, so that we would arrive there at the same time, and thus one escort would serve to protect both fleets. On October 26 the last planting of my force was accomplished and further work was suspended by the impending armistice. In all, the United States planted 56,611 mines and the British 13,652, making a total of over 70,000 mines.

I think it is due to the United States Navy under the existing circumstances to invite attention to the magnitude of this project and to the success achieved in accomplishing it. The barrier began to take toll of the enemy's submarines as early as July 9, when one was disabled on the barrier and compelled to return to Germany. From time to time after that, even in its uncompleted state, it succeeded in sinking one.

It is not known by us how many submarines were sunk or disabled in this mine field. It has been placed as high as 23. My own estimate, based on known sinkings, is 10, although I am inclined to think that that is a modest one.

The entire project consists of various phases which may be summarized as follows:

First, the inception of the scheme which originated in the United States Navy Department as early as April, 1917. This was rejected by the Admiralty and Admiral Sims.

Second, the design of a new mine by the Bureau of Ordnance. This mine was of an entirely new type, the principal advantage of which lay in the fact that only one-third as many would be required to form a deep barrier as would be the case with the then existing types. On July 18, 1917, the design had progressed to such a point as to cause its proposal on that date for use in barring the exit of German submarines to the Atlantic. On July 30 the Bureau of Ordnance addressed a second letter to the Chief of Naval Operations submitting a proposal for a joint American-British mine barrier across the North Sea. This project was further submitted in person by Admiral Mayo at an allied naval conference in London on September 4. This was met by a demurrer on the part of the British, the objection being that it would hamper the movements of the Grand Fleet, and it was agreed that nothing should be done until an adequate supply of mines of satisfactory type could be assured.

On October 20, on the recommendation of the General Board, the department cabled to Admiral Sims directing him to ascertain from the Admiralty whether they thought, in the light of their experience, that a barrier could be maintained from abreast Aberdeen across the North Sea to the Norwegian coast abreast Egersund, and whether the Straits of Dover could be similarly mined.

On October 23 the Admiralty expressed their approval of the scheme.

On October 29 the Secretary of the Navy approved the General Board's report and the project, as finally adjusted between ourselves and the British, was favorably acted upon by the President at a Cabinet meeting on the 30th.

Third, the purchase and reconstruction of eight mine layers of large capacity and the production of mines of the new type amounting to 100,000 or more, preparation of bases, etc.

Fourth, the actual planting of the mines in the North Sea as outlined above.

You will see from these facts that the scheme was purely one originating in the United States Navy Department, urged by the department, and although it was to be a joint effort of the American and British Navies, our Navy constructed four-fifths of it.

It took 64 shiploads of mines to furnish our part of the barrage. These all had to be transported across the Atlantic in United States carriers, taken across Scotland, assembled at the bases, and finally exactly planted in the North Sea.

The production of so vast a quantity of material, all shipped to a distance of 3,400 miles in good time, is a fine example of energy and organization, and when our task was completed on the other side I wrote the following letter to the Navy Department:

MINE FORCE, UNITED STATES ATLANTIC FLEET.

MARCH 29, 1919.

From: Commander mine force.

Navy Department.

Subject: North Sea barrage.

I beg to furnish for the files of the Navy Department an expression of appreciation of the part played by the Bureau of Ordnance in the construction of the mine barrage in the North Sea.

The mine itself, though entirely novel, was highly successful in its functioning. This, I understand, was devised in the bureau in a comparatively short time. The plan for mines for the North Sea barrage, that in the Aegean Sea, and across the Adriatic would have amounted in the end to probably 130,000. We actually received at the North Sea bases some 80,000 mines and used 57,000. We would have used more there had not the war been brought to a close when it was. The task placed on the Bureau of Ordnance was a very great one, and the highest credit is due the bureau for its achievement.

J. STRAUSS,

Rear Admiral, United States Navy.

Copy to: Bureau of Ordnance.

On the other side some 7,000 officers and men were employed—all belonging to the Navy; 3,000 men were busily engaged at the two assembly plants in assembling mines and anchors, testing each mine, and loading them in lighters, transporting them, and loading them on the mine layers at anchor in the harbor. This was strenuous labor, and rapidly as the layers worked, the force on shore could always keep ahead of them; 4,000 officers and men belonged to the crews of the layers. The process of laying a field of 5,500 mines only took a little over four hours after the ships arrived at the field.

As soon as the armistice was signed, the mine layers were sent home and plans were begun for sweeping up the mines. This work required considerable preparation, but on May 8, 1919, the work of sweeping was seriously begun and pursued with all the energy possible until September 30, when the last mine was removed. In the work of sweeping some 80 vessels were engaged, manned by 4,000 men.

The CHAIRMAN. In your statement you quote a letter written by you on December 10, 1915. Can you tell the committee what were the conditions in regard to powder, guns, and torpedoes and mines at the time of the declaration of war?

Admiral STRAUSS. Our declaration of war?

The CHAIRMAN. Our declaration of war.

Admiral STRAUSS. No, I can not. I have stated there that when I left the bureau in December, 1916, the full supply of shell, as stipulated by the General Board and approved by the Secretary of the Navy, was being manufactured.

The CHAIRMAN. Were they already manufactured and ready?

Admiral STRAUSS. No; but if you will look at my statement you will see that all ships then in existence had their supply of shell. What were being manufactured at that time were reserve.

The CHAIRMAN. But we had no reserves on hand?

Admiral STRAUSS. Yes, sir; we did.

The CHAIRMAN. Can you tell me anything about the number of reserves we had on hand?

Admiral STRAUSS. No, I can not. I think you can very readily get a statement from the Bureau of Ordnance to answer that question.

The CHAIRMAN. This was when you left the bureau in December, 1916?

Admiral STRAUSS. When I left was in December, 1916.

The CHAIRMAN. Was there a large reserve on hand?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. A large reserve of what, projectiles?

Admiral STRAUSS. Projectiles, powder—everything.

The CHAIRMAN. Do you know about the mine situation—many mines we had on hand at that time?

Admiral STRAUSS. When I left?

The CHAIRMAN. Yes.

Admiral STRAUSS. I have stated that here, sir.

The CHAIRMAN. You have stated it already?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. These mines you had on hand, were they latest, up-to-date mines at that time?

Admiral STRAUSS. They were at that time considered the very latest thing in mines in the world. But since that time we do not think much of them.

The CHAIRMAN. I am referring to that particular time.

Admiral STRAUSS. At that particular time they were supposed to be the very latest thing in mines, and were being manufactured in large numbers by Vickers for the British Government, were being manufactured, I believe, for the Italian Government, and we had placed in an order. Vickers were manufacturing 1,100 for us, and they were commandeered for the British Government.

The CHAIRMAN. On what page of your statement do the facts about the mines appear?

Admiral STRAUSS. I have not my statement paged, but I will read the paragraph again, if you please.

The CHAIRMAN. I would like to refer to it as you go along.

Admiral STRAUSS. It is page 4, the last paragraph.

The CHAIRMAN. Page 4 refers to your letter of December 10, 1916, does it not?

Admiral STRAUSS. Yes.

The CHAIRMAN. I asked you about December, 1916, when you left the bureau.

Admiral STRAUSS. Oh, yes. I can not recall the actual number of mines on hand in December, 1916. That can be gotten from the Bureau of Ordnance, quite readily.

The CHAIRMAN. You can not give me the figures now?

Admiral STRAUSS. I can not give you the figures; no, sir.

The CHAIRMAN. Can you get a statement from the Bureau of Ordnance and furnish it to the committee so that we may put it in the record?

Admiral STRAUSS. Yes, sir; that will be done.

The CHAIRMAN. I would also like a statement as to the number of torpedoes we had on hand at that time, and a statement of the powder, projectiles, and guns. You could get a statement covering all of these?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. And I would like to have that put in the record showing all the different sizes of the projectiles, and the different sizes of the guns, and whatever other matters would be of interest.

(NOTE.—The following communication, together with tables, subsequently received from Rear Admiral Earle, Chief of the Bureau of Ordnance, and is here inserted in the record.)

NAVY DEPARTMENT.
BUREAU OF ORDNANCE.
Washington, D. C., May 7, 1920.

SENATOR: The bureau is in receipt of a letter from Rear Admiral Joseph United States Navy, referring to his hearing before your subcommittee and that you be furnished with information in reply to questions in the cross-examination which referred to the bureau.

Testimony, page 1156 of the record. Admiral Strauss referred to the department policy and the method by which it was arrived at, as regards the supply of materials. All material supplied by the bureau is prepared in accordance with department policy and where, in the appendages, materials required are mentioned it will mean, of course, required in conformity with this policy.

As of the testimony shows that statement of material as of two approximate dates, December, 1916, and when war was declared in April, 1917, are desired. These are adhered to as closely as possible.

are appended hereto, appendages Nos. 1 to 8, statements giving the information.

As furnished the committee by Capt. W. V. Pratt the complete history of the Sea mine barrage compiled by my bureau.

Very respectfully,

RALPH EARLE.

Rear Admiral, United States Navy, Chief of Bureau.

FREDERICK HALE.

United States Senate, Washington, D. C.

¹ Made necessary by passage of appropriation acts of Aug. 29, 1916, and Mar. 4, 1917. Delivery of gun mounts has at all times anticipated ship requirements.

² Not considered necessary to make up spares for old type guns.

³ Made necessary by passage of appropriation act of August 29, 1916. Orders for manufacture to meet increased requirements due to arming of merchantmen and auxiliaries were placed as rapidly as caps could be obtained.

The CHAIRMAN. Do you consider that at the outbreak of the war we were thoroughly prepared so far as ammunition and guns were concerned?

Admiral STRAUSS. I do.

The CHAIRMAN. Thoroughly prepared?

Admiral STRAUSS. Thoroughly prepared.

The CHAIRMAN. To take an active part in the war?

Admiral STRAUSS. I do.

The CHAIRMAN. And we had large stores of reserve ammunition and guns on hand?

Admiral STRAUSS. Ammunition and guns and powder.

The CHAIRMAN. All that could possibly be needed toward our taking an active part in the war?

Admiral STRAUSS. Yes; all that would be needed—that is, my statement is as of a period one year and four months prior to the war. We had the money, and we were very active in procuring the material and in its being manufactured, and while I was not in the department when war was declared, I have not any idea in the world that the comparatively unimportant shortages of December, 1915, were not made up.

The CHAIRMAN. You say they were made up by December, 1916, after you left the bureau?

Admiral STRAUSS. I did not say that.

The CHAIRMAN. I am asking you, were they made up by that time?

Admiral STRAUSS. No; I do not know. I say I do not doubt but that by April we had plenty of ammunition.

The CHAIRMAN. Yes; and I asked you to state whether in your opinion we were in a thorough state of preparedness, so far as ammunition and guns were concerned, on April 6, 1917.

Admiral STRAUSS. Yes; thoroughly prepared.

The CHAIRMAN. But you can not state that in December, when you left, we were thoroughly prepared?

Admiral STRAUSS. Well, we were prepared in December to go to war; but if you mean were we 100 per cent prepared, I say no. And I would like to say right now about preparedness that no first-class navy, no live navy, ever considers itself thoroughly prepared. In other words, its ideals must outstrip its material accomplishments, or they are no good.

The CHAIRMAN. Had we come up, in December, 1916, to the plans that you had outlined?

Admiral STRAUSS. They were not completed; no.

The CHAIRMAN. They were not? But you do not know whether they were completed between December, 1916, and April, 1917?

Admiral STRAUSS. I do not.

The CHAIRMAN. So that your estimate that we were thoroughly prepared and that the plans were completed then is simply a guess?

Admiral STRAUSS. Not at all. I told you before that we were thoroughly prepared for war, so far as ammunition and guns were concerned, in December, 1916.

The CHAIRMAN. But you have just stated, Admiral, that your plans were not thoroughly carried out at that time.

Admiral STRAUSS. It does not matter.

The CHAIRMAN. And you have no accurate knowledge as to whether they were carried out between that time and April 6, 1917, have you?

Admiral STRAUSS. No; but I do not consider the absolute completion of my plans necessary to be prepared for war. As I say, there is an ideal state beyond what we ever accomplish.

The CHAIRMAN. For purposes of comparison, I would like to have you give me a statement of the condition of the Navy in regard to guns and projectiles, etc., those that I have already named, at the time when you left the department, and also give one at the time when war was declared, in April, 1917.

Admiral STRAUSS. I will have that prepared.

The CHAIRMAN. Both statements, so that they can be compared.

Admiral STRAUSS. Yes.

The CHAIRMAN. In December, 1916, you left the Bureau of Ordnance and took command of the battleship *Nevada*?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. With what force was she?

Admiral STRAUSS. She was with the battleship force—Force 2.

The CHAIRMAN. And she was with the battleship fleet when war broke out?

Admiral STRAUSS. Yes.

The CHAIRMAN. Was she in every respect thoroughly prepared for war?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. Was her personnel in every respect up to par?

Admiral STRAUSS. Quite so.

The CHAIRMAN. When war was declared?

Admiral STRAUSS. When war was declared. I am reminded that we had supplied some armed guards for several merchant ships.

The CHAIRMAN. So that your personnel had been by that time to a certain extent depleted?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. In other respects, as to material, she was in good condition?

Admiral STRAUSS. She was perfect?

The CHAIRMAN. And the same is true about the fleet in general?

Admiral STRAUSS. In my opinion the condition of the fleet was excellent when we came north from Cuba in April, 1917.

The CHAIRMAN. That is, the ships that were in the fleet were in excellent condition?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. I think the testimony has shown that with the exception of this personnel question, where they had been detached on armed guard duties.

Admiral STRAUSS. Yes.

The CHAIRMAN. Now, would you say that that was a thoroughly equipped and prepared battle fleet?

Admiral STRAUSS. Yes.

The CHAIRMAN. It needed no other vessels of any other kind?

Admiral STRAUSS. A battle fleet; yes. The main strength of a battle fleet, of course, is in the battleships. Now, there are required a certain number of destroyers and scouts and light cruisers.

The CHAIRMAN. And did the fleet have that certain number that would be required?

Admiral STRAUSS. We only had three scouts that had been built for scouts, at that time in commission, the *Birmingham*, the *Salem*, and the *Chester*. They had been built for scouts. They were not very good scouts.

The CHAIRMAN. Were they with the fleet?

Admiral STRAUSS. They were not with the fleet; but it did not matter. We had destroyers that could have served as scouts very well.

The CHAIRMAN. Did you have a surplus of destroyers?

Admiral STRAUSS. Yes; we had, in my opinion, plenty of destroyers.

The CHAIRMAN. More destroyers than you really needed for a number of battleships?

Admiral STRAUSS. No; I do not think we had more. We had destroyers about that time. It is a matter of opinion how many destroyers you need per battleship. I think, though, the consensus of opinion would be that two per battleship would do. We had battleships, and 32 destroyers would have afforded us a proper screen. We had 50 destroyers altogether.

The CHAIRMAN. With the fleet?

Admiral STRAUSS. No; not with the fleet.

The CHAIRMAN. How many did you have with the fleet?

Admiral STRAUSS. I think we had about 20.

The CHAIRMAN. About 20?

Admiral STRAUSS. Yes.

The CHAIRMAN. Which would not give even two to a battleship?

Admiral STRAUSS. We do not have to have them with the fleet.

The CHAIRMAN. I want to know, Admiral, whether the battle fleet as it existed then was a thoroughly prepared battle fleet and ready to go out and fight——

Admiral STRAUSS. It was.

The CHAIRMAN (continuing). The German or any other navy?

Admiral STRAUSS. I want to be emphatic about that, that it was.

The CHAIRMAN. Then, we should discard all scout vessels as not necessary?

Admiral STRAUSS. No; we had in existence enough destroyers to screen the fleet and provide scouts.

The CHAIRMAN. Where did we have them?

Admiral STRAUSS. Had them in the United States.

The CHAIRMAN. Part of them in the Pacific Ocean?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. Were not the most adequate screening vessels that we had in the Pacific Ocean scouting and screening vessels?

Admiral STRAUSS. What do you refer to?

The CHAIRMAN. I am referring to the cruisers that were laid up in the Pacific.

Admiral STRAUSS. At the outbreak of the war we had eight armored cruisers, so listed. We had two other ships that had always been listed as armored cruisers; that is, the *Rochester* and the *Brooklyn*. That made 10. Then we had two of the *St. Louis* class which would have served that purpose, light cruisers or armored cruisers.

The CHAIRMAN. Where were they?

Admiral STRAUSS. They were on the west coast, all except one, the *Montana*, which was on the east coast.

The CHAIRMAN. Was she in condition?

Admiral STRAUSS. She was in condition and actually did go out.

The CHAIRMAN. But she was not with the fleet?

Admiral STRAUSS. No, sir.

The CHAIRMAN. You see, it is a very interesting matter for this committee, as a part of the Naval Affairs Committee, to get the opinion of naval officers about what is necessary to constitute a battle fleet, and if it is not necessary to provide these screening vessels, we want to know about it.

Admiral STRAUSS. Yes; it is necessary to provide them.

The CHAIRMAN. It can not be very immediately necessary if you say that the fleet was all ready to go out for battle that did not have them.

Admiral STRAUSS. I want to differentiate between perfection and what will do.

The CHAIRMAN. How would it do against a fleet that had them?

Admiral STRAUSS. I think that our destroyers would have formed sufficient scouts as against the German fleet's vessels—not in all weathers.

The CHAIRMAN. Not in all weathers?

Admiral STRAUSS. Not in all weathers.

The CHAIRMAN. Not in fog?

Admiral STRAUSS. In fog; yes.

The CHAIRMAN. In darkness?

Admiral STRAUSS. Yes.

The CHAIRMAN. And in storm?

Admiral STRAUSS. The weather might be so bad that they could not stand it very well, although it is a fact that our destroyers stayed out in all weathers on the other side. The destroyers are not ideal scouts, but if you have not other scouts, you have got to use them, and you can use them successfully.

The CHAIRMAN. You would use them if you had them with the fleet?

Admiral STRAUSS. Yes; scouting for the fleet.

The CHAIRMAN. Yes; but would you say that a fleet of 10 battleships and 20 destroyers could go out and fight a fleet of 10 battleships and 20 destroyers and a number of scouting vessels at the same time?

Admiral STRAUSS. Yes.

The CHAIRMAN. And beat it?

Admiral STRAUSS. I would hope to beat it.

The CHAIRMAN. If they were equal in efficiency?

Admiral STRAUSS. No; not if they were equal in efficiency.

The CHAIRMAN. I mean, if the battleships and destroyers were equal in efficiency in each case?

Admiral STRAUSS. No, I would not; unless the personnel was superior.

The CHAIRMAN. So that it would be simply a question of the personnel?

Admiral STRAUSS. Personnel, drill, and morale.

The CHAIRMAN. Do you think it is safe enough for us to depend upon the superiority of the personnel and discard some of these ships?

Admiral STRAUSS. No; I think we ought to build scouts.

The CHAIRMAN. Do you think that a thoroughly equipped battle fleet, when it went out to fight, ought to have scouts?

Admiral STRAUSS. It ought to have scouts.

The CHAIRMAN. Do you think that our fleet in 1917, when the war commenced, if we had been called on to go out immediately—do you think we would have had scouts?

Admiral STRAUSS. Do you mean that we could have gone without scouts?

The CHAIRMAN. No; that we could have had an adequate supply of scouts when we went out.

Admiral STRAUSS. I think we would have used our destroyers successfully as scouts.

The CHAIRMAN. You think we could?

Admiral STRAUSS. Yes, sir. I would rather have scouts; but if we did not have them we would take destroyers.

The CHAIRMAN. There is a great deal of difference between the cost of a scout cruiser and that of a destroyer, is there not?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. So that it is economy to build destroyers instead of scout cruisers?

Admiral STRAUSS. Not at all. You have to pay more for the better implement.

The CHAIRMAN. Then you think, Admiral, that our fleet as constituted in April, 1917, could have gone out in mid-ocean and engaged the German Fleet if it had come out, successfully, do you?

Admiral STRAUSS. I do.

The CHAIRMAN. Even if the fleet had come out without engaging the British—if they had slipped by the British?

Admiral STRAUSS. I do; yes, sir.

The CHAIRMAN. On what do you base that?

Admiral STRAUSS. Our ships themselves were superior. The guns were superior. I believe the morale to have been superior.

The CHAIRMAN. You do not think there would have been any danger of their being attacked by submarines—or torpedo—in any way?

Admiral STRAUSS. No danger at all from submarines in mid-ocean, according to my notion.

The CHAIRMAN. And no danger from destroyers?

Admiral STRAUSS. No more danger than the Germans would have met in from our destroyers.

The CHAIRMAN. Did the Germans at that time have a larger number of destroyers with their fleet than we had?

Admiral STRAUSS. I do not know how many destroyers the Germans had. I fancy they had more than we had.

The CHAIRMAN. Did they not have more battle cruisers?

Admiral STRAUSS. They had some battle cruisers; but I would not put a battle cruiser in the line of battle.

The CHAIRMAN. You are talking about an actual line of battle, where battleship meets battleship?

Admiral STRAUSS. I am; yes.

The CHAIRMAN. But in the Battle of Jutland the battle cruisers had something to do with it?

Admiral STRAUSS. Yes; England had three of them—the *Indefatigable*, the *Queen Mary*, and the *Invincible*—go down in a few minutes; sunk there within a few minutes. My idea is that the battle cruisers have not any business in the line of battle. The purpose of a battle cruiser, the use of a battle cruiser, is an entirely different one.

The CHAIRMAN. But you regard the battle cruiser as a useful adjunct to a battle fleet?

Admiral STRAUSS. Yes, sir; you must have battle cruisers as anti-aircrafters, to meet the battle cruisers of other nations. An example, and a very good one, of their usefulness is in the destruction of Von Spee's squadron down in the Falkland Islands by Sturdee, in which Sturdee employed battle cruisers.

The CHAIRMAN. Did not the German destroyers make an attack on the British battleships in the Battle of Jutland and turn them back?

Admiral STRAUSS. I have not made up my mind about the Battle of Jutland yet. I have read pretty nearly everything about it that I can get hold of, but I do not feel that I am able to express a good opinion about that battle to-day. In fact, it may take a long time before we get sufficient perspective to judge what really did take place at the Battle of Jutland.

The CHAIRMAN. What is the limit of the size of the guns on our destroyers; do you know?

Admiral STRAUSS. Four-inch.

The CHAIRMAN. What is the limit of the size of the guns on scout cruisers—ordinary scout cruisers?

Admiral STRAUSS. Our design scout cruisers contemplate having four-inch guns as the largest guns.

The CHAIRMAN. So that the scout cruiser, if it came into direct contact anywhere with destroyers, when the battleships were not around, would sink the destroyers at any time?

Admiral STRAUSS. It could; yes, sir.

The CHAIRMAN. Would that not give them a certain advantage?

Admiral STRAUSS. That would undoubtedly give the scout cruiser an advantage.

The CHAIRMAN. But in spite of all these advantages you feel confident that our fleet was ready to start with its battleships and destroyers—and what else?

Admiral STRAUSS. Battleships and destroyers; yes, sir.

The CHAIRMAN. What else was it ready to start with?

Admiral STRAUSS. Nothing. Well, we had the cruisers.

The CHAIRMAN. Yes; but they were not ready, were they?

Admiral STRAUSS. I do not know; but I mean to say with the battleships and destroyers we could have gone out into the Atlantic Ocean and, in my opinion, whipped the German Fleet.

The CHAIRMAN. And in your opinion whipped the German Fleet it was then?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. You say that the inception of the barrage originated in the United States Navy Department as early as April 1917, and that it was originated by the Admiralty and Admiral Sims?

Admiral STRAUSS. Yes.

The CHAIRMAN. When do you mean it was originated by them?

Admiral STRAUSS. I have not got exactly the date when they originated it. It was practically at once.

The CHAIRMAN. That is, during the first few weeks of the war?

Admiral STRAUSS. Oh, well, very soon after it was proposed. Now I would like to say that all these things took place in my absence. I have gone to the records.

The CHAIRMAN. You did not go over until March, 1918, was it?

Admiral STRAUSS. Yes; March, 1918. But you will undoubtedly have witnesses before the committee who can give you the exact information about when it was originated.

The CHAIRMAN. What I wanted to find out was, Admiral, whether Admiral Sims—you stated that Admiral Sims turned down the whole proposition, or turned it down during the earlier stages of the war, and for what reasons he turned it down during the earlier stages of the war?

Admiral STRAUSS. I think you had better get all that information from some other witness. They probably have all the documents, and I have not. I only state the bare fact that it was turned down.

The CHAIRMAN. When were you assigned to the mine-laying squadrons—assigned to the laying of the northern barrage?

Admiral STRAUSS. I was detached from the *Nevada* in February 1918, spent the next two weeks at the Navy Department, and on about the 10th of March left the United States by passenger steamer and reported to Admiral Sims in London on the 21st of March, 1918. All these data in connection with the command of the mine force.

The CHAIRMAN. When did you arrive in Europe?

Admiral STRAUSS. The 21st of March, 1918.

The CHAIRMAN. What part did you have in drawing up the original plans for the operation?

Admiral STRAUSS. I had no part.

The CHAIRMAN. What part did you have in developing and perfecting the material and mines used in the operation?

Admiral STRAUSS. Nothing at all. I would like to amend that that as the mines arrived from Scotland, certain faults were developed which we had to correct out there. You might say that that was developed.

The CHAIRMAN. What part did you have in the equipping of the mine layers?

Admiral STRAUSS. You mean in the construction of the mine layers?

The CHAIRMAN. Yes.

Admiral STRAUSS. Nothing at all.

The CHAIRMAN. The equipping them for their work?

Admiral STRAUSS. I did not equip them.

The CHAIRMAN. Or the training of the personnel?

Admiral STRAUSS. Nothing at all.

The CHAIRMAN. Who was responsible for the preparation of the mine force?

Admiral STRAUSS. The Navy Department.

The CHAIRMAN. Over here?

Admiral STRAUSS. Over here.

The CHAIRMAN. Entirely?

Admiral STRAUSS. Yes.

The CHAIRMAN. What arrangements had been made in Europe for the laying of the barrage before your arrival?

Admiral STRAUSS. Agreements had been made between the Admiralty and the London office, approved by the department, and I think Admiral Mayo had something to do with that, as to the location of the barrage.

The CHAIRMAN. Made by the department with the Admiralty?

Admiral STRAUSS. Yes.

The CHAIRMAN. Were the mine bases completed and ready for the laying of the mines before your arrival in Europe?

Admiral STRAUSS. No, sir; not quite.

The CHAIRMAN. Who carried out this preliminary work?

Admiral STRAUSS. All my own bases were built by the British Government, with the original idea that they were to be assemblage plants for their own mines. We were to supply mines, or rather have our mines with their anchors. The first change was made when they asked us to supply the men to man these plants. The second change was made when they asked us to supply anchors, too. So that finally we took over everything there.

The CHAIRMAN. And who did you say had done the preliminary work?

Admiral STRAUSS. The British.

The CHAIRMAN. The British. Was not this work done under Admiral Sims's direct orders—the preliminary work?

Admiral STRAUSS. I do not know. There was a British commission went up there and selected the bases. The work itself was done by British labor under British direction. That is, in the preparation of the bases. I do not know how much was referred to Admiral Sims in the matter.

The CHAIRMAN. Did the admiral give his full support to the equipment and preparation of the mine bases?

Admiral STRAUSS. I think he did, but I was not there then.

The CHAIRMAN. What was your position abroad when you arrived there?

Admiral STRAUSS. I was commander of the mine force.

The CHAIRMAN. Commander of the mine forces?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. What were your relations with the other allied commanders?

Admiral STRAUSS. How do you mean?

The CHAIRMAN. Were you under any other orders?

Admiral STRAUSS. Yes. By direction from Admiral Sims received orders from Admiral Beatty.

The CHAIRMAN. You received your orders direct from Admiral Beatty?

Admiral STRAUSS. I received routing orders, as I have explained it in my letter, from Admiral Beatty; orders when to start mine-laying and——

The CHAIRMAN. Were you under the force commander on the other side?

Admiral STRAUSS. Sir?

The CHAIRMAN. Were you under the command of the force commander on the other side?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. Under his orders?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. Who was in command of all the operations in the North Sea?

Admiral STRAUSS. Mining operations?

The CHAIRMAN. All operations?

Admiral STRAUSS. The only operations in my part of the North Sea were the mining operations, and I was in command myself.

The CHAIRMAN. You were in command yourself of the mining operations?

Admiral STRAUSS. Yes.

The CHAIRMAN. Who was in command in general in the North Sea?

Admiral STRAUSS. They did not have a general North Sea commander that I know of. Admiral Beatty was the senior allied naval commander over there.

The CHAIRMAN. Was the actual planning of the various mining operations after you got over there done by you?

Admiral STRAUSS. Do you mean did I go out every time the mines were planted?

The CHAIRMAN. I say, did you plan them?

Admiral STRAUSS. The operations?

The CHAIRMAN. Plan them, yes; not plant? Did you make the plans yourself for laying down the mines?

Admiral STRAUSS. I made them in conjunction with my staff; yes.

The CHAIRMAN. Was this done in connection with the Allies?

Admiral STRAUSS. No; the only—do you mean, did they plan the actual laying of the mines?

The CHAIRMAN. Yes.

Admiral STRAUSS. No.

The CHAIRMAN. You had entire charge of that?

Admiral STRAUSS. We did. On one occasion I went out in command of both fleets, the English and the American mine-laying fleets; and on another occasion a British admiral went out and commanded both of our fleets.

The CHAIRMAN. Then, the plans for each mine-laying expedition were not made by Admiral Sims or by the British at the Admiralty?

Admiral STRAUSS. They were not. They were made by me.

The CHAIRMAN. Entirely?

Admiral STRAUSS. Entirely.

The CHAIRMAN. Without reporting to them?

Admiral STRAUSS. I reported when I finished.

The CHAIRMAN. But not before?

Admiral STRAUSS. I would report when I was ready to proceed.

The CHAIRMAN. From whom did you receive operation orders for mine-laying expeditions?

Admiral STRAUSS. I issued my own operating orders. As I have explained in my statement, the routing orders were received from Admiral Beatty.

The CHAIRMAN. Had the commander in chief of the Grand Fleet any control over your force except while engaged in actual mine-laying operations in the North Sea?

Admiral STRAUSS. No, sir.

The CHAIRMAN. What were your relations with the commander in chief of the Grand Fleet?

Admiral STRAUSS. What do you mean?

The CHAIRMAN. Were your relations friendly with him?

Admiral STRAUSS. Quite so.

The CHAIRMAN. In every way?

Admiral STRAUSS. In every way.

The CHAIRMAN. And the same with the British vice admiral at Inverness in charge of mining operations?

Admiral STRAUSS. They did not have a British vice admiral at Inverness.

The CHAIRMAN. I do not say British vice admiral, but British admiral, at Inverness, in charge of mining operations.

Admiral STRAUSS. They did not have one there.

The CHAIRMAN. There was no British admiral there?

Admiral STRAUSS. No, sir.

The CHAIRMAN. Did you have any difficulties with the members of your own staff?

Admiral STRAUSS. I do not know what you mean.

The CHAIRMAN. Did you have any trouble with any of your own staff?

Admiral STRAUSS. No. Do you mean with any forces under my command—any of the officers of my command?

The CHAIRMAN. Yes.

Admiral STRAUSS. I had the usual occurrences which were met by disciplinary action, but no trouble.

The CHAIRMAN. Nothing out of the ordinary run?

Admiral STRAUSS. No, sir.

The CHAIRMAN. Did you have any other problem to consider than that of the actual laying of mines?

Admiral STRAUSS. In the North Sea?

The CHAIRMAN. Yes.

Admiral STRAUSS. Yes; I was a member of an allied conference at Malta, in which we considered and fixed upon mining in the Mediterranean. We arranged to place a barrier of mines across the Asiatic, and one in the Aegean Sea.

The CHAIRMAN. Those were the only other problems, were they?

Admiral STRAUSS. Those were the only other projects.

The CHAIRMAN. And they had to do with the laying of mines?

Admiral STRAUSS. We had already started to building up at Biserta, with the object in view of laying those two barriers.

The CHAIRMAN. Who was responsible for coordinating the mine-laying operations with all other allied operations?

Admiral STRAUSS. You mean so far as our service goes?

The CHAIRMAN. Yes.

Admiral STRAUSS. Oh, Admiral Sims.

The CHAIRMAN. Was it not a part of Admiral Sim's task in London to exercise general control to coordinate the operations of your forces with the operations of other allied forces?

Admiral STRAUSS. Yes.

The CHAIRMAN. Did not the actual carrying out of your operation depend on the general situation in the North Sea?

Admiral STRAUSS. Do you mean the naval situation?

The CHAIRMAN. Yes.

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. Have you any definite evidence that Admiral Sims did not support the laying of the mine barrage as soon as it was undertaken?

Admiral STRAUSS. No.

The CHAIRMAN. Did you have any disagreement of any kind with the British authorities?

Admiral STRAUSS. I do not recall a single one. You mean a quarrel I suppose?

The CHAIRMAN. Yes; any difference of opinion?

Admiral STRAUSS. A row?

The CHAIRMAN. Yes.

Admiral STRAUSS. No.

The CHAIRMAN. Any great difference of opinion?

Admiral STRAUSS. Yes.

The CHAIRMAN. Did Admiral Sims support you in all essential matters?

Admiral STRAUSS. Yes, he did.

The CHAIRMAN. In the case of the opposition of the commander in chief to the laying of mines in the western area of the barrage, what recommendations did you make to Admiral Sims?

Admiral STRAUSS. I recommended that he press the matter very strongly with the British Government.

The CHAIRMAN. The British objected, did they not, to extending the barrage over because they thought it would interfere with their fleet?

Admiral STRAUSS. Yes.

The CHAIRMAN. What recommendations did you make to Admiral Sims?

Admiral STRAUSS. I recommended that he make strenuous efforts to get them to lay mines in area B.

The CHAIRMAN. And what did Admiral Sims do?

Admiral STRAUSS. He did. He succeeded in——

The CHAIRMAN. He backed up your recommendations?

Admiral STRAUSS. He backed up my recommendations very well. I attended a meeting at the Admiralty with Admiral Sims and the sea lords, and Admiral Sims was very emphatic about insisting that the mines be laid in area B.

The CHAIRMAN. And did not the Admiralty yield to his representations with respect to laying the mines in area B?

Admiral STRAUSS. They did.

The CHAIRMAN. Did any question arise concerning the laying of mine mines?

Admiral STRAUSS. The original plan contemplated the laying of equal number of mines at each of the three depths. This was changed afterwards to an increased number of surface mines at the expense of the number of deep mines.

The CHAIRMAN. And you made recommendations?

Admiral STRAUSS. No; that was done in London by the Admiralty; no change was made there.

The CHAIRMAN. What was your attitude on this?

Admiral STRAUSS. My attitude was that while it might be a good thing to remove the confusion in manufacture might make it inadvisable to change the plans at so late a date. We did make changes at the time. Of course, it meant an immense amount of trouble and an immense confusion over here in the United States in getting out the material, so that I acceded to the change with a good deal of reluctance.

The CHAIRMAN. Did Admiral Sims back up your attitude?

Admiral STRAUSS. Yes; very well.

The CHAIRMAN. Did he insist upon the completion of the mining operations in 1918?

Admiral STRAUSS. I do not believe I understand your question.

The CHAIRMAN. In 1918 he insisted on having the barrage completed?

Admiral STRAUSS. It was all done in 1918; yes. Everything was done in 1918.

The CHAIRMAN. And he insisted on that? He agreed with you on that?

Admiral STRAUSS. Yes.

The CHAIRMAN. What action was taken with regard to the closing of the Norwegian territorial waters at the eastern end of the barrage?

Admiral STRAUSS. Somewhat late in the operation the Norwegians mined about the Island of Utsar. We had stopped our barrier within a marine league of that island, and that left a passageway which finally the authorities of Norway agreed to close.

The CHAIRMAN. And you took the ground that it should be done?

Admiral STRAUSS. Yes; from the very start.

The CHAIRMAN. And Admiral Sims agreed with you on that and backed you up?

Admiral STRAUSS. He agreed with me.

The CHAIRMAN. What action was taken on this matter?

Admiral STRAUSS. The Norwegians mined about the island of Utsar to the 3-mile limit.

The CHAIRMAN. Did you ever have any difficulty with the commander in chief of the grand fleet concerning orders issued from him contrary to instructions issued by Admiral Sims?

Admiral STRAUSS. Yes; I mentioned that in my statement.

The CHAIRMAN. In your statement?

Admiral STRAUSS. Yes; you have got that.

The CHAIRMAN. Will you state in your answer here briefly about it? Refer to the page of your statement.

Admiral STRAUSS. When an order was received direct from Admiral Sims which seriously limited the barrage—and that order was not

to place any mines west of the meridian of Greenwich and we have left a gap in the barrier of about 70 miles; that is, from Orkneys east 70 miles—upon my making this known to Admiral Sims he had the order rescinded at the Admiralty, although it took over three weeks to accomplish.

The CHAIRMAN. But Admiral Sims had the order rescinded?

Admiral STRAUSS. He had it rescinded.

The CHAIRMAN. Instructions were issued by the Admiralty itself to the commander in chief to countermand these orders, were they?

Admiral STRAUSS. I had a telegram from Admiral Beatty rescinding the order.

The CHAIRMAN. Do you know whether he was ordered by the Admiralty to countermand his order?

Admiral STRAUSS. I do not know, but I presume he was.

The CHAIRMAN. At any rate, it was as the result of Admiral Sims's intervention?

Admiral STRAUSS. Yes; I think so. He could tell you more about that than I could. I only know that I informed him that this order had been issued to me, and about three weeks afterwards the order was rescinded. I presume he was instrumental in having it rescinded.

The CHAIRMAN. Are you familiar with Admiral Sims's testimony about the magnitude of operations involved in the laying of the northern barrage?

Admiral STRAUSS. I have read it.

The CHAIRMAN. In general, do you agree with it?

Admiral STRAUSS. That it was a great operation?

The CHAIRMAN. Well, do you agree with what he says about the magnitude of the operation?

Admiral STRAUSS. Yes.

The CHAIRMAN. Do you agree with his statement that the preparation of material for the barrage, and the actual operation, reflect the highest credit upon those engaged?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. Are you aware of any previous project requiring as large an amount of material as the northern barrage?

Admiral STRAUSS. Requiring as large an amount of material?

The CHAIRMAN. Yes.

Admiral STRAUSS. No.

The CHAIRMAN. Would it have been possible to lay such a barrage without antenna mines?

Admiral STRAUSS. It would have been possible, but very much more difficult.

The CHAIRMAN. Very much more difficult?

Admiral STRAUSS. Yes, sir; it would have taken about three times as many mines; or, you could have laid a barrage not so destructive to the enemy, with the same number of mines.

The CHAIRMAN. I think you said in your statement the advantage of the antenna mines was that you required a less number of them than of the other mines?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. Is that the only advantage?

Admiral STRAUSS. That is the only advantage.

The CHAIRMAN. When was the antenna mine fully, finally perfected?

Admiral STRAUSS. About June, 1917.

The CHAIRMAN. About June, 1917?

Admiral STRAUSS. Yes; it had gone far enough in June, 1917, to assure the Bureau of Ordnance that it was a feasible scheme.

The CHAIRMAN. Did you have any difficulty with it in actual operation abroad?

Admiral STRAUSS. What is that?

The CHAIRMAN. Did you have any difficulties with the antenna mines?

Admiral STRAUSS. Yes; we had some difficulties; but we succeeded in correcting them at the bases.

The CHAIRMAN. Were there any delays caused by premature explosions due to imperfections in the mines?

Admiral STRAUSS. There was always a certain number of premature explosions when the mines were planted. That generally ran about 4 per cent; and we could afford to neglect it. They made an alteration in the mine on this side which in August increased that loss to as much as 15 per cent, and we stopped work until we could correct that difficulty and prevent so great a waste of mines by premature explosions. However, the delay was not considerable.

The CHAIRMAN. What length of time was required after the perfection of the mine before arrangements were completed, for laying the barrage?

Admiral STRAUSS. About seven or eight months.

The CHAIRMAN. Seven or eight months?

Admiral STRAUSS. Yes; that is between the time the mine was perfected—the mine was perfected, we will say, in July, 1917. The rest of the mines was laid June 8, 1918. That delay, of course, involved the procuring of ships, rearranging their interior and mechanism for the purpose, as well as the construction of the mines.

The CHAIRMAN. And it required a large number of ships to take these mines over?

Admiral STRAUSS. It required 64 cargoes—64 shiploads.

The CHAIRMAN. Sixty-four shiploads, for how many mines?

Admiral STRAUSS. About 80,000 mines.

The CHAIRMAN. Of which you said you used about 56,000?

Admiral STRAUSS. Fifty-six thousand six hundred—about 57,000, iv.

The CHAIRMAN. Fifty-seven thousand mines. Do you know of any delays that occurred in preparing this material?

Admiral STRAUSS. I do not.

The CHAIRMAN. When was the laying of the Northern barrage begun?

Admiral STRAUSS. On June 8, 1918, the first mine was dropped. On that date we dropped 3,385 mines.

The CHAIRMAN. And when was the barrage completed?

Admiral STRAUSS. We never actually completed the barrage as originally designed, but on October 26 the last mine laying took place, and further work was suspended then by the impending armistice.

The CHAIRMAN. But the barrage was not quite completed?

Admiral STRAUSS. It was not quite completed; but still it was a very effective barrage?

The CHAIRMAN. In what respect was it not completed?

Admiral STRAUSS. Oh, we expected to lay another line up to northward. But, as it was, it was very effective.

The CHAIRMAN. But the barrage extended from the Norwegian coast to the Scotch coast?

Admiral STRAUSS. Within 10 miles of the Orkney Islands. It did not extend all the way over.

The CHAIRMAN. What were the merchant tonnage losses from enemy submarines, in June, 1918, as compared with April, 1917?

Admiral STRAUSS. I have not that at hand.

The CHAIRMAN. In April, 1917, the losses were 800,000 tons.

Admiral STRAUSS. Yes.

The CHAIRMAN. And in June, 1918, I think, the testimony has shown that they were between 100,000 and 200,000 tons.

Admiral STRAUSS. They were about 250,000 tons, I think.

The CHAIRMAN. Was not the German submarine menace pretty well checked before the barrage was completed?

Admiral STRAUSS. Yes; although, as I have stated in my statement, we did get a submarine on July 9, 1918, with the barrage.

The CHAIRMAN. At what time was the barrage sufficiently completed to be considered as a serious difficulty to enemy submarines?

Admiral STRAUSS. About the 7th of September, 1918.

The CHAIRMAN. The 7th of September?

Admiral STRAUSS. Yes.

The CHAIRMAN. What was the tonnage loss during that month?

Admiral STRAUSS. I have not the table here.

The CHAIRMAN. Was it not somewhere around 100,000 tons?

Admiral STRAUSS. No; very much more than that. In September, 1918?

The CHAIRMAN. Yes.

Admiral STRAUSS. It was probably 200,000 tons; but, without putting that down, let us look it up and get it exact. It was about 250,000 tons in September.

The CHAIRMAN. You think it was about 250,000 tons?

Admiral STRAUSS. Yes, sir.

The CHAIRMAN. Will you put in the record exactly?

Admiral STRAUSS. Yes; I will put the exact figures in the record.

The CHAIRMAN. You stated that in your opinion substantially all submarines were sunk in the northern barrage?

Admiral STRAUSS. Yes.

The CHAIRMAN. How do you get definite proof of the sinking of a submarine in the barrage?

Admiral STRAUSS. Well, of course, the most absolute proof is to get hold of the submarine on the bottom, and as a matter of fact in sweeping the barrage we did have positive evidence of at least three. But you can not always get that. We got those in places where the sweeps brushed along the bottom.

The CHAIRMAN. You got the submarines themselves?

Admiral STRAUSS. Where the sweeps brushed along the bottom. But I had a statement from the Admiralty upon which I based my figures as to the number lost. They did not state that 10 had been lost. I think they gave me 8, and I put it at 10. There had been a submarine damaged on July 9. That was the first we heard of the effects of the barrage. The British fleet at Rosyth heard the wireless calls and Admiral Beatty sent out two battle cruisers.

catch her, but she had a pretty good start and went home on the surface. That loss, in effect, would have been reported if we had controlled the barrage, and we wanted to patrol the barrage. I made a recommendation that we at least have sentries out on the barrage, so that in case a submarine was injured and had to come to the surface she could be attacked, or that in case the enemy swept the barrage—mutilated the barrage—they could bring forces here to fight them. That was never done. We never guarded the barrage.

The CHAIRMAN. Then on what do you base your evidence of the submarines that were sunk?

Admiral STRAUSS. On the statement that I received from the admiralty.

The CHAIRMAN. In view of the fact that the submarine campaign had been practically defeated in June, 1918, and that these losses had been much reduced and that the merchant tonnage construction was generally increased, do you consider that the northern barrage was the chief cause of the checking of the enemy submarines?

Admiral STRAUSS. No.

The CHAIRMAN. Do you consider it one of the major operations of the war?

Admiral STRAUSS. Yes.

The CHAIRMAN. You do consider it one of the major operations of the war?

Admiral STRAUSS. I do.

The CHAIRMAN. It was undoubtedly a tremendous piece of work; there can be no question about that, and it was mostly American work, was it not?

Admiral STRAUSS. Eighty per cent.

The CHAIRMAN. Who was in actual command at sea of the various mine-laying expeditions carried out by our force?

Admiral STRAUSS. I was in command of three of them at sea. My duties as commander of the force comprised the management of the whole scheme afloat and ashore. It also demanded my attendance at this allied conference at Malta, and I spent about a month here, and during my absence the Chief of Staff, Capt. Belknap, was in command.

The CHAIRMAN. Admiral, if you do not consider that the northern barrage was the chief cause of the defeat of the enemy submarines, on what ground do you base your contention that it was one of the major naval operations of the war, in view of the fact that the armistice came soon after its completion?

Admiral STRAUSS. It does not matter, really, whether it was the greatest contributing cause to the ending of the war or not, so far as being a big operation is concerned. One of the biggest things we did in this war was to get 4,000,000 men enlisted. Only 2,000,000 of them got over, but that does not rob the fact of our getting 4,000,000 men together of its importance.

The CHAIRMAN. And as being a very great stunt to do?

Admiral STRAUSS. Yes; and having a very great effect. If the war had been continued and the barrage had been completed to the Orkneys and the barrier across the Straits of Dover had been properly completed, it would have ended the submarine menace so far as submarines going from the North to the broad Atlantic was

concerned. Also the barrier that we were to build across the Adriatic and across the Aegean Sea, when completed, would have actually ended the submarine operations.

Now, the tonnage losses were comparatively small in the last month of the war; that is, they averaged about 250,000 tons. If they still were 250,000 tons a month, and this would have put an end to that still tremendous loss. The very last month of the war—that is, October—we lost 112,000 tons. The submarine warfare ended on the 11th of October, by agreement, so that that 112,000 tons is for 11 days.

The CHAIRMAN. Not one-half the month?

Admiral STRAUSS. Not one-half the month. As I repeat, you had a very serious thing to manage, and that was the loss of 250,000 tons a month. The barrier would have stopped that.

The CHAIRMAN. What recommendation did you make to Admiral Sims with regard to the command of the joint mine-laying expedition?

Admiral STRAUSS. I do not remember that I made any.

The CHAIRMAN. You do not remember that you made any?

Admiral STRAUSS. No.

The CHAIRMAN. You had command yourself?

Admiral STRAUSS. The English and the United States squadrons acted, generally, separately; but on occasion, when they acted together, either Admiral Clinton Baker or myself commanded the joint expedition afloat.

The CHAIRMAN. Did you make any request when the first mine-laying expedition was ready, to Admiral Sims, that you yourself were not required to take actual command at sea?

Admiral STRAUSS. No, sir. Where did you get that, Mr. Chairman?

The CHAIRMAN. I am simply asking the question. There was nothing of the kind?

Admiral STRAUSS. Nothing of the kind.

The CHAIRMAN. Then, how many of the joint expeditions at sea did you command?

Admiral STRAUSS. Three expeditions I commanded.

The CHAIRMAN. What forces were under your command on these joint expeditions?

Admiral STRAUSS. My own force once, and the combined forces two other times.

The CHAIRMAN. The combined forces two other times?

Admiral STRAUSS. Yes.

The CHAIRMAN. But under you?

Admiral STRAUSS. One other time I was in command and another time Rear Admiral Clinton Baker was in command.

The CHAIRMAN. Was not the assignment of the British force and the United States mine-laying force during these operations required by the principle of unity of command?

Admiral STRAUSS. Will you repeat that?

The CHAIRMAN. Was not the assignment of the British force and the United States mine-laying force during these operations required by the principle of unity of command?

Admiral STRAUSS. It did not seem to require it. We got along very well without it.

The CHAIRMAN. Without it?

Admiral STRAUSS. Yes.

The CHAIRMAN. But the policy was to assign them in mine-laying expeditions?

Admiral STRAUSS. I do not think that I have understood your questions.

The CHAIRMAN. You have said that on two of the mine-laying expeditions the British forces went along with you on the mine-laying expeditions?

Admiral STRAUSS. Yes; we laid close to and parallel to each other.

The CHAIRMAN. And the general policy of having them go along together, handled under your command, was sound, was it not?

Admiral STRAUSS. For that occasion it was; but their activities sometimes were a couple of hundred miles away from ours-- 150 miles. Of course you could not have a joint command then.

The CHAIRMAN. In general, do you think it was sound military policy to require one allied command of all operations in the North Sea?

Admiral STRAUSS. I do not understand that.

The CHAIRMAN. I say, in general do you consider that it was sound military policy to require a unified command of all operations in the North Sea?

Admiral STRAUSS. No; I do not consider it necessary, at all.

The CHAIRMAN. You do not think it was necessary?

Admiral STRAUSS. Not at all.

The CHAIRMAN. And you think you could have had a cooperation of mining operations with their operations in the North Sea, without such unity of command?

Admiral STRAUSS. Yes.

The CHAIRMAN. And you think it would have been better to have kept the American mining force as a completely separate force under a separate command?

Admiral STRAUSS. I think it would have been better. I would have preferred to have operated with my own force of destroyers, as a screen, and the battleship squadron that we had out there as a protection, because we lost half of our time in waiting for the other people to get ready, and in waiting for orders from Admiral Beatty. We expended just one-half of the time we were in the North Sea, waiting for this unity of command.

The CHAIRMAN. What would have been the effect so far as protection of the mine force by the Grand Fleet was concerned?

Admiral STRAUSS. It would have been all right if we had had a fleet of destroyers, what we called the six-battleship squadron—Admiral Rodman's battle squadron—to protect us in our operations. We would have done the work in half the time.

The CHAIRMAN. Upon what forces were you dependent for the protection and screening of the mine force in mine laying operations?

Admiral STRAUSS. The British.

The CHAIRMAN. How could you have had this protection unless your operations had been coordinated with others under the general command of the commander of the allied fleet in the North Sea?

Admiral STRAUSS. The North Sea was not a special command. Admiral Beatty was the senior British naval officer afloat. His area of operations was anywhere that the Navy was in the North Sea or

in the broad Atlantic. I think you have an idea that this North was a special, separate command. It was not.

The CHAIRMAN. But I assume that the forces that were there were coordinating, and that the subordinate officers were under the high officers, in some cases in other places, were they not?

Admiral STRAUSS. In an allied operation or in an operation of our country, the senior naval officer is in command by virtue of his rank and position.

The CHAIRMAN. That makes a certain unity of command, does not?

Admiral STRAUSS. Yes.

The CHAIRMAN. And that you approve of?

Admiral STRAUSS. I approve of that for a battle; but if you are trying to get at whether I think we would not have done better in laying this barrage without the English, I will have to say no. I think we would have done it better and quicker if we had acted singly. We did not even need the routing orders of Admiral Beatty if we had had mine sweepers to precede our layers; and as I stated before, we would have gained a lot of time.

The CHAIRMAN. It would have required the protection of our American destroyers?

Admiral STRAUSS. Destroyers and battleships.

The CHAIRMAN. And that would have taken them from some other service, would it not?

Admiral STRAUSS. It would have either taken them from Scapa Flow, or down from Rosyth, near Edinburgh.

Senator KEYES. Admiral, in your letter of December 10, 1916, you say the powder situation left nothing to be desired?

Admiral STRAUSS. Yes, sir.

Senator KEYES. You speak of the torpedo situation being well in hand, and you speak of various supplies, of theirs being a sufficient supply and sufficient reserves. When you say there is a sufficient supply, was that based on the peace program of November, 1915?

Admiral STRAUSS. No, sir; we work altogether on a war program. That is, the Navy is supposed to be prepared for war at all times, and when a ship is prepared, a declaration of war makes no difference in her supplies or internal economy, whatever.

Senator KEYES. I understood, you, in answer to a question of the chairman, to say that the Navy was fully prepared for war.

Admiral STRAUSS. Yes.

Senator KEYES. I think he asked you on more than one occasion!

Admiral STRAUSS. Yes.

The CHAIRMAN. Then would you say that the Navy was fully prepared for war when you wrote this letter?

Admiral STRAUSS. What I mean to say, that the Navy is fully prepared for war, I want to go back to this, that if our fleet had been called upon to meet the German Fleet in midocean in battle, I believe we would have defeated it. Now, if you ask, were we ideally prepared, no. If you wish to remove every chance against, you will be ideally prepared; but that is a thing that we can only hope for. Our ideals, as I stated before, must exceed what we have accomplished materially, or we will be at a standstill.

Senator KEYES. Then, in other words, if I understand you correctly, the Navy is always prepared for war, and always has been!

Admiral STRAUSS. No; I do not think that follows. Very often has not been.

Senator KEYES. Do you think it was prepared for war in 1914?

Admiral STRAUSS. I think in 1914 we could have gone forth all at: yes.

Senator KEYES. That is, we could have sent our ships to sea? I just want to know if you want to make the statement——

Admiral STRAUSS. I want to stick to that statement, that in 1917, when we declared war, we could have gone out into the Atlantic and whipped the German Fleet. That is my belief.

Senator KEYES. Yes; I understand you to make that statement, and it is very clear; and I am not sure but what you are right about

I think you would have done it. But what I am trying to find out is whether the Navy was prepared in April, 1917.

Admiral STRAUSS. Yes; I think so. All of the ships that we had—— and we had a fine fleet of 16 capital ships, and I am not counting the dreadnaughts, or anything like that——could have gone forth with their ammunition and everything aboard of them, and crews trained and everything, and whipped an enemy of the size of Germany.

Senator KEYES. Can you tell us at what time, in your opinion, the Navy became fully prepared for war?

Admiral STRAUSS. I think we could have done that in 1915.

Senator KEYES. That does not answer my question. Will you just answer my question? I am not asking you whether you think that the ships could have gone out and put up a good fight, etc. My question was, at what time do you think the Navy became fully prepared for war?

Admiral STRAUSS. No; I can not answer.

Senator KEYES. You made a statement that at a certain time it was fully prepared?

Admiral STRAUSS. Yes.

Senator KEYES. I would like to know when that time arrived.

Admiral STRAUSS. I can not tell you.

Senator KEYES. That is all.

The CHAIRMAN. Was it fully prepared in 1914?

Admiral STRAUSS. No; I do not think so.

The CHAIRMAN. Was it fully prepared in 1915?

Admiral STRAUSS. The end of 1915, at the time that I took stock of things, yes; so far as my own knowledge goes, that is in my own department.

The CHAIRMAN. And thereafter, until the date of the declaration of war, you would say that it was fully prepared?

Admiral STRAUSS. Well, so far as my own department goes, at that time; that is the supply of ordnance material. Now, there are other departments of which I was not informed, that is about the personnel and food supplies, and all that sort of thing.

Now, pass on to 1917, when I was with the fleet, and I can answer your question. I think at that time that we were fully prepared. That is when I was in the fleet and had first-hand knowledge of conditions. Before that time, that is up to the three years preceding December, 1916, I only had a part of it under my supervision, that is the supply of ammunition, torpedoes, mines, and so forth.

Now, your question about when we were fully prepared had better be asked of somebody in the Division of Operations, where they have all of these things under their charge.

Senator KEYES. We shall ask.

The CHAIRMAN. But you state that in your opinion, when war was declared, the Navy was fully prepared?

Admiral STRAUSS. I do; yes, sir.

The CHAIRMAN. Was it as fully prepared as it should have been in view of the fact that the world had been at war since 1914?

Admiral STRAUSS. I think so. Now, war was declared by England on August 4, I think, 1914.

The CHAIRMAN. When you say the fleet was prepared, you do not mean only in regard to matters with which you were connected, but in regard to everything else, too?

Admiral STRAUSS. Yes; I do. Of course there is not such a thing as 100 per cent preparedness. I have repeatedly stated that. The question I wish to answer is, Were we ready to go forth and whip the Germans at sea on the 6th of April, 1917, and I answer yes.

The CHAIRMAN. Did the British whip the Germans completely at the battle of Jutland?

Admiral STRAUSS. I will have to give you my previous answer to that question, that I have not made up my mind about the battle of Jutland yet.

The CHAIRMAN. Was the British fleet at the battle of Jutland more powerful than our fleet?

Admiral STRAUSS. Yes.

The CHAIRMAN. Very much more?

Admiral STRAUSS. Yes.

The CHAIRMAN. And yet you can not say whether they actually defeated the Germans at the battle of Jutland or not?

Admiral STRAUSS. No; I can not answer that question yet, whether they did; but there were certain well-known defects in the British fleet, defects of equipment that we did not have, and according to Jellicoe's own book——

The CHAIRMAN. They were not defects in screening, were they?

Admiral STRAUSS. No; they were defects of ammunition. Now, we did not have those defects.

The Germans did not have them. Admiral Jellicoe speaks of an inferior shell; and I have heard from other authorities that that was a source of great failure in their shooting.

Senator KEYES. I understand that we had a large and sufficient ample supply of powder at the time we declared war?

Admiral STRAUSS. Yes, sir; perfectly ample, even a year before we declared war.

Senator TRAMMELL. You were connected with the War Department in 1915, Admiral, according to your testimony?

Admiral STRAUSS. In 1913; ending October, 1913.

Senator TRAMMELL. 1913. During 1913 you were bending your energies towards building up the supply of ordnance, were you?

Admiral STRAUSS. Yes, sir.

Senator TRAMMELL. You left the department in December, 1916?

Admiral STRAUSS. I left the department in December, 1916.

Senator TRAMMELL. At the time you left, in December, 1916, you state in a general way that the supplies were all up to the standard, as far as war requirements?

Admiral STRAUSS. Well, that they were going along in very good shape.

Senator TRAMMELL. Now, in regard to the question of screening vessels, the question of whether or not we would have had to had them if we had met the German fleet, that, of course, is not involved directly, because we did not meet the German fleet, and some seem to think that there was no particular probability of our meeting the German fleet in midocean. But did you have sufficient vessels to carry out the mission and the purpose that was assigned to you?

Admiral STRAUSS. You mean——

Senator TRAMMELL. Did you have sufficient screening vessels, and on?

Admiral STRAUSS. In the North Sea?

Senator TRAMMELL. Yes.

Admiral STRAUSS. The screening was done altogether by the British. I had no screen at all. The British did that for us. The vessels that would have screened my force were down there operating from Queenstown under a British commander. Admiral Bayley was commanding them.

Senator TRAMMELL. That was more or less a question of strategic location, was it not? If our vessels had been up there assisting you, these other vessels might have had to be down in the location where our vessels were? As a matter of fact, you were utilizing the whole force in a cooperative way—the British and American forces there? You did have ample protection? You had ample protection, did you not, in the way of screening vessels?

Admiral STRAUSS. Yes.

Senator TRAMMELL. You spoke of our having a good many more destroyers than had been mobilized with your fleet. Did not that question of mobilizing rest upon the conditions and the work you would have to perform and the duties that you were undertaking? In other words, if your object and purpose and expectation was a battle with the German fleet, would you not have assembled more of your screening vessels with the fleet?

Admiral STRAUSS. Yes.

Senator TRAMMELL. So that the fact that you did not have them there would not mean that you could not have had them there if your main objective had been engaging in battle with the German fleet?

Admiral STRAUSS. Exactly.

Senator TRAMMELL. And when you were going over there, your primary mission being that of laying mines, you did not necessarily have to have the screening vessels and protection from our own Navy that you would if your main object had been to go and engage in battle with the German fleet?

Admiral STRAUSS. I wanted a screen—had to have a screen and a covering force in this operation. Now, we were allied with the British, and it was a matter of whether we got it from the British or from ourselves. It took these destroyers and battleships to do it.

Senator TRAMMELL. You did not care where you got them; you had the protection and the screening force?

Admiral STRAUSS. I did not care where I got them; yes.

Senator TRAMMELL. And they were an assistance to you just the same as you would have been an assistance to them?

Admiral STRAUSS. Well, they were, except that they used them for a double purpose. They used them for screening the British opera-

tions as well as ours. Therefore we lost half of our time waiting for the British to come along; so that it would have been better if we had had our own screening force and protecting fleet.

Senator TRAMMELL. Do you know about how long it takes to construct these scout cruisers?

Admiral STRAUSS. I fancy it would take two and one-half to three years to construct the latest design. You can get that better from the chief constructor.

Senator TRAMMELL. Do you know whether or not this country would have had more or less of them in course of construction at the time the war came on, in 1914?

Admiral STRAUSS. Yes; we had some under construction.

Senator TRAMMELL. Some in course of construction?

Admiral STRAUSS. Yes, sir.

Senator TRAMMELL. From your knowledge of the condition in the Navy in 1915 and 1916, was there more or less of a concert of action to better equip and build up the Navy and get it in better condition for war purposes during that time?

Admiral STRAUSS. During the time I was in the Bureau of Ordnance?

Senator TRAMMELL. Yes.

Admiral STRAUSS. Yes, sir; there was decided activity, everywhere.

Senator TRAMMELL. If you had not been making special efforts would it have been necessary to make so much preparation in connection with the mining project? Do you not think that the fact that war was going on, and the desire of the Navy Department to make special preparation, actuated the department to quite an extent in enlarging and extending your line of preparations?

Admiral STRAUSS. I think so. War broke out about six or seven months after I entered the bureau. I started to tell you a little while ago that three days after the declaration of war I asked the department to send abroad two officers as special observers of the effects of shell fire and torpedo fire, and to find out everything they could about what was going on abroad. One of them was Lieut. McCrary and the other was Lieut. Babcock. Lieut. Babcock stayed there only 10 days, and he wrote a letter saying that he would like to come back as it was too expensive; so that he came back on the *Tennessee*. Lieut. McCrary stayed there some time longer, and I think other bureaus of the Navy Department also had observers out, although I did not have much luck with mine.

Senator TRAMMELL. That was prior to the time we entered the war?

Admiral STRAUSS. Prior to the time, but immediately after the outbreak of the World War.

Senator TRAMMELL. Then, as a matter of fact, you know that so far as the branch of the service you were connected with was concerned, you were trying to get as much first-hand information as you could, and you sent over officers for the purpose of observing and reporting?

Admiral STRAUSS. Yes; within three days after war broke out had those orders issued for Babcock and McCrary; and if Babcock had stayed over there, I have no doubt that he would have gotten a lot of information.

Senator TRAMMELL. Now, I believe you stated in your direct testimony that some time in April, the month in which we entered war, the Navy Department here took up this matter of recommending the barrage.

Admiral STRAUSS. In April.

Senator TRAMMELL. In April?

Admiral STRAUSS. In April, 1917, I think, a very few days after we declared war. I fancy the matter had been considered some time before that, but very soon after our declaration of war, I am informed that the department proposed this barrier across the North Sea in conjunction with the barrier across the Straits of Dover.

Senator TRAMMELL. That recommendation was not approved of at that time, and I believe you stated that it was not until September, 17, when Admiral Mayo went abroad, that they finally agreed to the idea of the barrage?

Admiral STRAUSS. It was quite late in the year. But, if you will permit me to suggest, I think it would be better to ask Admiral Benson (Capt. Pratt, if they are to appear before the committee, as they are here in the department and knew all about these movements.

Senator TRAMMELL. We will make inquiry of them as to the more correct information. But if there was a six months' delay in going ahead with the mine-laying and the barrage, it could not be attributed to the United States Navy?

Admiral STRAUSS. No; I think it was attributable to the reluctance that the British had to going into the whole question of the mine barrier across the North Sea.

Senator TRAMMELL. Eliminating the question of the value of the barrage itself, if its benefits were deferred for six months, and it did not act in its effectiveness in helping to shake the submarine menace six months sooner, that was not chargeable to the Navy of the United States?

Admiral STRAUSS. No; you can not charge the United States Navy with any delay in agreeing to that barrage.

Senator TRAMMELL. I believe you stated that while you considered that our Navy was fully prepared in April, 1917, you, of course, did not mean an ideal condition, and that no navy was ever 100 per cent prepared?

Admiral STRAUSS. No. If any navy or department of the navy say that they are thoroughly and absolutely prepared, I believe they are in a bad way. They not only can not say that they are absolutely prepared before a war, but the developments during a war always make us a step behind. I will give you an example of that, the invention of the paravane during the war, which was a very clever scheme for defeating the surface mine, an attachment that they affixed to a battleship, and as the battleship steamed along it cut these mines adrift automatically. It took some time for us to put paravanes on our ships, and we were behind in that respect, because this was an invention that proceeded out of the war.

Senator TRAMMELL. I think you are thoroughly correct in your views upon that subject, and your opinion that the necessities and the developments, of course, make new things necessary, and the changes are lightninglike during the war, not only in the Navy operations, but the Army, too.

Admiral STRAUSS. Admiral McKean has just reminded me of the depth charge. That was entirely a development of this war, and a

very important one. And that not only runs along in peace time that way, but it runs along in war; so that if you wanted to be captious, you might charge that we did not have depth charges and paravanes.

Senator TRAMMELL. From your general knowledge of the preparation that has been made by the Navy and the effectiveness of the Navy in connection with this war, do you think that our Navy delayed the final victory to any great extent?

Admiral STRAUSS. I do not.

Senator TRAMMELL. Admiral Sims has stated that on account of our not entering wholeheartedly into the war in the first four to six months, and on account of the lack of preparedness, the United States Navy had caused the death of approximately 500,000 more people than would have been killed, the loss of 2,500,000 tons of shipping and the expenditure by all the allied powers of \$15,000,000,000 more than would have been necessary if we had entered into the matter wholeheartedly in the first four to six months and had not had a lack of preparedness. That is the substance of his statement. Do you agree with that, from your knowledge of the entire situation?

Admiral STRAUSS. I have prepared a statement on that subject.

Senator TRAMMELL. I would be very glad to have it.

Admiral STRAUSS. I have studied Admiral Sims's statement with respect to tonnage losses in connection with this question, and compared it with the information bulletin he sent out from London in September, 1918. The losses given in the bulletin from May to July 1917, inclusive, total 1,825,670 tons. In the remaining five months of 1917 the losses total 2,004,725 tons. Grand total from the time we might have become active on May 1, 1917, until the end of that year 3,830,393. Of this loss Admiral Sims states in his hearings a million and one-half tons would have been saved by our earlier cooperation. That is 39.2 per cent of all that was sunk.

Now take the next year. Admiral Sims cites the losses in October as being 100,000 tons. As a matter of fact it was 112,427, but he should have excluded October altogether from monthly comparisons since according to agreement the Germans called off all submarine warfare against merchant tonnage on the 11th of that month.

However, the total 1918 loss, according to the bulletin, amounts to 2,625,848, and Admiral Sims gives it as his opinion that we could have saved 1,000,000 of that if we had cooperated sooner. That is 38 per cent of the total for 1918. Now note that after fully entering into the business of protecting shipping, instead of a rise in percentage we are credited with a drop. With all due pride in our very efficient work in the war I would give a lower estimate as our share, since the British, operating in their home waters, actually had 3,000 vessels devoted to this duty as against our 232. Furthermore, Admiral Sims himself gives as our share less than 5 per cent of the total number of all patrol craft operating against enemy submarines in British and eastern Atlantic waters. (See Admiral Sims's memorandum to House Naval Committee, August, 1918.)

I feel that the data I have presented should be substituted for the complex calculation submitted by Admiral Sims, as showing that no action of ours, between our declaration of war and the cessation of hostilities, could have saved anything like two and one-half million tons. As the war progressed many things contributed to the sup-

pression of the submarine—the wholesale use of depth bombs in the spring of 1918, improved listening devices, the northern barrage, experience in fighting them, etc. All of these, as well as our share of the patrol and convoy, were factors.

(On December 2, 1917, Gen. Pershing cabled the War Department as follows:

* * * the minimum number of troops we should plan to have in France by the end of June (1918) is four Army corps of 24 divisions in addition to troops for service in the rear, * * *

And, further:

A study of American tonnage shows sufficient American tonnage to bring over this number of troops, but to do so there must be a reduction in tonnage allotted to other than Army needs.

He had previously defined shipping for Army needs as including that for transport of steel, coal, and food.

The above excerpts from Admiral Sims's quotations from Gen. Pershing's report are significant. It states, in effect, that we must further disturb the economic condition of the country by diverting tonnage from trade to the pressing military needs, but leaves us to infer that if the troops and equipment are there they can be transported. I have seen no statement anywhere that leads me to doubt that when the troops were ready to go transportation was there to take them. Twenty-four divisions of 20,000 each equals 480,000 men. By the end of June, the date set, we had over a million men in France. This number must have exceeded the highest hopes of the allied military leaders.

In my opinion, as a result of the above figures, the answer is no.

The CHAIRMAN. You believe that our Navy had considerable to do with putting down the submarine menace, do you not?

Admiral STRAUSS. Yes.

The CHAIRMAN. Much more than 5 per cent?

Admiral STRAUSS. Yes; I think the true figures lie somewhere between the 5 per cent that Admiral Sims told the House committee about and the 38 or 39 per cent that he accuses us of negligently losing.

The CHAIRMAN. And the sooner we got them over there, the better for checking the submarine menace?

Admiral STRAUSS. Yes.

The CHAIRMAN. So that if there was any delay in getting them over here, it tended to prolong the war?

Admiral STRAUSS. I do not think so.

The CHAIRMAN. I do not see why not.

Admiral STRAUSS. I do not think so, at all. The war was decided really and finally by the victory over the Central Powers on the western front. That is a fact.

The CHAIRMAN. Yes.

Admiral STRAUSS. Now, the submarine was a menace, but it did not contribute anything in the world to change the result of that victory. The greatest successes of the Germans never helped them to be fed better or to get more munitions. It did not do them a bit of good in that respect. The submarines might have defeated us, but they certainly never helped the Germans to win.

The CHAIRMAN. They did not help the Germans to win?

Admiral STRAUSS. Not at all.

The CHAIRMAN. Because the Germans did not win?

Admiral STRAUSS. I know; they took no part in assisting the win. They did not win, of course.

The CHAIRMAN. Then you think that the German use of the marine in destroying shipping was not a very important feature of war?

Admiral STRAUSS. I say it might have been very important. If it had finally succeeded I think Admiral Sims said it would have defeated us. But—it is sort of paradoxical there—it did not help them to win.

The CHAIRMAN. Because they did not win. But if it had succeeded, and they had been able to cut off the supply of food of the Allies——

Admiral STRAUSS. Well, it did not succeed.

The CHAIRMAN (continuing). Would it not have had a material effect in causing the Allies to lose?

Admiral STRAUSS. Let me interrupt you.

The CHAIRMAN. Yes.

Admiral STRAUSS. When I say it did not help them to win, I say they did not win. Now, I can say the same thing about your hypothetical question about our losing. We did not lose.

The CHAIRMAN. We did not lose; precisely. But was there not a very critical condition over there on account of the submarine?

Admiral STRAUSS. Yes, I think so; but not so bad as is generally made out. Take the question of food for England. England normally raises about 20 per cent of her food, as I understand it. An extraordinary effort, in this war when the war closed she was raising 80 per cent of her food, and that meant that they could get along on short rations, even without our food, if it meant anything.

The CHAIRMAN. Then you consider that the German submarine could have effectively blockaded England, and that England could have kept on?

Admiral STRAUSS. How is that?

The CHAIRMAN. You consider that the German submarines could have effectively blockaded England and prevented their getting supplies of food, and that they still could have kept on in the war?

Admiral STRAUSS. I will not say that. What I did say was that so far as the food supply of England was concerned, the condition was not as serious as they made out. I believe this, though, that if the submarine had been unchecked, and had sunk all the ocean tonnage, it would have caused the Central Powers to win. But that did not, and the Central Powers did not win.

The CHAIRMAN. Because the submarine was checked?

Admiral STRAUSS. It was checked.

The CHAIRMAN. If it had not been checked, do you think it would have been possible for us to send our armies over?

Admiral STRAUSS. No; we had to check the submarine. We had to check the submarine.

The CHAIRMAN. So that the checking of the submarine was perhaps the principal cause of our getting troops over there and helping to win?

Admiral STRAUSS. No; the Germans had 160 or 170 submarines in existence when our troops were going over there. I think it was 100. Our troops were going over there all the time, and these submarines were flying around.

The CHAIRMAN. But the submarines were checked by the allied and American forces which were used to check them, were they not?

Admiral STRAUSS. They were sinking 250,000 or 260,000 tons per month while our troops were going over.

The CHAIRMAN. That is, compared with 800,000 tons per month before we went in.

Admiral STRAUSS. If they had been sly enough to divert the sinkings from other ships to troop ships, it would have been a very serious blow; but they could not do it. You must reduce the whole thing down to, Did they ever stop our troops from going abroad? They never did. We never lost a man.

The CHAIRMAN. Because they were stopped by the Allies, with our assistance.

Admiral STRAUSS. We had not obliterated the submarines when we started to take troops across. They were there, and in tremendous numbers, sinking ships every day. But they did not sink our troopships.

The CHAIRMAN. By the effective use of convoys and of depth charges and of destroyers and other patrol boats, we prevented them from sinking our troop ships, did we not?

Admiral STRAUSS. They were sinking 250,000 or 260,000 tons per month, anyhow; but they never sunk our troopships.

The CHAIRMAN. That was very much of a reduction, of course, from what they had done before.

Admiral STRAUSS. It does not matter. Two hundred and fifty thousand tons of troopships a month would have been a very serious business for us; but they did not sink them.

The CHAIRMAN. No; we prevented them from sinking our troopships by our effective measures, did we not?

Admiral STRAUSS. But it was not prevented by a delay of a few weeks in getting our patrols started there, was it?

The CHAIRMAN. But if our assistance was of any value, it was of value as soon as we could get it over there.

Admiral STRAUSS. We sent over our first ships June 24. They were in pretty full blast at that date.

The CHAIRMAN. Certainly we were not as effective as we were later on?

Admiral STRAUSS. No; that was two months after the war began.

The CHAIRMAN. Admiral, you say that you sent two officers, Lieut. McCrary and Lieut. Babcock, over to study the situation in regard to gunnery on the other side?

Admiral STRAUSS. Yes.

The CHAIRMAN. Did you say that Lieut. Babcock returned to this country because he found that it was too expensive on the other side?

Admiral STRAUSS. That it was too expensive; that was his principal reason, and he said that he could not get much information anyhow.

The CHAIRMAN. And he was allowed to come home?

Admiral STRAUSS. Yes; he was allowed. He came home on the *Tennessee*.

The CHAIRMAN. Does that look as though the department was making any very strenuous efforts to find out the situation as to gunnery on the other side, if an officer was allowed to come home simply because it was too expensive for him on the other side?

Admiral STRAUSS. That was not his only reason. That was principal reason he seemed to dwell on. The other was that he could not get any information.

The CHAIRMAN. I think that should be said.

Admiral STRAUSS. I do not know what the department did otherwise, and what their other agents were. I presume they had that. I am just giving you an instance of our effort to get this information. What becomes of it afterwards I do not know.

The CHAIRMAN. Did you get any information from Lieut. McCarty?

Admiral STRAUSS. Very little; very little.

The CHAIRMAN. You say that the department had a plan of a barrage during the first few weeks of the war?

Admiral STRAUSS. Yes.

The CHAIRMAN. And that it was not approved by the British Admiralty. Would it have been feasible without the consent of the British Admiralty, to lay any barrage?

Admiral STRAUSS. I hardly think it would have been the proper thing to do. It was a sort of front yard of the British islands, and the operation was near their coast, I think, and it was the waters in which they would operate their fleet. We should have had their consent.

The CHAIRMAN. Would it have been feasible to lay any barrage without the antenna mines which were later discovered?

Admiral STRAUSS. Oh, yes; perfectly feasible. The British ships were in this barrage, and they had no antenna mines, at all. Their mines are not antenna mines.

The CHAIRMAN. Would it have been feasible for us to have substituted over a sufficient number of the other, the old-fashioned mines, which, as you have already stated required at least three to one of the antenna mines, to have constructed this barrage?

Admiral STRAUSS. For a barrage equal to the one we laid, it would have taken about 180,000 mines.

The CHAIRMAN. About 180,000 mines?

Admiral STRAUSS. And we actually sent 80,000.

The CHAIRMAN. And a considerable number of ships, to take them over, would it not?

Admiral STRAUSS. Well, we kept a certain number busy going back and forth. We got 64 cargoes in all, but most of them were repeats—the same ship. We ran a sort of a line of mines from the United States to the coast of Scotland.

The CHAIRMAN. And you think it would have been feasible to have gone ahead with the other barrage?

Admiral STRAUSS. Yes.

The CHAIRMAN. Did not the department accept the view of the admiralty that with the old mines it was not feasible to go ahead with the barrage?

Admiral STRAUSS. I do not know. I was not here in the department. That is another question that I would suggest that you ask some witness about, who was on duty in the department.

The CHAIRMAN. And after the new mines were recommended, did not Admiral Sims do everything in his power to go ahead with the barrage, as far as you know?

Admiral STRAUSS. As far as my personal contact with Admiral Sims goes, with respect to this barrage, he did everything that

did to further it. I got over there, as I say, on the 21st of March, and Admiral Sims did everything he could to see that the work was

The CHAIRMAN. These two observers that you speak of that were never ordered home, were they not? They came home under orders of the department?

Admiral STRAUSS. Yes, sir.

Senator TRAMMELL. Regardless of the accomplishment of these observers that were sent abroad for the purpose of gaining information, so far as the Navy Department was concerned and your particular branch of the service, you were vigilant in trying to get the information were you not?

Admiral STRAUSS. Yes, sir. The department readily acceded to request to have these men sent over there.

Senator TRAMMELL. If there was any dereliction or if there was failure, then, it was not of the Ordnance Department, because the Ordnance Department did all it could to try to get the information by sending these men?

Admiral STRAUSS. Yes, sir.

Senator TRAMMELL. I do not say that anybody made any failure, but it seems that they were not able to get the information.

Admiral STRAUSS. Yes.

Senator TRAMMELL. That was due, of course, to the fact that the British Admiralty were not opening up very much, and were not revealing very much of their plans to officers from some neutral country.

Admiral STRAUSS. That was a fact, and I think that, coupled with other condition, was what induced Mr. Babcock to give up.

Senator TRAMMELL. You have been asked a good many hypothetical questions about failure. As a matter of fact, did the United States and the allied powers fail in this last war, so far as ultimate result were concerned? Of course I know that is a silly question, but it is no more silly than it is to keep on talking about——

Admiral STRAUSS. I will answer the question. I do not think it is so much to say that the record of the United States Navy in this war, as it was in the Spanish War, was one of brilliant success.

Senator TRAMMELL. You did not hear of any nations or any armies starving to death over there for the want of food, did you?

Admiral STRAUSS. No; I guess they were pretty well supplied.

Senator TRAMMELL. You did not hear of any thousands or hundreds of thousands of our troops that were ready to be transported but could not get transportation, did you?

Admiral STRAUSS. I have no knowledge of any lack of transportation, but I must say that I am not well informed on the subject. I have read Gen. Hines's book to find out, but it does not tell, really, whether there was lack of transportation or not. It does not make it clear.

Senator TRAMMELL. The facts are, so far as you know, that we cooperated and performed such service as to have the allied powers supplied with the necessary food, both civilians and armies. We also cooperated and carried on our activities to such an extent as to get our own troops there in time for them to win a victory.

Admiral STRAUSS. We certainly did.

Senator TRAMMELL. The submarine menace, severe as it was as annoying as it was, proved a failure so far as giving Germany success, did it not?

Admiral STRAUSS. Yes.

Senator TRAMMELL. In other words, the United States and allied powers coped with the situation successfully; that is the fact?

Admiral STRAUSS. Yes.

Senator TRAMMELL. They coped with the submarine menace successfully. That is all I have to ask.

The CHAIRMAN. I think that is all, Admiral, and you may be excused.

(Thereupon, at 1 o'clock p. m., the subcommittee adjourned until to-morrow, Thursday, April 15, 1920, at 10 o'clock a. m.)

NAVAL INVESTIGATION.

TUESDAY, APRIL 15, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, in room 235, Senate Office Building, at 10 o'clock, a. m., Hon. Frederick Hale, presiding.

Present: Senators Hale (chairman), Keyes, and Trammell.

The CHAIRMAN. The committee will come to order. Admiral Badger, have you a statement to make in connection with the matters involved in this investigation?

TESTIMONY OF REAR ADMIRAL CHARLES J. BADGER, UNITED STATES NAVY.

The witness was sworn by the chairman.)

Admiral BADGER. I have a general statement, Mr. Chairman.

The CHAIRMAN. We will be glad if you will give it to us.

Admiral BADGER. I presume I am called before this committee to make such statements bearing upon the Navy's participation in the Great War, its preparation and conduct, as my service for the past five and one-half years as a member of the General Board of the Navy and chairman of its executive committee may have qualified me to give.

2. It may be well to say here that the General Board was created in 1900 by the then Secretary of the Navy and has been continued in existence by all succeeding Secretaries to date. The Admiral of the Navy, George Dewey, was president of the board from its creation until his death in January, 1917. The board is composed of officers of rank and experience, all of its ex-officio members, of which there are four, holding high executive positions in the naval organization.

3. The General Board is purely advisory in its functions and has no executive powers whatever. In the performance of its duties it is directly under the Secretary of the Navy and is independent of any other office or any bureau of the Navy Department.

4. Three of the principal duties of the General Board as laid down in the Navy Regulations, read as follows:

1. The General Board shall devise measures and plans for the effective preparation and maintenance of the fleet for war and shall advise the Secretary of the Navy as to the distribution of the fleet and of the reinforcements of ships, officers and men of the Navy and Marine Corps.

2. It shall prepare and submit to the Secretary of the Navy plans of campaign, including cooperation with the Army and the employment of all the elements of naval defense, such as the Naval Militia, Coast Survey, Lighthouse Service, Coast Guard, and merchant vessels, and shall constantly revise these plans in accordance with the latest information received.

- December 31, 1915: Commander cruiser squadron. Recommendations for new force, United States war fleet. (G. B., No. 420.)
- January 12, 1916: Commander cruiser squadron informed General Board's recommendation approved. Signed, Josephus Daniels.
- January 28, 1916: Black war plan. (G. B., No. 425.)
- Withdrawn by General Board.
- March 1, 1916: Necessity for dirigibles. (G. B., No. 449.)
- March 30, 1916: Paper filed. Unsigned.
- April 24, 1916: Duty to be performed by patrol motor boats; machinery characteristics. (G. B., No. 420-14.)
- April 24, 1916: Approved and papers forwarded to steam engineers for action. Signed, Josephus Daniels.
- May 17, 1916: Men necessary to man "C" fleet and its auxiliaries; supply of clothing to be kept on supply ships. (G. B., No. 425.)
- May 18, 1916: Approved and Bureau of Supplies and Account directed to take proper action. Signed, Josephus Daniels.
- May 17, 1916: Mobilization—war in the Atlantic. Proposed plan of anchorage. (G. B., No. 425.)
- May 18, 1916: Approved. C. in C. directed to make such use of plan as expedient. Signed, Josephus Daniels.
- May 24, 1916: Antiaircraft guns. (G. B., No. 430.)
- May 25, 1916: Approved. Referred to Bureau of Ordnance, unsigned.
- June 24, 1916: Development of aeronautics. Military functions and characteristics of aircraft. (G. B., No. 449.)
- No record of action by department.
- September 8, 1916: Principle plans necessary for preparation of fleet for war. (G. B., No. 425.)
- September 28, 1916: Letter sent to Lieut. Allen. No signature.
- October 19, 1916: Asphyxiating shell. (G. B., No. 430.)
- December 11, 1916: Letter included in annual report of Secretary. Signed, V. O. Chase, captain, United States Navy.
- October 27, 1916: Illuminating projectiles. (G. B., No. 420-16.)
- October 30, 1916: Approved and returned to Bureau of Ordnance. Signed, V. O. Chase.
- November 3, 1916: Need for net-planting vessel, mine force. (G. B., No. 420-5.)
- February 14, 1917: Approved. C. in C. Atlantic Fleet and Bureau of Ordnance informed. Signed, V. O. Chase.
- January 26, 1917: Nonrigid dirigibles. (G. B., No. 449.)
- No record of action by department.
- February 1, 1917: Apportionment of merchant vessels to War and Navy Departments for war service. (G. B., No. 442.)
- February 5, 1917: Approved and referred to joint Army and Navy board of survey for merchant vessels for information. Signed, Josephus Daniels.
- February 4, 1917: Steps to be taken to meet a possible condition of war with the Central European Powers. (G. B., No. 425.)
- No record of action by department.
- February 10, 1917: Mine force. (G. B., No. 431.)
- February 13, 1917: C. in C. Atlantic Fleet and Bureau of Ordnance informed. Signed V. O. Chase.
- February 14, 1917: Supply of floating mines. (G. B., No. 431.)
- February 16, 1917: Approved and forwarded to Bureau of Ordnance. Signed V. O. Chase.
- February 21, 1917: Additional supply of naval defense mines. (G. B., No. 431.)
- February 23, 1917: Approved and returned to Bureau of Ordnance. Signed V. O. Chase.
- February 24, 1917: Vessels for Coast Artillery Corps in time of war. (G. B., No. 442.)
- February 27, 1917: Referred to joint Army and Navy board. Signed, V. O. Chase.
- March 6, 1917: Discussed movement of fleet in view of international situation. Recommended fleet be recalled by March 15 and assembled in Chesapeake Bay. Verbal discussion by General Board. Record in minutes.
- March 17, 1917: System of patrol and sweeping for protection of shipping off New York. Estimate of situation. (G. B., No. 425.)
- April 16, 1917: Referred to commandant third naval district for information and return. Signed, V. O. Chase.
- March 20, 1917: Protection of American shipping. (G. B., No. 425.)
- No record of action by department.
- March 20, 1917: Safety of lives and property of United States citizens on American ships on the high seas. (G. B., No. 425.)

Secretary and Assistant Secretary present for discussion of two preceding subjects.)
No record of action by department.

March 26, 1917: Construction of submarine chasers. (G. B., No. 420-14.)

March 27, 1917: Approved Signed, V. O. Chase.

Assistant Secretary of Navy present at meeting for discussion of above subject.)

March 29, 1917: Admiral Mayo, commander in chief Atlantic Fleet appeared before

rd.
In minutes of meeting.

March 30, 1917: Batteries for naval auxiliaries. (G. B., No. 420-23.)

No record of action by department.

April 5, 1917: Assistance United States can give Allies upon declaration of war.
(G. B., No. 425.)

June 8, 1917. All recommendations acted upon favorably and measures taken in
ordance therewith so far as practicable. Signed, F. H. Schofield.

April 5, 1917: Proposal to send naval officers to England and France to observe
methods of warfare and secure general information. (G. B., No. 425.)

June 9, 1917: Officers and making investigation. Signed, F. H. Schofield.

April 9, 1917: Bases in the Carribbean for use in war with black. (G. B., No. 408.)

June 28, 1917: Approved. Signed, F. D. Roosevelt, Acting Secretary.

April 18, 1917: Development of mining and obstruction materials. (G. B., No. 431.)

April 25, 1917: Approved. Paper referred to commander in chief Atlantic Fleet.
Signed, V. O. Chase.

April 20, 1917: Types of vessels to be built for present and future condition. (G. B.,
No. 420.)

No record of action by department.

April 26, 1917: Methods of detecting presence of enemy submarines. (G. B., No.
420-15.)

April 28, 1917: Letter written to Mr. Lake. Signed V. O. Chase.

April 27, 1917: Proposed type of motor boat for destroying submarines. (G. B.,
No. 420-14.)

April 27, 1917: Referred to commander in chief Atlantic Fleet. Approved.
Signed, V. O. Chase.

April 28, 1917: Value of City Island, N. Y., for naval purposes. (G. B., No. 414-3.)

No record of action by department.

May 2, 1917: Rear Admiral de Chair, R. N., accompanied by Commodore Gaunt,
R. N., appeared before the board to give views and answer questions relating to patrol
and regulation of shipping around the British Islands and French coasts.

Record in minutes of meeting.

May 3, 1917: Further recommendations as to employment of patrol craft to meet
submarines. (G. B., No. 425.)

No record of action by department.

May 3, 1917: Vice Admiral Chocheprat, French Navy, and the French naval attaché
appeared to discuss matters of cooperation between our Navy and those of the Allies.

Record in minutes of meeting.

May 5, 1917: Patrol vessels for duty in European waters. (G. B., No. 425.)

No record of action by department.

May 12, 1917: Increase and training of mine force. (G. B., No. 431.)

June 21, 1917: Approved. Forwarded to commander in chief Atlantic Fleet.
Signed, V. O. Chase.

May 12, 1917: Training of sweeping vessels. (G. B., No. 431.)

June 21, 1917: Approved. Forwarded to commander in chief Atlantic Fleet.
Signed V. O. Chase.

May 19, 1917: Naval bases outside continental limits. (G. B., No. 425.)

Discussed in meeting of General Board.

May 19, 1917: Japanese cooperation with the Allies. (G. B., No. 425.)

July 2, 1917: Approved and forwarded to State Department. Signed, F. H.
Schofield.

May 25, 1917: Naval base sites in the Antilles. (G. B., No. 404.)

No record of action by department.

May 26, 1917: Purchase of six additional colliers and one tanker. (G. B., No.
420-5.)

No record of action by department.

May 28, 1917: Methods of combating submarine menace. (G. B., No. 442.)

June 11, 1917: Approved. Referred to Bureau of Ordnance. Signed V. O. Chase.

May 31, 1917: Suggestions for routing supplies for European powers cooperating
with United States. (G. B., No. 425.)

June 4, 1917: Approved. Referred to War College for information, Capt. Maxwell.
Signed V. O. Chase.

- June 6, 1917: Submarine trap nets. (G. B., No. 403.)
- June 26, 1917: Approved. Referred to commander in chief Atlantic Fleet. Signed, W. V. Pratt.
- June 12, 1917: Location and necessity for training station, Marine Corps base, and base of operations for the fleet in the vicinity of Hampton Roads.
- Discussion in minutes of meeting.
- June 26, 1917: Concentration of marines. Disposition April 30, 1919. (G. B., No. 432.)
- June 28, 1917: Approved. Referred to major general commandant. Signed, F. H. Schofield.
- July 13, 1917: Comment on report, Submarine warfare. Number and military characteristics of a new type of destroyer. (G. B. No. 420-429.)
- July 20, 1920: Letter placed before the Secretary. Signed, F. H. Schofield.
- July 26, 1917: Use of homing pigeons by Navy. (G. B. No. 420-16.)
- No record of action by department.
- August 16, 1917: Increase of personnel. (G. B. No. 421.)
- August 29, 1917: Referred to Bureau Navigation. No action pending decision: manning of merchant marine. Signed, F. H. Schofield.
- August 29, 1917: Naval policy—Building program. (G. B. No. 420-422.)
- Original misplaced in Office of Naval Operations. Copy placed in hands of Secretary by Rear Admiral C. J. Badger. No record of action by department.
- September 17, 1917: Distribution of drifting mines. (G. B. No. 431.)
- September 21, 1917: Approved and forwarded to Bureau of Ordnance. Signed, F. H. Schofield.
- September 22, 1917: Increase of enlisted personnel. (G. B. 421.)
- No record of action by department.
- October 12, 1917: Submarines in active offensive against submarines. (G. B., No. 420-15.)
- October 13, 1917: Referred to bureaus for compliance. Signed, F. H. Schofield.
- October 20, 1917: Inquiry re mine barrier in North Sea. (G. B., No. 425-5.)
- October 24, 1917: Cable sent. Signed, W. V. Pratt.
- October 22, 1917: Plans for opposing enemy submarine activity in Atlantic trade routes by mine barrage at entrance to North Sea. (G. B., No. 425-5.)
- No record of action by department.
- October 24, 1917: Proposed measures to prevent German submarines from operating against allied commerce in the Atlantic. (G. B., No. 425-5.)
- No record of action by department.
- October 27, 1917: Suggestions for the conduct of the war. (G. B., No. 425-5.)
- November 1, 1917: Approved as recommended. Signed, F. H. Schofield.
- (This includes the consideration by the board of 229 suggestions by various officers bearing upon improving methods and material for prosecuting the war.)
- November 16, 1917: Enemy aliens as menace to utilization of resources. (G. B., No. 425-5.)
- No record of action by department.
- November 27, 1917: Lieut. Commander F. R. E. Davis, Royal Navy Air Service, appeared to give information concerning aeroplanes and aviation in the British Navy. Record in minutes of meeting.
- November 30, 1917: Army and Navy technical members of Aeronautical Commission to Europe submit recommendations re general aeronautical policy of the United States. (G. B., No. 449.)
- January 16, 1918: Approved. Signed, N. E. Irwin.
- December 13, 1917: Treaty concerning prizes captured during present war. In minutes of meeting.
- December 15, 1917: Reply to German Government re reciprocal repatriation of sanitary personnel, etc. (G. B., 438.)
- January 11, 1918: Referred to State Department. Signed, L. McNamee.
- December 15, 1917: Guns for long-range bombardments. (G. B. 430.)
- No record of action by department.
- December 15, 1917: Shore mounting for heavy guns. (G. B., 430.)
- No record of action by department.
- December 19, 1917: Lieut. C. H. Varley, Royal Navy, appeared to discuss characteristics of special type of submarine for use in hunting enemy submarines and the practical operation and methods employed in submarine hunting.
- Record in minutes of meeting.
- December 21, 1917: Naval Constructor S. V. Goodall, Royal Navy, appeared to discuss proposed type of submarine for hunting enemy submarines.
- Record in minutes of meeting.

ber 29, 1917: Senior Member Special Board on Submarine Devices re detection of submarines. (G. B., No. 420-15.)
 rd of action by department.

May 5, 1918: Plan for blockading enemy coast by submarines. Capt. J. K. (G. B., No. 425-5.)

May 19, 1918: Referred to Commander Submarine Force for information. L. McNamee.

May 31, 1918: Naval Constructor S. V. Goodall, Royal Navy, appeared to discuss merits of tripod mast vs. cage mast, from British Admiralty viewpoint. in minutes of meeting.

May 7, 1918: Unity of control in the distribution and transportation of war (G. B., No. 451.)
 rd of action by department.

May 14, 1918: Proposed tactical method for operating against submarines. (G. B., No. 418.)
 rd of action by department.

May 14, 1918: Plan of attack on German bases. Lieut. H. F. D. Davis. (G. B., No. 425-5.)
 rd of action by department.

May 19, 1918: Tentative solution of problem of overseas transportation during war. Admiral H. P. Huse. (G. B., No. 451.)

May 19, 1918: Referred to Council of National Defense. Signed, L. McNamee.

May 21, 1918: Type of vessel most suitable for submarine hunting. (G. B., No. 420-14.)

May 23, 1918: Approved. W. V. Pratt.

May 26, 1918: Control of the air in Dunquerque-Calais region to prevent Dover Strait by enemy submarines. (G. B., No. 425-5.)

May 26, 1918: Approved. Signed, L. McNamee.

May 30, 1918: Present and future building program for submarines. Commander Submarine Force. (G. B., No. 420-15.)

May 30, 1918: Paper filed. No action having been taken. Signed, L. McNamee.

May 31, 1918: One-man semi-submersible boat to fire torpedoes. W. Shearer. (G. B., No. 420-14.)
 rd of action by department.

May 31, 1918: Strategic use of Shearer one-man torpedo boat. (G. B., No. 420-14.)
 rd of action by department.

May 31, 1918: The Dunkirk-Calais aircraft offensive. (G. B., No. 425-5.)

May 31, 1918: Reviewed. Approved in part. Signed, L. McNamee.

May 31, 1918: Small subsurface or submarine boats for offensive warfare in North Atlantic. (G. B., No. 420-15.)
 rd of action by department.

May 31, 1918: The Dunkirk-Calais air offensive against submarines. (G. B., No. 425-5.)
 rd of action by department.

May 31, 1918: Submarine building policy. (G. B., No. 420-15.)
 rd of action by department.

May 31, 1918: Radio control of torpedoes. John Hays Hammond, jr. (G. B., No. 420-14.)

May 31, 1918: Referred to Secretary by Lieut Commander Landoz, 2.30 p. m., May 3, 1918. No rd of action.

May 31, 1918: Mr. Cheradame, author on International politics and strategy, discussed normally political and strategical conditions in the Balkan States and in Hungary and Russia. in minutes of meeting.

May 31, 1918: Capt. C. Gilbert More, Royal Air Service, on staff of Vice Admiral temporarily on duty in the office of aviation, appeared to discuss status of aviation abroad. in minutes of meeting.

May 31, 1918: Lieut. Col. J. C. Port, Royal Air Force, discussed practice of storing aeroplanes on ships of the British Navy. in minutes of meeting.

May 31, 1918: Plan for patrol and protection of Atlantic and Gulf coasts and Caribbean Sea. (G. B., No. 425-5.)
 rd of action by department.

May 31, 1918: Two hundred and fifty feet patrol boat. (G. B., No. 420-14.)

May 31, 1918: Construction of 250-foot boats will not be undertaken. Signed, L. McNamee.

- July 23, 1918: Cork protection, U. S. S. *Chester*. (G. B. 420-11.)
- July 30, 1918: Approved. Action will be taken as recommended. Signed J. T. Tompkins.
- August 1, 1918: Capt. Gilbert More, R. A. F., temporarily attached to aviation section, informally discussed conditions at various seaplane stations noted on his recent tour of inspection.
- In minutes of meeting.
- August 5, 1918: Use of homing pigeons in combatting submarines. (G. B. No. 417.)
- August 9, 1918: Approved. Signed W. Evans.
- August 15, 1918: Lieut. Col. F. Lucas, R. A. F., discussed development of airships abroad.
- Record in minutes of meeting.
- August 17, 1918: Lieut. L. Townsend, jr., U. S. N., accompanied informally by Capt. David Albala, of the Serbian Army, and Capt. Henry M. Sguippa, of the Jugo-Slav Army, discussed Jugo-Slavic political and military situation in the Balkans.
- In minutes of meeting.
- August 21, 1918: Rigid airships. Recommendations of Joint Army and Navy Airship Board. (G. B. No. 449.)
- September 4, 1918: Approved. Bureaus concerned notified. Signed W. V. Pratt.
- August 22, 1918: Plan for patrol and protection of Pacific coast and Pacific Islands of United States. (G. B., 425-5.)
- Secret document. No record of action taken by department.
- September 10, 1918: Building program, 1920. (G. B. No. 420-2.)
- In annual report.
- October 14, 1918: Secretary of Navy present for consultation to hear General Board's explanation of the proposed building program for 1920.
- Record in minutes of meeting.
- November 14, 1918: H. M. S. *Argus*, airplane carrier, development of use of aircraft in connection with United States Atlantic Fleet. (G. B. No. 449.)
- No record of action by department.
- December 2, 1918: Terms and conditions that should be insisted upon by the United States in armistice and peace conferences following present war. (G. B., 435.)
- Secret document. No record of action taken by department.
- December 5, 1918: Capt. J. W. W. Ashworth, R. A. F., discussed latest development of aircraft material and personnel.
- Record in minutes of meeting.

The foregoing list does not include the numerous hearings before the board which were held on all important subjects requiring consultation with experienced officers and other qualified specialists.

These hearings covered every range of naval activity and gave the board and the department the benefit of the experience and advice of officers returning from active duty in the theater of operations, including foreign officers (listed above) and foremost military and civilian experts and scientific men.

6. The gist of the criticism of the operations of the Navy Department and the Navy now under investigation is contained in the charges of unpreparedness to enter the war; absence of war plans or policies at the commencement of the war; vacillating and hand-to-mouth policies and plans after war was declared resulting in extending the duration of the war and thereby enormously increasing the allied war losses in lives, ocean tonnage, and money.

7. To each and all of these I enter emphatic denial. I do not mean to say that we had attained to perfection in the Navy—we never shall; that no errors of judgment or mistakes were made—they will always occur, but I assert that the Navy when it entered the war was, as a whole, well prepared and administered.

8. Despite the adverse criticisms that have recently been widely circulated it may confidently be maintained that the Navy met and efficiently stood the stress of a great war; it aided greatly the allied nations, and if success is any test of a military or any other organization, then the alleged shortcomings of the Navy and its directing

ads can properly and justly be dismissed from serious consideration.

9. The preparation of a Navy for war is not a matter of weeks or months but of years, even of generations. The creation of our modern Navy may be said to have commenced in 1890 with the authorization of the *Oregon* class of battleships and since that time has steadily progressed in power, efficiency, and numbers of ships and personnel until at the commencement of the war in Europe in 1914 there were only two navies superior in power to our own. Then, after our entry into the war, our battleships, destroyers, and other types of ships were called into cooperation with allied ships of similar types they measured up fully to the standards of the best. I do not know that any better example of preparation can be brought forward.

10. After the commencement of war abroad in August, 1914, and until the United States entered it, April 6, 1917, a period of nearly three years, the policy of this country was one of strict neutrality. The people, the Congress, and the administration hoped until the last moment to be able to keep out of the war with honor and every effort was made by the Government to avoid showing bias as between the belligerents as well as any expectation on our part of becoming embroiled. Although there were many, particularly of the Navy, who believed our eventual participation in the war to be inevitable, the Navy Department was handicapped in making preparations which would indicate to belligerent agents, in close watch upon our doings, that we were preparing for war. Only the normal increase in our naval power was, under these conditions, permitted us.

11. Nevertheless, the Navy Department in view of the probability of our finally being drawn into war did make such preparations as could be made without violation of our national policy of strict neutrality. Doubtless in the course of this investigation the committee will be informed of the measures adopted along these lines and of the important, efficient, and far-reaching part they played as the war progressed. It should be particularly noted in this connection that the prewar organization of the Navy Department adjusted itself efficiently to war demands. Without material change it stood the strain of enormous expansion and subsequently of speedy and orderly contraction to normal or nearly normal conditions with the minimum of friction or confusion.

12. It has been testified to before this committee by the officers best qualified to do so that on April 6, 1917, the battle fleet of the United States had never been in such efficient condition for war. In some types, principally of small craft, we were deficient and that mainly because of the rapid development of the submarine after war began and the uses to which it was put had given a new and unexpected turn to warfare on the sea—as unexpected by the nations abroad as by ourselves. The difference between us when we entered the war and the Allies was that they had had three years in which to follow the submarine method of warfare and so far as possible in the time build the necessary craft with which to combat it. This, as I have said before, was denied us by our neutral attitude and effort to avoid giving ground for the belief that we were preparing to take part in the war. I would like to accentuate this for it explains many things.

13. Always bearing in mind the difference in size and power between the British and German Fleets and our own in 1914. I do not hesitate to say that we were as well prepared as to our Navy when we entered the war as were the other belligerents in 1914. For the reasons given above we had to catch up with the development of the previous three years and the strides we made in the year and a half before the armistice in producing the types of craft needed were unsurpassed anywhere.

14. As to policies and plans: The policy of the United States before we entered the war was that of strict neutrality, to keep out of the war if we could with honor. After the war, it was to cooperate with the Allies and to the utmost of our power to aid in the winning of the war. This policy of course obtained for the Navy as well as all other departments of the Government. One of the principal criticisms now before this committee for investigation is that the Navy Department had no plans. This is both unjust and incorrect. We had plans—well-considered ones. The trouble is that the plans and the execution of them did not meet with the approval of the critics. It is a difference of opinion. For many years the General Board, in pursuance of the duties required of it, has had in progress plans of campaign by able and competent officers. It is a process that never ends, for constant revision is needed to keep up with modern developments.

15. Among these plans of campaign is one for war in the Atlantic Ocean. To-day this plan is comprised in 170 typewritten pages. All the fundamental information, strategy, probable fighting areas, logistics, organization of the fleet, bases, administration, etc. possible to obtain is incorporated in this plan and has been for years. It contains a fund of useful and essential information of the greatest value for the study and prosecution of war activities in the Atlantic to which we may be a party.

16. To meet special conditions or variations or after contact with the enemy, plans can not be made beforehand upon which dependence can be placed. War is waged in the field and that is why we have commanders in chief and able staffs to assist them. It is unfortunate but true that the enemy may not play the game as we want him to do. The elements alone may upset the best-laid plans and necessitate sudden change and perhaps complete revision. The stories of practicable plans which cover all the varying vicissitudes of a campaign and lead inevitably to success are fairy tales. Operating plans change from day to day, and while every effort can be and is made to foresee what is likely to happen, a wise commander will always be prepared to make radical changes when occasion demands. He knows what is essential to be done—how and when he does it depends upon circumstances.

17. The Navy Department always had in view the things necessary to be done in case we entered the war. I will read, with your permission, a letter, marked "B" from the general board, dated March 13, 1915, approved and put into effect immediately. It proved of great value in expediting and coordinating the department's preparations for war. As the reports came in, the general board examined them, noted progress made or the reverse, and returned them with comments to the department. I will ask you to let Commander Baum read that letter for me.

The letter in question, which was here read aloud by Commander [redacted], is here printed in full as follows:

G. B. No. 425 (confidential).

MARCH 13, 1915.

Secretary of the Navy.

Subject: Preparation necessary to be made by the bureaus and offices of the Navy Department to insure a state of preparedness for war.

Closures: As enumerated in paragraph 2.

The strategic study of war in the Atlantic Ocean, in which the United States is a diligent, shows that the full naval force of the United States, together with the necessary merchant auxiliaries, must be manned, fitted out and mobilized within two weeks after the Government decides that war is imminent and a mobilization of the naval force is necessary. In order to accomplish this it is necessary that all preparations possible be systematically made during time of peace and this state of preparedness be constantly maintained.

2. The administrative section of the plan for war in the Atlantic gives generally the work to be inaugurated now and diligently prosecuted by the bureaus of the Navy Department to insure a state of preparedness, and there are forwarded herewith copies of that part of the plan that concerns the activities of the following offices and bureaus: Office of Solicitor, Office of Naval Intelligence, Bureau of Ordnance, Bureau of Construction and Repair, Bureau of Steam Engineering, Bureau of Yards and Docks, Bureau of Medicine and Surgery, Bureau of Supplies and Accounts, Bureau of Navigation, and headquarters of Marine Corps.

3. The General Board recommends that each office and bureau be furnished with the part of the plan that pertains to its own duties and directed to comply with the requirements of the plan so far as may be practicable, and especially to be directed to report to the department as soon as practicable, not later than one month from the approval of this letter, and thereafter at the end of each calendar quarter, the progress made in the work of preparation and to comment upon any defects in the plan which makes its execution impracticable or that seem cumbersome.

4. It is recommended that copies of these reports be forwarded by the department to the General Board for the purpose of keeping the war plans up to date.

GEORGE DEWEY.

Admiral BADGER. The effort of the department to obtain a well-balanced fleet has been continuous and consistent, but the great cost of new construction made it difficult to procure the various types of ships in the numbers needed. Compromise had to be made. When battleships, the real backbone of the fighting fleet were added, their cost prevented any considerable expenditure for cruisers or destroyers of other types, but in the annual estimates submitted the principle of an ultimately well-balanced fleet was never lost sight of.

In 1911 battle cruisers and a new type of scout cruiser commenced to be recommended, but it was not until 1915 (for the fiscal year 1917) that any were authorized. In that year, influenced by the war then in progress abroad and in order that a more comprehensive program might be inaugurated in preparation for our possible participation in it, the Secretary of the Navy, on October 7, 1915, addressed a letter to the General Board directing the submission to him of a building program to continue through five years, with an expenditure of about \$100,000,000 a year for new construction during that period. This, so far as I know, was the first suggestion for a continuing program for the increase of our naval power. I here offer this letter, marked "C." [Reading:]

Confidential.

NAVY DEPARTMENT,
Washington, October 7, 1915.

To: General Board.

Subject: Building program for the Navy.

1. The department desires that the General Board submit at the earliest practicable date a building program for the Navy that will continue over a period of five years,

with an expenditure of about \$100,000,000 each year for five years, on new construction only. It is desired that this program be so arranged as to provide the fleet with the necessary fighting units and auxiliaries as will make it as powerful and well balanced as possible at the end of this period.

JOSEPH DANFORTH

On October 12, 1915, the General Board submitted such a program which provided for 10 dreadnaughts, 6 battle cruisers, 10 scout destroyers, 9 fleet submarines, 58 coast submarines, and a number of fleet auxiliaries, the whole, including an appropriation for aviation and reserve ammunition, totaling \$499,876,000. I offer herewith a letter, marked "D." [Reading:]

G. B. No. 420-2.
Confidential.

OCTOBER 12, 1915

To: Secretary of the Navy.
Subject: Building program to be authorized within a period of five years in accordance with:
Reference: Secretary's letter No. Op-9 of October 7, 1915.

In accordance with the directions contained in the above-referenced letter, the General Board has drawn up a program which "will continue over a period of five years, with an expenditure of about \$100,000,000 each year for five years, on construction only"; the program to "be so arranged as to provide the fleet with the necessary fighting units and auxiliaries as will make it as powerful and well balanced as possible at the end of this period."

2. Omitting certain ships now nearing the end of their usefulness, the General Board estimates that at the end of the fiscal year 1921 the effective strength of the present Navy, including all ships now authorized, will be as follows:

TABLE 1.—Ships of the present fleet remaining serviceable in 1922.

| | |
|------------------------------------------------|--|
| Dreadnoughts, first line..... | |
| Predreadnoughts, second line..... | |
| Superannuated predreadnoughts, third line..... | |
| Battle cruisers..... | |
| Scouts..... | |
| Destroyers..... | |
| Fleet submarines..... | |
| Coast submarines..... | |
| Fuel ships, coal..... | |
| Fuel ships, oil..... | |
| Repair ships..... | |
| Supply ships..... | |
| Transports..... | |
| Hospital ship..... | |
| Mine ships..... | |
| Destroyer tenders..... | |
| Fleet submarine tender..... | |
| Ammunition ships..... | |
| Harbor-defense monitors..... | |
| Harbor-defense battleships..... | |
| Gunboats..... | |
| River gunboats..... | |

3. The names of the ships of the Navy classified in accordance with the above are hereto appended, marked "A."

4. The General Board is of the opinion that the \$500,000,000 mentioned in the above reference should be so expended that at the end of the quinquennial period a well-balanced fleet will have been authorized in which the ships of the several types will exist in the proportions suited to the geographic and strategic situation of the United States.

5. To accomplish this end the General Board recommends the authorization within the next five fiscal years, 1917, 1918, 1919, 1920, and 1921 of ships as given in the following table. To this table of ships has been added the sum of \$7,000,000 for aircraft and \$11,000,000 for a reserve of ammunition. The last item is to establish a sufficient reserve for ships now in service or authorized. The necessity for it exists now without any reference to future shipbuilding.

TABLE 2.—Classification of new construction, with estimated cost.

| | |
|---------------------------------------------|-----------------|
| dreadnaughts, at \$18,800,000..... | \$188, 000, 000 |
| battle cruisers, at \$17,500,000..... | 105, 000, 000 |
| scouts, at \$5,000,000..... | 50, 000, 000 |
| destroyers, at \$1,360,000..... | 68, 000, 000 |
| fleet submarines, at \$1,500,000..... | 13, 500, 000 |
| coast submarines, \$650,000..... | 37, 700, 000 |
| fuel ships, oil, at \$1,355,000..... | 4, 065, 000 |
| repair ship, at \$2,051,000..... | 2, 051, 000 |
| transport, at \$2,000,000..... | 2, 000, 000 |
| hospital ship, at \$2,450,000..... | 2, 450, 000 |
| destroyer tenders, at \$2,000,000..... | 4, 000, 000 |
| fleet submarine tender, at \$1,510,000..... | 1, 510, 000 |
| ammunition ships, at \$1,500,000..... | 3, 000, 000 |
| river gunboats, at \$300,000..... | 600, 000 |
| Total..... | 481, 876, 000 |
| aircraft service..... | 7, 000, 000 |
| reserve ammunition..... | 11, 000, 000 |
| Grand total..... | 499, 876, 000 |

6. In order to admit of the expenditure of the sum of \$500,000,000 upon the most favorable terms the General Board suggests that the appropriation for "new construction only" should be for \$100,000,000 each year as a continuing appropriation. The General Board further recommends that the appropriation acts should authorize new construction each year during the quinquennial period about in accordance with the following table, but for the first year, 1917, it definitely recommends the items as given.

TABLE 3.—Building program, 1917 to 1922.

| | First year, 1917. | Second year, 1918. | Third year, 1919. | Fourth year, 1920. | Fifth year, 1921. |
|----------------------------------|----------------------|-----------------------|----------------------|-----------------------|----------------------|
| dreadnoughts..... | 4 | 2 | 2 | 2 | |
| battle cruisers..... | 3 | | 1 | 2 | |
| scouts..... | 4 | 2 | 1 | 3 | |
| destroyers..... | 10 | 10 | 10 | 14 | 6 |
| fleet submarines..... | 2 | 2 | 2 | 2 | 1 |
| coast submarines..... | 20 | 10 | 10 | 10 | 8 |
| fuel ships, oil..... | 1 | | | 2 | |
| repair ship..... | | | | 1 | |
| transports..... | | | | 1 | |
| hospital ship..... | 1 | | | | |
| destroyer tenders..... | 1 | | | 1 | |
| fleet submarine tender..... | | | | 1 | |
| ammunition ships..... | 1 | | | 1 | |
| river gunboats..... | 2 | | | | |
| Aircraft Service..... | \$3, 000, 000 | \$1, 000, 000 | \$1, 000, 000 | \$1, 000, 000 | \$1, 000, 000 |
| reserve ammunition, first year.. | 11, 000 | | | | |

7. The general board believes that this schedule provides the most needed ships at the earliest dates. Under such an arrangement the annual expenditures for new construction only would run in detail approximately as shown in appendix B.

8. The expenditures in appendix B and the unit prices set forth in table 2 are in accordance with estimates made by the Bureau of Construction and Repair, Navy Department, based upon current prices of labor and material. They are subject to change before the expiration of the quinquennial period. The board believes that prices of material are not unlikely to diminish in the future, particularly upon the conclusion of the present European war.

9. With a view of obtaining as large an addition to the Navy as possible from the total appropriation, the above building program should be revised, and if necessary, modified from year to year not only to take advantage of further developments of the present war and its professional lessons, but also to profit by the probable fall in prices.

GEORGE DEWEY.

The development of submarine warfare and the necessity for antisubmarine craft for our Navy after we entered the war as well

as the adoption of a great merchant shipbuilding program to meet the submarine menace, prevented the commencement of the capital ships and many large auxiliaries authorized for the five-year program as planned, but after the war it was again taken up and is now progressing satisfactorily. The whole history of this matter is interesting and shows no lack of effort to prepare the fleet for any eventuality as soon as our change from a neutral to a war policy became possible.

18. On February 4, 1917, the general board forwarded a communication to the department, a plan of procedure to meet a possible condition of war with the Central European powers. I will ask your forbearance while I read it in order to show that the department was neither neglectful nor ignorant of the critical situation, as has been charged. The communication referred to is marked "E" and is as follows [reading]:

G. B. No. 425. Confidential. Serial No. 666.

FEBRUARY 4, 1917

From: Senior member present.

To: Secretary of the Navy.

Subject: Steps to be taken to meet a possible condition of war with the Central European powers.

On account of existing conditions, the general board recommends that the following steps be taken to meet a possible condition of war with the Central European Powers:

1. Complete complements and allowances of all kinds, first of the A and B fleet, then of the C fleet, and naval districts.
2. Mobilize the A fleet in the Lower Chesapeake, and increase it immediately to the B fleet. (See Black Plan.)
3. Dock and repair all ships in reserve and ordinary that will be used.
4. Arrange for the supply of fuel to the fleet and stock all fuel depots to capacity.
5. Establish additional recruiting stations and increase personnel of the Navy and Marine Corps to the total number required to supply complements for all the ships built, building, and authorized, and to maintain shore establishments and naval defense districts, including aviation service, with 10 per cent additional for casualties as follows: Enlisted force—Navy, 150,000; Marines, 30,000; officers in the proportion prescribed by law.
6. Mobilize the naval districts, including the coast-guard and lighthouse service, and put patrol vessels, mine sweepers, etc., of the Atlantic coast districts, on their stations; no commercial vessels to be mobilized in the Pacific Coast districts at present.
7. Prepare to the utmost detail for the employment of mines along our coast as may be necessary.
8. Prepare nets and other obstruction for submarines, ready for immediate use at the Chesapeake Capes, Delaware Capes, Entrance to New York Bay, eastern entrance to Long Island Sound, Narragansett Bay, Panama Canal, and Guantanamo. Other places as their need becomes apparent. The General Board considers it of the utmost importance that net protection shall be immediately provided for the fleet during its mobilization in Chesapeake Bay.
9. Establish immediately the guards at all navy yards, magazines, radio stations, powder factories, munitions plants, bases, shipbuilding yards, and naval shore utilities in accordance with the mobilization plans.
10. Reduce the force of marines in Haiti and Santo Domingo to the smallest number that can maintain order there, transferring these men to the United States to perform necessary guard duty at navy yards, magazines, radio stations, shipbuilding plants, and to form cadres for the organization of new regiments as recruits are obtained. Organize the advanced base force and complete its equipment.
11. Leave in the Caribbean a sufficient number of light cruisers to keep a lookout for submarines in those waters and for the protection of our interests there. Protect the canal and Guantanamo as far as possible by the use of mines and where possible by monitors, submarines, and nets.
12. For the present use the greater part of the destroyer flotillas as patrol for submarines in the vicinity of the principal ports of entrances leading to them.
13. Base the submarines at canal, Guantanamo, and points along the coast in accordance with the Black Plan.

14. Rush to completion all naval vessels building or authorized; also build up the Aviation Service as rapidly as possible.
15. Guard all bays and harbors on the coast of Maine to prevent their use as bases of supply. Patrol waters of Haiti, Santo Domingo, Porto Rico, and Danish West Indies, Cuban Coast Guard Service to assist in patrolling all bays and gulfs of the east of Cuba.
16. Prepare to close entrances to all ports at night and discontinue or change such aids to navigation as may be necessary.
17. Organize a comprehensive system of intelligence service covering the whole theater of war in accordance with the plans of the office of Naval Intelligence.
18. Take possession of all interned vessels of war of central powers; also take control of all commercial vessels of central powers now in United States waters.
19. Place under surveillance all citizens of the central powers in the Navy or in government employ in naval establishments and remove them from positions in which they may do possible harm.
20. Arm our merchant ships for purposes of defense.
21. In accordance with Black Plan, carry out the following:
 - (a) Issue proclamation prescribing defensive sea areas and put rules in regard to them in force.
 - (b) Issue proclamation prescribing press regulations and establishing censorship of cable and radio, including naval control of all commercial and private radio stations.
 - (c) Issue President's order in regard to visit and search, capture, etc.
22. And as most important, arrange, as soon as possible, plans of cooperation with the naval forces of the Allies for the joint protection of trans-Atlantic commerce and for offensive naval operations against the common enemy.

CHAS. J. BADGER.

On March 20, 1917, war being imminent, but we being still neutral, precautionary measures for the protection of American shipping were recommended. It is not long and I think should be read. It is as follows:

G. B. No. 425-A. (Serial No. 689.) Confidential.

MARCH 20, 1917.

From: Senior member present.

To: Secretary of the Navy.

Subject: Protection of American shipping.

Reference: Secretary of the Navy's confidential letter, March 20, 1917.

Of the measures advocated by the General Board in its letter of February 4, 1917, G. B. No. 425, Serial No. 666, especial attention is invited to the following which bear directly upon the protection of our commerce in transit between the United States and Europe:

- (a) Escort vessels to deep water from our ports and similarly from deep water to our ports.
- (b) Arrange with British and French Governments for the convoy of our merchant ships through the barred zones.
- (c) Merchant ships to proceed on high seas from points of leaving and receiving escorts, depending upon their guns for protection, and upon changes of course to follow alternate routes.
- (d) Arrange with British and French Governments a code of signals to be used in directing merchant ships as to routes to be followed and points of meeting escorts.
- (e) Establish a patrol of the Atlantic coast.
- (f) Recruit up to the limit allowed by law for emergencies in order to provide crews for patrols and auxiliaries, and fill battleship complements which have been depleted to supply gun crews to merchant ships.

2. In order to obtain what the General Board regards as the greatest measure of protection to American lives and American shipping on the high seas the General Board invites attention to its letter March 20, 1917, B. G. No. 425, Serial No. 688, and of its previous letters of—

February 6, 1917, G. B. No. 425-1, Serial No. 553-b;

February 17, 1917, B. G. No. 425-1, Serial No. 672;

March 17, 1917, G. B. No. 425, Serial No. 683, on the same subject.

CHAS. J. BADGER.

On April 5, 1917, the country being then committed to war on the side of the Allies, though the declaration had not yet been made, a

paper on the subject of "Assistance that United States can give Allies upon declaration of war," appended marked "G," was submitted. The recommendations are in effect those of February 4 already read to the committee. I will quote from the letter of April 5, as follows:

The General Board believes that the mission of our Navy when war is declared against Germany will best be determined by arrangement with the allied powers now engaged in war with that country. We should immediately obtain from the allied powers their views as to how we can best be of assistance to them and as far as possible conform our preparations and acts to their present needs, always bearing in mind that should peace be made by the powers now at war, we must also be prepared to meet our enemies single handed. We should not depend upon the defensive but prepare for and conduct a vigorous offensive.

* * * * *

"There is no doubt that, if desired by the Allies, sending immediately a number of destroyers to cooperate with the allied powers in the barred zone would greatly add to the moral effect, at home and abroad, of the participation of the United States in the war. The number of this type which may eventually be sent abroad will depend upon the development of a German offensive on this side of the Atlantic, our immediate needs, and the increase of this type in our Navy."

This letter "G" is in effect the reiteration of the law of February 4, "Preparations for War," from which I have quoted. I wish to say that this letter came back to the General Board with this indorsement on it:

"The recommendations contained in the General Board's letter, G. B. No. 425 dated April 5, 1917, have been received and action has been taken, as follows: All recommendations acted upon favorably and measures taken in accordance therewith as far as possible.

"By direction of the Secretary:

"F. H. SCHOFIELD."

That is signed by Capt. Schofield, who was attached to Operations and later in London.

The letter referred to is here printed in full in the record, as follows:

G. B. No. 425 (serial No. 699). Confidential.

From: Senior member present.

To: Secretary of the Navy.

Subject: Assistance that United States can give Allies upon declaration of war.

References: (a) General Board's letter, G. B. No. 425 (serial No. 666), February 4, 1917; steps to be taken to meet a possible condition of war with the Central European Powers; (b) General Board's letter, G. B. No. 425-1 (serial No. 553-b), February 6, 1917; Black plan, tactical problem I; (c) General Board's letter, G. B. No. 425-1 (serial No. 672), February 17, 1917; solution of problem, Black; (d) General Board's letter, G. B. No. 425 (serial No. 683), March 17, 1917; estimate of the situation as to system of patrol and sweeping best adapted for protection of shipping off port of New York; (e) General Board's letter, G. B. No. 425 (serial No. 689), March 20, 1917; protection of American shipping.

The General Board believes that the mission of our Navy when war is declared against Germany will best be determined by arrangement with the Allied Powers now engaged in war with that country. We should immediately obtain from the Allied Powers their views as to how we can best be of assistance to them and as far as possible conform our preparations and acts to their present needs, always bearing in mind that should peace be made by the powers now at war we must also be prepared to meet our enemies single handed. We should not depend upon the defensive but prepare for and conduct a vigorous offensive.

2. This recommendation has already been made by the General Board, reference (a) and (e), and is as follows:

"And as most important, arrange, as soon as possible, plans of cooperation with the naval forces of the Allies for the joint protection of trans-Atlantic commerce and for offensive naval operations against the common enemy."

The General Board wishes to emphasize strongly the necessity of such preliminary arrangement, in order that economy of effort and concentration of purpose may become effective as early as possible.

3. The General Board suggests that consideration be given to the following measures in anticipation of cooperation with the Allies:

(a) Protect shipping proceeding to and from our ports from submarine or other attack.

(b) Prevent the use of unfrequented bays or harbors on our own coasts in the Gulf of Mexico and the Caribbean from use by submarines as bases.

(c) Take over as far as may be desired and practicable the patrol of trade routes in the western, north, and south Atlantic and eastern Pacific, and prevent the exit of enemy merchant ships now finding asylum in the South American ports.

(d) There is no doubt that, if desired by the Allies, sending immediately a number of destroyers to cooperate with the allied powers in the barred zones would greatly add to the moral effect, at home and abroad, of the participation of the United States in the war. The numbers of this type which may eventually be sent abroad will depend upon the development of a German offensive on this side of the Atlantic, our immediate needs, and the increase of this type in our Navy.

(e) Should United States troops be sent to Europe it will be necessary to escort the transports from shore to shore. At present we are short of transports and convoying vessels, and cooperation in this duty with the Allies would be necessary.

(f) The transportation of supplies for the Entente Allies is of the first importance. Requisition all enemy merchant ships detained in our ports, and seize enemy converted ships interned, repair them and place them in service as transports or supply ships.

(g) Mobilize the shipbuilding industries, both commercial and governmental so that the energies of the Nation be extended in the directions needed to provide vessels to combat submarines, to escort merchant shipping, to replace shipping destroyed, and for other necessary additions to the fleet.

(h) Keep constantly in view the possibility of the United States being in the not distant future compelled to conduct a war single handed against some of the present belligerents and steadily increase the strength of the fighting line, large as well as small vessels, doing this with as little interference with the rapid building of destroyers and other small craft for the Navy and cargo ships for the merchant marine as possible.

(i) Manufacture the number of medium-caliber guns which will be needed for merchant shipping and patrol craft.

CHAS. J. BADGER.

NAVY DEPARTMENT,
Washington, June 8, 1917.

Subject: 699 assistance that United States can give Allies upon declaration of war.
Memorandum for the General Board.

The recommendations contained in the General Board's letter, G. B. No. 425, dated April 5, 1917, have been received and action has been taken as follows: All recommendations acted upon favorably and measures taken in accordance therewith so far as possible.

By direction of the Secretary.

F. H. SCHOFIELD.

Admiral BADGER. On the same date, April 5, 1917, the General Board, not being aware that Admiral Sims was then en route to London, recommended sending to England and France commissions of United States naval officers to collect information at first hand as to the true situation and further suggested that the British and French Governments be requested to send experienced officers to the United States to give information. The officers recommended as heads of the American commissions were Rear Admiral T. S. Rodgers to France, and Rear Admiral W. S. Sims to Great Britain. I offer here the letter marked "H," which is as follows. [Reading:]

G. B. No. 425-A. (Serial No. 700.) Confidential.

APRIL 5, 1917.

From: Senior member present.

To: Secretary of the Navy.

Subject: Detail of a commission of officers to Great Britain and France.

In view of the existing state of war and the value to us of definite technical information as to methods of naval operations developed by the allied powers in the

present war, the General Board believes that steps should be immediately taken to get all the practical information possible for our guidance in our own operations and in order that we may heartily and efficiently cooperate with the Allies.

2. The General Board therefore recommends that negotiations be immediately entered into with Great Britain and France to send experienced naval officers to the United States to give information, and also obtain permission for two commissions of our own naval officers to visit England and France, respectively, so that they may as rapidly as possible acquire the desired information at first hand.

3. The main points on which information is desired are as follows:

- (a) Methods of placing nets, mines, and obstructions, and their character;
- (b) Methods of mine sweeping and countermining;
- (c) Methods of submarine detection, chasing, capture, and destruction;
- (d) Types of antisubmarine vessels and of aircraft for all naval purposes;
- (e) Methods of patrol, escort, and convoy for the protection of both merchant shipping and naval forces against submarine and mine menace;
- (f) Methods of communication actually employed in antisubmarine warfare;
- (g) Methods and codes to be employed by our forces in cooperating with those of the Allies;
- (h) Best methods and manner of cooperation and nature of service to be rendered by our forces, particularly in escorting merchant shipping.

4. The General Board recommends that the commission be constituted of officers on the active list, as follows:

GREAT BRITAIN.

One rear admiral; five lieutenant commanders or lieutenants; one captain; one naval constructor; two commanders.

FRANCE.

One rear admiral; two lieutenant commanders or lieutenants; one captain; one naval constructor; one commander.

The General Board recommends this number of officers so that the work can be divided up and expedited and believes that if this number of officers is detailed the information desired can be obtained in about two months.

CHAS. J. BADGER

APRIL 5, 1917.

Memorandum for the Chief of Naval Operations.

Names suggested for commissions (to be sent abroad to obtain information as to methods of prosecuting naval war abroad. See G. B. Serial No. 700):

FRANCE.

Rear Admiral T. S. Rodgers, Capt. H. H. Hough, Commander David F. Sellers, Lieut. H. H. Crosby, Lieut. Wadleigh Capehart, and Naval Constructor H. G. Gilmer

ENGLAND.

Rear Admiral W. S. Sims, Capt. W. V. Pratt, Commander Yates Stirling, Commander F. H. Clark, Lieut. F. A. Daubin, Lieut. G. L. Caskey, Lieut. S. C. Hooper, and Naval Constructor E. S. Land.

(Sent in accordance with your request.)

CHAS. J. BADGER.

NAVY DEPARTMENT,
Washington, June 9, 1917.

Subject: 700 detail of commission of officers to Great Britain and France.

Memorandum for the general board:

The recommendations contained in the general board's letter, G. B. No. 425-A, dated April 5, 1917, have been ——— this date and action has been taken, as follows: Officers are making investigations.

By direction of the Secretary:

F. H. SCHOFIELD.

At his time (April 5) much information, most of it of an alarming character, as to the chances of success of the allied forces both afloat and ashore, was coming in. On April 11 Vice Admirals Browning

nd Grasset, respectively, commanding the British and French cruiser and patrol squadron in the western Atlantic, with members of their staffs, met in the general board room in conference with the Secretary of the Navy, the Assistant Secretary, and a considerable number of our leading naval officers, to discuss the war situation and to set forth the ways which in their opinion the United States could best render assistance to the Allies. While a discussion of the general subject was had the British and French admirals were particularly concerned as to the patrol of the east coast of North and South America for which their forces were considered inadequate. My recollection of this conference is that everything asked for was heartily accorded and steps were immediately taken to carry the agreement arrived at into effect.

23. On May 2 Rear Admiral de Chair, Royal Navy, and Com-mo-dore Gaunt, Royal Navy, naval attaché at Washington, appeared before the board to give information and their opinions as to the best methods of cooperation between the Allies and ourselves. Rear Admiral de Chair had been sent specially by the British Admiralty to fully acquaint the Navy Department with the naval situation abroad from the British point of view.

24. On May 3 Vice Admiral Chocheprat, French Navy, and the French naval attaché, appeared to discuss matters of cooperation between our Navy and those of the Allies, principally the French.

25. The naval attachés from all the Allied nations were, after the declaration of war, extremely active and were ready at all times to give information from their respective Governments or to immediately try to obtain any that was desired by our department.

26. Later Vice Admiral Grant, Royal Navy, commander in chief of the British North Atlantic cruiser squadron, brought his flagship to Washington and remained for several months as a liaison officer between the British Admiralty and our Navy Department.

27. From start to finish of the war the Navy Department suffered from no lack of accurate information as to the progress of the war from sources outside of our own information gatherers. (See the general board's summary of the situation May 3, 1917, appended, marked "I.")

The summary above referred to is here printed in the record as follows:

G. B. No. 425. (Serial No. 724.) Confidential.

MAY 3, 1917.

From: Senior member present.

To: Secretary of the Navy.

Subject: Further recommendations as to the employment of patrol draft to meet sub-marines.

References: general board letter, G. B. No. 425, of April 28, 1917 (serial No. 721).

Subject: Immediate steps to be taken for efficient cooperation against submarines.

Since forwarding the above reference, the general board has obtained from the senior naval members of the British and French commissions now in this country, additional specific information in regard to the submarine situation; the measures which the British and French are now taking; and suggestions as to the measures which the United States may best take to supplement British and French endeavor, which is now a probable maximum.

2. The General Board has also interviewed the officer in charge of naval districts, in order that concrete and specific information might be the basis of the recommendations which the General Board feels called upon to make in the present great emergency, and as supplementary to its discussion of the urgency of the present situation, in reference (a), copy appended.

3. The statements of the senior naval members of the British and French commissions before this board May 2 and 3 may be briefly summarized as follows:

(a) The number of patrol vessels, both British and French, now available or in prospect, is not sufficient to meet the submarine campaign waged by Germany.

(b) The present rate of destruction of food carriers to England and France, unless it can be reduced in the next two months, will result in starving both England and France.

(c) England will be starved out before France.

(d) The need for patrol craft is immediate; the critical period is now; and in the next two months the fate of England may be decided.

(e) Unless armed patrol craft, destroyers, and any surface craft able to keep the sea are dispatched in the next few weeks, they will be too late to prevent disaster to England first, and to France, second.

(f) Fifty armed surface craft dispatched now would be "a real help." Two hundred sent now would do much to prevent the disaster which threatens England especially.

(g) The vessels most desired are destroyers; then sea-keeping craft armed with 5-inch, 4-inch, or 3-inch guns, capable of a sustained cruising speed of 13 knots; then any armed sea-keeping craft to relieve British patrol craft of greater speed. Ocean-going tugs are also most valuable for patrol work and for towing into port damaged vessels.

(h) In regard to other assistance, Great Britain needs now two mine layers capable of 12 knots speed and a large number of Navy defense automatic mines.

(i) The belief was expressed that Germany was building submarines faster than they were being destroyed.

4. The officer in charge of naval districts, who appeared before the General Board, stated that approximately the following numbers of listed vessels could be armed and used for patrol in British and French waters if the Government had and exercised the authority to take them over for naval purposes:

| | |
|---------------------------------------------------------|-------|
| Seagoing tugs, armed with 3 to 5 inch guns..... | |
| Yachts, armed with 3 to 5 inch guns..... | |
| Steam fishing vessels, armed with 3 to 5 inch guns..... | |
| Steam trawlers, armed with 3-inch guns..... | |

Total.....

Approximate number of Government vessels available for patrol in British waters:

Destroyers.....

Naval converted yachts and gunboats.....

Revenue cutters.....

Total.....

Grand total.....

5. The Bureau of Ordnance states that there are in service the following naval guns, thus indicating that there are sufficient guns to arm any patrol vessels that it is practicable to fit out:

| | |
|-------------|-------|
| 3-inch..... | |
| 4-inch..... | |
| 5-inch..... | |
| 6-inch..... | |

Total..... 2,400

6. The General Board is convinced that the emergency exists now; that the element is of overwhelming importance; that every effort should be made, first, to meet or prevent submarine attack, and, second, as of less importance, to supply additional food and munition carriers, and that sending 200 or more patrol craft to England in the next two months will go far toward preventing the collapse of Great Britain.

7. The General Board, in view of the above considerations, and those more fully stated in reference (a), makes the following recommendations and urges with emphasis at its command that action to carry them out be immediate, and that the action be prosecuted uninterruptedly, to the exclusion of other war preparations necessary, having constantly in view the statement of the naval members of British and French commissions that Great Britain's fate may be decided in the next two months by the submarine campaign alone.

- (a) Concentrate department effort upon the passage at once of legislation, if needed, enable the President to take over and utilize the yachts, tugs, and other craft necessary for the above patrol duty.
 - (b) Take over, arm, and fit out such patrol craft, in the least possible time, utilizing the full resources of navy yards and private plants to expedite the work, postponing other work which in any way interferes therewith.
 - (c) Dispatch at once at least 36 destroyers for patrol work in British and French waters, accompanied by repair ships, and provide for the necessary fuel and supply ships at stated intervals.
 - (d) Establish a base at a point on the Irish coast for destroyers, from which they may operate to patrol shipping routes. The senior naval member of the British commission suggests Berehaven, on Bantry Bay, Ireland, as the most suitable location and possessing all the facilities necessary for a base. Also as the patrol craft become available establish a base at Brest.
 - (e) Send in advance 100 enlisted men and necessary officers to Great Britain and the same number to France for instruction in mine sweeping.
 - (f) Manufacture naval mines of the anchored automatic type for use in British waters in the number to be agreed upon with the British naval authorities.
 - (g) Fit out and dispatch two mines layers, 18 knots speed.
8. The General Board wishes to reiterate with the utmost earnestness that it believes disaster to Great Britain can only be prevented by immediate action as recommended above.

CHAS. J. BADGER.

Admiral BADGER. In fact, the department fully understood the situation at all times. The action that it took is now a matter under discussion. Before and after the war commenced the direction of the operations of the fleet was in the hands of some of the ablest officers in the service, who were in a position to obtain and did obtain a broader view and more complete information as to the whole situation (for the Navy Department was not the only one to be considered in the operations of the war) than was possible at any other place than the seat of government. Since that direction and operation resulted in complete success, it seems to me to be a waste of time to discuss at this late date the differences of opinion as to what should or should not have been done in the early days of the war, particularly as from it I can see no possible good to the Navy or to the country.

29. Finally, as to the statement that the failure of the United States to immediately send its full force of destroyers and antisubmarine craft to the war zone prolonged the war four months and occasioned the loss to the Allies of 2,500,000 tons of shipping, 500,000 lives, and \$5,000,000,000. This is a very grave charge, but one that I believe to be utterly unfounded. It is in my opinion based upon an entire misapprehension of the influence of the enemy submarines upon the duration of the war.

30. Looking broadly at the progress and conduct of the Great War, the blockade stands out as one of the most salient and decisive features.

31. From almost the day war was declared by Great Britain an effective sea blockade was instituted and maintained against the Central Powers to the very end. At no time did the development of submarine warfare loosen the grip of this blockade, which worked silently, slowly, and unceasingly to exhaust the material war resources of the enemy.

32. Enemy submarines, it is true, destroyed an enormous amount of ocean tonnage, supplies of all kinds, a considerable number of lives, and placed the Allied cause in great peril, but with all their efforts they failed to break that strangling blockade or do sufficient damage

to extort a favorable peace proposition and so, in the end, failed of their purpose.

33. The submarine operations added nothing to the Central Power material strength. The submarines did not open their ports to food or raw materials or other necessities for the prosecution of successful warfare. Actually the Central Powers were no better off, internally, with submarine operations in full blast than without them. Unless the submarines could so exhaust the Allied resources that men and supplies could not be furnished in sufficient volume to the fighting fronts, they had no decisive effect upon the progress or duration of the war.

34. Laboring under the handicap of our strict neutrality, creation of our new armies was not commenced until after war was declared though doubtless plans had been previously made for hastening a general mobilization when the time should come. Under the best of conditions, it took time to recruit, equip, organize, and give some preliminary training to the men destined for foreign service. It was not until a good many months after the declaration of war that we began to send our troops abroad in great numbers, though Admiral Gleaves escorted the first convoy of regular troops across the ocean in the latter part of June, 1917. By good management—it was not luck—we got a little more than 2,000,000 abroad in the course of a year and a half without loss and despite the submarines.

35. It is important to realize that the number of men we sent abroad in the time was phenomenal, and was not limited by lack of over-seas transportation. In the emergency, transport was found and utilized, and so far as the submarines are concerned, they can not be said to have even checked the ocean transit of our troops. It was the arrival on the continent of fresh troops from America in increasing and seemingly unlimited numbers, that finally broke the morale of the enemy, already near the breaking point from four years of strenuous fighting and the material exhaustion due to the blockade.

36. His submarine campaign failed to relieve the blockade, failed either to check the flow of troops from the United States as soon as made ready to cross the ocean or to stop delivery of the necessary supplies for the use of the armies at the front. It did not, in fact, delay the progress of the war, which, as was already predicted, had to be fought out on the Western front, though it came measurably near doing so.

37. The enemy fought until he was exhausted, materially as well as morally. Nothing that the submarine did contributed toward relieving the exhaustion of materials. They weakened the resources of the Allies, but fortunately not to the point where they could not support their civil populations and provide liberally for their armies in all their needs. The doors were closed to the enemy and nothing could enter. The submarine failed to open those doors even a little way and collapse ensued. I am of the opinion that the absence from the submarine danger zone, for a few weeks or even months, of a comparatively small number of United States destroyers or other anti-submarine craft in the early days of the war had no effect whatever upon its duration.

The CHAIRMAN. I do not recall in any of the testimony that has been given before the committee so far, any reflection upon the activities or the efficiency of the General Board. The question is whether

the plans that you did give out—did give to the department—were allowed out. Now, you have given us a number of plans that were made by the board and were submitted to the department prior to the outbreak of hostilities. What action was taken on those plans?

Admiral BADGER. I have reason to believe that in the majority of cases favorable and immediate action was taken. I have read here, for instance, in one of these papers, the indorsement of the department, coming from operations, saying that all of the recommendations that were possible had been carried out. I believe that on the whole the plans were carried out by the executive officers in accordance, as far as possible, with the recommendations of the General Board.

The CHAIRMAN. As I understand it, the General Board is advisory.

Admiral BADGER. Absolutely, sir.

The CHAIRMAN. And until its recommendations are accepted by the Navy Department, they do not have any effect?

Admiral BADGER. No.

The CHAIRMAN. Is that correct?

Admiral BADGER. No; there is no executive power in the General Board.

The CHAIRMAN. And who accepts them?

Admiral BADGER. The Secretary of the Navy.

The CHAIRMAN. In your appendix marked "A" I think you refer to certain detailed recommendations that were made?

Admiral BADGER. Yes; I gave in that a list of the advisory papers either sent originally or in answer to requests, or in accordance with its routine duty, to the Secretary, with regard to the preparations for and the conduct of the war. I introduced that paper more for the purpose of showing that there was no lack of effort to keep the department informed, and that the department was informed. What action the department took afterwards depended upon the opinions of the executive authorities.

The CHAIRMAN. Was it the custom of the department to notify the General Board when its recommendations were accepted?

Admiral BADGER. Of late years; yes. But during the very busy times that came to the department, of the war, that custom was honored more often in the breach than in the observance. However, we were informed as to how things were going, because the ex officio members of the General Board included the Chief of Operations, the Director of Naval Intelligence, the Commandant of the Marine Corps, and the president of the War College. Admiral Sims was the president of the War College immediately preceding the war, but after the war was declared he was, as you know, abroad, and they appointed no one in his place. From these ex officio members, from direct communication from the Secretary or the Assistant Secretary or the chiefs of bureaus, we knew in a general way, and sometimes particularly, how our recommendations were going, and as a rule they were executed where it was possible to do so, I should say.

The CHAIRMAN. But you have no knowledge that they were actually accepted by the department, except in cases where you have informed us that a letter came accepting them?

Admiral BADGER. No; I have no official written statements to that effect.

The CHAIRMAN. And until they were accepted officially by department, they were not orders of the department. They were simply advisory matters that can be used or not as the department should see fit?

Admiral BADGER. That is true; and these papers have been introduced to show that plans and preparations were made.

The CHAIRMAN. Precisely; that the General Board did everything that it could?

Admiral BADGER. Yes.

The CHAIRMAN. Then you say that you have no knowledge of the matters in Appendix A were really accepted by the department?

Admiral BADGER. Oh, I do not say that for all those numerous papers. I say that in a number of cases the——

The CHAIRMAN. But, Admiral, it is very easy to find out whether they were or were not officially accepted.

Admiral BADGER. I think it would be easy to do it.

The CHAIRMAN. Will you get the record in each case—any official acceptance that was made?

Admiral BADGER. Yes; I can make a note of that and do that.

The CHAIRMAN. In each case.

Admiral BADGER. In each case on Appendix A?

The CHAIRMAN. Yes; and state in each case who signed the acceptance.

Admiral BADGER. Yes. But I want to make it plain that the fact of not having received that official notification of the fact that it had been approved, or what action had been taken at that time, will show that it was not accepted and was not carried out, because we have said everybody was very busy, we were sending officers away from the department, and papers of that kind came in and were acted upon, and they did not go to the trouble of sending back and say, "We approve of that paper," but they took it and acted upon it.

The CHAIRMAN. They may not have sent back the approval, but they would have to approve them in order to make them official, would they not? Otherwise, they were mere advice.

Admiral BADGER. I do not think so, Mr. Chairman. Remember I was not in the executive department. I think you could find that out from others, from Capt. Pratt, when he comes up, for instance. I think that the probable method that was adopted was when one of these papers came in, ordinarily they went through the Division of Operations, but if they got to the Secretary I think what he did was to say to the Chief of Operations or to one of the staff, "Take that paper and carry it out"; and that was the way that it was done. We did not hear of it.

The CHAIRMAN. But you have no means of knowing that that was done?

Admiral BADGER. I can not swear that that was done, but that is the way I believe it was done.

The CHAIRMAN. Now, in the same way with Appendix B, a letter of the General Board dated March 13, 1915, approved and put into effect immediately. You say that was approved and put into effect immediately. It was approved by the Secretary of the Navy?

Admiral BADGER. It was approved probably from the Secretary's office; from Operations, I take it. Capt. Schofield was one of

in the Secretary's office, and I think was principally employed in the planning section, and later was sent over and became one of the officers of the planning section of Admiral Sims's in London.

CHAIRMAN. And with authority to sign the paper?

MR. BADGER. With authority to sign by direction of the

CHAIRMAN. And that was sufficient?

MR. BADGER. Yes.

CHAIRMAN. So that everything that was done that way, any-
it was approved officially, made the recommendation one of
s of the department; is that right?

MR. BADGER. Yes, sir.

CHAIRMAN. So that Appendix B, this letter from the General
dated March 13, 1915, was approved?

MR. BADGER. Oh, that was approved and carried into effect.
that, because the results of it came to the General Board
thereafter in the reports.

CHAIRMAN. I see that this letter provides that various bureaus
make monthly reports.

MR. BADGER. No; quarterly reports.

CHAIRMAN. Quarterly reports?

MR. BADGER. But one month after that letter was approved,
one month after.

CHAIRMAN. To the department; and "that copies of these
be forwarded by the department to the General Board for
use of keeping the war plans up to date."

MR. BADGER. Yes.

CHAIRMAN. That was done?

MR. BADGER. That was done; and further, as I have stated,
General Board commented upon those reports and pointed out
the progress had not been made, or the reverse, where distinct
had been shown, and sent them back to the Secretary's
that he had a paper that had been critically scanned by the
Board, showing how that particular bureau or office was
lagging.

CHAIRMAN. The general recommendations of this letter were
out?

MR. BADGER. Yes, sir; absolutely.

CHAIRMAN. You know that?

MR. BADGER. I know that.

CHAIRMAN. Appendix E referred to a plan to "meet a pos-
sibility of war with the Central European Powers." This
submitted on February 4, 1917. What was done with that
recommendation of the General Board?

MR. BADGER. As I have said, so far as I know, no official
adoption of that was returned to the General Board; but
discussion, and with the knowledge of what was going on, I
think the majority of these things were carried out.

CHAIRMAN. This had to do with the so-called three-year war
—building program—did it not? It is referred to on the
basis of your testimony.

MR. BADGER. Appendix C was the letter of the Secretary of
War to the General Board suggesting a five-year building
program to cost \$500,000,000. \$100,000,000 annually, for new con-

The CHAIRMAN. And until they were accepted officially by the department, they were not orders of the department. They were simply advisory matters that can be used or not as the department should see fit?

Admiral BADGER. That is true; and these papers have been introduced to show that plans and preparations were made.

The CHAIRMAN. Precisely; that the General Board did everything that it could?

Admiral BADGER. Yes.

The CHAIRMAN. Then you say that you have no knowledge that the matters in Appendix A were really accepted by the department?

Admiral BADGER. Oh, I do not say that for all those numerous papers. I say that in a number of cases the——

The CHAIRMAN. But, Admiral, it is very easy to find out whether they were or were not officially accepted.

Admiral BADGER. I think it would be easy to do it.

The CHAIRMAN. Will you get the record in each case—any official acceptance that was made?

Admiral BADGER. Yes; I can make a note of that and do that.

The CHAIRMAN. In each case.

Admiral BADGER. In each case on Appendix A?

The CHAIRMAN. Yes; and state in each case who signed the acceptance.

Admiral BADGER. Yes. But I want to make it plain that the fact of not having received that official notification of the fact that it had been approved, or what action had been taken at that time, will not show that it was not accepted and was not carried out, because as I have said everybody was very busy, we were sending officers away from the department, and papers of that kind came in and were acted upon, and they did not go to the trouble of sending back to say, "We approve of that paper," but they took it and acted upon it.

The CHAIRMAN. They may not have sent back the approval, but they would have to approve them in order to make them official. Would they not? Otherwise, they were mere advice.

Admiral BADGER. I do not think so, Mr. Chairman. Remember I was not in the executive department. I think you could find that out from others, from Capt. Pratt, when he comes up, for instance. I think that the probable method that was adopted was, when one of these papers came in, ordinarily they went through the Division of Operations, but if they got to the Secretary I think what he did was to say to the Chief of Operations or to one of the aids "Take that paper and carry it out"; and that was the way that was done. We did not hear of it.

The CHAIRMAN. But you have no means of knowing that that was done?

Admiral BADGER. I can not swear that that was done, but that is the way I believe it was done.

The CHAIRMAN. Now, in the same way with Appendix B, a letter of the General Board dated March 13, 1915, approved and put into effect immediately. You say that was approved and put into effect immediately. It was approved by the Secretary of the Navy?

Admiral BADGER. It was approved probably from the Secretary's office; from Operations, I take it. Capt. Schofield was one of the

cers in the Secretary's office, and I think was principally employed in the planning section, and later was sent over and became one of the principal officers of the planning section of Admiral Sims's in London.

The CHAIRMAN. And with authority to sign the paper?

Admiral BADGER. With authority to sign by direction of the Secretary.

The CHAIRMAN. And that was sufficient?

Admiral BADGER. Yes.

The CHAIRMAN. So that everything that was done that way, anything that was approved officially, made the recommendation one of the orders of the department; is that right?

Admiral BADGER. Yes, sir.

The CHAIRMAN. So that Appendix B, this letter from the General Board dated March 13, 1915, was approved?

Admiral BADGER. Oh, that was approved and carried into effect. We know that, because the results of it came to the General Board quarterly thereafter in the reports.

The CHAIRMAN. I see that this letter provides that various bureaus shall make monthly reports.

Admiral BADGER. No; quarterly reports.

The CHAIRMAN. Quarterly reports?

Admiral BADGER. But one month after that letter was approved, to start; one month after.

The CHAIRMAN. To the department; and "that copies of these reports be forwarded by the department to the General Board for the purpose of keeping the war plans up to date."

Admiral BADGER. Yes.

The CHAIRMAN. That was done?

Admiral BADGER. That was done; and further, as I have stated, the General Board commented upon those reports and pointed out where the progress had not been made, or the reverse, where distinct progress had been shown, and sent them back to the Secretary's office; so that he had a paper that had been critically scanned by the General Board, showing how that particular bureau or office was progressing.

The CHAIRMAN. The general recommendations of this letter were followed out?

Admiral BADGER. Yes, sir; absolutely.

The CHAIRMAN. You know that?

Admiral BADGER. I know that.

The CHAIRMAN. Appendix E referred to a plan to "meet a possible condition of war with the Central European Powers." This was submitted on February 4, 1917. What was done with that recommendation of the General Board?

Admiral BADGER. As I have said, so far as I know, no official acknowledgment of that was returned to the General Board; but from conversation, and with the knowledge of what was going on, I believe that the majority of these things were carried out.

The CHAIRMAN. This had to do with the so-called three-year war program—building program—did it not? It is referred to on the last page of your testimony.

Admiral BADGER. Appendix C was the letter of the Secretary of the Navy to the General Board suggesting a five-year building program, to cost \$500,000,000, \$100,000,000 annually, for new con-

doubt that they can give you a perfectly satisfactory answer definite answer.

The CHAIRMAN. Now, the next is a paper on the subject of "acceptance that United States can give Allies upon declaration of war." That is "G."

Admiral BADGER. Yes, sir. That paper bears on it the memorandum which I have already read, from Capt. Schofield, stating that all the recommendations contained in this paper have been accepted upon favorably and measures taken in accordance therewith as far as possible.

The CHAIRMAN. You consider that an acceptance?

Admiral BADGER. Yes, sir.

The CHAIRMAN. "As far as possible." How far does that qualify?

Admiral BADGER. For that I must refer you to Operations.

The CHAIRMAN. That is, it might or might not mean that the recommendations were followed?

Admiral BADGER. Well, I suppose that if you take it in that point of view; but I happen to know that in most of these statements it was done.

The CHAIRMAN. Was it done immediately?

Admiral BADGER. As soon as practicable, I believe; yes, sir.

The CHAIRMAN. But you have no knowledge of just when it was done?

Admiral BADGER. No; it would not come to me.

The CHAIRMAN. On May 3 you made a summary of the situation which is in Appendix I.

Admiral BADGER. Yes, sir.

The CHAIRMAN. Was that officially accepted by the department?

Admiral BADGER. I never heard from it officially.

The CHAIRMAN. Do you know whether the provisions of the act were adopted at once?

Admiral BADGER. No, I do not. But I do know that on all general lines we began dispatching—

The CHAIRMAN. In many respects that report coincides with Admiral Sims's recommendations, does it not?

Admiral BADGER. Yes, it does. In fact all of these reports.

The CHAIRMAN. That bears out Admiral Sims's contention as to the grave danger of the submarine menace, and the importance of sending our vessels abroad as soon as possible to meet it.

Admiral BADGER. The information was the same from the foreign people on this side as it was from Admiral Sims, in effect. Admiral Sims's opinion was perhaps more voluminous, but the situation was in the possession of the Navy Department with regard, or practically without regard, to what came from abroad.

The CHAIRMAN. Were you given any information about Admiral Sims's recommendations, from abroad?

Admiral BADGER. Yes; many if not all of his recommendations, telegrams, and cablegrams, came to the General Board.

The CHAIRMAN. So that in making this report Admiral Sims's recommendations were consulted?

Admiral BADGER. That was a part of the information of the General Board.

The CHAIRMAN. Was not that the most authoritative information you had on hand at that time?

The CHAIRMAN. Certainly not, but it says here that it was brought to the attention of the department, and you say that it was followed quickly as it was available after we entered the war.

Admiral BADGER. Exactly. Now, with regard to the convoy system, the submarine was a new weapon. It possessed the quality of invisibility. It was believed for more than three years of the war, very nearly three years of the war, that to gather merchant ships into groups would give an opportunity for the submarine to attack them, much greater or more fatal to the shipping than to disperse the ships throughout the zone; and you will find in Admiral Sims testimony as late, I think, as June of 1917, a statement to this effect, that up to the present time the dispersion of merchant shipping throughout the danger zone is considered here the best policy," and it was not until later, until a month or two months after our entry into the war, that a trial convoy was established by the British, and I think it was a South African convoy which they brought up through the Channel, and having succeeded with that, then they proceeded to put a convoy system into effect. What the General Board did was simply to recommend the convoy system three months before the British adopted it at all.

The CHAIRMAN. What date was that?

Admiral BADGER. That was about March 20.

The CHAIRMAN. Three months before it was finally put into operation?

Admiral BADGER. Before it was put into operation abroad. It took the French and the British—the Allies—three years to determine that the convoy system would be a good thing to adopt.

The CHAIRMAN. But you do not know whether the adoption was made on account of this recommendation of the board?

Admiral BADGER. Oh, no; I have not the slightest idea that it was. They never knew anything about this recommendation. That convoy system was adopted because the other system failed, and they were willing to try anything they could.

The CHAIRMAN. Then you do not know whether the various things commended in this report were adopted on account of the making of this report or whether they were adopted in the ordinary routine process of the war?

Admiral BADGER. No; that information will have to be obtained through the Division of Operations.

The CHAIRMAN. And you received no official acceptance?

Admiral BADGER. Not in the majority of these cases.

The CHAIRMAN. Now, in regard to the next appendix, the paper on the subject of property of United States citizens on board of American ships on the high seas?

Admiral BADGER. This Appendix F is merely renewing a part of the recommendations of the general letter of February 4, and it recommends for the protection of our commerce in transit between the United States and Europe that arrangements be made to escort vessels to deep water from our ports, outgoing, and similarly from deep water to our ports, incoming.

The CHAIRMAN. What action was taken on this report, if any?

Admiral BADGER. I have only the general knowledge that we did escort our vessels, as soon as it was practicable, to deep water. Again, that is for the executive department to state, and I have no

The CHAIRMAN. Then, in general, you would state that the British officers who were over here and who gave us information about the submarine situation gave practically the same information that Admiral Sims gave?

Admiral BADGER. Yes; I should say that.

The CHAIRMAN. And bore out his recommendations?

Admiral BADGER. Yes. Much if it was prior to Admiral Sims's statement. That is to say, he elaborated very much upon that later.

The CHAIRMAN. So that even prior to Admiral Sims's statement the department was aware of the critical condition on the other side and the General Board, as well?

Admiral BADGER. The department was aware at all times of the real situation. What they did to meet that situation was carried out after a study of the situation and the belief of the people charged with that duty that the steps they were taking were the proper steps to meet that condition abroad.

The CHAIRMAN. What steps did the General Board take after the outbreak of the European war in 1914, and prior to these reports that you have given us, in recommending more preparedness to the United States Navy?

Admiral BADGER. Our recommendations were largely, in those cases, with regard to the building program. You gentlemen know the difficulties of pushing through a considerable building program. The question of money and other questions come in that do not affect the General Board. The recommendations are made rather from the military needs, and that point of view, than from the other points that have to be taken into consideration; the financial needs of the country and other necessities that do not affect us for our recommendations.

Now, up to 1914 we had no knowledge that war was likely to take place in the immediate future. It came as a surprise.

The CHAIRMAN. Up to August, 1914?

Admiral BADGER. Up to August, 1914. It came as a surprise. Of course it was known that conditions were very much strained abroad, but still we hoped that there would not be any war, and it was a surprise when in 1914 war was suddenly precipitated. Suppose I give you a summary here of the recommendations for preparation, going back to 1906.

The CHAIRMAN. Very well.

Admiral BADGER. The General Board recommended two battleships, two scout cruisers, four destroyers, four torpedo boats, and a number of smaller craft that it is not necessary to enumerate—auxiliaries mostly. The department recommended two battleships, two scout cruisers, and four destroyers, and four torpedo boats, practically the same that the General Board had recommended. But Congress authorized one battleship and two destroyers. That is all we got out of that recommendation.

In 1907, for 1909, the General Board recommended 4 battleships, 4 scout cruisers, 10 destroyers, and 4 submarines. The department substantially repeated that recommendation, 4 battleships, 4 scout cruisers, 10 destroyers, 4 submarines.

Congress gave us 2 battleships, 10 destroyers, and 8 submarines. They cut us a good deal, there—more than half.

1908. for 1910, the General Board recommended 4 battleships, 4 cruisers, 10 destroyers, 4 submarines.

1909. gave us 2 battleships, 5 destroyers, and 7 submarines.

1910. for the fiscal year ending June 30, 1911, the General Board recommended 4 battleships, 4 scout cruisers, 10 destroyers. Battleships were with an armament of 14-inch guns. Those are the first ships with the 14-inch guns. I am only giving you the main ships here.

THE CHAIRMAN. Yes.

Admiral BADGER. The Navy Department cut us down that year to 2 battleships.

1911. gave us two battleships, six destroyers, and four subma-

For the fiscal year ending 1912, the recommendations being made in 1910, the General Board recommended 4 battleships, 16 destroyers. We were going up then and looking forward to the light craft of the fleet—4 scouts, tenders, etc.

1912. got out of that two battleships, eight destroyers, and four submarines, with two gunboats.

For 1913, when things began to look rather serious abroad, the General Board recommended 4 battleships, 1 or more cruisers; that is as many as we could get we wanted, of battle cruisers; 16 destroyers, 4 scouts, 5 submarines.

We got one battleship, no battle cruisers, six destroyers, and eight submarines. That was for 1913. That is to say, the recommendation was made in 1911. In all these recommendations they do not commence until two years later. It really is about a year and a half.

THE CHAIRMAN. The recommendation was made in 1911?

Admiral BADGER. The recommendation was made in 1911. The session of Congress is for the fiscal year ending June 30 of the next year.

THE CHAIRMAN. You said it began to look more like war?

Admiral BADGER. It began to look a little bit more like war. In 1911 we had some incidents abroad that came very near precipitating war. It came very close to it.

THE CHAIRMAN. Yes.

Senator TRAMMELL. Excuse me, Admiral, I just want to get matters straight in the record. Did Congress act on that recommendation in 1911?

Admiral BADGER. Yes.

Senator TRAMMELL. As I understand, they acted in 1911?

Admiral BADGER. No; the recommendations were made in 1911 for the fiscal year ending June 30, 1913. If the board makes a recommendation in September of 1920, now, it is not acted upon until 1921, Congress—say, the spring of 1921.

THE CHAIRMAN. It is acted upon by Congress in 1920 and takes effect in 1921?

Admiral BADGER. It is acted upon probably not until January or February of 1921. The Navy bill does not come up until then.

THE CHAIRMAN. That is, the board's recommendations are not acted upon for a year?

Admiral BADGER. The board's recommendations for this fall—suppose in September or October we make those recommendations, in November. Then Congress takes it up in the year 1921, and the appropria-

tion does not become available until after July 1 of 1921, which is the fiscal year of 1922.

The CHAIRMAN. Yes. Congress takes it up within a few months after the board makes the recommendations?

Admiral BADGER. Yes; exactly.

The CHAIRMAN. And makes the appropriation a year from the following July?

Admiral BADGER. Yes; it is nearly a year before Congress can authorize the thing. So that is what this means here, for 1912. Now for 1912 the General Board recommended 4 battleships, 2 battle cruisers, 16 destroyers, and 1 destroyer tender, 2 transports, 1 ammunition ship, 6 submarines, 1 submarine tender, 1 supply ship, 4 gunboats, 2 seagoing tugs, 1 dry dock, 1 submarine testing dock.

Then the Navy Department approved substantially that recommendation, except that they cut 1 battleship, making the recommendation of the department for 3 battleships.

Congress gave us 1 battleship, 6 destroyers, 4 submarines, 1 supply ship, and 1 transport; so that we did not get any too much that time.

In 1913, for 1915, the board recommended 4 battleships, 16 destroyers, 8 submarines, and a lot of other things; but owing to our lack of success with the battle cruisers, and some difference of opinion as to the advisability of battle cruisers that existed at that time we did not ask for any. We got 3 battleships, 6 destroyers, and 4 submarines.

In 1914, for 1916, the board recommended 4 battleships, 12 destroyers, 3 fleet submarines, 16 coast submarines, 4 scouts, 4 gunboats, and some tenders.

We got from Congress 2 battleships, 6 destroyers, 16 submarines, 2 fleet submarines, and 1 fuel-oil ship.

The CHAIRMAN. That was the recommendation made in 1914?

Admiral BADGER. Yes. Now, in 1915, the recommendation of the General Board was 4 battle cruisers, 4 dreadnaughts, 6 scouts, 30 coast submarines, 7 fleet submarines, 28 destroyers, 6 gunboats, with a number of auxiliaries. It was in that year that the five-year building program was introduced and started, covering a total expenditure for new construction of \$500,000,000, and the Congress did authorize in 1916 that very large program, which is here: Ten battleships, 6 battle cruisers, 10 scout cruisers, 50 destroyers, 9 fleet submarines, 58 coast submarines, 1 submarine with Neff system of propulsion, 3 fuel ships, 1 repair ship, 1 transport, 1 hospital ship, 2 destroyer tenders, 1 fleet submarine tender, 2 ammunition ships, and 4 gunboats. That was the \$500,000,000 program, and that program was recommended in view of the preparation for war on the sea by the United States; and had we been able to go on and complete it, it should have been completed, under the hastening process of the war, in three years. If the war had continued, we should have had many of the essential ships about a year after it ended; but we could not foresee that it was going to end so soon.

The CHAIRMAN. Those are recommendations as to the building of boats?

Admiral BADGER. As to the building. And those that I have read you, I have read you the authorization by Congress, those things actually have been or are being done now.

The CHAIRMAN. Yes. Did you make any other recommendations from those for a building program to the department.

Admiral BADGER. Oh, yes.

The CHAIRMAN. My question was whether you made any recommendations for more preparedness for the United States Navy?

Admiral BADGER. I think that those recommendations are covered in the various papers that were sent in, that of February 4, that of March 20, and that of April 5 being typical of the papers that were sent to the department.

The CHAIRMAN. What I wanted to know was whether you made any recommendations before those to which you have referred; from August, 1914, at the outbreak of the war, to February 4, when I think your first recommendation that I think you have referred to was made?

Admiral BADGER. Yes.

The CHAIRMAN. And if so, will you please state what recommendations were made by the board toward further preparedness?

Admiral BADGER. I will read the titles of some of these papers, if you care to have me do so. I did not take them all, but these are typical papers. From the 1st of August, 1914, the withdrawal of battleships to the home yards was recommended as a preparatory measure, and on the 9th of September, 1914, the withdrawal of battleships from Mexican and West Indian waters was recommended. On the 23d of September attention was called to the lack of gunboats and small cruisers in the Navy.

On the 15th of October—this is all in 1914—the recommendation was for arming merchant ships.

On the 7th of November, 1914, proposed gun and projectile to be used against aircraft.

November 14, 1914, immediate need of trained personnel.

January 6, 1915, suggested method of attacking submarines.

March 13, 1915, information desired in connection with revision of war plans. Periodical reports on preparedness of bureaus.

April 14, 1915, plan of employment of vessels of cruiser squadron.

April 17, 1915, utilization of Coast Guard by Navy Department.

April 24, 1915, commander cruiser squadron recommends organizing armored cruisers in Atlantic.

And so it goes. I do not know that you can gain much from this. These were constant and continuous recommendations.

On the 1st of March, 1916, there was a paper on the necessity for frigates in case we go to war.

The CHAIRMAN. I would like to have a full list of those. You need not give them now. We will put them in the record.

Admiral BADGER. They are all here in this list, Appendix A.

The CHAIRMAN. Do you know whether those recommendations were in all cases accepted by the department?

Admiral BADGER. They certainly were accepted; but whether they were carried out, I am not in a position to tell you.

The CHAIRMAN. Were they officially accepted?

Admiral BADGER. They were never returned.

The CHAIRMAN. No; but I say were they officially accepted by the department?

Admiral BADGER. Yes. I have already covered that point, sir. It was always the custom to acknowledge. It depended somewhat

upon who was in charge of the desk that looked over these things. Sometimes we got a receipt for them, concerning the action taken, and sometimes we did not. I will have that looked up in the General Board, and see if I can find that out, and will send it to you.

The CHAIRMAN. If you will do that, Admiral, and send a list to us, we would like that.

Admiral BADGER. I will send a list. I will send another copy of this with what we can find.

The CHAIRMAN. You have no means of knowing whether recommendations that were not officially accepted, were adopted or not?

Admiral BADGER. I have not, except where it came to my attention in the general course of duties that they were being done. In many cases we did know, and had they been disapproved, the chances were greatly in favor of our knowing it, because we were always on the lookout to see that they received proper consideration.

The CHAIRMAN. In November, 1914, did the General Board make a specific recommendation to the Secretary of the Navy as to numerical increases in the enlisted personnel?

Admiral BADGER. What is the date, sir?

The CHAIRMAN. I think you said just now that in November, 1914 you made a recommendation as to the enlisted personnel?

Admiral BADGER. Yes. This whole paper gives the history of the personnel and the recommendations of the board, as to personnel in the same way that the one I have been discussing gave it as to material.

The CHAIRMAN. From what date?

Admiral BADGER. This commences in 1900, for the fiscal year ending June 30, 1902, and it follows it all the way down to last year. Now, in some years we made no recommendation, but you can see the recommendations here. There has been a steady increase in personnel as the material has increased.

The CHAIRMAN. I think it would be well, as long as you have put in the building program from 1906, to put in also the personnel recommendations from 1906 down to the present time.

Admiral BADGER. In the same way?

The CHAIRMAN. Yes; in the record. Put them in the record.

Admiral BADGER. I can put in this paper here.

The CHAIRMAN. Yes; so that we will begin in 1906 instead of 1900.

Admiral BADGER. I can put both of these papers right in as they stand, if you desire.

The CHAIRMAN. And have both papers begin in 1906.

Admiral BADGER. Then I will have to take them back and furnish them later in that shape.

(The papers referred to are here printed in the record as follows:

NAVY DEPARTMENT,
GENERAL BOARD.
April 2, 1920.

From: Senior member present.

To: Secretary of the Navy.

Subject: Building programs; recommendations by General Board and Navy Department, and action by Congress.

In compliance with your verbal request of March 27, 1920, the following information, compiled from the files of the General Board, is submitted:

The following table shows the progress of construction resulting from the program for every year between 1906 and 1919:

| Year. | Battleships. | | Armored cruisers. | | Protected cruisers. | | Scout cruisers. | | Destroyers. | | Colliers. | |
|-------|--------------|-------------|----------------------|-------------|------------------------|-------------|-----------------|-------------|-------------|-------------|------------|-------------|
| | Completed. | Authorized. | Completed. | Authorized. | Completed. | Authorized. | Completed. | Authorized. | Completed. | Authorized. | Completed. | Authorized. |
| 1906 | 19 | 2 | 8 | 1 | 6 | 3 | 4 | 4 | 22 | 3 | 2 | 2 |
| 1907 | 24 | 2 | 10 | 1 | 9 | 3 | 8 | 4 | 25 | 3 | 5 | 3 |
| 1908 | 26 | 2 | 11 | 1 | 12 | 3 | 12 | 4 | 28 | 3 | 7 | 2 |
| 1909 | 28 | 2 | 12 | 1 | 15 | 3 | 16 | 4 | 31 | 3 | 10 | 2 |
| 1910 | 30 | 2 | 13 | 1 | 18 | 3 | 20 | 3 | 34 | 3 | 12 | 2 |
| 1911 | 32 | 2 | 14 | 1 | 21 | 3 | 24 | 3 | 37 | 3 | 14 | 2 |
| 1912 | 34 | 2 | 15 | 1 | 24 | 3 | 27 | 3 | 40 | 3 | 16 | 2 |
| 1913 | 36 | 2 | 16 | 1 | 27 | 3 | 30 | 3 | 43 | 3 | 18 | 2 |
| 1914 | 38 | 2 | 17 | 2 | 30 | 4 | 33 | 3 | 46 | 3 | 20 | 2 |
| 1915 | 40 | 2 | 18 | 2 | 33 | 4 | 36 | 3 | 49 | 3 | 22 | 2 |
| 1916 | 42 | | 19 | | 36 | 4 | 39 | 3 | 52 | 3 | 24 | 2 |
| 1917 | 44 | | 20 | | 40 | | 42 | 3 | 55 | 3 | 26 | 2 |
| 1918 | 46 | | 22 | | 44 | | 45 | | 58 | 3 | 28 | |
| 1919 | 48 | | 24 | | 48 | | 48 | | 61 | | 30 | |

1906: FOR FISCAL YEAR ENDING JUNE 30, 1908.

Recommendation by General Board:

| | |
|--------------------------------------|---------------------------------|
| battleships. | 2 small gunboats. |
| scout cruisers. | 2 shallow-draft river gunboats. |
| destroyers. | 2 squadron colliers. |
| battleships, motor torpedo boats. | 1 ammunition ship. |
| river gunboat (<i>Helena</i> size). | |

"No submarines are recommended this year pending a determination by the department, under the terms of the last appropriation bill, of the best type for our purposes."

Recommendation by Navy Department:

| | |
|------------------------|--------------------|
| battleships. | 4 destroyers. |
| scout cruisers. | 4 torpedo boats. |
| gunboat. | 1 ammunition ship. |
| gunboats, light draft. | 2 colliers. |

Authorized by Congress:

| | |
|-------------|---------------|
| battleship. | 2 destroyers. |
|-------------|---------------|

1907: FOR FISCAL YEAR ENDING JUNE 30, 1909.

Recommendation by General Board:

| | |
|-----------------------------------|-----------------------------------------------------------------------------------------------------|
| battleships. | 1 repair ship. |
| scout cruisers. | 2 fleet colliers. |
| destroyers. | 2 mine-laying ships (conversion and equipment for that purpose of 2 cruisers now on the Navy list). |
| submarines. | |
| battleships, motor torpedo boats. | |
| ammunition ship. | |

That the Navy should be of such strength that there may be one fleet concentrated in the Atlantic and one fleet concentrated in the Pacific, each sufficient to cope with any emergency that may require immediate action in its own sphere.
All obsolete armored vessels should be replaced by new battleships as rapidly as possible.

The ratio of destroyers to battleships as set forth in letter of February 9, 1903, to be changed from one torpedo boat destroyer for each battleship, to four destroyers for each battleship.

Recommendation by Navy Department:

| | |
|-----------------|-------------------------------------------------------------------------------------------------|
| battleships. | 1 ammunition ship. |
| scout cruisers. | 2 mine layers (conversion and equipment for that purpose of two cruisers now on the Navy list). |
| 0 destroyers. | 4 colliers. |
| submarines. | |
| repair ship. | |

Authorized by Congress:

| | |
|----------------|---------------|
| 2 battleships. | 8 submarines. |
| 10 destroyers | 5 colliers. |

1908: FOR FISCAL YEAR ENDING JUNE 30, 1910.

Recommendation by General Board:

| | |
|-------------------|-------------------------------------------------------------------------------------------------------|
| 4 battleships. | 1 repair ship. |
| 4 scout cruisers. | 1 ammunition ship. |
| 10 destroyers. | 2 mine laying ships (conversion and equipment for that purpose of two cruisers now on the Navy list). |
| 4 submarines. | |
| 3 colliers. | |

Recommendation by Navy Department:

| | |
|-------------------------------------------------------------------------------------------------------|--------------------|
| 4 battleships. | 3 colliers. |
| 4 scout cruisers. | 4 submarines. |
| 10 destroyers. | 1 repair ship. |
| 2 mine-laying ships (conversion and equipment for that purpose of two cruisers now on the Navy list). | 1 ammunition ship. |

Authorized by Congress:

| | |
|----------------|---------------|
| 2 battleships. | 7 submarines. |
| 5 destroyers. | 1 collier. |

1909: FOR FISCAL YEAR ENDING JUNE 30, 1911.

Recommendation by General Board:

| | |
|----------------------------------------|--------------------|
| 4 battleships (armament 14-inch guns). | 1 repair ship. |
| 4 scout cruisers. | 1 ammunition ship. |
| 10 destroyers. | 1 oil-tank ship. |

Recommendation by Navy Department:

| | |
|----------------|----------------|
| 2 battleships. | 1 repair ship. |
|----------------|----------------|

Authorized by Congress:

| | |
|----------------|---------------|
| 2 battleships. | 4 submarines. |
| 6 destroyers. | 2 colliers. |

1910: FOR FISCAL YEAR ENDING JUNE 30, 1912.

Recommendation by General Board:

| | |
|---------------------------|------------------------------------|
| 4 battleships. | 4 colliers. |
| 16 destroyers. | 3 gunboats. 1 for service in China |
| 1 repair ship. | 2 tugs. |
| 4 scouts. | 1 mine-laying vessel. |
| 2 tenders for destroyers. | 2 transports. |
| 3 tenders for submarines. | 1 hospital ship. |

Recommendation by Navy Department:

| | |
|----------------|---------------------|
| 2 battleships. | 1 submarine tender. |
| 2 gunboats. | 2 tugs. |
| 2 submarines. | 1 collier. |

Authorized by Congress:

| | |
|----------------|---------------------|
| 2 battleships. | 1 submarine tender. |
| 2 gunboats. | 2 tugs. |
| 8 destroyers. | 2 colliers. |
| 4 submarines. | |

1911: FOR FISCAL YEAR ENDING JUNE 30, 1913.

Recommendation by General Board:

| | |
|----------------------------|---------------------------|
| 4 battleships. | 2 tenders for submarines. |
| 1 or more battle cruisers. | 4 fuel ships. |
| 16 destroyers. | 1 ammunition ship. |
| 1 repair ship. | 1 mine-laying vessel. |
| 4 scouts. | 2 transports. |
| 2 tenders for destroyers. | 5 submarines. |

Recommendation by Navy Department:

| | |
|--------------|-------------------|
| battleships. | 2 fuel-oil ships. |
|--------------|-------------------|

Authorized by Congress:

| | |
|-------------------|-------------------------------------------|
| battleship. | 1 submarine tender. |
| destroyers. | 2 fuel-oil ships. |
| submarines. | 1 river gunboat (appropriated for in 1898 |
| destroyer tender. | to replace the <i>Michigan</i>). |

1912: FOR FISCAL YEAR ENDING JUNE 30, 1914.

Recommendation by General Board:

| | |
|-------------------|---------------------------|
| battleships. | 1 submarine tender. |
| battle cruisers. | 1 supply ship. |
| destroyers. | 2 gunboats. |
| destroyer tender. | 2 sea-going tugs. |
| transports. | 1 dry dock. |
| ammunition ship. | 1 submarine testing dock. |
| submarines. | |

"The General Board recommends the conversion of the *Prometheus* into a repair ship, and if this is approved, one fuel ship should be provided for in the building program to replace the *Prometheus*. The *San Francisco* having demonstrated its efficiency as a mine transport, the General Board recommends that the *Baltimore* be likewise converted into a mine transport."

Recommendation by Navy Department:

| | |
|-------------------|---------------------------|
| battleships. | 1 submarine testing dock. |
| battle cruisers. | 1 supply ship. |
| gunboats. | 1 repair ship. |
| destroyers. | 2 tugs. |
| submarines. | 2 transports. |
| destroyer tender. | 1 dry dock. |
| submarine tender. | |

Authorized by Congress:

| | |
|-------------|----------------|
| battleship. | 1 supply ship. |
| destroyers. | 1 transport. |
| submarines. | |

1913: FOR FISCAL YEAR ENDING JUNE 30, 1915.

Recommendation by General Board:

| | |
|--------------|---------------------|
| battleships. | 1 supply ship. |
| destroyers. | 1 hospital ship. |
| submarines. | 1 destroyer tender. |
| oilers. | 1 submarine tender. |
| gunboats. | 2 dry docks. |
| transport. | |

Recommendation by Navy Department:

| | |
|----------------|---------------|
| 2 battleships. | 3 submarines. |
| 3 destroyers. | |

Authorized by Congress:

| | |
|----------------|---------------|
| 3 battleships. | 8 submarines. |
| 6 destroyers. | |

1914: FOR FISCAL YEAR ENDING JUNE 30, 1916.

Recommendation by General Board:

| | |
|---------------------|--------------------------|
| battleships. | 1 destroyer tender. |
| 2 destroyers. | 1 submarine tender. |
| fleet submarines. | 1 Navy transport. |
| 6 coast submarines. | 1 hospital ship. |
| scouts. | 1 supply ship. |
| gunboats. | Air Service—\$5,000,000. |
| oil fuel ships. | |

Recommendation by Navy Department:

| | |
|----------------|--------------------|
| 2 battleships. | 7 submarines. |
| 1 gunboat. | 1 fleet submarine. |
| 3 destroyers. | 1 fuel oil ship. |

Authorized by Congress:

- 2 battleship.
6 destroyers.
16 submarines.
- 2 fleet submarines.
1 fuel oil ship.

1915: FOR FISCAL YEAR ENDING JUNE 30, 1917.

Recommendation by General Board:

- 4 battle cruisers.
4 dreadnaughts.
6 scouts.
30 coast submarines.
7 fleet submarines.
28 destroyers.
6 gunboats.
1 destroyer tender.
- 2 fleet submarine tenders.
4 fuel oil ships.
1 supply ship.
1 transport.
1 hospital ship.
1 ammunition ship.
1 repair ship.
Air Service—\$5,000,000.

The following five-year building program, 1917 to 1922, was recommended O 12, 1915, to comply with Secretary of Navy letter of October 7, 1915:

| | First year, 1917. | Second year, 1918. | Third year, 1919. | Fourth year, 1920. | 1 year |
|-----------------------------|----------------------|-----------------------|----------------------|-----------------------|-----------|
| Dreadnoughts..... | 4 | 2 | 2 | 2 | |
| Battle cruisers..... | 3 | | 1 | 2 | |
| Scouts..... | 4 | 2 | 1 | 3 | |
| Destroyers..... | 10 | 10 | 10 | 14 | |
| Fleet submarines..... | 2 | 2 | 2 | 2 | |
| Coast submarines..... | 20 | 10 | 10 | 10 | |
| Fuel ships, oil..... | 1 | | | 2 | |
| Repair ship..... | | | | 1 | |
| Transport..... | | | | 1 | |
| Hospital ship..... | 1 | | | | |
| Destroyer tender..... | 1 | | | 1 | |
| Fleet submarine tender..... | | | | 1 | |
| Ammunition ship..... | 1 | | | 1 | |
| River gunboats..... | 2 | | | | |
| Aircraft Service..... | \$3,000,000 | \$1,000,000 | \$1,000,000 | \$1,000,000 | \$1 |
| Reserve ammunition..... | 11,000,000 | | | | |

Recommendation by Navy Department:

- 2 battleships.
2 battle cruisers.
3 scout cruisers.
2 gunboats
- 15 destroyers.
25 submarines.
5 fleet submarines.
1 hospital ship.

Authorized by Congress:

- 10 battleships.
6 battle cruisers.
10 scout cruisers.
50 destroyers.
9 fleet submarines.
58 coast submarines.
1 submarine with Neff system of propul-
sion.
- 3 fuel ships.
1 repair ship.
1 transport.
1 hospital ship.
2 destroyer tenders.
1 fleet submarine tender.
2 ammunition ships.
2 gunboats.

Appropriations for some of the above construction were not made until a late

1916: FOR FISCAL YEAR ENDING JUNE 30, 1918.

Recommendation by General Board:

“The General Board recommends that the following vessels, whose construct been authorized by act of Congress, be included in the department’s estima new construction in the building program, 1918”:

- 4 battleships.
2 battle cruisers.
4 scouts.
20 destroyers.
9 fleet submarines.
18 coast submarines.
- 1 fuel ship.
1 transport.
1 destroyer tender.
1 fleet submarine tender.
1 gunboat.

The following vessels are also recommended for inclusion in the building program:"

| | |
|----------------|------------------------------------|
| mine sweepers. | Air Service, \$6,000,000. |
| supply ship. | Advanced base material, \$460,000. |
| goings tugs. | Net defenses, \$2,000,000. |

Recommendation by Navy Department:

| | |
|----------------|---------------------------|
| attleships. | 14 submarines. |
| attle cruiser. | 4 fleet submarines. |
| out cruisers. | 1 destroyer tender. |
| estroyers. | 1 fleet submarine tender. |

Authorized by Congress:

act of March 4, 1917, funds were appropriated for the construction of the following
els previously authorized:

| | |
|----------------|---------------------------------|
| attleships. | 1 destroyer tender. |
| attle cruiser. | 1 submarine tender. |
| out cruisers. | 18 coast submarines (800 tons). |
| estroyers. | |

nder naval emergency fund:

wenty coast submarines (800 tons).

ew construction authorized:

| | |
|---------------------|------------------------|
| estroyers. | 74 tugs. |
| ubmarines. | 392 submarine chasers. |
| leet mine sweepers. | 112 patrol vessels. |

1917: FOR FISCAL YEAR ENDING JUNE 30, 1919.

Recommendation by General Board, August 29, 1917;

| | |
|-------------------------------------|----------------------------|
| royers, as many as the resources of | 30 fleet submarines. |
| ie country will permit. | 2 dreadnoughts. |
| costs. | Air service, \$45,000,000. |
| attle cruisers. | |

Under the special conditions created by the war, the General Board, for the
lding program of 1919, does not recommend additional fleet auxiliaries, mine
epers, seagoing and patrol craft. Such needs as have not already been provided
under emergency appropriation must be met by taking over from the merchant
ine, as the need arises, vessels of the types required and equipping them for
al uses."

Revised recommendation by General Board June 15, 1918:

The General Board believes its analysis of present and future needs to be sound.
ee needs, expressed in numbers of fighting ships of several types, should form
basis of a continuing naval program to be started as soon as practicable. With-
violating the confidential argument of the General Board's report, these numbers
y be summarized for the purpose of this paper. Comparison of the estimated
ngth of certain navies and attainment of a desirable equality by December 31,
0, require the addition to the United States Navy, over and above the three-
r program authorized by Congress August 29, 1916, of the following vessels:

| | | |
|------------------------|------------------|------------------|
| attleships..... | 10- | 12 |
| attle cruisers..... | 15- | 16 |
| outs and cruisers..... | 30- | 63 |
| stroyers..... | 158- | ¹ 200 |
| omarines..... | ² 91- | 127 |

The General Board fully realized that the shipbiulding facilities of the United
tes taxed to capacity, could not undertake the task set by these numbers; but
ieved that present facilities could be increased so as to provide for immediate
struction of the following, as the building program for 1919:

| | |
|-----------------------------------------------------------------------------|-----------------|
| stroyers: As many as the resources of the country will permit. ¹ | |
| outs..... | 15 |
| attle cruisers..... | 5 |
| et submarines..... | ² 30 |
| attleships..... | 2 |

Destroyers: The department has meanwhile assured immediate construction of 150 of the 200 even-
lly needed.
Submarines: The General Board has submitted a supplementary building program largely increased
in these figures by reason of war developments.

"Since no part of this program has been included in the pending naval appropriation bill, the General Board believes that the time has arrived to obtain authority for full numbers of essential battle units, viz: Battleships, battle cruisers, and destroyers, which nearly 10 months ago were reported by the General Board as needed and therefore recommended that Senator Francis' bill receive the approval of the department in principle; that construction of 12 battleships, 16 battle cruisers, and 30 destroyers be authorized now, and be started as soon as practicable, and that the funds determined to be necessary for the first year of construction be appropriated."

Recommendation by Navy Department:
No increase over vessels authorized.

Authorized by Congress:
Available until expended—
Destroyers, \$125,000,000.
Coast submarines, \$32,397,000.

1918: FOR FISCAL YEAR ENDING JUNE 30, 1920.

Recommendation by General Board:

"The General Board recommends as based on the naval policy, that the department request Congress to authorize the following new construction with the provision that the program shall be completed not later than June 30, 1925, viz:"

| | |
|------------------------------|------------------------|
| 12 battleships. | 12 destroyer tenders. |
| 16 battle cruisers. | 6 submarine tenders. |
| 30 scouts. | 6 airplane carriers. |
| 108 destroyers. | 376 patrol vessels. |
| 21 fleet submarines. | 1,704 large seaplanes. |
| 146 S-type submarines. | 156 dirigibles. |
| 24 antisubmarine submarines. | 544 kite balloons. |
| 42 mine-laying submarines. | 24 rigid airships. |
| 284 mine sweepers. | |

Recommended by Navy Department:
Building program recommended by General Board.

Authorized by Congress:
Continue construction of vessels already authorized.

1919: FOR FISCAL YEAR ENDING JUNE 30, 1921.

Recommendation by General Board:

| | |
|---------------------|--------------------------------------------------------------------------|
| 2 battleships. | 2 airplane carriers. |
| 1 battle cruiser. | 1 destroyer tender. |
| 10 scout cruisers. | 1 submarine tender. |
| 5 flotilla leaders. | Aircraft construction, including experimental development, \$27,000,000. |
| 6 submarines. | |

CHAS. J. BADGER

G. B. No. 421 (confidential).

NAVY DEPARTMENT,
GENERAL BOARD,
April 5, 1920

From: Senior member present.

To: Secretary of the Navy.

Subject: Increase in personnel; recommendations by general board and Navy Department, and action by Congress.

In compliance with your verbal request of March 27, 1920, the following information compiled from the files of the general board, covering recommendations made by the general board and the Navy Department and the action taken by Congress on increase in personnel of the Navy, is submitted.

1906: FOR FISCAL YEAR ENDING JUNE 30, 1908.

Recommendation by general board: No recommendation.
Recommendation by Navy Department: Increase of 3,000 men.
Action by Congress: Permanent strength of enlisted men fixed at 38,500 men.

1907: FOR FISCAL YEAR ENDING JUNE 30, 1909.

Recommendation by general board: No recommendation.
 Recommendation by Navy Department: Increase of 6,000 men. Submits report
 personnel board which recommends that number of officers be based on percentage
 number of men. The numbers in grades to be distributed in certain ratios.
 Action by Congress: Permanent strength of enlisted men fixed at 44,500 men.
 Established Female Nurse Corps. Increased Marine Corps, as follows: 1 major general
 commandant in lieu of brigadier general commandant; 1 colonel; 1 lieutenant colonel;
 majors; 18 captains; 7 first lieutenants; 14 second lieutenants; 1 assistant adjutant
 inspector, rank of lieutenant colonel; 1 assistant quartermaster, rank of lieutenant
 colonel; 1 assistant quartermaster, rank of major; 3 assistant quartermasters, rank of
 captain; 1 assistant paymaster, rank of major; 1 assistant paymaster, rank of captain;
 sergeant majors; 15 quartermaster sergeants; 20 first sergeants; 50 sergeants; 125
 corporals; 10 drummers; 10 trumpeters; 518 privates.

1908: FOR FISCAL YEAR ENDING JUNE 30, 1910.

Recommendation by General Board: No recommendation.
 Recommendation by Navy Department: No record of recommendation.
 Action by Congress: No increase.

1909: FOR FISCAL YEAR ENDING JUNE 30, 1911.

Recommendation by General Board: No recommendation.
 Recommendation by Navy Department: Increase of 3,000 men.
 Action by Congress: Permanent strength of enlisted men fixed at 47,500 men.

1910: FOR FISCAL YEAR ENDING JUNE 30, 1912.

Recommendation by General Board: Recommended increase consistent with in-
 crease in vessels.
 Recommendation by Navy Department: No record of recommendation for increase.
 Action by Congress: No increase.

1911: FOR FISCAL YEAR ENDING JUNE 30, 1913.

Recommendation by General Board: "The General Board invites the attention
 of the department to the continued needs of the fleet in personnel and in dry docks."
 Recommendation by Navy Department: Recommended personnel bill which was
 introduced in the House of Representatives February 13, 1912, as H. R. 20045. Pro-
 vides for basing the personnel of the Navy in officers and men on tonnage of the Navy;
 10 men for every 1,000 tons and fractions in proportion of the battleships and cruisers
 of the Navy fixed on July 1 of each year. Three line officers for every 1,000 tons
 and fractions in proportion of the battleships and cruisers. The total authorized
 number of commissioned line officers not to be increased more than 10 per cent nor
 decreased more than 5 per cent in any fiscal year. Distribution in grades to be in
 the proportion of 1 flag officer, 4 captains, 5 commanders, 13 lieutenant commanders,
 30 lieutenants, 12 lieutenants (junior grade), 35 ensigns. The bill makes further
 provisions as to the ultimate distribution and of percentages allowed for Staff Corps,
 etc.
 Action of Congress: Permanent strength of enlisted men fixed at 51,500 men.

1912: FOR FISCAL YEAR ENDING JUNE 30, 1914.

Recommendation by General Board: No recommendation.
 Recommendation by Navy Department: No record of recommendations made.
 Action by Congress: No increase.

1913: FOR FISCAL YEAR ENDING JUNE 30, 1915.

Recommendation by General Board: "In the opinion of the General Board, a naval
 policy in relation to personnel is of even greater importance, as all history teaches us
 that the greatest element of success in all enterprises, and more especially in the enter-
 prises of war, lies in the personnel conducting the enterprise and its morale.
 "The General Board has from its incipency given careful consideration to this
 question, and made recommendations to the department from time to time. These
 recommendations have varied in details at times to meet conditions existing at the

time, but have all been founded on the same fundamental ideas, which are expressed in the citation made in paragraph 11 of this letter from general board letter No. 434 of October 17, 1903. The same idea is expressed in paragraph 4 of General Board letter No. 58 of February 9, 1903, which reads:

"4. The General Board further strongly recommends, as an essential part of an intelligent continued naval policy, that whenever an appropriation is made for an increase in the material of the fleet, the corresponding indispensable increase in personnel of officers and men be simultaneously provided for."

"In the opinion of the General Board, the question of personnel is more urgent now than at any time in the history of the Navy; and the board believes that the adoption and continued advocacy from year to year of a regular policy by the department for expansion and regulation of the personnel, coequal with the expansion of the fleet, will result in eventual success."

"The General Board recommends as a basis for such a policy:

"(a) That the personnel of the Navy, officers and enlisted men, including the active list and an established and trained naval reserve, shall at all times be sufficient to fully man the entire fleet for war."

"(b) That the officers and enlisted men of the Navy on the active list shall bear a definite fixed ratio to the total displacement of the fighting units of the fleet."

"(c) That the officers of the active list of the Navy shall be distributed in the various grades in a ratio that will insure the best efficiency of the fleet, by having in all grades the proper proportion of numbers for the duties of the grade, and so regulated as to bring each officer to the grade with sufficient experience and at the age when best equipped to perform the duties of the grade."

Recommendation by Navy Department: Recommend reestablishment of grade of vice admiral. Recommended increase in number of chaplains by 24. No recommendation for any further recommendation for a definite increase.

Action by Congress: No increase.

1914: FOR FISCAL YEAR ENDING JUNE 30, 1916.

Recommendation by General Board: That personnel of Marine Corps should be 10 per cent of that of the Navy. Extract from General Board letter to Secretary of Navy, August 7, 1914:

"In view of its study and the conclusions arrived at, the General Board specifically recommends that the department exert all its efforts to obtain legislation embodying the following features:

"(1) The obtaining of sufficient officers on the active list to man the fleet adequately on a peace basis; and this the General Board fixes at a minimum of three line officers per thousand tons, and the corresponding number of staff officers."

"(2) The obtaining of sufficient enlisted men to man the fleet adequately on a peace basis; and this the General Board fixes at a minimum of 70 men per thousand tons, exclusive of apprentices for training and prisoners."

"(3) The reorganization of the commissioned personnel of the Navy, both line and staff, and a redistribution in grades that the numbers in grades may correspond to the duties of the grade, and that officers may remain in the various grades during the period of life when they are best mentally and physically equipped for those duties. This requires legislation providing a total to be fixed in accordance with recommendation (1), and the distribution of this total in a fixed proportion between grades, with a service qualification for eligibility for promotion and a fair method of elimination for preserving the best for the active service as the grades go up and the number of places decrease. The General Board recommends as the right proportion between grades: 1 flag officer to 4 captains, to 6 commanders, to 15 lieutenant commanders, to 67 junior officers in the grades of lieutenant, lieutenant (junior grade), and ensign."

"(4) The establishment of an active reserve list of the Regular Navy for certain specified duties in peace and war, to be composed of officers not promoted to the higher grades on the active list for lack of places in those grades, and who have hence been honorably transferred from the active list in accordance with recommendation (3)."

"(5) The establishment of the grades of admiral and vice admiral in the Navy, and the distribution of the flag officers in the flag grades in the proportion of 1 admiral to 2 vice admirals to 8 rear admirals."

"(6) The further development and increase of the Naval Militia."

"(7) The establishment of a national naval reserve, to be composed of ex-officers who have resigned or been honorably discharged, merchant and yacht captains and officers, ex-enlisted men who have been honorably discharged, and all men in other Government seafaring services and all merchant seamen and yachtmen of good character, who can be induced to join and receive training, to the end of obtaining a reserve

fully manning the fleet on the outbreak of war, and supplying losses caused by casualties in war."

The following is an extract from General Board letter to the Secretary of the Navy, G. B. No. 420-2 of November 17, 1914:

"39. The General Board can not too strongly urge upon the department the necessity of using its best endeavors to carry out the repeated recommendations of the General Board made from year to year, to provide the fleet with a personnel, active list, and trained reserve, equal to the manning of the fleet for war.

"40. In the opinion of the General Board this is a matter of even more serious importance than that of construction; for it can not be too often repeated that ships without a trained personnel to man and fight them are useless for the purposes of war. And the training needed for the purpose is long and arduous, and can not be done after the outbreak of war. This must have been provided for long previous to the beginning of hostilities; and any ship of the fleet found at the outbreak of war without provision having been made for its manning by officers and men trained for service can be counted as only a useless mass of steel, whose existence leads only to a false sense of security.

"41. The strength of fleets is measured too often in the public mind by the number and tonnage of its material units. The real strength of a fleet is a combination of its personnel—with their skill and training—and its material; and of these two elements the more important—the personnel—is too often forgotten and neglected in making provision for our fleet. The General Board can not impress this point too strongly upon the department or recommend too earnestly that every effort be made to correct this, and that legislation be urged to provide for a personnel on the active list, supplemented by a trained reserve, sufficient to man every vessel of the fleet when the call comes.

"42. No nation in time of peace keeps all the ships of its navy fully manned and in full commission. But all leading nations except ourselves provide an active list, officers and men, sufficient to keep the best of their fleet in full commission and all the serviceable ships of their fleet in a material condition for war; and in addition a trained reserve of officers and men sufficient to complete the complements and fully man every serviceable ship of their navies, and furnish a reserve for casualties. Thus, every nation with which conflict is possible is prepared to mobilize its entire navy by order with officers and men trained for the service. We alone of the naval powers provide no such reserves, and an active personnel too scant, and trust to the filling of the complements of our ships by untrained men recruited after war is imminent or declared. To quickly man all of the ships of the Navy serviceable for war (including ships which are now in reserve or ordinary) with trained crews is impossible owing to the absence of a trained reserve.

"43. In view of all that has been herein set forth, the General Board recommends:

"(a) That legislation be asked for providing an active personnel, officers and enlisted force, capable of keeping in full commission all battleships under 15 years of age from date of authorization, all destroyers and submarines under 12 years of age from authorization, half of the cruisers and all gunboats, and all the necessary auxiliaries that go with the active fleet; and of furnishing nucleus crews for all ships in the Navy that would be used in time of war, and the necessary men for the training and other shore stations.

"(b) That the general policy be adopted of expanding the active personnel with the expansion of the fleet in the proportions indicated in (a).

"(c) That immediate steps be taken to form a national naval reserve of trained officers and men, and that this work be pushed until this reserve in connection with the naval militia has reached the point where, combined with the active list, it will be possible to fully man the entire fleet with war complements and furnish 10 per cent additional for casualties.

"(d) That the naval militia be expanded in number and that the department encourage the continuance and improvement of its training to the end that it may still more efficiently serve to reinforce the regular service at need."

Recommendation by Navy Department: No record of any recommendation for increase.

Action by Congress: Established naval reserve act of March 3, 1915. Provided for appointment of pay clerks, increased number of naval constructors, and increased Marine Corps by 20 gunnery sergeants, 20 sergeants, 70 corporals, and decreased the number of privates by 110.

1915: FOR FISCAL YEAR ENDING JUNE 30, 1917.

Recommendation by General Board: Extract from letter G. B. No. 420-2, July 30, 1915:

"Personnel: 11,000 men. This number will provide for the needs of the preships of the Navy, including those nearing completion, but it must be borne in mind that the personnel, commissioned, warrant and enlisted, will have to be further increased as the new construction progresses. * * *

Extract from G. B. No. 420-2, November 9, 1915, to Secretary of the Navy:

"23. The General Board recommends that legislation be sought for the fiscal year 1917 which will authorize an active personnel, officers and enlisted force, capable of—

"(a) Keeping in full commission all battleships under 15 years of age from date of authorization, all destroyers and submarines under 12 years from date of authorization, half of the cruisers, all gunboats, and all necessary auxiliaries that go with the active fleet.

"(b) Providing partial complements for all other ships in the Navy that would be placed in active use in time of war.

"(c) Providing the necessary personnel for training and for shore stations.

"ENLISTED MEN.

"Navy:

"24. The partial crews mentioned under (b) should be 50 per cent of the full complement for battleships, cruisers, destroyers and submarines. They should be permanent in order that they may be kept thoroughly trained and the ships maintained as efficient units of the fleet, ready for immediate service in case of emergency, simply filling the complements. For other ships the partial crews should be adequate for their upkeep.

"25. This does not provide sufficient personnel for war. With full war complements for all ships of the Navy ready for service in 1917 and a minimum number required at shore stations 74,700 men will be needed. In addition, upon the outbreak of war the personnel of the Navy must be greatly expanded to provide for aviation, coast defense districts, patrol craft, and other auxiliary duties of every kind as well as for a reserve of men under training to replace casualties. The coast guard, naval militia and naval reserve will be far from sufficient to meet these demands. The Navy is the first line of defense of the country. For peace requirements in the fiscal year 1917 the general board regards as inadequate any smaller force than 67,000 men in the regular Navy.

"Marine Corps:

"26. The Marine Corps should also be increased. There are now new demands from many points to provide guards at magazines, powder factories and other important property. To meet them it has been necessary to interfere seriously with the maintenance of detachments of proper strength on board ship and with the continuance of the training of the advance base force. These new demands would be accentuated if the United States were itself at war. The Navy Department has approved the recommendation of the general board that the strength of the Marine Corps should be 20 per cent of that of the Navy. The general board recommends that the authorized strength of the enlisted men of the Marine Corps for the fiscal year 1917 be 13,400 men.

"Officers:

"27. At the present time, the expansion of the Navy calls for an increase in the number of officers and revision of their distribution in the various grades.

"28. In recommending an increase in the number of officers of the Navy the general board has had in view—

"(a) Adequate complements for all ships included under paragraph 23.

"(b) A sufficient number to fill the necessary stations on shore.

"To accomplish this the general board finds that the total number of commissioned line officers, exclusive of flag officers, should number 2,700 for the fiscal year 1917. The general board recommends that Congress be requested to authorize this number to be reached through the Naval Academy as speedily as possible.

"29. In every grade the numbers in the grade should correspond with the number of positions to be filled, whose responsibilities are in accordance with the rank. A very considerable increase is needed in the number of lieutenants and lieutenant commanders; less proportional increase is needed in the higher grades. As the Navy increases the duties appropriate to each grade will increase in about the same ratio as the whole strength of the Navy.

"30. The various ranks of the Navy are established to correspond broadly to various classes of duty whose importance and responsibilities vary. Increased responsibilities are assigned to increased rank. At present the numbers in all the grades, except those of ensign and lieutenant (junior grade), are fixed by law. The present increase in numbers in the body of officers is entirely in those two grades.

31. The general board invites particular attention to the serious congestion in the grade of lieutenant (junior grade), which demands a remedy at the earliest practicable moment. The present condition is a serious detriment to the efficiency of the service and it is rapidly growing worse.

32. The general board limits the part of its report regarding the numbers in grade to an earnest recommendation that those numbers be established by Congress as a percentage of the entire number of officers. At the present time the grades have a length established by fixed numbers, except as noted in the grades of ensign and lieutenant (junior grade), without reference to the total number of officers. This method has no flexibility; in order to keep the numbers in grades properly proportioned to the needs of the service it is necessary to revise them periodically. This adjustment, while it is made from time to time by Congress, has not been done frequently enough to meet the needs of the service. The establishment of fixed percentages in grades would automatically provide for readjustment, while at the same time Congress would keep the whole matter under its control by establishing the total number of officers instead of the numbers in each of the several grades.

33. The officers of the Marine Corps, line and staff, should number 4 per cent of the total number of enlisted men of that corps. They should be recruited from the graduates of the Naval Academy.

34. The numbers of officers of the Medical and Pay Corps should be increased in accordance with the requirements of the service as stated in paragraph 28; those of the other Staff Corps should be increased in accordance with the requirements of their special duties. Entries to the Pay Corps should be from graduates of the Naval Academy.

35. The laws of promotion should be so adjusted as to provide that officers of the rank of ensign in the line, and those of corresponding rank in the Marine Corps, Pay Corps, and Civil Engineer Corps, shall have promotion to the next higher grade after the same length of service in the lower grade, and the general board so recommends.

36. In concluding its remarks upon personnel the general board invites attention to the fact that the repeal of the feature of the law of 1899 providing for the forced retirement of line officers operates to cause a stagnation in promotion. It recommends that the department seek from Congress remedial measures to insure a proper flow of promotion in line, staff, and Marine Corps, as otherwise the service will suffer grave losses of efficiency."

Extract from third indorsement G. B. No. 425 (serial No. 535), May 17, 1916, as follows:

2. The total number of men for which provision is to be made at present, for war on the Atlantic, is 100,000."

Recommendation by Navy Department: That 3½ per cent, or 2,152 men, in Hospital Corps be allowed as additional to authorized strength of personnel; that 2,000 additional marines be authorized; that authorized enlisted strength of Navy be increased 10,000; that 30 civilian engineers be appointed each year to a total of 300; and that civilian radiators be appointed, not to exceed 40 a year.

Action by Congress: Authorized increase to the number of 68,700 enlisted men, 1,000 apprentice seamen, 2,929 Hospital Corps, 350 enlisted men Flying Corps, 84 chaplains, 84 Dental Corps officers, 1,762 midshipmen, 150 Flying Corps officers, and 1,981 marines (enlisted men, including 67 men in Marine Band).

Commissioned officers of line on active list, exclusive of commissioned warrant officers, to be 4 per cent of total authorized enlisted strength of the active list, exclusive of Hospital Corps, prisoners undergoing sentences of discharge, enlisted men detailed for duty with Naval Militia and Flying Corps.

Commissioned officers of staff corps on the active list, exclusive of chief warrant officers, to be based on percentages of the total number of commissioned officers of the active list of the line of the Navy as follows: Pay Corps, 12 per cent; Construction Corps, 5 per cent; Civil Engineer Corps, 2 per cent.

Commissioned officers of Medical Corps to be 0.65 per cent of the total authorized number of officers and enlisted men of the Navy and Marine Corps including midshipmen, Hospital Corps, prisoners undergoing sentence of discharge, enlisted men detailed for duty with Naval Militia and the Flying Corps.

Authorizes the Secretary of the Navy to appoint annually in the line of the Navy for a period of 10 years, 30 acting ensigns for the performance of engineering duties only. Number of surgeons increased by one for duty with the Red Cross. Established Naval Reserve Force on definite basis.

1916: FOR FISCAL YEAR ENDING JUNE 30, 1918.

Recommendation by general board: Enlisted force Navy to 150,000, marines to 10,000, and officers in the proportions prescribed by law.

Recommendation by Navy Department: Recommended temporary increase 150,000 men.

Action by Congress: Act of May 22, 1917, authorized temporary increase to 150,000 men. Marines increased temporarily to 30,000.

1917: FOR FISCAL YEAR ENDING JUNE 30, 1919.

Recommendation of general board (G. B. 421, ser. 765, Aug. 16, 1917):

"In accordance with the reference the general board has habitually included recommendations for the personnel in the annual building program. There is now in preparation the program for the fiscal year 1919. In advance of its completion the board has deemed it urgent to represent to the department certain conditions affecting the authorized strength of the personnel—conditions which have developed on account of the war and since the board's last annual program was submitted.

"2. Although in some respects the ultimate needs of the Navy in personnel cannot be foreseen, being dependent upon the duration of the war, immediate needs are apparent. Enlisted men must now be available for: (a) Fighting fleet; (b) maintenance of shore establishments; (c) coast defense ships; (d) new destroyers, yachts, and other submarine chasers; (e) transports, and impressed German ships; (f) fleet aviation service; (g) armed guards already on merchantmen; (h) an addition of 5 per cent for sick; (i) an addition of 10 per cent for casualties.

"3. According to the opinion of the Chief of Bureau of Navigation, as expressed to the general board, the total of present requirements (a) to (i) of paragraph 2 already equals and probably exceeds the total present authorized strength of the Navy regular enlisted men.

"4. The personnel of the fighting fleet must be left intact as far as possible so that the vessels composing it may be ready at all times for any emergency.

"5. Naval Reserves will yield, without additional legislation, the number required for further increase of naval duties. They should be enrolled in numbers as required together with an excess of several thousand for training and contingencies.

"6. The next large increase of naval duties will come about immediately upon recognition of the necessity of manning all merchant vessels by men of the Navy. This is a war measure and follows directly the development of the present war.

"7. Recognition of this necessity is demanded for the following reasons: First, definition of the status, now uncertain, of the crews and armed guards of merchant vessels; assuring them rights of belligerents; second, suppression of strikes, and enforcement of discipline; third, increased safety of ship and cargo, insuring through central authority strict obedience as to routing, zigzagging, speeding in the submarine zone and to other affecting lights and lookouts; fourth, increased speed of loading, of discharge, and of voyages; fifth, decreased cost of wages; sixth, increased intelligence of crews; seventh, American citizenship of enlisted men.

"8. All American merchant vessels now engaged in overseas trade should be manned by naval crews, as soon as practicable. The general board is informed that a large number of Naval Reserves is now available toward this purpose.

"9. All American merchant vessels building, including those under the Shipping Board and Emergency Fleet Corporation, should be commissioned as fast as completed with naval crews.

"10. The General Board recommends, therefore, that the Bureau of Navigation be directed to proceed in the enrollment of Naval Reserves to accomplish the objects stated."

In G. B. letter No. 420-2, August 29, 1917, G. B. 421, Serial No. 765, August 16, 1917, is again quoted with the following additional recommendation as to personnel:

"At the present the general board emphasizes its recommendations as stated above to meet the requirements as given above by an immediate increase in the Naval Reserves.

"25. In its annual report for 1916, G. B. No. 420-2, August 16, 1916, the general board recommended 'that the enlisted force of the Marine Corps be maintained at 20 per cent of the total authorized enlisted personnel of the Navy, exclusive of the Hospital Corps.' The act of Congress of May 22, 1917, increasing the strength of the Navy to 150,000, authorized an increase of the Marine Corps to 30,000, thus maintaining the above percentage, as between the regular enlisted forces of the Navy and Marine Corps.

"26. The general board calls attention to the fact that there is now no provision in law to provide automatically or otherwise for an adequate number of senior officers above the grade of lieutenant in the Navy or major in the Marine Corps to properly care for and supervise in war the increased material and enlisted personnel already provided for by legislative enactment.

“27. Since the last annual report of the general board the authorized enlisted force of the Regular Navy has been increased by law to 150,000 men, which, together with seamen apprentices and the Hospital Corps brings the authorized strength of the Regular Navy to about 163,000 enlisted men.

“28. To organize this force so that the greatest efficiency may be obtained there should be created a sufficient body of officers, distributed among the various grades in such manner and in such numbers as will provide responsible officers of commensurate rank and experience to perform all the duties which will devolve upon the Navy during the war.

“29. Excluding the apprentice seamen and Hospital Corps and considering only the 150,000 enlisted men now authorized by law, it is to be noted that the Congress already has enacted, after exhaustive investigation and hearings, a law which provides that the total number of commissioned line officers shall be 4 per cent of the authorized enlisted force and that this total shall be apportioned to the various grades of the Navy in certain specified percentages.

“30. Following the principles recognized in this act, 6,000 line officers should be provided for 150,000 enlisted men.

“31. There are now 2,390 regularly commissioned line officers in the Navy and 325 holding temporary commissions, a total of 2,715, leaving a shortage of 3,285, which must be provided to make the Regular Navy thoroughly efficient—to properly organize it, in fact.

“32. While recognizing the difficulty of obtaining this number of additional officers and after consultation with officers representing the Bureau of Navigation, the General Board believes it can be done if immediate steps are taken to that end. The sources of supply, besides the Naval Academy, are, in order of importance, the warrant officers and enlisted men of the Navy itself, the Coast Guard, the Naval Militia, National Naval Volunteers, the Naval Reserve, and others not belonging to any of these organizations who can demonstrate their fitness for positions in the Navy.

“33. The General Board recommends that the provisions of the act of August 29, 1916, apportioning the officers in the different commissioned grades of the Navy upon the basis of 87,000 men be extended to apply to the 150,000 men authorized in the act of May 22, 1917, and to any further increase of enlisted men which may be authorized.

“34. The General Board further recommends that the upper grades of the line of the Navy be filled at once up to the authorized numbers based upon a strength of 87,000, by the promotion of officers now in the regular service and the issuance of sufficient temporary commissions in the lower grades to make up the total number. When the total numbers of officers for the 87,000 men have been obtained by permanent and temporary commissions as authorized for this enlisted strength, every effort should be made at once to procure the additional number of temporary officers authorized for an enlisted strength of 150,000 men, the corresponding temporary increases in all higher grades being filled by temporary promotions for the period of the war in the proportions specified in the act of August 29, 1916, of line officers now in the regular Navy, the original temporary appointments being made by selection from the sources enumerated in paragraph 32 after such examinations as to fitness as the department may prescribe.

“35. Because the time required to train officers for the more onerous duties and added responsibilities of the higher grades, it is the opinion of the General Board that training in the advanced grades should be started now, not wait until the emergencies of the war have actually to be met with a greatly expanded untrained personnel, when the time for necessary preparation and preliminary training will not be available. Additional senior officers are imperatively demanded to officer not only the battleship forces, but also to organize, supervise, and direct the operations of convoys, supply and transportation trains, and the numerous squadrons and divisions of smaller vessels, cruisers, destroyers, and patrol craft which must be organized and put into service. Reliefs for senior officers must also be provided to fill vacancies caused by sickness and war casualties.

“Staff Corps:

“36. What holds in regard to the expansion of the commissioned officers of the line of the Navy holds similarly for the Staff Corps, and the General Board recommends that steps be taken at once to provide additional permanent and temporary officers for these corps, in accordance with the percentages prescribed in the act of August 29, 1916.

“Marine Corps:

“37. The act of Congress of August 29, 1916, provided for officers for the Marine Corps in proportion to the number of enlisted men, these officers to be apportioned to the different grades in a certain fixed proportion. The act of Congress approved May 22, 1917, authorized a temporary increase of the Marine Corps from 17,400 to 30,000, and

provided for an increase of officers therefor by temporary commissions in the proportions already fixed by law, but limited these temporary commissions to the rank of major and below.

"38. The General Board believes that the number of officers in proportion to the number of enlisted men and the proportions in the different grades as fixed by the law of August 29, 1916, are required to properly officer the Marine Corps as a military organization, and recommends that the officers required for the temporary increase authorized in all grades by temporary commission for the duration of the war according to that proportion.

"Naval Reserves:

"39. The present necessity for the expansion of the Naval Reserves has been discussed in paragraph 24 of this paper. The recruitment and training of officers of the Naval Reserves, in total numbers and percentages in grades, similarly to those provided for the Regular Navy should be immediately taken up."

General Board letter to the Secretary of the Navy (G. B., No. 421; serial No. 77) September 22, 1917:

"Paragraph 2 of the General Board's letter No. 421, of August 16, 1917, states:

" 'Although in some respects the ultimate needs of the Navy in personnel cannot be foreseen, being dependent upon the duration of the war, immediate needs are apparent. Enlisted men must now be available for:

- " '(a) Fighting fleet.
- " '(b) Maintenance of shore establishments.
- " '(c) Coast defense ships.
- " '(d) New destroyers, yachts, and other submarine chasers.
- " '(e) Transports and impressed German ships.
- " '(f) Foreign aviation service.
- " '(g) Armed guards already on merchantmen.
- " '(h) An addition of 3 per cent for sick.
- " '(i) An addition of 10 per cent for casualties.'

"2. In its No. 1159-1094 of August 29, 1917, to the department (copy furnished to the General Board), the Bureau of Navigation made an estimate of the enlisted personnel required for the Regular Navy by March 1, 1919. Over and above 162,490, the present authorized strength, the Bureau of Navigation estimates that an increase of 48,848 is required.

"3. The General Board accepts these figures as a conservative estimate. Anticipating the need of sufficient time for recruiting and training, it is recommended that the department include in its estimates for the coming fiscal year legislative provision for the increase stated by the Bureau of Navigation as required by March 1, 1919."

Recommendation by Navy Department:

To increase the number of midshipmen authorized to 3,128.

To temporarily increase the enlisted strength of the Navy to 180,000 plus 14,000 in trade schools, plus 10,000 for aviation, plus 24,000 for apprentice seamen; total: 228,000.

Recommends an increase of 50,000 men in the permanent strength of the Navy. Recommended temporary increase of Marine Corps to 75,000.

Action by Congress:

Sixty-fifth Congress, second session, act of July 1, 1918:

Permanent enlisted strength, 131,485; apprentice seamen, 6,000; Flying Corps, 35,000; total, 137,835.

Temporary enlisted strength, 181,485; apprentice seamen, 24,000; Flying Corps, 10,000; trade schools, 14,000; total, 229,485.

Marine Corps to temporary strength of 75,500 and to enroll reserves without limit.

1918: FOR FISCAL YEAR ENDING JUNE 30, 1920.

Recommendation by General Board:

Extract from G. B. No. 421 (serial No. 915), June 7, 1919, as follows:

"The General Board does not at this time recommend a final settlement of the permanent enlisted force, which must depend upon necessities of the Navy after the demobilization of the temporary force now contemplated has been completed.

"The General Board recommends that the permanent force shall remain as at present, 137,485, not including the medical complement provided by law, and that until July 1, 1920, the personnel of the Navy remain as follows:

| | Perma- nent. | Tempo- rary. | Total. |
|------------------------------------|-----------------|-----------------|---------|
| Until Oct. 1, 1919..... | 137,485 | 112,515 | 250,000 |
| Oct. 1, 1919, to Jan. 1, 1920..... | 137,485 | 87,515 | 225,000 |
| Jan. 1 to June 30, 1920..... | 137,485 | 62,515 | 200,000 |

"The General Board wishes to add that it considers the present personnel situation of the Navy as most serious and that any reduction below that recommended above could not be made for the present, having in view not only the efficient operation of the Navy as now constituted but also the gravely unsettled international situation."

Recommendation by Navy Department:

To authorize the temporary strength of the Navy at 25,000 men until June 30, 1920.

To authorize the permanent enlisted strength of the Marine Corps to be 26,297 men.

Action by Congress:

Act of July 1, 1918, temporary strength of the Navy to be:

July 1, 1919, to September 30, 1919, 241,000; October 1, 1919, to December 31, 1919, 191,000; January 1, 1920, to June 30, 1920, 170,000.

The above figures include the Hospital Corps, apprentice seamen, Flying Corps, etc. The President is authorized to increase the authorized enlisted strength to 191,000 men.

CHAS. J. BADGER.

The CHAIRMAN. I asked you specifically about the recommendations in 1914. You do recall a specific recommendation as to numerical increase in the enlisted personnel that was made at that time?

Admiral BADGER. Yes.

The CHAIRMAN. In the report of the board?

Admiral BADGER. I do not find that in that recommendation there was a specific program in 1914 for the fiscal year ending June 30, 1916. There is quite a lot of material here that I can read, but it hardly bears on the subject of your question. But I can read this. This is an extract from the General Board's letter to the Secretary of the Navy, No. 420-2, of November 17, 1914. [Reading:]

39. The General Board can not too strongly urge upon the department the necessity of using its best endeavors to carry out the repeated recommendations of the General Board made from year to year, to provide the fleet with a personnel, active list and trained reserve, equal to the manning of the fleet for war.

40. In the opinion of the General Board this is a matter of even more serious import than that of construction; for it can not be too often repeated that ships without a trained personnel to man and fight them are useless for the purposes of war. And the training needed for the purpose is long and arduous, and can not be done after the outbreak of war. This must have been provided for long previous to the beginning of hostilities; and any ship of the fleet found at the outbreak of war without provision having been made for its manning by officers and men trained for service can be counted as only a useless mass of steel, whose existence leads only to a false sense of security.

Then further they say:

43. In view of all that has been herein set forth, the General Board recommends:

(a) That legislation be asked for providing an active personnel, officers, and enlisted force, capable of keeping in full commission all battleships under 15 years of age from date of authorization, all destroyers and submarines under 12 years of age from authorization, half of the cruisers and all gunboats, and all the necessary auxiliaries that go with the active fleet; and of furnishing nucleus crews for all ships in the Navy that would be used in time of war, and the necessary men for the training and other shore stations.

(b) That the general policy be adopted of expanding the active personnel with the expansion of the fleet in the proportions indicated in (a).

(c) That immediate steps be taken to form a national naval reserve of trained officers and men, and that this work be pushed until this reserve in connection with the naval militia has reached the point where, combined with the active list, it will be possible to fully man the entire fleet with war complements and furnish 10 per cent additional for casualties.

(d) That the naval militia be expanded in number and that the department encourage the continuance and improvement of its training to the end that it may still more efficiently serve to reinforce the regular service at need.

Now, the action by Congress on that was that it established a Naval Reserve by the act of March 3, 1915, increased the Marine Corps by a small amount of noncommissioned officers and 110

privates, and increased the number of pay clerks and naval constructors. But the naval reserve act of 1915 was intended to meet the requirements of these recommendations, to give a reserve which would, in connection with the regular men of the Navy, serve in time of emergency to man all of the vessels of the fleet.

The CHAIRMAN. You were on the General Board at that time?

Admiral BADGER. Yes, sir.

The CHAIRMAN. That report that you have read was the report that was finally submitted to the Secretary of the Navy. Was that the first report that was submitted to the Secretary of the Navy on this matter?

Admiral BADGER. No; it is not. There was a report——

The CHAIRMAN. For numerical increase, was there not?

Admiral BADGER. There was a report prepared in which it was recommended that there be a numerical increase of 19,600 enlisted men, and as I remember it, 1,070 commissioned officers of the line.

The CHAIRMAN. And the report with the numerical increase in it was not published, was it?

Admiral BADGER. It was never sent in. The Secretary of the Navy, for what reasons I do not know, objected to publishing any report giving concrete numbers. He came and attended a meeting of the board, and this report of the personnel, which was then a very live question indeed, was read to him. My recollection is that he said——

The CHAIRMAN. That had the provision for 19,600 enlisted men in it?

Admiral BADGER. In it; yes, sir. Whether that was a special letter or whether it was embodied in the report itself, I am not sure, but I rather think it was a special letter. However, substantially it recommended the 19,600 men and——

The CHAIRMAN. And that was cut out?

Admiral BADGER. It was changed. The principle was maintained but those figures were cut out. I will try to give it to you exactly as I recall it, now.

The Secretary said that he had no objections whatever to the 19,000 appearing in the report, but that he did not feel under the conditions and circumstances he could publish the report of the General Board with that in it. The report of the General Board never had been published in full before the present Secretary of the Navy came in, and Admiral Dewey, who was always most anxious to increase the influence of the General Board and the knowledge of people as to its workings, was anxious that that particular report should be published, and he suggested, and talked over with the General Board, the idea of putting in it the same principle exactly, and leaving out those particular numbers, and that was done. There was no pressure whatever from the Secretary of the Navy beyond the fact that he would not publish the report with those numbers in, and he gave no reasons for his action.

Now, as I remember, the 19,600 men were the number that we believed were required to do what I have already read to you, that legislation be asked for providing for active personnel, officers, and enlisted force capable of keeping in full commission the battleships under 15 years of age, etc. That has been already read.

It was our idea, as I remember it, that the 19,600 men were needed to do that, and by leaving out the 19,600, we still maintained the principle, and the report would be published; and that is all that I remember about it.

The CHAIRMAN. And was Congress informed of the recommendation of the board for the 19,600 additional men?

Admiral BADGER. No; I think not; not that I know of.

The CHAIRMAN. And they were not provided for?

Admiral BADGER. My recollection—and I think it is correct—is that following this recommendation of the board for the keeping in commission—having men to keep in full commission—various ships enumerated, the Bureau of Navigation, which has charge of the manning of ships and the personnel of the Navy, made a report which was published—I read it—in which it stated that there were men enough in the Navy to do all these things and to have something over; I think something like 500 or 600 men more in the Navy at that time.

The CHAIRMAN. The General Board was familiar with that when made these general recommendations?

Admiral BADGER. The General Board believed that they needed that number of men, 19,600 men.

The CHAIRMAN. In addition to what it had?

Admiral BADGER. To meet the requirements. That was the General Board's recommendation.

The CHAIRMAN. And the Secretary had that?

Admiral BADGER. The Secretary of the Navy, without either approving or disapproving, except in so far as he stated that he would not publish the report if those figures were left in. They were left out, and it was attempted to provide for it.

The CHAIRMAN. But the action of the Secretary in not putting it up to Congress and not asking that increase, would indicate that he was not in favor of the 19,600 increase, would it not?

Admiral BADGER. Well, of course, the Secretary of the Navy has to do as he thinks best in these matters. I do not know what actuated him. That 19,600 never reached him afterwards.

The CHAIRMAN. But it did reach him in the first letter sent him by the General Board?

Admiral BADGER. No, he came over to the General Board, and it was read to him, and there he expressed his disapproval, and it was changed there.

The CHAIRMAN. I will read you Capt. Taussig's statement about that matter.

Admiral BADGER. Yes, sir.

The CHAIRMAN. [Reading:]

The General Board of the Navy, in its 1914 annual report to the Secretary of the Navy, recognized that the unsatisfactory personnel conditions greatly impaired the efficiency of the fleet, and made recommendation to the department that an additional 19,600 enlisted men be immediately requested. The Secretary of the Navy did not accept the report of the board with this recommendation, but returned the report to the board with the request that all mention of a numerical increase be eliminated. This the board did in order that the other important features of the report be not lost to the public.

Admiral BADGER. The report never left the board containing that 19,600. It never left the board at all, and never was returned.

The CHAIRMAN. But whether it went to him officially or not, went to him?

Admiral BADGER. He knew it, yes.

The CHAIRMAN. After the Secretary declined to accept the report of the General Board for the numerical increase of 19,600 men, did the board, before sending the deleted report back to the Secretary, send to the Secretary a letter in regard to the needs of the personnel, giving more details than those contained in the printed report? That report was the letter to which you have referred.

Admiral BADGER. No, that letter was never sent—no letter of that kind was sent to the Secretary.

The CHAIRMAN. Was not this letter read to the Secretary at a meeting of the General Board?

Admiral BADGER. It was, yes. That is what I have stated.

The CHAIRMAN. Was any action taken by the Secretary on the letter, or was it simply filed?

Admiral BADGER. Filed.

The CHAIRMAN. With the General Board?

Admiral BADGER. Filed with the General Board, to be produced whenever, in case——

The CHAIRMAN. Does the General Board keep minutes of its proceedings?

Admiral BADGER. Yes.

The CHAIRMAN. Was the fact that this letter was read to the Secretary in such a meeting of the General Board reported in its minutes?

Admiral BADGER. I can not tell you, but I think so.

The CHAIRMAN. Does it still appear in the minutes of the General Board?

Admiral BADGER. It would appear if it is there. Of course, I can not remember the minutes of that occasion.

The CHAIRMAN. You testified that the letter was read to the Secretary at a meeting of the General Board?

Admiral BADGER. Yes.

The CHAIRMAN. And that minutes of the General Board were kept?

Admiral BADGER. Yes.

The CHAIRMAN. And that, therefore, it must appear in the minutes, in the record of the General Board.

Admiral BADGER. I say therefore it ought to be in the minutes of the General Board. I can not swear that it is absolutely there, but I believe it to be there.

The CHAIRMAN. Can you conceive of any possibility of its not being there?

Admiral BADGER. No.

The CHAIRMAN. Will you verify that fact, Admiral, and notify the committee as to whether it is there and whether it has been there continuously, as far as you can find out?

Admiral BADGER. Yes; I have recently seen the paper itself. I have not seen the minutes.

The CHAIRMAN. I refer to the minutes, now.

Admiral BADGER. Yes.

The CHAIRMAN. I say, will you do that as soon as you can, so that we can put it in this record?

Admiral BADGER. Yes. I will do it immediately.

CHAIRMAN. Did the General Board in 1914, after the outbreak of the World War, consider that it was possible that the United States would be drawn into the war?

Admiral BADGER. I think we all feared that we should be drawn into the war, yes. It seemed impossible that such a general war as would proceed without a nation like the United States being drawn into it eventually.

CHAIRMAN. And this was considered possible immediately after the outbreak of the World War?

Admiral BADGER. I should say so, so far as I am personally concerned, yes.

CHAIRMAN. And you think that the General Board thought, from that time until the declaration of war, that we would be drawn into the war?

Admiral BADGER. That there was great danger of our being drawn into the war, yes, sir.

CHAIRMAN. Were there any special reports made to the department after August, 1914, and prior to these reports that you have already alluded to, beginning February 4?

Admiral BADGER. As I have said, all the letters that have been in this appendix A bore upon the possibility of war and the situation therefor. There are I do not know how many here, are 70 or 80 papers, doubtless, or more. And this does not contain by any means all the information that was gathered, because about the continuance of the war, from the early days, when officers of our own service returned from abroad, and when foreign officers came—as many did come, here, the General Board had them before them and conducted hearings, and those reports are in existence now, in bound volumes, and an enormous amount of information in regard to the situation was obtained that would appear — —

CHAIRMAN. And you are going to inform the committee about the acceptance by the department of those various recommendations?

Admiral BADGER. Yes.

CHAIRMAN. If any of them were not accepted, on whom was the responsibility?

Admiral BADGER. As I say, the mere fact that we did not receive a report showing what the action of the department was does not mean either that it was accepted or rejected. Frequently nothing was done even preceding the commencement of the war, to show what action the department had taken.

CHAIRMAN. But even so, Admiral, if they were not adopted, or if they were formally accepted or not, if they were not adopted, where, and the responsibility for the failure to adopt them, was on whose shoulders?

Admiral BADGER. I am not sure that you can say. They might not have been good recommendations.

CHAIRMAN. Yes; but who has the final say?

Admiral BADGER. The final say is with the Secretary of the Navy.

CHAIRMAN. And you are going to inform the committee about the recommendations made by the board in 1915 for increasing the personnel of the Navy, were approved by the department? Is one of the things that you were to inform the committee

Admiral BADGER. Well, I can——

The CHAIRMAN. I asked you, in each case where you made recommendations, to let us know whether they were accepted by the department?

Admiral BADGER. Yes.

The CHAIRMAN. Is the word "accepted" or is it "approved?"

Admiral BADGER. "Officially approved," would be the language. But again I will say that the mere fact that we did not receive a return does not prove that it was not accepted and approved, and put into effect by the department.

The CHAIRMAN. But in case of an increase in personnel, it is very simple for you to find out whether, if approved, it was carried into effect?

Admiral BADGER. Yes; we can find out what the recommendations of Congress were in that year.

The CHAIRMAN. So that, will you give me that also? And, in the case of all recommendations for increases of personnel, if they were not approved and not adopted, the responsibility was on the Secretary of the Navy, was it not?

Admiral BADGER. The responsibility is always on the head of the department, whatever it may be.

The CHAIRMAN. Were there any other plans with regard to naval operations, prepared by the board, before those plans which you have already given us, the first of which I think is dated February 4, 1917?

Admiral BADGER. Yes; I have read you one, commencing; a preparatory plan was in 1915. That was establishing reports by the various bureaus as to the status of preparation in each bureau for war.

The CHAIRMAN. Were there any others besides that?

Admiral BADGER. Only that all recommendations of the General Board for increase of the Navy, the types of ships, for everything with which it was charged, were in the line of preparation for war, not necessarily for this particular war, but for all wars.

The CHAIRMAN. Was any plan drawn up to meet the case of a war in which the United States naval forces would be used almost exclusively against submarines?

Admiral BADGER. No; because it was believed that we should have to do what the people abroad were doing; to follow their lead. You understand that we entered the war under this handicap that we came in to cooperate after the others had been at war three years. Our neutrality had prevented us from completing the necessary ships to prepare for a new type of warfare, and the recommendations throughout were as soon as we entered the war we should cooperate to the best of our ability with the belligerents on the allied side. We all knew that the submarine had started a new type of warfare. As early as March, even before we entered the war, we had begun to build submarine chasers. The first order for submarine chasers was placed on the 17th of March, 1917, and I think it covered about 40. Every preliminary thing had been done toward increasing our destroyer force, and as soon as war was declared we commenced to sign contracts and commenced just as soon as practicable a vast increase in our destroyers. I think we contracted for in the neighborhood of 350 destroyers, costing somewhere in the neighborhood of \$2,000,000.

piece, in the very few months succeeding the commencement of war, commencing almost immediately. They had very great difficulty in finding facilities for so greatly increasing that kind of craft, but the idea of the Secretary of the Navy and of the General Board and of every other department, so far as I am informed, was that our plan must be dependent upon the plans of the Allies, brought about by familiarity with three years of war under these exceptional conditions.

The CHAIRMAN. But did the General Board have any plan drawn up for a war in which the United States naval forces would be used almost exclusively against submarines; in which the naval warfare would be practically restricted to the submarines?

Admiral BADGER. We could not say that; no, sir. We knew we would have war with these submarines, but I should not say that we thought necessarily it would be confined to submarine warfare. We thought it possible and very probable that our fleet would be called into service.

The CHAIRMAN. But you did not formulate a general plan of submarine warfare?

Admiral BADGER. A general plan?

The CHAIRMAN. You did not draw up any general plan for a submarine warfare?

Admiral BADGER. I do not think it was possible to draw up any plans for submarine warfare.

The CHAIRMAN. On what did you base your recommendations with respect to submarine warfare?

Admiral BADGER. With respect to submarine warfare?

The CHAIRMAN. Yes.

Admiral BADGER. We had the reports of our own officers abroad. We had the reports of the foreign officers who were here, notably the British, and Commodore Gaunt, the naval attaché, who was an unending fount of information on that subject. We had the reports of officers returning, and we had the reports, so far as they went, of losses. All of those combined to acquaint us with the situation and the steps that were taken.

The CHAIRMAN. Had any plans been formulated, prior to our entrance into the war, for sending antisubmarine craft abroad?

Admiral BADGER. Not that I know of.

The CHAIRMAN. When were such plans formulated?

Admiral BADGER. I have read you here this morning where the General Board said that undoubtedly it would add much to the moral effect by sending our destroyers abroad and antisubmarine craft, and also that we should, in view of the emergency, send them abroad as soon as possible.

The CHAIRMAN. That was in your recommendation of May 3, was it not?

Admiral BADGER. I think it was.

The CHAIRMAN. Was any general plan governing antisubmarine operations ever drawn up in the Navy Department?

Admiral BADGER. I do not know. I do not believe that any such plan was prepared.

The CHAIRMAN. Was it better, in the opinion of the General Board, to keep the antisubmarine craft on the Atlantic coast or to send them to the war zone?

Admiral BADGER. Now, you are opening a very broad question. Senator, and one that is very controversial.

The CHAIRMAN. Your report of May 3 recommended sending abroad as much as possible.

Admiral BADGER. As much as the condition of our fleet and the number that we had would permit. Now, I do not object to saying this on one view of the situation. It looked in April and May very much as though peace would have to be declared by the British and the French—the Allies. The reports that we were receiving were most pessimistic here, that they could not hold out. In that case, if the German navy had remained untouched, there was no telling how we in this country might become involved with Germany ourselves and therefore it was a very doubtful policy whether we should strip ourselves and run the chance of coming in at the last moment and being defeated on the other side as far as prevention of the collapse of the allied powers was concerned, or whether we should look out for ourselves and our own fleet until we could see about it. Therefore the men who had a responsibility of that kind considered it from that point of view also, that we must look out for our own fleet, in addition to the fleets of the other powers concerned, and not strip our battleships of protection against the submarines that might attack them. We had our fleet here in the Chesapeake. We went to sea for practice purposes, to keep them up, without any real protection, and it was a very dangerous thing, but we had to take the chance, because we had to send all of our other vessels abroad.

The CHAIRMAN. What was the mission of our naval forces in home waters? Was it to protect against operations by an enemy capital fleet or against raiders or submarines?

Admiral BADGER. Both, if necessary; but certainly against raids on our coasts by submarines or by destroyers, or by light craft generally.

The CHAIRMAN. Therefore it had three missions; one to protect against the capital fleet, one to protect against raiders, and one to protect against submarines?

Admiral BADGER. Well, say submarines, yes, sir; and all had to be taken into consideration.

The CHAIRMAN. Do you think there was very much danger of a capital fleet coming against it?

Admiral BADGER. There might have been, if the Allies had sued for peace and the Germans were free to follow their own inclinations, in view of the attitude that we had assumed all through the war. There was a good deal of hatred.

The CHAIRMAN. You have stated in your testimony that the fleet was in splendid condition.

Admiral BADGER. Yes, I have stated that, according to all the reports that I have heard, it was in splendid condition.

The CHAIRMAN. That is as a fleet, or in respect to the individual vessels?

Admiral BADGER. As a fleet.

The CHAIRMAN. It was a complete battle fleet?

Admiral BADGER. Yes, sir.

The CHAIRMAN. What did it consist of?

Admiral BADGER. It consisted of battleships, destroyers, submarines, and cruisers.

The CHAIRMAN. All with the fleet?

Admiral BADGER. All forming part of the fleet, yes, sir.

The CHAIRMAN. Were they actually with the fleet?

Admiral BADGER. It is not necessary that they should be. The fleet is the ships that compose the Navy—compose the fleet.

The CHAIRMAN. I am talking about a battle fleet, now, that I asked you about.

Admiral BADGER. Yes. Well, battleships, destroyers, and submarines.

The CHAIRMAN. And cruisers?

Admiral BADGER. And cruisers also, if we had wanted them with the fleet.

The CHAIRMAN. Were the cruisers and submarines that you speak of all prepared and ready for war, in every way, as to the personnel and material?

Admiral BADGER. No; they were not fully prepared. We had had misfortunes with the submarines, and who is to blame I do not know. Our cruisers were not up to the modern standard so far as speed is concerned, but they were good cruisers of their class and of their kind. The cruisers with which it is usual to compare them now are the cruisers really that were built after the war commenced, in 1914, and we could not do it.

The CHAIRMAN. You are familiar with the details of the battle of Jutland?

Admiral BADGER. Well, I have read it.

The CHAIRMAN. In your opinion, would it be wise to send the battleship force of the United States Navy as it was then, at the time of the war, to meet a fleet like that of Germany as it was constituted at the battle of Jutland, when our battleships were unaccompanied by battle cruisers or scouts or screening vessels, and with only a small force of destroyers?

Admiral BADGER. I think that it would have been a dangerous thing to do. Germany admittedly had a more powerful fleet than ours, and we were striving to get a fleet which would, first, equal that, and then which would equal that of the most powerful nation. When we entered the war in 1917 there was no doubt about the superior power of the German fleet over ours. We had been striving to reach that point where we could equalize the power of those two fleets. Therefore, to say that you can put a less powerful fleet against a more powerful one with a chance of success is not good military tactics. I think, however, that the battle fleet as it stood, that is to say, the battleships, and ship for ship the destroyers were fully equal to the Germans', and I am rather under the impression that our battleships in fleet were as powerful as the Germans'.

The CHAIRMAN. But without the screening vessels?

Admiral BADGER. Without the screening vessels, which we were still trying to build as a part of our fleet, and which constituted the main difference in power between the German fleet and our own.

The CHAIRMAN. Then you do not consider that a Navy or a fleet is in all respects ready for war when it is short of screening vessels?

Admiral BADGER. That may be; but that responsibility can not always be placed on the shoulders of the Navy or the Navy Department, because we had been trying to obtain cruisers and other ships for many years where the total cost prevented the growth of that

type of ship as rapidly as we wished. But you can not say that because we did not have them in 1914, the Navy Department was to blame, because the Navy Department had been trying——

The CHAIRMAN. Are you of the opinion that all of the adequate screening vessels we had were prepared and ready at the time of the outbreak of hostilities in April, 1917?

Admiral BADGER. No; I do not think they were.

The CHAIRMAN. So that the fact that Congress had not provided those vessels is not the determining factor in the case, because we had vessels that were not ready?

Admiral BADGER. Yes, sir. I am not speaking there of the fact that they were not as good vessels of their class, in some cases, as the more modern cruisers abroad.

The CHAIRMAN. But we did have screening vessels which we could have had ready, and did not have ready?

Admiral BADGER. I am not prepared to say absolutely on that, but I think that we did not put the smaller cruisers into commission until after the war was declared.

The CHAIRMAN. At the beginning of the World War were not gun crews taken from our battleship force before it left Cuba to return to the United States, to put armed guards on merchant ships?

Admiral BADGER. I do not know when they began to take them out of the fleet. They did before war commenced.

The CHAIRMAN. Admiral Mayo, I think, has testified that before the declaration of war the personnel of his fleet was being depleted.

Admiral BADGER. Yes, I think they did before the war started. I do not know exactly.

The CHAIRMAN. Do you consider that a Navy or a fleet is in all respects ready for war when its battleship personnel must be depleted to furnish armed guards for merchant vessels?

Admiral BADGER. I think that was an entirely new and unexpected development, taking the men out of the battleships. It came suddenly and could not have been foreseen.

The CHAIRMAN. But if our Navy had been in all respects complete as to personnel, could we not have taken those men from some less important forces than the actual battle forces which made up our battle fleet?

Admiral BADGER. There we have been struggling ever since we have been in the Navy for a naval reserve. We have been struggling for more men. It is one of the most difficult things in the world to get through Congress—let us put it there for the time being, a provision for men for the Army and the Navy. Now, we had when we entered the war all that had been provided for in the Navy. We found a new duty for those men to perform, and that was to act as armed guards for merchant ships. We supplied that, and it was one of the best things that the Navy has ever done, the way that it met the emergency, supplied that demand, and took in the new drafts who were given, drilled them, and made good the absence of the men who had been sent away, at the earliest possible moment. We have inquired on many occasions from competent officers of the fleet what the result was, and while they have sometimes said that it would reduce their secondary batteries, yet they had been able to hold the main battery crews in good condition, so that I do not think that the actual fighting capacity of the ships was seriously injured by the armed guard crews detachments.

CHAIRMAN. The personnel was materially lowered by it?

Admiral BADGER. We got the men back almost immediately.

CHAIRMAN. But not trained men?

Admiral BADGER. Not as well trained, but we proceeded to man.

CHAIRMAN. Yes.

Admiral BADGER. Yes.

CHAIRMAN. But now, Admiral, assuming that Congress was unable for the lack of personnel, I think the testimony already shows that when the General Board recommended an increase of 10,000 men, it was not allowed to put up this report to Congress. The Secretary of the Navy had that cut out.

Admiral BADGER. He had the figures cut out, but my contention is that he did not have the principle cut out.

CHAIRMAN. But he made no attempt to get it?

Admiral BADGER. He made no attempt, so far as I know.

CHAIRMAN. Therefore Congress was not shown the need for 19,600 men.

Admiral BADGER. Yes.

CHAIRMAN. And I think the testimony also has shown that in January of 1917, and at several periods thereafter extending well into 1918, the Secretary ordered enlistments in the reserves increased. Now, that can not be very well attributed to Congress, can it?

Admiral BADGER. Oh, no; no, not in that case.

CHAIRMAN. How many armored cruisers of large size, protected cruisers capable of making 15 knots, did we have in our fleet in April, 1917, do you know?

Admiral BADGER. We had 10 of the armored cruisers to start with. I do not know whether it was 9 or 10 at that time. We had either 9 or 10. We lost one down in Haiti, or somewhere. Yes, there was 9 armored cruisers.

CHAIRMAN. Nine armored cruisers, and how many large protected cruisers capable of making over 15 knots speed?

Admiral BADGER. I should say there were only about 5.

CHAIRMAN. Only 5 protected cruisers capable of a speed of over 15 knots?

Admiral BADGER. Over 15 knots? Let me see. That is, not including the armored cruisers, you understand?

CHAIRMAN. Yes.

Admiral BADGER. Cruisers, first class, the *Rochester*, *Brooklyn*, *Charleston*, and *St. Louis*. Those were cruisers of the type that you speak about, large cruisers ranging along about 9,000 tons.

Of the cruisers, second-class, we had the *Chicago*, *Columbia*, *Minneapolis*, and *Olympia*, ranging anywhere from 7,500 to 4,500 tons. That makes four more.

Of cruisers, third-class, of the *Marblehead* type—they would not come under your question.

There were 10 of 18 or 9 of 17 cruisers, I will say. There were 10 of the *Birmingham* class, which would make about 21, together.

CHAIRMAN. Were these vessels manned and ready for immediate action at the outbreak of war in 1917?

Admiral BADGER. I do not remember. Some of them were and some of them were not. How many were, I do not now remember.

The CHAIRMAN. Do you remember whether any of them were immediately available for use with the fleet?

Admiral BADGER. I think that some of the armored cruisers were immediately available. They were in the Pacific. We brought them up at a very early date to the Atlantic coast and turned them into the cruiser squadron patrol for the American coast.

The CHAIRMAN. But when the war broke out, on April 6, 1917, if within two weeks thereafter we had had to go into a great naval engagement with the German fleet, do you know whether any of these armored cruisers or protected cruisers would have been available for action with the fleet?

Admiral BADGER. I think that the majority of them would have been available; yes. They were in commission on the Pacific coast, and they could have been brought through the Canal. But to get the exact data on that——

The CHAIRMAN. But were they brought through the Canal immediately?

Admiral BADGER. They were not brought through the Canal immediately. They were left on that side.

The CHAIRMAN. So that they were not a part of the Atlantic Fleet?

Admiral BADGER. They were not a part of the Atlantic Fleet.

The CHAIRMAN. And for any urgent action they could not have been brought out. They would have needed several weeks notice, would they not?

Admiral BADGER. Not several weeks. It would probably have taken them two weeks to get to this side.

The CHAIRMAN. But they were all manned and ready?

Admiral BADGER. They were all ready; and a part of the Pacific Cruising Fleet.

The CHAIRMAN. All of them?

Admiral BADGER. Some of them; not all.

The CHAIRMAN. You do not recall how many?

Admiral BADGER. No, sir.

The CHAIRMAN. As commander in chief of a fleet, would you not have preferred to have had all these cruisers, scouts and screening ships with the battleships?

Admiral BADGER. The more ships I could get, the better I would like it.

The CHAIRMAN. But you would not say that these vessels were absolutely necessary?

Admiral BADGER. That type of vessel?

The CHAIRMAN. In order to make up a complete battle fleet?

Admiral BADGER. They are not absolutely necessary, but they would help out a great deal. The information service could have been carried on with destroyers alone, as we have been carrying it on in our Navy.

The CHAIRMAN. But would you say that the destroyers could take the places of these larger vessels?

Admiral BADGER. As scouts; as scouting vessels, they would have to. They have done it.

The CHAIRMAN. And as screening vessels?

Admiral BADGER. Yes. That is one of their duties, as screening vessels—destroyers.

The CHAIRMAN. Then, do you think it necessary for us to appropriate large sums of money for these other types of vessels?

Admiral BADGER. Yes.

The CHAIRMAN. You do?

Admiral BADGER. Because they help greatly; but I am speaking about the possibility of using the fleet without them. That is quite possible, although of course it would be very much better to have them.

The CHAIRMAN. And you think it would have been dangerous to have engaged in a battle without them?

Admiral BADGER. Not the type of cruiser we had. I think not. They can not approach the battle of the great battleships—the great armored class of ships. They would have to be kept out of range.

The CHAIRMAN. No cruiser can approach a battleship, can it?

Admiral BADGER. No; not with any safety.

The CHAIRMAN. Not with any safety. So that they were not different from other scout cruisers in that respect?

Admiral BADGER. No.

The CHAIRMAN. Do you consider a well-equipped air service as of importance in connection with naval operations to-day?

Admiral BADGER. Of very great importance.

The CHAIRMAN. Do you think that such an air service would have been useful with our naval service in the war zone immediately upon our entry into the World War?

Admiral BADGER. Of great use; yes, sir.

The CHAIRMAN. Could it have been used successfully against German submarine bases?

Admiral BADGER. We hoped they would, but the practice did not show it.

The CHAIRMAN. Did the General Board advise the Navy Department of the importance of such a service in 1913?

Admiral BADGER. Yes.

The CHAIRMAN. Did the Navy Department ask Congress for the necessary appropriations promptly to develop that service?

Admiral BADGER. I do not remember now what they asked. We were trying for an aeronautic service, and money was asked at various times, but I am under the impression that we did not—in 1915 we asked for \$5,000,000, which seemed to be a very large sum in those days, and there were appropriations previous to that, and we had a very small number of airships. We were backward all the way in this country in airships when war commenced. We spent quite enough money to have gotten a better exhibit than we did, but the Navy is to be highly commended for the way in which it proceeded at once to provide the necessary bases and all the facilities for utilizing both heavier than air and lighter than air craft abroad.

The CHAIRMAN. I have some more questions to ask you, Admiral, and it is nearly 1 o'clock now, so we will adjourn until to-morrow morning at 10 o'clock. Will you be here then?

Admiral BADGER. Yes.

(Thereupon, at 1 o'clock p. m., the subcommittee adjourned until to-morrow, Friday, April 16, 1920, at 10 o'clock a. m.)

NAVAL INVESTIGATION.

FRIDAY, APRIL 16, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, in room 235, Senate Office Building, at 10 o'clock a. m., Hon. Frederick Hale presiding.

Present: Senators Hale (chairman), Keyes, and Trammell.

TESTIMONY OF REAR ADMIRAL CHARLES J. BADGER, UNITED STATES NAVY—Resumed.

The CHAIRMAN. The committee will come to order. Admiral Badger, will you proceed.

Admiral BADGER. Mr. Chairman, yesterday you asked me to supply certain things for the record.

The CHAIRMAN. Yes.

Admiral BADGER. One of them was the action of the Navy Department in the case of papers under Appendix A.

The CHAIRMAN. Yes.

Admiral BADGER. I have made notes on this list of all the cases, and I will hand it to the stenographer.

The CHAIRMAN. Stating what action was taken?

Admiral BADGER. Stating what action was taken in each case. I will state that where no action appears on the record it does not mean either approval or disapproval by the department. It is simply on account of inaction on the part of the receiving clerk, I take it.

The CHAIRMAN. You have stated which ones of your recommendations were formally accepted by the department.

Admiral BADGER. All of those for which we have any acknowledgment at all, it is stated what that acknowledgement is. It is in the majority of cases. There are some where no action was forwarded to the board.

The CHAIRMAN. It is not stated what action was taken in regard to following out recommendations, even after they were accepted?

Admiral BADGER. No, sir; that comes under the executive part of the department.

The CHAIRMAN. And you are not familiar with that?

Admiral BADGER. No, sir; not familiar with that, in most cases.

The CHAIRMAN. In 1917 a number of these approvals were signed by V. O. Chase.

Admiral BADGER. Yes, sir; V. O. Chase. He was at that time senior assistant to the Chief of Operations.

The CHAIRMAN. And he accepted?

Admiral BADGER. He signs by direction for the Secretary.

The CHAIRMAN. For the department?

Admiral BADGER. Yes, sir; and you will find some other signatures there; as that of Schofield.

The CHAIRMAN. And in some cases they signed, by direction, for the Secretary?

Admiral BADGER. For the department.

The CHAIRMAN. For the Secretary?

Admiral BADGER. For the Secretary.

The CHAIRMAN. Did the Secretary ever sign any himself?

Admiral BADGER. I am told that some of them are signed by the Secretary.

The CHAIRMAN. In any event, it has the same effect?

Admiral BADGER. It has the same effect.

(Appendix "A," including the additional notations above referred to by Admiral Badger, will be found where originally offered in evidence.

Admiral BADGER. I have also here a statement that you asked for with regard to the personnel, the 19,600 enlisted men, which I took from the hearings of the House committee, Sixty-third Congress, third session, 1915-December 10, 1914. You asked for that yesterday, with regard to the action of the Secretary of the Navy, or of the reading of a paper from the General Board, requesting 19,600 enlisted men.

The CHAIRMAN. Will you read your statement?

Admiral BADGER. I have headed it "Action of the Secretary of the Navy as to an increase of personnel for the 1915 program." That was the point on which you were questioning me yesterday. This is taken from the hearings of the Committee on Naval Affairs of the House of Representatives on estimates submitted by the Secretary of the Navy, Sixty-third Congress, third session, 1916. Secretary of the Navy's hearing, December 10, 1914, on personnel, pages 572 to 585. On page 573 the Secretary states:

I have not asked for any increase of enlistments, and I will tell you why.

In this statement of reasons for not asking for more enlisted men in the 1915 Navy bill is introduced a tabular statement of "Distribution of personnel required for the fleet" from Rear Admiral Victor Blue, dated November 28, 1914, showing (from the Chief of the Bureau of Navigation's point of view) that there was a surplus of 384 enlisted men in the Navy after providing for its requirements on that date.

That is all that I know with regard to the Secretary's action.

The CHAIRMAN. There was no statement made to the committee?

Admiral BADGER. There was no statement made to the board. That is his action before the House committee.

The CHAIRMAN. I say there was no statement made to the House committee, so far as you know, by the Secretary, telling them of the recommendation of the board?

Admiral BADGER. Not that I know of; no, sir.

The CHAIRMAN. I also asked you about the minutes of the board.

Admiral BADGER. Here is a copy of the minutes. [Reading:]

GENERAL BOARD, NAVY DEPARTMENT,
November 12, 1914.

The executive committee met at 10 a. m. Present: Rear Admirals Badger and Fiske, Capts. Winterhalter, Knapp, Oliver, Hood, and Huges, and the secretary of the board. Rear Admiral Nicholson entered at 10.50 a. m.

Nicholson was at that time Chief of the Bureau of Navigation.

The minutes of the executive committee meeting of November 10, and of the General Board meeting of November 11, were read and approved. It was directed that the minutes of the meeting of November 11 be submitted to the Secretary of the Navy before finally becoming a part of the record of the board.

Capt. Hood read to the committee the amended portions of the letter on building program and personnel, 1916, in which reference to the war in Europe is eliminated in accordance with the direction of the board at yesterday's meeting.

Capt. Winterhalter suggested that the figures regarding shortage in enlisted personnel be reconciled with recent information from the Bureau of Navigation.

Admiral Dewey entered at 11 a. m. and the meeting resolved itself into a meeting of the General Board.

The Secretary of the Navy entered at 11.03 a. m.

The letter regarding "The immediate need of the Navy for trained personnel to meet a situation which exists at the present time and assure the national defense," G. B. 421, November 13, 1914, was read to the Secretary of the Navy. Minor changes were made in the letter during the reading. Admiral Dewey directed that the letter be filed with the war plans.

The Secretary of the Navy and Admiral Dewey withdrew at 11.30 a. m. The meeting resolved itself into a session of the executive committee and Serial No. 298, building program and personnel, 1916, was again taken up for discussion.

The section about personnel was read and discussed.

Admiral Nicholson withdrew at 12.05 p. m.

A paper from the chief of the Bureau of Navigation to the Navy Department regarding present and suggested distribution of the personnel, was read and discussed. It was directed that the paper, Serial No. 298, as revised, be drawn up in smooth form for consideration tomorrow.

The executive committee adjourned at 12.50 p. m., to meet again at 10 a. m. tomorrow.

Approved by the executive committee, November 17, 1914.

E. H. CAMPBELL,
Commander, United States Navy,
Secretary General Board.

The CHAIRMAN. I asked you yesterday, Admiral, the following question: After the Secretary declined to accept the report of the General Board for that numerical increase of 19,600 men, did the board, before sending the deleted report back to the Secretary, submit to the Secretary a letter outlining the needs of the Navy as regards the personnel, giving more definite recommendations than those contained in the printed report?

Admiral BADGER. There was such a letter. It was read to the Secretary of the Navy, and while I do not remember what the Secretary of the Navy said in the matter, the letter was not forwarded officially.

The CHAIRMAN. And took no action on it?

Admiral BADGER. And took no action on it so far as I know; no action on that particular paper, certainly.

The CHAIRMAN. And in his hearing before the House committee made no allusion to that?

Admiral BADGER. He made no allusion to that paper, which the minutes of the report of the hearing, which I just read, show.

The CHAIRMAN. The minutes?

Admiral BADGER. I mean the report of the hearing before the House committee.

The CHAIRMAN. That shows that that letter was read to the Secretary?

Admiral BADGER. No; that shows that the Secretary made no allusion to that letter there.

The CHAIRMAN. But you have stated that that letter was read to the Secretary at this meeting.

Admiral BADGER. Yes, at the meeting of the General Board.

The CHAIRMAN. At the meeting of the General Board?

Admiral BADGER. Now, when the Secretary appeared before the House Naval Affairs Committee on the subject of the recommendations for 1915 for personnel—

The CHAIRMAN. I understand; he made no mention of that.

Admiral BADGER. He made no mention of that?

The CHAIRMAN. Yes.

Admiral BADGER. And that information I get from studying the hearings of the House Naval Committee upon that bill.

The CHAIRMAN. What I want to know is whether the minutes of the General Board show that letter was read to the Secretary of the Navy.

Admiral BADGER. The following is the paragraph referring to that in the minutes of the board which I read:

The letter regarding "The immediate need of the Navy for trained personnel to meet the situation which exists at the present time and assure the national defense" G. B. No. 421, November 13, 1914, was read to the Secretary of the Navy. Minor changes were made in the letter during the reading. Admiral Dewey directed that the letter be filed with the war plans.

The CHAIRMAN. What letter was that; your original letter; the amended letter?

Admiral BADGER. No; that was another letter.

The CHAIRMAN. That was the letter referred to in my question?

Admiral BADGER. Yes.

The CHAIRMAN. The letter outlining the needs of the Navy as regards enlisted personnel?

Admiral BADGER. I think so.

The CHAIRMAN. And the minutes do refer to that letter?

Admiral BADGER. The minutes, I believe, refer to that letter; yes, sir. I have not the number of that letter here, but I am satisfied that that reference in these minutes that I have read was to that letter.

The CHAIRMAN. Can you get that letter and put it in the record?

Admiral BADGER. I believe so; yes, sir.

The CHAIRMAN. I would like to have that for the record.

(The letter referred to is here printed in the record, as follows:)

(Confidential.)

G. B. No. 421.

NOVEMBER 14, 1914.

To: Secretary of the Navy.

Subject: The immediate need of the Navy for trained personnel to meet the situation which exists at the present time, and assure the national defense.

Reference: (a) G. B. letter No. 420-2, of November 14, 1914: Increase of the Navy building program and personnel, 1916.

In its letter of November 14, 1914 (reference a), the General Board summed up the situation of the Navy in regard to personnel, showed clearly the deficiencies which exist for manning all the ships of the Navy for war, and recommended the passage of the two laws which would eventually, when they had come into full operation, provide for these deficiencies, and put the naval branch of the national defense in a state of readiness for war.

2. It was shown that at the present time the Navy is lacking about 1,070 line officers, and a proportionate number of staff officers, and about 19,600 enlisted men allowing the usual number for unavailable prisoners—to fully man all the ships of the Navy with peace complements. It was shown that the only reserves in sight are the partially trained 596 officers and 7,132 enlisted men of the Naval Militia. It was stated that war complements should be 10 per cent above peace complements.

3. We are therefore faced with this condition: If the Navy should be called on suddenly to prepare for an emergency we would be short about 19,600 men to fill the existing vessels of the Navy with peace complements. These places would have to be filled by new enlistments of untrained recruits, though probably some ex-Navy men would return to the service, so that the entire number might not be wholly without some training. In addition, we would have the 7,132 Naval Militiamen, who could just about serve to increase the peace complements to war complements. Even if the 19,600 men were immediately available, this would not provide complements for vessels building nor for the many auxiliaries that would have to be taken into service for war, and would leave no reserves to meet casualties which would occur in war. In other words, should an emergency arise in the near future calling for putting the fleet on a war footing, we should have the available vessels of the Navy as they are to-day manned in large proportion by 19,600 untrained recruits and 7,132 partially trained Naval Militia, and have no provision for manning new ships that would be hurried to completion, or for auxiliaries that would be taken into service, and no reserve provided for casualties.

4. In view of the actual existing situation in the world's affairs to-day, the General Board is of the opinion that this is a dangerous situation, and believes that considerations of national security and defense call for the promptest application of the most effective remedy.

5. If there was no need for considering the present disturbed condition of international affairs, the two laws proposed in the General Board's letter of November —, 1914, would eventually meet the situation and provide and maintain the trained personnel, active and reserve, that is required by the national defense to man the entire fleet for war. When these two laws shall have been passed and shall have become fully operative, the Navy will be in the state of readiness as regards personnel that the country has a right to expect; a state that does not now exist, and that never has existed. With the most expeditious action possible on the part of Congress in passing the two laws recommended, and with the very best efforts of the department in carrying them into effect, there will be a considerable interval of time extending over many months, if not several years, before the trained reserve called for by the proposed laws is fully organized and effective, or before the Navy will be in a complete state of preparedness to meet an emergency.

6. Meantime, during this interval, we are faced by the most complicated and delicate situation in international affairs that has ever arisen; and the General Board is of the opinion that the national defense is not in proper condition to meet any crisis which may arise at any time from this delicate situation. Causes of friction have recently arisen, and are increasing in number as new and hitherto unrecognized interpretations of international law are being made by one or another of the belligerent nations in matters relating to contraband, blockade, closure of open seas, seizure of noncombatant persons from neutral vessels on the high seas, and other questions, all of which affect our national rights and seriously interfere with our legitimate trade and with our national prosperity. As the war develops there may also arise at any time a question even more nearly affecting our national interests in the form of changes in sovereignty in outlying possessions of the belligerent or other nations which lie on or near the American continent, or flank our ocean routes to the Panama Canal or across the two oceans. The general disturbed international situation is further complicated for the United States by the continued unsettled state of affairs in Mexico, Haiti, and Santo Domingo; and by the as yet unsettled questions in dispute between this Nation and Japan. Authentic reports show that popular feeling against us in the latter country is growing more unfriendly, and this at a time when Japan's alliance with Great Britain and Russia leaves her free from fear of restraint from those quarters.

7. The General Board hopes that no combination of circumstances will arise that would draw us into this present world conflict; but, from the causes briefly sketched above, foresees grave danger of such a possibility, or of a derogation from our rights as a nation. In the opinion of the General Board this possibility is fostered by our well-known state of military unpreparedness, and is likely to become a probability unless prompt remedy for it is applied at least to that branch of the national defense that forms its first line—the Navy—during this interval covering the time between the present state of unpreparedness and the time when the proposed laws will have operated to supply a continued remedy.

8. To meet this situation the General Board believes that the personnel of the Navy should be increased and trained in the quickest possible manner until it is at least sufficient to fully man the available ships of the existing Navy. The best way—and, in fact, the only possible way to get men quickly and train them—is by enlistment in the regular service, and training in that service. If the General Board's provisions are correct, the element of time is of such importance that even this method of correcting the major deficiency in our naval preparation—lack of trained personnel—is

Admiral BADGER. Yes, at the meeting of the General Board.

The CHAIRMAN. At the meeting of the General Board?

Admiral BADGER. Now, when the Secretary appeared before House Naval Affairs Committee on the subject of the recommendations for 1915 for personnel——

The CHAIRMAN. I understand; he made no mention of that.

Admiral BADGER. He made no mention of that?

The CHAIRMAN. Yes.

Admiral BADGER. And that information I get from studying hearings of the House Naval Committee upon that bill.

The CHAIRMAN. What I want to know is whether the minutes of the General Board show that letter was read to the Secretary of Navy.

Admiral BADGER. The following is the paragraph referring to it in the minutes of the board which I read:

The letter regarding "The immediate need of the Navy for trained personnel to meet the situation which exists at the present time and assure the national defense." G. B. No. 421, November 13, 1914, was read to the Secretary of the Navy. No changes were made in the letter during the reading. Admiral Dewey directed the letter be filed with the war plans.

The CHAIRMAN. What letter was that; your original letter; amended letter?

Admiral BADGER. No; that was another letter.

The CHAIRMAN. That was the letter referred to in my question?

Admiral BADGER. Yes.

The CHAIRMAN. The letter outlining the needs of the Navy regards enlisted personnel?

Admiral BADGER. I think so.

The CHAIRMAN. And the minutes do refer to that letter?

Admiral BADGER. The minutes, I believe, refer to that letter, yes, sir. I have not the number of that letter here, but I am satisfied that that reference in these minutes that I have read was to that letter.

The CHAIRMAN. Can you get that letter and put it in the record?

Admiral BADGER. I believe so; yes, sir.

The CHAIRMAN. I would like to have that for the record.

(The letter referred to is here printed in the record, as follows:

(Confidential.)

G. B. No. 421.

NOVEMBER 14, 1914

To: Secretary of the Navy.

Subject: The immediate need of the Navy for trained personnel to meet the situation which exists at the present time, and assure the national defense.

Reference: (a) G. B. letter No. 420-2, of November 14, 1914: Increase of the Navy building program and personnel, 1916.

In its letter of November 14, 1914 (reference a), the General Board summed up the situation of the Navy in regard to personnel, showed clearly the deficiencies which exist for manning all the ships of the Navy for war, and recommended the passage of the two laws which would eventually, when they had come into full operation, provide for these deficiencies, and put the naval branch of the national defense in a state of readiness for war.

2. It was shown that at the present time the Navy is lacking about 1,070 line officers, and a proportionate number of staff officers, and about 19,600 enlisted men, allowing the usual number for unavailable prisoners—to fully man all the ships of the Navy with peace complements. It was shown that the only reserves in the Navy are the partially trained 596 officers and 7,132 enlisted men of the Naval Militia. It was stated that war complements should be 10 per cent above peace complements.

Admiral BADGER. Yes, sir, always; but not necessarily from the British Admiralty or the French naval office or any other particular place. We based our recommendations upon what we considered the best available information.

The CHAIRMAN. But in general, in such cases, you believed that the experience of the nations who had been operating in the war zone was of great value, did you not?

Admiral BADGER. Oh, yes.

The CHAIRMAN. And that, as you said, it put them in the best position to decide whether the proposed scheme was practicable?

Admiral BADGER. That was a particular scheme, Senator, and involved propositions in mine laying. The great distance that had to be covered, the usual depth of water, the weather conditions in the North Sea and up in the Orkney region, and the experience of the British, particularly in laying mines in the open sea, of which we had had very little in our Navy, all led us to refer that matter to the British Admiralty through the proper channels, to find out whether in their opinion it was practicable to lay mines and keep and maintain them there in such deep water under such conditions. We attached a great deal of importance to their opinion on that subject.

The CHAIRMAN. And, in general, you would say that the experience of the men who had been through the mill should be followed rather than the experience of men who had not?

Admiral BADGER. Oh, yes; certainly.

The CHAIRMAN. Was such information available in Washington?

Admiral BADGER. Not as authoritative. We had line officers who had had experience in the laying of mines, one of them, notably, Capt. Reginald Belknap, and during the consideration of this mine barrier Capt. Belknap was temporarily attached to the general board to give us the result of his experience; so that while we had an experienced officer in the laying of mines, we thought it would be better to get the local experience of men who were familiar with the North Sea conditions.

The CHAIRMAN. And from what sources did you obtain this information?

Admiral BADGER. That was addressed to the representative of the Navy Department in London; I suppose, undoubtedly, to Admiral Sims.

The CHAIRMAN. And it was through him that you got that information?

Admiral BADGER. Through him that we got that information; as we got all other information requested from London. All those requests went to the senior officer in London.

The CHAIRMAN. Now, if such information was available in Washington, why did the general board in this memorandum consider it necessary to refer the question to London, to the British Admiralty?

Admiral BADGER. Because we thought that they had had more experience than we had had, and would be guided in a measure by the reply that they sent in our findings.

The CHAIRMAN. It is essential, is it not, in warfare, when conditions are changing rapidly, that all operational plans should be based upon full information and well-informed discussion by responsible leader?

Admiral BADGER. Yes.

rather palliative than remedial, but it is the best that can be applied at this late and no other would even approach effectiveness.

9. It has been shown that we should have about 19,600 more trained men, together with the 7,132 naval militia we already have, to fully man the available ships of the Navy for war, leaving out of consideration the matter of the needed reserves. The passage of the laws recommended in General Board letter No. 420-2 of November 1914, would provide immediately for about 4,700 men, in the general plan of manning the Navy in the future. This leaves about 15,000 of the 19,600 men believed to be immediately required by present conditions unprovided for, until sufficient time shall have elapsed for the proposed laws to come into full operation and shall have provided the needed reserve. The General Board believes the present exigencies make such delay a national danger. It is, therefore, recommended that, in addition to the two laws already recommended for the general regulation of the naval personnel, an emergency law be passed authorizing the immediate enlistment of 15,000 men additional and that these men be enlisted, trained, and held in service until the operation of the two general laws already recommended shall have provided the needed trained personnel—active and reserve—required to fully man the entire fleet for war.

GEORGE DEWEY

The CHAIRMAN. Then I asked you if the minutes of the board referred to that letter, and the reference to the letter was in the minutes of the General Board and had been in those minutes right along?

Admiral BADGER. As I have already said, I believe that the reference that I have just read, that section from the minutes, refers to that letter, and that letter has been in the files of the General Board since that time. You will observe that Admiral Dewey, who was presiding, directed that the letter be filed with the war plans.

The CHAIRMAN. And the minutes you have read this morning were the minutes prepared at that time?

Admiral BADGER. November 12, 1914.

The CHAIRMAN. And you have been on record ever since?

Admiral BADGER. Yes, sir.

The CHAIRMAN. Have you any further papers to file?

Admiral BADGER. Here is a paper. You made some reference yesterday to the action of the General Board in 1913 on the subject of naval aviation.

The CHAIRMAN. Yes.

Admiral BADGER. I believe you asked if we had any data on the subject. At all events, the secretary of the General Board, Commander Baum, thought you did, and got a copy of that letter. If you would like to have it read, it can be read now. This is on development of airships, for naval use, August 30, 1913.

The CHAIRMAN. That letter was put in the record by Admiral Niblack during his testimony, and will be found at page 2441 of the typewritten record.

In a memorandum of the General Board, dated November 1914, 425, serial 476, you recommended that the British Admiralty be cabled concerning details of the proposed mine barrier, and stated:

It is believed that the great experience of the British naval forces in North Sea operations and their experience in naval mining during the present war puts them in the best position to decide whether the proposed scheme is practicable in construction and maintenance, and whether in the opinion of the Admiralty it is the best scheme in sight for limiting the operations of enemy submarines.

Admiral BADGER. Yes, sir; I remember a telegram of that kind.

The CHAIRMAN. Did the General Board uniformly base its recommendations and decisions upon the necessity of basing all plans upon the latest and most complete information available concerning naval operations?

quarters of the Navy. If they decided that there should be delay in the sending of those ships over, I accept their decision in the matter.

The CHAIRMAN. But, still they would be committing a military error if they were delaying it beyond the necessities of the case?

Admiral BADGER. If they had a good reason for the delay—I do not know what the reason may have been in that particular case.

The CHAIRMAN. So that if they did delay beyond any necessities of the case, it was a military error?

Admiral BADGER. Putting it that way; yes.

The CHAIRMAN. Admiral Sims in his testimony has shown that in regard to his recommendations as to the sending of antisubmarines east to the other side, great delays occurred, and that his recommendations were adopted after many months' delay and put into effect; was not that a military mistake?

Admiral BADGER. No, sir: I am not qualified to say that. The vessels were sent by the Navy Department—by the directing head of the Navy Department, of which some of the ablest naval officers were representing the department and directing its movements, and they, knowing the conditions as I have tried to show in my statement, thought at the time that the delay should take place in sending certain types of ships abroad, then I consider that it was their duty to act in the way that they did. It is a question of opinion, as between one man and another, in that case.

The CHAIRMAN. But the fact that they subsequently adopted the recommendations of Admiral Sims indicated that the recommendations were all right, did it not?

Admiral BADGER. I have stated here that operational plans were changed from day to day. What they might refuse to-day, they may accept to-morrow. You can not tell.

The CHAIRMAN. Admiral Sims has stated that all of the vessels sent to Europe in the first year of the war were in existence on the 1st of April, 1917. How can a delay in sending forces under these conditions be justified?

Admiral BADGER. That, sir, the officers who were responsible, will have to justify themselves. The men are available, and will, I understand, appear before this committee. I can not say what their action was.

The CHAIRMAN. Is it a question of the officers? Is it not a question of the policy of the department about sending them over?

Admiral BADGER. Oh, it is a question of policy of the department. Nobody else could send them except the department.

The CHAIRMAN. I asked you, could a delay in sending the forces over under those conditions be justified?

Admiral BADGER. I say you will have to ask the men who are responsible to justify. I can not. I was not an executive officer during the war, and I can not say any more.

The CHAIRMAN. If it is a question of policy, you have already stated that that was a question for the head of the department. The final responsibility rests upon the head of the department?

Admiral BADGER. Oh, yes; as always. The responsibility rests upon the head of the organization finally.

The CHAIRMAN. Admiral Sims in his testimony referred to the department's delay or failure of six months in sending over specific requirements of battleships, submarines, and tugs, after conference

of Admiral Sims and the Allies. Were the recommendations of Admiral Sims in your opinion sound?

Admiral BADGER. What is that; sending over what?

The CHAIRMAN. The delay in sending over specific requirements of battleships, submarines, and tugs.

Admiral BADGER. That was Admiral Sims's summing up of the situation, that he needed these things at that time, and I am trying to make it clear that while it was his duty to make such recommendations in accordance with his belief as to the proper thing to do, it was the duty of the directing heads, the responsible heads in Washington, to decide whether they would comply with those recommendations or not. If they did not, then the responsibility lies upon them for their action.

The CHAIRMAN. Now, I asked you if the recommendations of Admiral Sims were sound. They were sound, were they not, when the department sent those vessels over later, as they did, in every case?

Admiral BADGER. Generally speaking, recommendations of that kind are sound. But I do not know, and I can not testify, whether they were sound at the moment or not, when the whole situation was taken into account. They might have been sound from that side but they might not have been sound from this side of the conditions.

The CHAIRMAN. At least, they were needed over there, were they not, and the department recognized that by sending them over at a later period?

Admiral BADGER. Undoubtedly they were added and were needed, but the department decided whether that was the proper time, considering everything else, to send them or not. They had the recommendations, and they were the ones who took the action.

The CHAIRMAN. Then, do I understand that you question the fact that they were needed when they were asked for, but admit that they were needed at a later date?

Admiral BADGER. I do not state that. I say that they may have been needed; and yet the action of the department in not complying immediately with the request may have been based on perfectly just and sound reasoning.

The CHAIRMAN. But at least it caused a delay in sending the vessels over?

Admiral BADGER. At least, they did not act immediately on the request of Admiral Sims, yes.

The CHAIRMAN. And presumably that had some effect, when they did not send them over when they were asked for, and probably not a beneficial effect?

Admiral BADGER. It may have had an effect upon the plans on this side and may have had an effect on the plans on the other. We can not tell. I can not tell you. It is impossible for me to testify to a thing like that. That must come from the men themselves.

The CHAIRMAN. You would not be willing to state that the delay in sending these ships over held up certain plans on the other side, regardless of the effect it had on this side? You would not be willing to say that it held up the plans on the other side?

Admiral BADGER. No, I do not state that either, Senator. Whatever action was taken either held up or hastened results. Now,

that I have been trying to make clear to you is that they may have been needed on the other side and Admiral Sims's recommendation may have been perfectly just and proper and covered the situation; but on this side there may have been other reasons which were considered serious enough and important enough not to carry out at that time those recommendations. Therefore it can not be said that there was neglect on either side.

The CHAIRMAN. But if they were held up on this side for certain reasons which appeared to be important, perhaps, to the department at that time on this side, and which later turned out not to be important, and then not sending them over held up certain plans on that side which were of great importance, does it not prove that it was a military error not to send them over?

Admiral BADGER. No, sir, I can not agree with you there.

The CHAIRMAN. Does it not prove that it was a mistake in general not to send them over?

Admiral BADGER. No, I will not even say that. I think that in viewing it in the light of future events, you might say, that implication should not go because the conditions at the moment made the authorities at headquarters—the governing, directing, responsible headquarters—take a certain action which later on was found possibly to have been unnecessary, but which they could not, at the time they took that action, know would be unnecessary. I can not see that any charge lies for neglect or dereliction.

The CHAIRMAN. Could you conceive of any possible delay that the department made which would be a dereliction on their part in such a case?

Admiral BADGER. Well, of course you can conceive anything, but I should not ever say that a bad result was obtained by any action of the department unless I knew the reasons which impelled the department to take that action; and those reasons I do not know.

The CHAIRMAN. And even if the department was mistaken you are not willing to admit that it was a mistake?

Admiral BADGER. Oh, yes; if I should think it was a mistake. But this is not one of those mistakes that I feel that I can judge upon. I have got to have more information than I have at present.

The CHAIRMAN. Then you are not prepared to say that the recommendations of Admiral Sims were sound, about sending these vessels over?

Admiral BADGER. On the contrary, I am willing to say that from his point of view they were sound.

The CHAIRMAN. How about the point of view of the general board?

Admiral BADGER. The point of view of the general board was also sound.

The CHAIRMAN. I say, how about Admiral Sims's recommendations from the point of view of the general board?

Admiral BADGER. I think they were sound. I think the whole thing was sound.

The CHAIRMAN. You think that the general board agreed with Admiral Sims's recommendations?

Admiral BADGER. The general board believed that the vessels should be sent at the earliest possible moment; but it qualified that, if you will remember, by saying that depended upon the possibility of submarine action by Germany or the Central Powers, upon our

immediate needs for ourselves, and upon the number of antisubmarine-craft that we had, or might be expected to have. Now, I have not quoted it exactly, but I have given you the gist of it, and it is in the record.

The CHAIRMAN. Was the general board much impressed with the danger of attacks of submarines on this side?

Admiral BADGER. The general board believed that it was possible and believed that everything should be done to meet such an attack should it take place.

The CHAIRMAN. They believed, did they not, that the essential way to fight the submarines was to go for them in the war zone?

Admiral BADGER. In general, yes. But they also believed that the submarines might find their way over here; that they might, by some skillful way in which they had shown themselves to be well versed, find bases on this coast, and that we might find ourselves under serious attack from the German submarines and raiders. They therefore believed that proper precautions should be taken to meet any such attack. If the war abroad had ended suddenly there was reason to believe that some of these vessels, or many of them, might be diverted suddenly to our coast, and that we would find ourselves, as the saying goes, "holding the bag." We wanted to be sure whether we were going to be in that position or not before we denuded our coast of proper protective measures.

The CHAIRMAN. Admiral, if on account of the lack of our assistance on the other side—our immediate assistance—the submarines had been successful and had driven England and France to withdraw from the war, thus leaving us at war with Germany, do you not think that the fact that we could have sent vessels over to help them and did not do so would go down in history as a military mistake?

Admiral BADGER. Oh, I think if it could be shown that that was a good reason for it. But I do not consider that it was a good reason. I do not consider that the presence or absence of the very small number of destroyers that we could have placed there within the first three or four months of the war had any effect on the duration of the war at all.

The CHAIRMAN. There were other vessels besides destroyers that were asked for, were there not?

Admiral BADGER. Yes, sir; but the real crux of the situation lay with the destroyers.

The CHAIRMAN. And you do not think that our destroyers and other vessels going over there had anything to do with putting down the submarine menace?

Admiral BADGER. Oh, yes. I beg your pardon; yes; a great deal to do with it. I do not know what the percentage is, but the vessels that were sent over; the destroyers, were equal in every way, and if we chose to be a little bit conceited we might say better than the other destroyers in those regions in the danger zone. I think they did their part in reducing the destruction by the submarines. I think that they aided the Allies in many ways. I think that they aided our own Government in carrying out the transportation of troops, particularly through the war zone. But I do not think that they had anything to do with the duration of the war—the length of the war—and I do not believe that their being delayed four months or six months would have had any effect whatever on the length of the war.

The CHAIRMAN. You do not think that the naval forces and their activities in the war had anything to do with shortening the war?

Admiral BADGER. Oh, no; I do not say that. I say they had everything to do with it.

The CHAIRMAN. I was simply asking from your answer.

Admiral BADGER. I say they had everything to do with it. I place the blockade as the most important naval operation of the war and its results. It was not spectacular, but there it was. It shut Germany up so that it could not get anything from anywhere else. It lived on its own fat. It was exhausted. The whole country was suffering for food and for all the material, the raw material that makes possible to carry on war; and the submarines did not in any way, shape, or manner loosen that blockade or permit stores to come in. The submarines destroyed an enormous amount of supplies and an enormous amount of tonnage, but they had to be absolutely successful in order to change the question of the duration of the war. They did not stop the supplies getting to the allied countries in sufficient quantity to keep the civil population alive and to supply with liberality the armies at the front, and until that could be done they had no effect on the duration of the war.

The Germans were a military race who were determined to fight to the end, and they did fight to the end until they had to collapse, and the mere fact of those submarines working and destroying tonnage and supplies never came to the point where it stopped that.

The CHAIRMAN. You say that the blockade was the principal naval operation of the war?

Admiral BADGER. Yes; I said it was one of the most decisive naval operations of the war, and I think the most decisive.

The CHAIRMAN. When was that blockade effected?

Admiral BADGER. The day that Great Britain declared war with Germany.

The CHAIRMAN. And it was effective thereafter until the end of the war?

Admiral BADGER. From that until the end of the war. There was little smuggling and a little aid through the Scandinavian countries, but it was a mere drop in the bucket and could not do anything for Germany.

The CHAIRMAN. Our forces had nothing to do with that blockade, and had nothing to do with the establishment of it. That blockade was effective before we came in.

Admiral BADGER. Before we came in. We had nothing to do with it.

The CHAIRMAN. Before we came in the blockade was effective?

Admiral BADGER. For three years; yes, sir—nearly three years.

The CHAIRMAN. And it would have been effective without us?

Admiral BADGER. Just the same, whether we were there or not.

The CHAIRMAN. So that that was not one of the services rendered by our Navy in the war?

Admiral BADGER. I say until we came into the war.

The CHAIRMAN. Yes; but you say they could have got along just as well without us so far as that was concerned?

Admiral BADGER. Oh, well, we helped. When we came in, we were reinforcements.

The CHAIRMAN. We helped——

Admiral BADGER. I can not state absolutely, but I think you will find that when our destroyers went over to Queenstown and established themselves there, very shortly the British destroyers were withdrawn, and in a little while we found that the United States destroyers were the only ones present. I do not know when this occurred, but I think after we got something like 20 of our destroyers there the British took their own destroyers away.

The CHAIRMAN. And took them back to their fleet?

Admiral BADGER. They used them with their fleet or somewhere else in the channel, at some other point. But that area to the south and west of Ireland was never unpatrolled. What we did was to bring reinforcements to them, and we did it very well; and the aid that we gave in sending these reinforcements was very great. That is the point. That is where we come in.

The CHAIRMAN. So that these vessels of ours were used largely in submarine warfare?

Admiral BADGER. Almost entirely. We had there only five battleships with the Grand Fleet in the North Sea, and later we had three battleships for use in emergency, should the German cruisers go adrift on the Atlantic trade routes. And then we had, from time to time, the convoy vessels that may have touched in one port or the other on the other side; escort vessels for convoys across the ocean. But our fleet as a fleet never got there.

The CHAIRMAN. And our destroyers had a great deal to do with putting down the submarine menace?

Admiral BADGER. Oh, yes; they had a part commensurate with their number and power.

The CHAIRMAN. And much more, did they not?

Admiral BADGER. Well, let us concede it, and say so; yes.

The CHAIRMAN. A part that was much more than commensurate, would you not say, with the number of vessels we had, in comparison with the number of vessels used by the British? It has been stated that there were 3,000 vessels of the British, and there were a very small number of our vessels.

Admiral BADGER. Oh, yes; but what I was speaking of was a comparison between 36 American destroyers of the latest type and 36 of the British of the latest type. I do not know that we can claim any more than what our national pride causes us to claim, that we were better than anybody else.

The CHAIRMAN. Do you not think that Germany depended a great deal upon the success of submarine warfare?

Admiral BADGER. Oh, yes; but it had to be complete.

The CHAIRMAN. Do you not think that had a great deal to do with Germany continuing the war—the fact that she expected to win through her submarines?

Admiral BADGER. That is entirely a matter of opinion, you understand, Mr. Chairman. I do not know exactly how far you can go under oath as a matter of opinion.

The CHAIRMAN. I want your opinion.

Admiral BADGER. I have been reading since the war certain books on the subject; for instance, Gen. Ludendorff's book and Admiral von Tirpitz's book, and some others, and there, in those books, are well set forth the hopes of Germany from the submarine war. At one time they were very high, as is shown by the statements in these books.

ter on, particularly the army of Ludendorff, they began to lose hope of any decisive result coming from the submarine. They were yet exhausted. They hoped, and the submarine was doing great work; but they saw—and comment upon that—that it was not doing the work that they expected it to do. They had realized that in any case it was a failure. They were doing a great deal of damage to the lines, but they were not doing the fatal damage, and did not get there. If it had not been for the antisubmarine craft, the destroyers, sloops, and subchasers, trawlers, and all the other things that came, the carriers of mines, and what not, that checked it and held it, they might have succeeded and forced a peace by destroying so much damage and by so having interfered with the supplies, so broken the communications of the allied countries that they would have had to acknowledge defeat; and to prevent that these submarine defensive or offensive vessels, mines, etc., prevented the submarines from making a success of their efforts.

If we had withdrawn antisubmarine craft, the war would have immediately been decided in favor of Germany.

The CHAIRMAN. What do you mean, if America had withdrawn its antisubmarine craft?

Admiral BADGER. No; I say that if all the nations had withdrawn their antisubmarine craft. If America had withdrawn, the damage would have been greater, because the reinforcements we sent would not have been available. Whether or not our reinforcements saved the situation, I do not know. I hope that they did and believe that they did, because we gave them efficient reinforcements at a very critical time. But they did not, by having them there, affect in any way the duration of the war. It would have lasted just as long as it did. What broke the morale of the Germans finally was our troops arriving as they did in such great numbers and such unexpected numbers. A million men in the year was considered something extraordinary, when we began talking about sending men abroad, and we sent 2,200,000 men, I think, taking the actual time that the new armies were going across, in something about a year—a year and a month or two months. It was phenomenal. Nobody believed it was possible. They had had four years of fighting. They had lost enormously. Their material was nearly exhausted, and when they saw these reinforcements that they would have to meet they made no grand final attempts in the spring and summer of 1917, and failing in those, in which our troops, by the way, to the number of I do not know how many, about 600,000 or 800,000 men, were in the front lines, they gave up; and that was the real end of the war; and it was not due to the submarine at all. The submarine hurt the lines, but it did not help them up to the time of their collapse.

The CHAIRMAN. Of course the submarines had a great deal to do with the sending of our troops over, did they not?

Admiral BADGER. No; I think not. We had to take all sorts of precautions against the submarine, but the submarine did not, as I have stated in my statement here, even check the transport of our troops from the United States to the Continent of Europe.

The CHAIRMAN. And it had nothing to do, either, with the question of feeding the troops after we got them over?

Admiral BADGER. It gave us great anxiety, but it did not prevent us from feeding them. In that they failed also.

The CHAIRMAN. Because we checked them?

Admiral BADGER. Because we checked them, yes, sir.

The CHAIRMAN. Now, Admiral, I do not like to feel that it was altogether the Army that won this war. I like to feel that the Navy had some part in it.

Admiral BADGER. You misunderstand me, Senator. Neither side or the other was the determining feature. The Navy and the Army in all wars where navies participate, have to work in cooperation. The thing might be accomplished without the Navy—probably would. This war would have been a failure without the Navy. We could not have sent any troops abroad if it had not been for the Navy—or the navies of the Allies. We did our part in the protection of our transports, but we did not do it all, because our Navy was smaller. The Navy was as essential as the Army. One could not have gotten along without the other.

The CHAIRMAN. Yes; but necessarily there was not any chance for our Navy to get into any great naval engagements with the navy of the enemy, and it seems that the principal thing that our Navy did was to take care of this submarine menace, and it seems to me that they did splendid work on it.

Admiral BADGER. They did splendid work.

The CHAIRMAN. It seems to me that the work they did had a great deal to do with cutting it down, and bringing the war to a close.

Admiral BADGER. They had a great deal to do with it. I am trying to make it clear that I speak of the duration of the war, in this.

The CHAIRMAN. Well, bringing the war to a close.

Admiral BADGER. No; up to the end it did not shorten the war at all, or lengthen it.

The CHAIRMAN. The Navy did not help shorten the war?

Admiral BADGER. It did not help shorten the war or lengthen it as it stood; no.

The CHAIRMAN. You would state that the work of the Navy had nothing to do with bringing the war to a close?

Admiral BADGER. No; I do not say that. I say that it did not make it longer by not sending those destroyers to the other side; that it did not lengthen the war.

The CHAIRMAN. In what way did they shorten the war?

Admiral BADGER. They did not shorten the war.

The CHAIRMAN. The Navy did not?

Admiral BADGER. No. I do not know whether that is going to show my real ideas or not, but I hope that will read all right when we get it in print.

The CHAIRMAN. Oh, well, you can explain in any way you want to.

Admiral BADGER. No; I think it will be understood.

The CHAIRMAN. Do you not think that the complete readiness of our entire fleet for war, with all its auxiliary forces ready to move at once, and the knowledge by Germany that our fleet was so nearly ready, might have decidedly influenced Germany's action and convinced the German people that they would lose the war, and that brought them to recognize the necessity of suing for peace sooner than they did?

Admiral BADGER. No, sir; I do not think so.

The CHAIRMAN. You do not think it would have had anything to do with bringing that about?

Admiral BADGER. No, sir; the Germans were in for a war on the continent of Europe. They believed that they were going to win it, and they deliberately challenged the United States to enter the war adopting the submarine warfare that they did. They knew we would go to war with them if they did, and they deliberately took the chance of what we should do.

The CHAIRMAN. But they knew just how well we were prepared, did they not?

Admiral BADGER. Yes; they knew what we had.

The CHAIRMAN. Absolutely, they knew as well as we did.

Admiral BADGER. They knew as well as we did what we had, and they knew that it would all be in service against them as soon as they declared war.

The CHAIRMAN. And they knew exactly the state of preparedness we were in, did they not?

Admiral BADGER. They knew we were in a very good state of preparedness, according to my idea, Mr. Senator.

The CHAIRMAN. And they had full knowledge of our state of preparedness?

Admiral BADGER. Yes.

The CHAIRMAN. In breaking the submarine menace and defeating Germany's submarine campaign, would it not have been wise to make all efforts to closing the channels through which the submarines left their bases before they reached the open sea, before combating them?

Admiral BADGER. If that could have been done, it would have been very much better.

The CHAIRMAN. That is, if we could have sent over a fully equipped fleet, could we not have cooperated with the English and closed them in?

Admiral BADGER. I do not know about closing them in. With the whole British fleet, so far as they were called upon to assist, and what we sent over later, as you said, over 3,000 antisubmarine vessels, with tens of thousands of mines, every effort that could be made in three years of warfare was made, but they did not even close the English Channel up to the end of the war. One of the things that the General Board in its report on the feasibility of the northern barrage said was that if they could not close the English Channel it was futile to put that barrage down; and they promised to close it, but they did not.

The CHAIRMAN. Could we not have helped close the English Channel if we had had our battle fleet there?

Admiral BADGER. We were able to send over there, and did send over, in something like a year and a half—because we were not able to begin until after war was declared—no money was appropriated—the feeling of the people of this country was against war or against showing anybody that we wanted to go to war or thought that we were going to war, and we were behind the others in the development of the means of successfully combating submarine warfare or the submarine menace, nearly three years.

Now, it took us some time to get on a level with those people who had been three years combating this warfare and building with great rapidity. They had, as you stated here a little while ago, 3,000 antisubmarine craft in use when we entered the war. We had com-

paratively little. I do not suppose all of the ships that we would number over 60 or 70, as against over 3,000 that they had and we had to go to work and build. We did build, and we built with astonishing rapidity. We had not commenced when the war ended. The war ended before we had begun to show what we could do, either ashore or afloat.

The CHAIRMAN. That was building ships?

Admiral BADGER. That was building; and we had to do it when the war commenced.

The CHAIRMAN. That was the building of additional ships?

Admiral BADGER. Yes. Now, we never did get over there on account of the short time, more than in the neighborhood of 25 ships. It is given here in this table as 220 ships, I think it was on October 1, 1918. It is down here that we had 300 ships there, made up of 68 destroyers, 11 tenders, 28 yachts, 11 tugs, 5 gunboats, 6 cruisers, 6 Coast Guard ships, 11 submarines, 42 subchasers, battleships, 10 mine layers, 11 mine sweepers, and 24 miscellaneous cargo vessels belonging to the Navy, making 375. Later we sent over there, on July 1, 1918, 120 subchasers built especially for that work. Now, in all, then, we were able to have, let us say, somewhere in the neighborhood of 200 actual antisubmarine craft against the 3,000 of Great Britain. We did our share, and we did more than our share; but we did not decide the war.

The CHAIRMAN. Of course the destroyers were the most effective thing, Admiral, in the meeting of the submarine menace, and our proportion of destroyers was very much larger than our proportion of vessels as a whole, over there?

Admiral BADGER. Yes; it was. We had on the 4th of May, 1917, 6 destroyers over there. On the 1st of June we had 19. On the 1st of July we had 30. On the 1st of August we had 47. No; I beg your pardon; those are other vessels.

On the 1st of July we had 28, on the 1st of August 37, on the 1st of September 39, on the 1st of December 45, and finally, as the ships were built and gotten ready and sent over, on November 11, 1918, we had 74. Those are destroyers. We only started with about 50.

The CHAIRMAN. How many of those destroyers were new vessels that we did not have at the beginning of the war?

Admiral BADGER. We had 51 at the beginning of the war, and we had 74 in the war zone at the end of the war.

The CHAIRMAN. We had 51 at the beginning of the war?

Admiral BADGER. Yes.

The CHAIRMAN. So that, other things being equal, if those 11 destroyers had been in a state of preparedness, and it had been deemed desirable to have sent them over, we could have sent them over at the beginning of the war?

Admiral BADGER. If it had been deemed desirable to send them over, we could have sent them over very much quicker than we did, that is to say, sent them all. Our destroyers were in very good condition before the war began—all the larger destroyers. A good many of them were in reserve, but they had, in the vast majority of cases, considerable reserve crews. During the Mexican troubles in 1914 I was commander in chief of the Atlantic Fleet, and I took the reserve destroyers and took them down into the Gulf of Mexico with half crews, and they did everything that the destroyers with

ull crews did. They were ready, and I took them out suddenly, order.

the CHAIRMAN. I would like to get from Admiral McKean later exact condition of preparedness of the destroyers at the beginning of the war, and all the other vessels of the Navy.

Admiral BADGER. All right.

the CHAIRMAN. Now, if all of our naval force except battleship No. 1 and a limited force to guard our own coast, had been over immediately after the declaration of war, would not the effect have been greatly augmented, and could not the German bases have been closed through the joint action of the Allied forces?

Admiral BADGER. That means the Battleship Fleet?

the CHAIRMAN. Yes.

Admiral BADGER. No; I do not think we could have sent them at that time.

the CHAIRMAN. That is, it means not only the Battleship Fleet with the other vessels that should have been and might have been prepared.

Admiral BADGER. No; while they were able to cruise about in submarine area, and after the early days of the war in fact never one of their capital ships, they did not cruise around without having a base on which they could——

the CHAIRMAN. My question does not refer in any way merely to the Battleship Fleet and destroyers. It refers to the Battleship Fleet and destroyers and all other vessels of the United States Navy except battleship force No. 1 and a limited force to guard our coast.

Admiral BADGER. Yes.

the CHAIRMAN. That would have included all of the scouting and screening vessels and other vessels which we had.

Admiral BADGER. Yes.

the CHAIRMAN. If they had been in a state of preparedness.

Admiral BADGER. We talked of sending over a large fleet there, but for certain reasons, and I think they came from the Admiralty, necessarily through Admiral Sims, we found that we could not maintain a fleet over there of that kind. They did not want them. There was want of harbors. The question of supplying the fleet with food, and the question of fuel were to be considered. When we sent over, later, the five battleships, the request was not for our best type and best of the oil-burners, but it was for coal-burners because they could not supply them with oil, and they did not want more than five, and my recollection is that in other cases wherever we talked of sending over some ships other than the small type, the heavy antisubmarine craft, and the convoy escort ships, the question of maintenance always came in. The Grand Fleet was in such a state that it did not need reinforcements materially. Our five battleships that went over there were for the purpose of allowing some of their ships to be put out of commission in order to utilize their crews in some other way; and also, we were very glad to do anything possible and to add to our cooperation, to add to our forces abroad. But the British never wanted an American fleet over there under American command. They wanted the American aid to be in the way of reinforcements to their own fleet, and I

sure but they were perfectly correct in that, because to have two separate commands in the same zone would have been very difficult, if not disastrous to carry out.

The CHAIRMAN. You state that the Secretary of the Navy asked Congress for the 19,600 men that the General Board said was necessary to man the fleet in 1915?

Admiral BADGER. For the 1915 program, yes.

The CHAIRMAN. For the 1915 program?

Admiral BADGER. Yes.

The CHAIRMAN. In view of the new ships which were received in 1917, and which I think at that time it was evident would be received, was it not plain that the fleet would be undermanned without the increase of personnel in 1917?

Admiral BADGER. To the General Board it was plain that it would be the part of prudence and perhaps necessity to have more personnel for the fleet, yes. There is no doubt of that. Now, prevented that being accepted as a proper view, I do not know. I have told you that the Chief of the Bureau of Navigation was in charge of the personnel needs of the Navy, in a tabular statement which he presented to the Secretary, and which by the Secretary was presented to the House of Representatives Naval Committee. He stated that we had enough men to look out for all the ships in the Navy without any new ones, for that year. We had gotten an increase the year before of 4,500 enlisted men. But we knew we were short of men and we knew we were very short of officers in case we went to war and we were. We were short of officers then and we are short of officers now for the regular establishment nearly 2,500 line officers.

The CHAIRMAN. Now I want to ask you a few questions, Admiral, about the battleship fleet.

Admiral BADGER. I am afraid you will have to get someone else for that.

The CHAIRMAN. If our battleship force was screened only by a small force of destroyers, would not the scout cruisers of the enemy fleet seek to destroy these destroyers in the first stage of a battle?

Admiral BADGER. Oh, yes; that is a part of the duty of a scout.

The CHAIRMAN. That is one of the first things they would try to do.

Admiral BADGER. Yes.

The CHAIRMAN. If our weak screen of destroyers had been smashed, would not our battle force have been open to serious danger from submarine and torpedo attack?

Admiral BADGER. Yes; it is very dangerous to go out with battleships—

The CHAIRMAN. Would the General Board justify putting the fleet in action in such a condition, simply having a few destroyers as screening vessels?

Admiral BADGER. No, sir; and that is the reason why we did not want to send them abroad as long as we had a fleet that might be in action. We did not want to denude the fleet to the point where we could not send a fleet on the high seas without great danger.

The CHAIRMAN. That is a denuded fleet. But how about the fleet as it then was?

Admiral BADGER. I think, as the fleet then was, we took a risk whenever we sent that battleship fleet out of the Chesapeake Bay for practice, and we did it on many occasions. We took a great

that we might lose some of those ships by enemy submarines had come over there knowing that we were doing that, and taking that risk. There are two sides to the question, in other words, Mr. Chairman.

THE CHAIRMAN. Certain officers who have appeared before this committee have testified that our battleship fleet, consisting simply of battleships and of destroyers with them, which were few in number, could have met the German fleet and beaten it. Now, would you say that after smashing our weak screen of destroyers, as I asked my question to you——

ADMIRAL BADGER. Yes.

THE CHAIRMAN (continuing). Would not a night attack upon our battleships by enemy destroyers have endangered our fighting line and weakened it before the main engagement with enemy battleships?

ADMIRAL BADGER. Yes; if I had had my screen entirely smashed I could have gotten out of there as soon as I could.

THE CHAIRMAN. Had the 20 or more armored and other cruisers and our total destroyer force been present ahead of and in the flanks of our battleship force, would not our chances of victory over the enemy battle fleet have been very much greater?

ADMIRAL BADGER. The bigger the fleet and the more complete it is, the better it is.

THE CHAIRMAN. Is a fleet without screening vessels and submarines and scouting vessels of all kinds a homogeneous fleet?

ADMIRAL BADGER. It is not a well balanced fleet. "Homogeneous" is a term referring usually to one particular type. It is not a well balanced fleet. It has not the proper auxiliary vessels to accompany it and to do the auxiliary duty.

THE CHAIRMAN. And as commander in chief of a battle fleet, would you not say that the presence of screening vessels was of great necessity?

ADMIRAL BADGER. Yes.

THE CHAIRMAN. Would not 10,000 or 15,000 additional men have manned all of these vessels that we had in 1917?

ADMIRAL BADGER. Oh, yes; I think so.

THE CHAIRMAN. Who was responsible for their not being so manned?

ADMIRAL BADGER. I do not know that it took very long to man them. I am not competent to say how long it took to man those reserve ships, particularly the destroyers. When I was familiar with the reserve destroyers, they had a nucleus crew on board, a nucleus which, as I told you, was found to be large enough to handle them under rather strenuous conditions. But they could not have kept it up very long; the work would have been too hard. But they had a nucleus crew.

Now, aboard of all ships there are certain highly trained men that are absolutely essential to the efficient manipulation of that ship, and as we go on that number of highly trained men is increasing on board each ship and type of ship. On board of some ships, like submarines, they all have to be trained to the work. But there are also all except the submarines other men who are, so to speak, hewers of wood and drawers of water. In the old Navy they used to call them "beef." Now you can incorporate, if you have a destroyer

Senator KEYES. In other words, it was the purpose of the Government, to use the common expression, "To sit tight and wait for developments"?

Admiral BADGER. Yes; you can put it that way.

The CHAIRMAN. But had it not been for our new policy, an arms race about the world would have started. I am extremely sure that we did have a policy. I did have a policy, then you would have been possible, would it not, to undertake for war preparations; and, if such preparations were failure, if any, to make such preparations would be done of our Government?

Admiral BADGER. Yes.

The CHAIRMAN. That being so, how do you explain the decision of the General Board of October 12, 1915, about the breaking out of the war and approximately a year before we entered the war, which provided for the growth of development in the history of our Navy, involving the construction of 10 dreadnaughts, 6 battle cruisers, 10 destroyers, 9 fleet submarines, 58 coast submarines, and auxiliaries, and the whole including an appropriation of \$499,876,000? Your Secretary objected to the Secretary's suggestion of the Secretary of the Navy was handicapped and permitted to make only a small increase in our naval power?

Admiral BADGER. Yes.

The CHAIRMAN. I want to ask you if you consider the decision of the General Board referred to as providing for a normal increase?

Admiral BADGER. In the first place, the General Board was always guided in its recommendations by what might be the political policy of the country. We were guided in our recommendations most frequently, and are still and always will be, by what we consider military conditions; and we do sometimes recommend things that we know we are not going to get. Nevertheless, in order to show a consistent policy, also that we believe those things are necessary for the progress or naval progress of this nation, we recommend them.

Now, with regard to that particular program that we had there, we had been trying for years to get, from one year to another, some sort of a building policy. Sometimes we got two, sometimes we got three. One year we got five. And we were modifying vessels. About that date the yearly appropriations for the Navy would run from \$40,000,000 to \$50,000,000. We were not going to get next year, what we were going to get. So when the program came, through the suggestion of the Secretary of the Navy, we did it, done, to bring about a continuing program of around \$50,000,000 a year so as to bring our Navy up to where it ought to be. We seized that with great avidity and put in that program. I did it in a way, the normal increase under very favorable conditions.

The CHAIRMAN. Would you think that would attract the attention of any of the belligerent nations?

Admiral BADGER. Yes.

The CHAIRMAN. And would that make them think that the Navy was preparing for war?

Admiral BADGER. It did. It does not now.

The CHAIRMAN. But I understand you to say that the Government was not to do that?

Admiral BADGER. The responsibility lay with the administration, the Navy Department, because they were the heads, and they were the directing force.

The CHAIRMAN. If you were told that only one of the 11 armored cruisers on the Pacific coast, and few, if any, of the remaining vessels of this class in the Navy were fully manned and officered in 1917, would you consider the fleet ready for battle?

Admiral BADGER. If I was told they were not manned?

The CHAIRMAN. If you were told that only one of the 11 armored fast cruisers on the Pacific coast, and few, if any, of the remaining vessels of this class in the Navy were fully manned and officered in 1917, would you consider that the fleet and the Navy were ready for battle?

Admiral BADGER. No.

The CHAIRMAN. How long do you think it will take to prepare a ship for battle against a ship of the same class that has been in full commission for two years?

Admiral BADGER. That is merely a matter of opinion, sir. It depends on the kind of men. I should say from three to six months for large ships.

The CHAIRMAN. Do you, or the General Board, consider it wise to permit our Navy to such a condition?

Admiral BADGER. If we could keep every ship in the Navy manned and ready for battle, as we keep a moderate number of them, we would be glad, and that is what we, from a military point of view, consider the proper course; but no nation can stand for the expense that would be entailed by such a policy. Even Great Britain had only a small number of her fleet fully manned and ready. Great Britain, however, and Germany also, so far as that goes, had the advantage of a large and more or less trained naval reserve, which they could bring in, as they did bring in, when the war commenced. If you can take it that the General Board or the Navy Department or any other set of officers, if they could get the men, if they could get the money to supply the men to keep a war complement aboard every ship, would recommend it every time. Of course we want it.

The CHAIRMAN. The Secretary tried to stop enlistments in the Naval Reserve both before and after the war commenced.

Senator TRAMMELL. In view of the fact that the Admiral does not know what the testimony was, unless he has read it, I want to say that the Secretary was endeavoring to do all that he could to build up the strength of the Regular Navy, and that it was not up to its full strength by a good deal, and he was bending all his efforts on that. That is a fair statement in regard to his activities as to personnel.

The CHAIRMAN. It is also a perfectly fair statement that he could not fill up the Regular Navy, that he found that he could not get men to go into the regular service, but he could get men for the naval reserve. You can take that up later on, when you examine the Admiral.

Senator TRAMMELL. I want him to know all the facts.

The CHAIRMAN. What plan was adopted in regard to antisubmarine operations on our coast?

Admiral BADGER. I have only a general knowledge of that, sir, and I can not testify. That would come, in all its details from the operations, and I have no doubt that Operations can give

INVESTIGATION.

Senator KEYES. In other words, it was the purpose of the Government, to use the common expression, "To sit tight about that."?

Admiral BADGER. Yes; you can put it that way.

The CHAIRMAN. But had it not been for our need, it would have been possible, would it not, to undertake for war preparations; and, if such preparations were a failure, if any, to make such preparations would be a failure of our Government?

Admiral BADGER. Yes.

The CHAIRMAN. That being so, how do you explain the action of the General Board of October 12, 1915, about the breaking out of the war and approximately a year before we entered the war, which provided for the development in the history of our Navy, involving the construction of 10 dreadnaughts, 6 battle cruisers, 10 destroyers, 9 fleet submarines, 58 coast submarines, auxiliaries, and the whole including an appropriation of \$499,876,000? Yes, the Navy was handicapped and permitted to make only a normal increase?

Admiral BADGER. Yes.

The CHAIRMAN. I want to ask you if you consider the action of the General Board referred to as providing for a normal increase?

Admiral BADGER. In the first place, the General Board is always guided in its recommendations by what might be the political policy of the country. We were guided in our recommendations most frequently, and are still and always guided in what we exist, by what we consider military conditions; and we do sometimes recommend things that we are not going to get. Nevertheless, in order to show a consistent policy also that we believe those things are necessary for the progress or naval progress of this nation, we recommend a normal increase.

Now, with regard to that particular program that we had there, we had been trying for years to get, from one year to another, some sort of a building policy. Sometimes we got one, sometimes we got three. One year we got five. As modifying vessels. About that date the yearly appropriations for the Navy would run from \$40,000,000 to \$50,000,000. We have nothing next year, what we were going to get. So when the year came, through the suggestion of the Secretary of the Navy, as I have done, to bring about a continuing program of around \$50,000,000 a year so as to bring our Navy up to where it ought to be. I did not we seized that with great avidity and put in that program. I did not in a way, the normal increase under very favorable conditions.

The CHAIRMAN. Would you think that would attract the attention of any of the belligerent nations?

Admiral BADGER. Yes.

The CHAIRMAN. And would that make them think that the Navy was preparing for war?

Admiral BADGER. It did. It does not now.

The CHAIRMAN. But I understand you to say that the Government was not to do that?

CHIEF. The policy of the Government was not to take But that is a 5-year policy, and they could afford to be nervous about that.

CHIEF. I know, but you have stated what the general policy of the Government was. I am extremely interested in trying to find out our Government did have a policy in those four years, 1914 and 1917.

CHIEF. It did.

CHIEF. Then, if you did have a policy and if the policy was stated it was, then your recommendation was consistent with that policy.

CHIEF. We regarded it as we had done many times

CHIEF. And the action of Congress was entirely inconsistent with that policy, then.

CHIEF. The action of Congress was perhaps inconsistent.

CHIEF. Did the Secretary object to it?

CHIEF. The Secretary suggested it.

CHIEF. Therefore the Secretary's suggestion was entirely

CHIEF. That may be. I think they deserve great credit.

CHIEF. Admiral, I do not want you to be put in any false position by anything you may say here before this committee, and to qualify the statement that you made about the Navy's part in shortening the war, I should be glad if you do so and put it in along with your statement.

CHIEF. Oh, no; I do not want to make any qualification of the statement I read. I consider that absolute my opinion. The only thing was that in this long statement I hope that I have not said anything that in any way is inconsistent with my written statement. My real opinion is in my statement. I stand on that.

CHIEF. Yes; but of course the testimony is a part of the

CHIEF. Yes. We went through so much; and I could not have said something that in some way modified my views, as expressed in the statement. I do not modify them at all. They stand.

CHIEF. You have nothing to add?

CHIEF. No, sir.

CHIEF. Admiral, as I understand, the chairman was particularly alluding to your statement this morning—some statement in regard to your stating that the Navy had no part in shortening the war. I did not understand you to say that the Navy

CHIEF. I did not understand you to say that the Navy had no part in shortening the war or bringing it to a close. I did not mean to claim that the Navy was not a part in shortening the war. That is the point, that the chairman had in mind as to whether you really meant to say that the Navy had no part in bringing the war to a close. I did not mean to say that.

CHIEF. Oh, no; I made no such statement as that,

Senator KEYES. In other words, it was the purpose of the Government, to use the common expression, "To sit tight and await developments"?

Admiral BADGER. Yes; you can put it that way.

The CHAIRMAN. But had it not been for our neutral position would have been possible, would it not, to undertake various plans for war preparations; and, if such preparations were not made, failure, if any, to make such preparations would be due to the policy of our Government?

Admiral BADGER. Yes.

The CHAIRMAN. That being so, how do you explain the recommendation of the General Board of October 12, 1915, about one year after the breaking out of the war and approximately a year and a half before we entered the war, which provided for the greatest program of development in the history of our Navy, involving, as you state, the construction of 10 dreadnaughts, 6 battle cruisers, 10 scouts, 10 destroyers, 9 fleet submarines, 58 coast submarines, and a number of auxiliaries, and the whole including an appropriation for aviation and reserve ammunition totaling \$499,876,000? You state that our Navy was handicapped and permitted to make only a normal increase in our naval power?

Admiral BADGER. Yes.

The CHAIRMAN. I want to ask you if you consider the recommendation of the General Board referred to as providing simply a normal increase?

Admiral BADGER. In the first place, the General Board was always guided in its recommendations by what might be called the political policy of the country. We were guided in our recommendations most frequently, and are still and always will be as long as we exist, by what we consider military conditions; but we have to follow the political policy and we do sometimes recommend things that we know we are not going to get. Nevertheless, in order to show a consistent policy, and also that we believe those things are necessary for the proper military progress or naval progress of this nation, we recommend them.

Now, with regard to that particular program that you speak of there, we had been trying for years to get, from one year to another, some sort of a building policy. Sometimes we got two battleships, sometimes we got three. One year we got five. And we got other vessels. About that date the yearly appropriations for new construction would run from \$40,000,000 to \$50,000,000. We never knew the next year, what we were going to get. So when that opportunity came, through the suggestion of the Secretary of the Navy as that had been done, to bring about a continuing program of around \$100,000,000 a year so as to bring our Navy up to where it ought to be in our opinion, we seized that with great avidity and put in that program. It was in a way, the normal increase under very favorable circumstances.

The CHAIRMAN. Would you think that would attract the attention of any of the belligerent nations?

Admiral BADGER. Yes.

The CHAIRMAN. And would make them think that we might be preparing for war?

Admiral BADGER. It did. It does not now.

The CHAIRMAN. But I understand you to say that the policy of the Government was not to do that?

Admiral BADGER. The policy of the Government was not to take that course. But that is a 5-year policy, and they could afford to wait a little before they got nervous about that.

The CHAIRMAN. I know, but you have stated what the general policy of the Government was. I am extremely interested in trying to find out whether our Government did have a policy in those four years between 1914 and 1917.

Admiral BADGER. It did.

The CHAIRMAN. Then, if you did have a policy and if the policy was what you have stated it was, then your recommendation was entirely inconsistent with that policy.

Admiral BADGER. We regarded it as we had done many times before.

The CHAIRMAN. And the action of Congress was entirely inconsistent with that policy, then.

Admiral BADGER. The action of Congress was perhaps inconsistent; yes.

The CHAIRMAN. Did the Secretary object to it?

Admiral BADGER. The Secretary suggested it.

The CHAIRMAN. Therefore the Secretary's suggestion was entirely consistent?

Admiral BADGER. That may be. I think they deserve great credit.

The CHAIRMAN. Admiral, I do not want you to be put in any false position about anything you may say here before this committee, and if you would like to qualify the statement that you made about the Navy not having anything to do with shortening the war, I should be very glad to have you do so and put it in along with your statement.

Admiral BADGER. Oh, no; I do not want to make any qualification of the statement I made in the statement I read. I consider that absolutely correct, in my opinion. The only thing was that in this long series of questions I hope that I have not said anything that in any way contradicts what is in my written statement. My real opinion is in writing—in that statement. I stand on that.

The CHAIRMAN. Yes; but of course the testimony is a part of the record.

Admiral BADGER. Yes. We went through so much; and I could not tell whether I might not have said something that in some way might be considered as modifying my views, as expressed in the written statement. I do not modify them at all. They stand.

The CHAIRMAN. You have nothing to add?

Admiral BADGER. No, sir.

Senator TRAMMELL. Admiral, as I understand, the chairman was referring more particularly to your statement this morning—some 30 minutes ago, probably—in regard to your stating that the Navy did not shorten the war. I did not understand you to say that the Navy did not have some part in shortening the war or bringing it to a termination, but that you did not mean to claim that the Navy was entirely responsible for the shortening of the war. That is the point, I think, that the chairman had in mind as to whether you really meant to say that the Navy had no part in bringing the war to a conclusion at the time it was ended.

Admiral BADGER. Oh, no; I made no such statement as that, Senator.

Senator TRAMMELL. I do not mean in your written statement. I can explain to you. The chairman started out by questioning you a good deal on the matter of whether or not the war was prolonged on account of inactivity and lack of wholeheartedness, and so on, on the part of the American Navy. That was the substance of it. You said emphatically that it was not prolonged on account of that; and later you said that the Navy did not shorten the war.

Admiral BADGER. No; then let me see how I can make that statement. I had no intention of stating anything that would in any way invalidate that written statement of mine, and I think we might let it go at that, sir. I do not know; I would have to examine the testimony to see whether there was any variation in that.

Senator TRAMMELL. I will ask you some questions, then. Do you not think that the activities of our Navy were of sufficient importance to have had some effect upon the war probably being terminated sooner than it would have been if we had not been active?

Admiral BADGER. Oh, yes. Yes, sir, undoubtedly.

Senator TRAMMELL. That is the point.

Admiral BADGER. The Navy did many things. It assisted in getting the Army across. The movement of the troops shortened the war. In my opinion, it shortened the war greatly.

Senator TRAMMELL. And without our Navy that would have been impossible.

Admiral BADGER. Without our Navy the troops could not have gone across.

Senator TRAMMELL. They could not have moved them. So that the Navy performed a very important function there?

Admiral BADGER. Yes; it performed a very important part also in checking the destruction of supplies and material. It did all the things that the other navies did. It was essential to the conduct of the war.

Senator TRAMMELL. In other words, the Navy filled its mission?

Admiral BADGER. The Navy filled its mission.

Senator TRAMMELL. In bringing to an end the war?

Admiral BADGER. The only thing was that the enemy submarines were unable to do such damage to the Allies that the Allies had to sue for peace.

Senator TRAMMELL. In other words, the submarine menace was severe, and a source of great anxiety and annoyance, and did a good deal of damage, but their damage was not effective—it was not fatal?

Admiral BADGER. It had to be complete to be fatal. That is the point. It did not reach the complete state.

Senator TRAMMELL. Now, on the question of policy, while we all know that this country was assuming neutrality, was not the Navy Department during the years, say, 1914, 1915, and 1916, engaged in trying to better the service and enlarge and increase the Navy?

Admiral BADGER. I think so, sir; and that I have stated in my statement—that it did make preparations.

Senator TRAMMELL. But you, of course, had hanging over you the question of not committing an act of war, or doing something that would precipitate war?

Admiral BADGER. That was it.

Senator TRAMMELL. If the Navy Department had committed an act that could have been considered one of hostility toward a partic-

ur nation, and probably precipitated war, if it had precipitated war 6 years sooner than it did, were we in better fix then or were we better fix at the time we did get into it?

Admiral BADGER. Well, we had increased the Navy its normal increase in those two years. The Navy was more powerful in 1916 than it was in 1914. It was more powerful in 1917 than it was in 1916.

Senator TRAMMELL. In other words, we could have better afforded to have gotten into the war when we did than to have committed the rash act that would have been considered an act of war two years sooner? Were we not in better condition when we did get to it?

Admiral BADGER. So far as the Navy was concerned, we were far more powerful. The Navy became better each year in its normal development than it was in the year just past. It should be better this year than last year. That is true on that ground.

As to when we should have gotten into the war, that is a thing that I am not prepared even to reach an opinion on.

Senator TRAMMELL. Now, as to the question of sending over of our antisubmarine craft: Of course, we know the policy that was allowed out by the department, and I will be frank in stating that we have been unable to find any testimony yet that showed that that resulted in a failure. None whatever. But if we had sent all of our fleet—submarines and everything else—over there, and left the coast entirely undefended and had taken no precautions whatever on this side, is there not at least some possibility or probability that they might have transferred some of their activities to our coast, and would not that have been regarded as a colossal blunder if we had done that?

Admiral BADGER. If they had sent ships over here and found our coasts undefended, yes.

Senator TRAMMELL. That would have been considered a colossal blunder and mistake on the part of our people. Now, as a matter of fact the policy that we did follow resulted successfully. Is there anything to make it appear that it was a failure, except purely a matter of conjecture?

Admiral BADGER. That is what I state in my written statement.

Senator TRAMMELL. Results count, and not a matter of conjecture?

Admiral BADGER. We succeeded, and it is a matter of difference of opinion as to whether the procedure we adopted was right or wrong.

Senator TRAMMELL. The procedure we followed did result successfully?

Admiral BADGER. Yes.

Senator TRAMMELL. There is no question about that. It resulted successfully. And, in your opinion, from your general knowledge of the situation, the fact that we took a general, broad view of the entire situation, did not restrict ourselves merely to the zone over there, did not, in your opinion, prolong the thing from four to six months, did it?

Admiral BADGER. It did not prolong it at all, according to my ideas.

Senator TRAMMELL. You were asked some questions in regard to the personnel. In the first of 1917, with the Regular Navy not filled up to its full strength, would you regard it as more important to try and recruit the Regular Navy to full strength at that time, rather

than to try to build up a reserve, when we needed men in Navy?

Admiral BADGER. If we had any vacancies, the first fill those vacancies in the Regular Navy. As to the reserve until the war was declared we had no reserve to speak

Senator TRAMMELL. Does not a man get much more much more intensive training in the Regular Navy than serves?

Admiral BADGER. Under normal conditions; yes, sir.

Senator TRAMMELL. This is hypothetical: If you were build up your Regular Navy strength to its full authorized you found that you were having a great deal of difficulty that, and you probably attributed it more or less to the fact that you were going into the Reserve instead of into the Regular Navy would you then continue, if you felt that you had to discontinue or the other until you built the other up; would you discontinue the Reserve temporarily or discontinue the regular naval service?

Admiral BADGER. If you found the conditions as you

Senator TRAMMELL. I said that.

Admiral BADGER. I would, of course, prefer to fill up the Regular Navy first.

Senator TRAMMELL. I will state that the testimony here at the time the Secretary discontinued the enlistments in the Regular Navy the testimony of the same witness also is to the effect that the Secretary was bending his energies and doing everything that he could to build up the authorized strength of the Regular Navy.

The CHAIRMAN. Which time?

Senator TRAMMELL. At the very same time he was doing so, Admiral Palmer so stated. He was doing everything that he could publishing notices in the newspapers and doing all that he could.

I will ask you another hypothetical question, Admiral: If that quite a good many men were being enrolled and committed in the Reserve as officers, scattered around over the country, if you had no particular use for them, some of them just on little boats, would you think it time to put a check on enlistments in the Reserve until you investigated that?

Admiral BADGER. I can only answer that in the general case if I thought improper enlistments were being made anywhere in the administration of the Navy, I would investigate it, and if I found that it was wrong I would stop it.

Senator TRAMMELL. A question was asked you in regard to if we had had 15,000 more men at the time we went into the war would we not have been able to have manned all the ships to our full quota, and so on? As a matter of fact, did we not have the necessary personnel and the necessary officers to meet the requirements and meet it successfully?

Admiral BADGER. We did, yes. But of course it took longer to do it in that way.

Senator TRAMMELL. The 15,000 men would have been a small percentage of the additional 450,000 that you raised, would it not?

Admiral BADGER. Yes, sir.

Senator TRAMMELL. This arming of merchantmen, I have stated that that was an entirely new and undreamed-of proposition that came on?

BADGER. No, sir; I did not make that statement. It
ted.

RAMMELL. Unexpected; that is what I mean.

BADGER. Not unknown or not undreamed of.

RAMMELL. I mean as far as necessity was concerned.
that no one could have anticipated that?

BADGER. Yes.

RAMMELL. That was one of the necessities that arose
progress made by the submarine menace, was it not?

BADGER. Yes. I think that you have misquoted me
or not seriously, at all, but I do not think I dilated at all
pected part of arming the merchantmen.

RAMMELL. I do not know that you said it in your writ-
st.

BADGER. Here is what I said in my statement:

a principally of small craft, we were deficient and that mainly because
ment of the submarine after war began and the uses to which it was
a new and unexpected turn to warfare on the sea, as unexpected by
ed as by ourselves.

he only time I remember having used the word "un-
But it was unexpected that we would have to arm
ips until only a reasonably short time before the war
We commenced arming our ships before we entered
the first ship that we armed was armed before the war
I think in March, 1917. That was one of the steps for
on that we took.

RAMMELL. Of course I elaborated a little too much when
you said it was undreamed of.

BADGER. Yes.

RAMMELL. But you said that nobody could have expected
ed the necessity of having to put so many men on the
n!

BADGER. Yes. We did not expect it to the extent to
at: no.

RAMMELL. That was successfully carried out so far as you
a not?

BADGER. The reports were very good. It did not do as
had hoped. That is to say, it did not stop the depreda-
submarine upon the slower ships—the cargo ships. In
however, it drove off the submarines and undoubtedly
at deal of property.

RAMMELL. It was at least one of the deterring oper-
st submarine progress?

BADGER. Yes. I have been recently going through, on
of Awards, the history of the armed guard that we used
war, and I find a considerable percentage of cases where
ne was driven off, and a few cases where the submarine
damaged by the defensive guns on board the merchant

RAMMELL. You have been asked more or less questions
whether or not the board and the department agreed
al Sims about thus and so. As a matter of fact, was
deal of the activity, even abroad, the

itiate all the activities?

than to try to build up a reserve, when we needed men in the Regular Navy?

Admiral BADGER. If we had any vacancies, the first thing was to fill those vacancies in the Regular Navy. As to the reserve, of course until the war was declared we had no reserve to speak of.

Senator TRAMMELL. Does not a man get much more rapid and much more intensive training in the Regular Navy than in the Reserves?

Admiral BADGER. Under normal conditions; yes, sir.

Senator TRAMMELL. This is hypothetical: If you were trying to build up your Regular Navy strength to its full authorization, and you found that you were having a great deal of difficulty in doing that, and you probably attributed it more or less to the fact that men were going into the Reserve instead of into the Regular Navy, what would you then continue, if you felt that you had to discontinue one or the other until you built the other up; would you discontinue the Reserve temporarily or discontinue the regular naval strength?

Admiral BADGER. If you found the conditions as you state—

Senator TRAMMELL. I said that.

Admiral BADGER. I would, of course, prefer to fill up the Regular Navy first.

Senator TRAMMELL. I will state that the testimony here shows that at the time the Secretary discontinued the enlistments in the Reserve, the testimony of the same witness also is to the effect that the Secretary was bending his energies and doing everything that he could to build up the authorized strength of the Regular Navy.

The CHAIRMAN. Which time?

Senator TRAMMELL. At the very same time he was doing it. Admiral Palmer so stated. He was doing everything that he could, publishing notices in the newspapers and doing all that he could.

I will ask you another hypothetical question, Admiral: If you found that quite a good many men were being enrolled and commissioned in the Reserve as officers, scattered around over the country, when you had no particular use for them, some of them just on little craft, little boats, would you think it time to put a check on enlisting people in the Reserve until you investigated that?

Admiral BADGER. I can only answer that in the general way, that if I thought improper enlistments were being made anywhere in the administration of the Navy, I would investigate it, and if I found that it was wrong I would stop it.

Senator TRAMMELL. A question was asked you in regard to what if we had had 15,000 more men at the time we went into the war, would we not have been able to have manned all the ships with their full quota, and so on? As a matter of fact, did we not provide the necessary personnel and the necessary officers to meet the situation and meet it successfully?

Admiral BADGER. We did, yes. But of course it took a little longer to do it in that way.

Senator TRAMMELL. The 15,000 men would have been a very small percentage of the additional 450,000 that you raised, would it not?

Admiral BADGER. Yes, sir.

Senator TRAMMELL. This arming of merchantmen, I believe you stated that that was an entirely new and undreamed-of and unthought-of proposition that came on?

Admiral BADGER. No, sir; I did not make that statement. It was unexpected.

Senator TRAMMELL. Unexpected; that is what I mean.

Admiral BADGER. Not unknown or not undreamed of.

Senator TRAMMELL. I mean as far as necessity was concerned. I stated that no one could have anticipated that?

Admiral BADGER. Yes.

Senator TRAMMELL. That was one of the necessities that arose from the progress made by the submarine menace, was it not?

Admiral BADGER. Yes. I think that you have misquoted me, Senator; not seriously, at all, but I do not think I dilated at all on the unexpected part of arming the merchantmen.

Senator TRAMMELL. I do not know that you said it in your written statement.

Admiral BADGER. Here is what I said in my statement:

Some types, principally of small craft, we were deficient and that mainly because of rapid development of the submarine after war began and the uses to which it was put had given a new and unexpected turn to warfare on the sea, as unexpected by nations abroad as by ourselves.

That is the only time I remember having used the word "unexpected." But it was unexpected that we would have to arm merchant ships until only a reasonably short time before the war commenced. We commenced arming our ships before we entered the war. The first ship that we armed was armed before the war commenced, I think in March, 1917. That was one of the steps for self-protection that we took.

Senator TRAMMELL. Of course I elaborated a little too much when I said that you said it was undreamed of.

Admiral BADGER. Yes.

Senator TRAMMELL. But you said that nobody could have expected or anticipated the necessity of having to put so many men on the merchantmen?

Admiral BADGER. Yes. We did not expect it to the extent to which it went; no.

Senator TRAMMELL. That was successfully carried out so far as you know, was it not?

Admiral BADGER. The reports were very good. It did not do as well as we had hoped. That is to say, it did not stop the depredations of the submarine upon the slower ships--the cargo ships. In many cases, however, it drove off the submarines and undoubtedly saved a great deal of property.

Senator TRAMMELL. It was at least one of the deterring operations against submarine progress?

Admiral BADGER. Yes. I have been recently going through, on the Board of Awards, the history of the armed guard that we used during the war, and I find a considerable percentage of cases where the submarine was driven off, and a few cases where the submarine was hit and damaged by the defensive guns on board the merchant ship.

Senator TRAMMELL. You have been asked more or less questions in regard to whether or not the board and the department agreed with Admiral Sims about this and so. As a matter of fact, was not a good deal of the activity, even abroad, thought of, conceived, suggested, even before you heard from Admiral Sims in regard to it, did he initiate all the activities?

plans for the prosecution of the war. The directing heads had be guided also by the situation of the War Department, and particularly of the State Department. I do not know that they ever clashed at all, but in the direction of a war of that kind, particularly in the early stages, those two departments had to be consulted in order to get concerted action of all the power of the country.

Senator TRAMMELL. In regard to your recommendations in 1914, to increased personnel, I believe you stated that the Chief of the Bureau of Navigation, under whose department personnel was direct, compiled a statement in which he showed that you had a surplus of a few hundred men.

Admiral BADGER. Yes.

Senator TRAMMELL. I judge from this that the Chief of the Bureau of Navigation, who was a naval officer dealing directly with the question of personnel, did not agree with your recommendation that you should have the 19,600 men increase at that particular time.

Admiral BADGER. He did not, sir.

Senator TRAMMELL. So that if the Secretary of the Navy did not recommend it, he did rely upon information and upon the position which was assumed by the officer directly in charge of personnel. That is, it is to be presumed that he relied upon it?

Admiral BADGER. That would be a reasonable conclusion upon the face of it, yes, sir.

Senator TRAMMELL. I think that is all that I have to ask.

Senator KEYES. Admiral, in answering some of the questions asked by Senator Trammell, I understood you to say that you knew of no act on the part of the United States Government that precipitated or tended to precipitate war prior to 1917. He was speaking of the general policy of this country.

Admiral BADGER. Well, I may or may not have said it, but I will answer it now. I do not know of any act that precipitated war.

Senator KEYES. On the contrary, the Government was doing all it could to keep us out of war, was it not?

Admiral BADGER. To keep us out of war, yes.

Senator KEYES. You may remember that there was a great number of papers written about that time not only to Germany but to Great Britain, and Senator Trammell also asked you, I think, if we were not better prepared for war in 1917 than we were or would have been in 1915 or 1916 to have entered the war.

Admiral BADGER. Yes.

Senator KEYES. I would like to ask you if you do not think we would have been better prepared in 1921 if we had waited until then?

Admiral BADGER. That was the impression I intended to convey by my answer to the Senator.

The CHAIRMAN. You do not consider naval preparedness an act of war, do you, Admiral?

Admiral BADGER. No; but abnormal preparedness is sometimes considered an act of war, and the foreign nations will make inquiries—immediate inquiries—if they see any abnormal preparations made. The diplomatic blue books or white books teem with letters and with protests made, particularly by Great Britain when Germany was building her fleet; and agreements were made. There was not a movement that explanations were not demanded as to why they were doing this, and so on.

he CHAIRMAN. That is to say, if we had gone ahead with naval preparations, Great Britain would have asked why?

Admiral BADGER. Yes; would have asked why.

he CHAIRMAN. After 1914 do you think Great Britain would have been disturbed about it?

Admiral BADGER. I do not know who would have been disturbed.

he CHAIRMAN. Do you think Great Britain would have questioned us if we had done it after the outbreak of the World War in 1914?

Admiral BADGER. It would be only a thought. Yes, I think Great Britain would not have liked it.

he CHAIRMAN. You think Great Britain would not have liked it? Do you think France would have liked it?

Admiral BADGER. I think France would have cared less.

he CHAIRMAN. But would have cared?

Admiral BADGER. I do not think they would have cared at all.

he CHAIRMAN. How about Italy?

Admiral BADGER. Would not have cared.

he CHAIRMAN. Or any of the Allies?

Admiral BADGER. Would not have cared.

he CHAIRMAN. But you think Great Britain would have cared?

Admiral BADGER. Yes; that is my own opinion, you understand.

he CHAIRMAN. So that we did not prepare ourselves to go into war because we thought Great Britain would question it?

Admiral BADGER. That would be the reasoning. Again, it is my opinion we did not do it because the feeling of the people of this country was to keep out of that war if we could, and that if we made any of these preparations it might influence the other countries. It is just my individual opinion that it would not have influenced anybody except Great Britain.

he CHAIRMAN. How about Germany?

Admiral BADGER. Well, Germany would not have been—it would have influenced Germany in a way, because they would have known that we were increasing our power. I think it would have influenced Germany. But it did not make much difference at that time.

he CHAIRMAN. That is, it would have influenced Germany because we were increasing our power presumably to fight against her?

Admiral BADGER. Well, to fight against her; yes.

he CHAIRMAN. Do you think Great Britain would have minded our increasing our power to fight against Germany?

Admiral BADGER. No; if she could have been dead sure.

he CHAIRMAN. Do you think she would have objected to it?

Admiral BADGER. I do not think she could have liked it.

he CHAIRMAN. Even if it was for the purpose of fighting with Germany against Germany?

Admiral BADGER. Look here, Mr. Senator, we are getting into pretty deep water.

he CHAIRMAN. Do you think Germany would have objected to our building up our naval personnel and material, with the ships and the Navy that we then had.

Admiral BADGER. No, I do not think so; and I do not think it could have made any difference if she had. We had a perfect right to go ahead and do anything that was not abnormal and showing intention to join in the war. I would like to scratch out one or two of those questions, there.

The CHAIRMAN. But it is an extraordinary conception, Admiral, that any of the Allies should have objected, after the outbreak of the World War, to our making ourselves as efficient as possible to go into a war when anyone must have known at that time that if we did go into the war it would be against the central powers. I do not think there ever was any question of our going in on the side of the central powers, after the outbreak of the war.

Admiral BADGER. Oh, no; there never was any question of that at all.

Senator KEYES. Was there any great disturbance in England over our building program in 1913?

Admiral BADGER. No, but if you will take the service literature you will doubtless find criticisms and articles on the increase of the Navy, and I have seen one such article by a Mr. Hurd (?) who was on the General Board's policy of having a Navy equal to that of the most powerful was stated here about a year or two ago there was a very grave discussion of the reasons for our having any such policy and the necessity for it was exploited, in one of the principal English reviews. The British take more interest, in general, in the Navy in their own navy, and in the naval policy of the world, than we do. They long have regarded their navy as their safeguard. They know more about it, and they have more expert civilian writers and investigators than we have. Anything that occurs that is of interest to naval officers or naval domination or anything of that kind is exploited in that country much more completely and thoroughly than in any other country I know of.

The CHAIRMAN. Well, Admiral, at least if we were paying attention to the objections of Great Britain, we took the most objectionable course we could possibly take in preparing for a future expansion, did we not, when we finally did act?

Admiral BADGER. Yes. I think, perhaps, you misunderstand Mr. Senator. What I said was that we did not want anybody to believe that we were getting ready for war, and that we only were permitted the normal increase.

The CHAIRMAN. I do not understand why we should not want the Allies to know that we were getting ready for war.

Admiral BADGER. We were permitted only the normal increase of the Navy, and that applied to our own country as well as any other country. It was a part of the policy of neutrality. Now, what particular nation I do not think is of any importance. They all might object, or they all might say, "Go ahead."

The CHAIRMAN. You have stated that putting down the submarine menace did not enable us to get the troops abroad, did it not?

Admiral BADGER. No, sir; no, sir. I said that we got the troops abroad without the flow being checked by the submarines. If we had had nothing to combat the submarines, we would have got the troops over.

The CHAIRMAN. Therefore it did have a great deal to do with getting the troops abroad?

Admiral BADGER. It had everything to do. We got them abroad though, in phenomenal time, and unchecked by the submarine.

The CHAIRMAN. Because by the action of our force and the Allied forces we protected them?

Admiral BADGER. The Allied forces protected them. Without them we could not have gotten them there.

CHAIRMAN. And therefore, by checking the submarine menace, we could enable us to get our troops abroad?

Admiral BADGER. Yes.

CHAIRMAN. And getting our troops abroad helped to shorten the war?

Admiral BADGER. Yes, but it would not have ended it a day sooner than it did, according to my idea.

CHAIRMAN. But are you an expert on the question of the transfer of troops? Do you know anything about the troops of the Allies?

Admiral BADGER. I am not an expert, but I do know that to move the 2,100,000 men across 3,000 miles of ocean, to recruit them, to equip them and give them some little training—and they did all get that, they were simply herded aboard ship almost as soon as they got their clothes—was an extraordinary performance.

CHAIRMAN. It was an extraordinary performance. There is no question about that. But can you testify from naval knowledge as to whether they could have been gotten over sooner had we been able to check the submarine menace, and had we been able to send cargo ships over?

Admiral BADGER. My opinion, as I stated, is that they could not. That is what I have been saying.

CHAIRMAN. That is merely an opinion?

Admiral BADGER. That is merely an opinion.

CHAIRMAN. You have not made a study of that matter?

Admiral BADGER. It is merely an opinion.

CHAIRMAN. Senator Trammell has spoken, in questioning you, of the colossal blunder that it would have been to have sent our antisubmarine forces over at the early stage of the war and to have left our coast undefended.

Senator TRAMMELL. Mr. Chairman, I would like to have you state my entire question.

CHAIRMAN. I am simply stating it from memory.

Senator TRAMMELL. I stated if we had sent them over there and when they had come over here with their vessels and attacked our coast, with our coast unprotected, and without any defense here, would not that have been regarded as a colossal blunder—a colossal failure?

CHAIRMAN. That is what I intended to convey.

Senator TRAMMELL. Yes.

CHAIRMAN. If we had had battleship force No. 1 over here and the boats or vessels which we had over here on our coast after we had sent our antisubmarine forces abroad, could they not have given our coast some protection?

Admiral BADGER. Oh, yes; they would have given some protection to the coast. It depends on how many ships they had retained. The battleships in force No. 1 could hardly have been sent to look for submarines, though. It would have been very dangerous.

CHAIRMAN. I spoke of the other vessels.

Admiral BADGER. Yes; the other vessels. And we had very few. When the submarines did come over, we had very few antisubmarine craft on this coast, to my thinking. I do not remember how

many, but you can find out from the Operations officers how many there were. But we had stripped ourselves by that time to below what would ordinarily have been called a safe limit, and nothing but the emergency abroad, I think, could have influenced the officers to so strip themselves.

The CHAIRMAN. But we had a large force over in the summer of 1917—a large antisubmarine force—did we not?

Admiral BADGER. Yes; we had a large force over there.

The CHAIRMAN. And in doing so, we must have stripped ourselves on this side to a certain extent?

Admiral BADGER. We did strip ourselves very close.

The CHAIRMAN. And when did the first German submarine come over?

Admiral BADGER. I have forgotten the date. I am told that it was May, 1918.

The CHAIRMAN. So that in spite of the fact that we had stripped our force over here, no submarines came over?

Admiral BADGER. Submarines had been here before we entered the war.

The CHAIRMAN. Not for 9 or 10 months?

Admiral BADGER. I beg your pardon.

The CHAIRMAN. No submarine came over for 9 or 10 months?

Admiral BADGER. Exactly, but that did not mean that they could not send them if they wanted to.

The CHAIRMAN. Senator Trammell says that we must judge by results. We won the war, and therefore we did what was right. How about applying that to this question? No submarine did come over, and therefore there was no great danger to our coast over here, as proved by what happened.

Admiral BADGER. We could not see the point then, you know.

The CHAIRMAN. But is it not true, Admiral, that the large bulk of the expert naval opinion of the Allies was to the effect that the submarine menace was principally over on the other side?

Admiral BADGER. Oh, yes; it was, undoubtedly.

The CHAIRMAN. And that the value of the submarine to Germany was for what it could do over on the other side near her base?

Admiral BADGER. It undoubtedly was; but we had had two object lessons before the war, apparently. We had had a submarine come over, go into harbor——

The CHAIRMAN. Before we entered the war?

Admiral BADGER. Yes; go into the harbor of Newport with all the privileges of a visiting man of war, leave Newport, go out over the shoals past Nantucket lightship, and sink some five or six ships then and there, and then go back home again.

The CHAIRMAN. And that fear of what might happen and what did not happen would justify us in withholding our assistance from the other side?

Admiral BADGER. For a reasonable time.

The CHAIRMAN. And for just as long as we withheld that assistance, by just so long we delayed putting down the submarine menace?

Admiral BADGER. We delayed to that extent; but I am not saying——

The CHAIRMAN. To the extent that we withheld it, we delayed!

Admiral BADGER. I do not want to get this mixed. I am not saying that the submarines did not go on destroying property. What I am standing for is that because we did not send over sooner than we did we did not prolong the war and cause those enormous losses stated in the hearing of Admiral Sims.

The CHAIRMAN. Senator Trammell asked you if it was a question between getting men for the naval reserve or men for the regular navy, whether you would not give up the naval reserve in order to get men for the regular Navy.

Admiral BADGER. The question was, as I understood the question, could it be preferable? Supposing you were building up a naval reserve, but had vacancies in the regular Navy, which would you fill first? And I say that I would fill the vacancies in the regular navy first.

The CHAIRMAN. Undoubtedly; but if you found that you could not get men into the regular Navy, would you not in every way try to get them for the reserve?

Admiral BADGER. Oh, yes; but we want men first in the Navy, and second in the reserve.

The CHAIRMAN. Testimony, I think, has shown that in many cases it was not possible to get them for the regular Navy, whereas you could get them into the reserve.

Admiral BADGER. I do not know as to that.

The CHAIRMAN. In such cases you would do everything you could to get them into the reserve at least, as the second best thing you could do, would you not?

Admiral BADGER. If within the law, I would get men for the reserve if I could not get them for the regular Navy; yes, sir.

The CHAIRMAN. And after the war had commenced it made very little difference whether the men were in the reserve or in the regular Navy; they were all used, were they not?

Admiral BADGER. They were all used; yes, sir.

The CHAIRMAN. And they were all given training?

Admiral BADGER. Yes, sir; they were all used. They were all given training, of course. They had their values. There were some classes of the reserve; there were certain limitations upon their employment, etc. But, speaking generally, the reserve was absolutely necessary.

The CHAIRMAN. And the reserve, of course, did a great deal of value during the war?

Admiral BADGER. A very great deal. We could not have gotten along without them.

The CHAIRMAN. Do you consider that we were adequately prepared as to personnel at the outbreak of the war?

Admiral BADGER. I think not. I think that in accordance with the General Board's views we should have had more men at the commencement of the war.

The CHAIRMAN. Did you not at one time in your testimony refer to armed guard preparation as early as 1917?

Admiral BADGER. I have said that the first ship with an armed guard was in March, 1917, I think, a month before the war.

The CHAIRMAN. Yes; but did you not refer in your testimony to the question of putting armed guards on ships as early as 1914 or 1915?

NAVAL INVESTIGATION.

MONDAY, APRIL 19, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE ON NAVAL AFFAIRS,
Washington, D. C.

Subcommittee met, pursuant to adjournment, in room 235, Office Building, at 10 o'clock a. m., Senator Frederick Hale presiding.

Present: Senators Hale (chairman), Pittman, and Trammell.

CHAIRMAN. Have you a statement to make, Capt. Pratt, about matters connected with this investigation?

PRATT. Yes; I have prepared a statement.

CHAIRMAN. First, will you state what were your duties in the room from the time of the commencement of the World War in 1914, up to the present time?

STATEMENT OF CAPT. W. V. PRATT, UNITED STATES NAVY.

PRATT. Yes, sir. Just previous to the World War Admiral Sims and I went to the torpedo flotilla together, he as commander of the flotilla and I as Chief of Staff. We were serving in this capacity when the World War broke out. I was Chief of Staff and in command of the submarine chaser *Birmingham*. I served on that vessel with Admiral Sims until November, 1915, on which date I was ordered by Operations to proceed to the Panama Canal in connection with the defense of the canal, working in cooperation with Gen. Edwards, who was in command of troops.

I remained on that duty until September, 1916, when I was ordered to the War College, where I was serving until April 6, 1917, when I went into the World War.

From that date, about February 1, I was doing additional duty in the planning section of the Office of Operations. I continued on that duty until the outbreak of the World War in April, 1917, when I did duty entirely in the Office of Operations, in the plans section. I continued on planning duty with no executive functions until July 7, 1917, when, on the death of Capt. V. O. Chase, I was appointed aide for operations to Admiral Benson, and some time later I was appointed Assistant Chief of Naval Operations by the Navy Department, which duty I held until January 5, 1919.

CHAIRMAN. And you are now——

PRATT. I am now in command of the U. S. S. *New York*, to which I have been detailed to that duty in January of 1919.

CHAIRMAN. So that you are no longer in the Bureau of Operations?

PRATT. I am no longer in the Office of Operations.

Members of the committee, with your permission I would like to state the subjects under discussion; that is, the points brought up

Admiral BADGER. Yes, if he so desires. There is no law covering the subject. The General Board exists only by the Secretary's order.

The CHAIRMAN. And the Chief of the Bureau of Navigation—

Admiral BADGER. Exists by law.

The CHAIRMAN. I understand. The Chief of the Bureau of Navigation is the appointee of the Secretary and would be apt to reflect the Secretary's views rather more than the General Board, would he not?

Admiral BADGER. Well, I would not like to say that. I think of every man——

The CHAIRMAN. I mean that the General Board does not feel bound by the views of anybody?

Admiral BADGER. No. That is true.

The CHAIRMAN. While the bureau chiefs undoubtedly would!

Admiral BADGER. Bureau chiefs have to be, within proper limits, loyal to their chief, or get out, one of the two.

The CHAIRMAN. Is there any such thing as a war and navy board?

Admiral BADGER. There is a joint board; yes, sir. There are several of those boards, but you are doubtless referring to what is called the joint board?

The CHAIRMAN. Yes.

Admiral BADGER. Composed of naval officers and Army officers of high rank. Formerly the joint board, until within, indeed, the last year, had two members of the General Board of the Navy on it.

The CHAIRMAN. Were you on the joint board during the war?

Admiral BADGER. Yes.

The CHAIRMAN. Did that board meet?

Admiral BADGER. We met, but we did not meet very often or very satisfactorily.

The CHAIRMAN. Were you instructed to draw up any plans?

Admiral BADGER. No; the trouble with the joint board was that there were many ranking officers on it, the Chief of Staff, the Assistant Chief of Staff, the commander of the Coast Artillery, and the president of the War College—there was not any War College during the war, so that there was the Chief of Staff, the Assistant Chief of Staff, and the commander of the Coast Artillery—and it was almost impossible to get those men, because they were busy with war duties, and had no time for coming to any board. On the Navy side we had the Chief of Operations, an admiral who was on the Council of National Defense, myself, and the president of the War College, I think; and we never could get anybody but myself. I was usually the only man who would attend the board meetings.

The CHAIRMAN. Was there any other board that could act jointly with the Army?

Admiral BADGER. I think there was no regular board. There were several minor boards composed of Army and Navy officers.

The CHAIRMAN. But not for any general thing?

Admiral BADGER. Not for any general thing.

The CHAIRMAN. So that there was no actual cooperation as between the members of that board?

Admiral BADGER. As a general thing we did have meetings, and the officers laid down very important things, to me, when there was any necessity for it; but it was very difficult to get meetings; that is what I mean.

The CHAIRMAN. Were the recommendations of that joint board allowed in any case?

Admiral BADGER. I do not know. I think so. So far as I can remember, they always came back approved. There were no very important, far-reaching questions discussed during the time of the war.

The CHAIRMAN. You never took up the question of handling the recruits who were to go abroad?

Admiral BADGER. No.

The CHAIRMAN. How about the matter of the coast defenses?

Admiral BADGER. Those questions came up, and recommendations were made with regard to the coast defenses in various ways, particularly with regard to the mining of the entrances to harbors.

The CHAIRMAN. Did you receive any orders to meet as a board?

Admiral BADGER. No; we met when papers accumulated.

The CHAIRMAN. Did you receive any orders not to meet?

Admiral BADGER. No, not during my membership.

The CHAIRMAN. Simply, you never did much of anything? It never was regarded as an active board?

Admiral BADGER. It was regarded as an active board, but in the press of the war operations it was not frequently called upon in important matters.

I want to say that that board has been rehabilitated now. They have changed the membership, and they have regular meetings and from all that I hear, without being absolutely involved—I am no longer a member, myself—I understand that they are taking up very important questions and settling them now. It has become a very important board.

The CHAIRMAN. Did you in February, 1917, receive a request from the Secretary of the Navy to draw up a war plan—did the General Board receive such a request?

Admiral BADGER. I remember that case. There was a paper sent, involving a problem of war—connected with this particular war.

The CHAIRMAN. What was the problem?

Admiral BADGER. It was quite a paper. It involved advice as to the operations necessary to conduct the war, taking up the question of submarine warfare, among the others.

The CHAIRMAN. Was it a general war plan?

Admiral BADGER. No, it was a problem with regard to the conduct of this particular war.

The CHAIRMAN. With regard to all problems of this particular war or some specific problem of this particular war?

Admiral BADGER. As I remember it, it was rather restricted.

The CHAIRMAN. Will you get a copy of that letter for the committee so that we can put it in the record?

Admiral BADGER. I can not give you a copy of that letter.

The CHAIRMAN. You can not give a copy of that letter?

Admiral BADGER. No, sir. I have searched for that letter, and it has disappeared from the records. I have had a search in the records of the General Board, and I can not find it in the general records of the Navy Department or in the records of the Division of Operations. In fact, I can not find a copy of it.

The CHAIRMAN. And you have no way of getting it?

Admiral BADGER. No way of getting it. The answer was prepared under Admiral Fletcher, who was then the head of the planning

NAVAL INVESTIGATION.

MONDAY, APRIL 19, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, in room 235, the Office Building, at 10 o'clock a. m., Senator Frederick Hale presiding.

Present: Senators Hale (chairman), Pittman, and Trammell.

The CHAIRMAN. Have you a statement to make, Capt. Pratt, about matters connected with this investigation?

Capt. PRATT. Yes; I have prepared a statement.

The CHAIRMAN. First, will you state what were your duties in the navy from the time of the commencement of the World War in August, 1914, up to the present time?

TESTIMONY OF CAPT. W. V. PRATT, UNITED STATES NAVY.

Capt. PRATT. Yes, sir. Just previous to the World War Admiral Sims and I went to the torpedo flotilla together, he as commander of the flotilla and I as Chief of Staff. We were serving in this capacity in 1914 when the World War broke out. I was Chief of Staff and in command of the submarine chaser *Birmingham*. I served on that ship and with Admiral Sims until November, 1915, on which date I was ordered by Operations to proceed to the Panama Canal in connection with the defense of the canal, working in cooperation with General Lawrence Edwards, who was in command of troops.

The CHAIRMAN. So that you are no longer in the Bureau of Operations?

Capt. PRATT. I am no longer in the Office of Operations.

Gentlemen of the committee, with your permission I would like to handle the subjects under discussion; that is, the points brought up

were in reserve and unmanned or only partly manned when
ered war?

ral BADGER. No, sir, I can not tell you that.

'HAIRMAN. Did the obligation of neutrality forbid this country
eguarding itself against a German attack by making our fleet,
pects, ready for battle after the sinking of the *Lusitania*,
1915 and 1916?

ral BADGER. No. It depended on how far they wanted to go.

'HAIRMAN. You think that was enough of a warning so that
at liberty to prepare ourselves in every way?

ral BADGER. Yes, sir.

NAVAL INVESTIGATION.

MONDAY, APRIL 19, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, in room 235, Senate Office Building, at 10 o'clock a. m., Senator Frederick Hale presiding.

Present: Senators Hale (chairman), Pittman, and Trammell.

The CHAIRMAN. Have you a statement to make, Capt. Pratt, about the matters connected with this investigation?

Capt. PRATT. Yes; I have prepared a statement.

The CHAIRMAN. First, will you state what were your duties in the navy from the time of the commencement of the World War in August, 1914, up to the present time?

TESTIMONY OF CAPT. W. V. PRATT, UNITED STATES NAVY.

Capt. PRATT. Yes, sir. Just previous to the World War Admiral Sims and I went to the torpedo flotilla together, he as commander of the flotilla and I as Chief of Staff. We were serving in this capacity in 1914 when the World War broke out. I was Chief of Staff and in command of the submarine chaser *Birmingham*. I served on that ship and with Admiral Sims until November, 1915, on which date I was ordered by Operations to proceed to the Panama Canal in connection with the defense of the canal, working in cooperation with Gen. Clarence Edwards, who was in command of troops.

I served on that duty until September, 1916, when I was ordered to the Army War College, where I was serving until April 6, 1917, when we went into the World War.

Prior to that date, about February 1, I was doing additional duty in the plans section of the Office of Operations. I continued on that additional duty until the outbreak of the World War in April, 1917, when I did duty entirely in the Office of Operations, in the plans section. I continued on planning duty with no executive functions until July, 1917, when, on the death of Capt. V. O. Chase, I was appointed aide for operations to Admiral Benson, and some time after that was appointed Assistant Chief of Naval Operations by the Secretary, which duty I held until January 5, 1919.

The CHAIRMAN. And you are now——

Capt. PRATT. I am now in command of the U. S. S. *New York*, having been detailed to that duty in January of 1919.

The CHAIRMAN. So that you are no longer in the Bureau of Operations?

Capt. PRATT. I am no longer in the Office of Operations.

Gentlemen of the committee, with your permission I would like to handle the subjects under discussion; that is, the points brought up

by Admiral Sims's letter and the additional evidence introduced in the following manner:

- (a) Review of first 77 paragraphs of Admiral Sims's letter.
- (b) Discuss some of the points brought up in the additional testimony.
- (c) Sum up the charges set forth in paragraph 78 of the letter and in the additional testimony.

The above gives a viewpoint of the subject at the present date April, 1920.

It is then considered desirable to present additional testimony in the shape of—

- (d) Letter written in November, 1918, after the armistice, outlining in general terms the naval activities during the war.
- (e) Certain documents on file in the department bearing on the critical six months mentioned in Admiral Sims's testimony.
- (f) Final statement.

As authority for the statements I may make, I desire to inform the committee that from the date of our entry into the war in April until June 25, 1917, I was attached to the office of operations in a subordinate capacity as a member of the plans section and acted in a somewhat advisory capacity with no actual administrative functions. On June 25, 1917, upon the death of my predecessor, Capt. V. O. Chase, United States Navy, I was appointed first aid to the Chief of Naval Operations, Admiral Benson, and some time after was appointed Assistant Chief of Naval Operations by the Secretary which office I held until January 5, 1919.

I was in general charge of plans, policy, and operations and acted as a sort of general manager under my chief, Admiral Benson. To the best of my knowledge I was in his full confidence and believe that I enjoyed the confidence of the Secretary of the Navy in all matters pertaining to my sphere of activities.

From the date of my appointment to the above offices I assume full responsibility for all advice given pertaining to my office, and for any acts which I may have committed either while Acting Chief of Naval Operations during Admiral Benson's visits abroad or while Assistant Chief of Naval Operations, or aid for operations.

Before commencing upon the routine I would like to speak of the letter, Mr. Chairman, which you sent to the Secretary, dated April 13, 1920, which I received only the other day, April 17, relating to certain correspondence which you wished filed before your committee, and state the action that I have taken. I have here your letter together with the Secretary's reply to it, which I have presented to the Acting Chief of Naval Operations, and asked him to give me everything pertaining thereto. If you find there is something you need more, I can then send it all over to you. This is the first opportunity that I have really had to collect possibly some of the data which you might want.

(The letters referred to are here printed in the record, as follows:

UNITED STATES SENATE.
April 13, 1920.

HON. JOSEPHUS DANIELS,
Secretary of the Navy, Washington, D. C.

DEAR MR. SECRETARY: On January 9 Senator Page wrote you a letter asking for detailed information concerning all ships of the Navy prior to and on the declaration of war with Germany. In your reply to him of February 4 you stated that you would

this information collected and that you hoped to have it ready by the time the committee should take up its investigation. On March 24 I wrote you a letter asking for this information, and it has not been furnished either to Senator Page or myself. Will you please see that I have the information at once, as I shall need it for use in the investigation which is now going on? I have received no reply to my letter of March 24, which also asked for official copies of all the letters and cables from Admiral Sims to the department and from the department to Admiral Sims quoted from or given in full in Admiral Sims's testimony before the subcommittee, and a statement in regard to what action, if any, was taken in regard to each such letter or cable. This information also I would like at once for use in the investigation.

Sincerely, yours,

FREDERICK HALE.

Chairman Subcommittee Senate Committee on Naval Affairs.

Y DEAR SENATOR: I have your letter of the 13th in which you refer to letters and cables, requesting official copies of all the letters and cables from Admiral Sims to the department and from the department to Admiral Sims quoted from or given in full in Admiral Sims's testimony, and a statement in regard to what action, if any, was taken in regard to each such letter or cable.

I note that in Admiral Sims's testimony, on page 27, that Admiral Sims states in answer to a question from the chairman:

To give you an idea of the magnitude of the job, I may say that I do not know how many dispatches there were, but they are in the hundreds of thousands. I asked a statistician some time ago how many there were and he said that if they were all laid up in boards and set on a shelf, that shelf would have to be 140 feet long in order to contain them. Of course, the committee does not want them all.

Senator TRAMMELL. And your reference will refer to the particular numbers, and what they can be found?

Admiral SIMS. Out of those miles of dispatches I am only selecting representative ones, and out of those representative ones I am selecting those that illustrate the point in question; and of all those dispatches, of which there are probably 100,000, I am only selecting a certain number, and those can be included; and if, after my testimony is concluded, you decide that it would be advisable, you can put them in in full; but in the meantime there are only extracts from these dispatches." All the clerical force of the Navy Department is now only sufficient to care for its regular work, and to comply with your request regarding making official copies of all the letters and cables from Admiral Sims to the department and from the department to Admiral Sims quoted from or given in full in Admiral Sims's testimony will take some time.

However, if you insist, I shall be pleased to have these copies prepared.

As to making a statement in regard to what action, if any, was taken in regard to each such letter or cable, I am unable at this late date to make proper reply. The officers most capable of answering these questions are Admiral Benson, Rear Admiral Kean and Capt. Pratt. These officers will undoubtedly be called before your committee and will be in a position to answer any questions regarding them you may submit.

I shall forward a copy of this correspondence to Admiral Benson, Rear Admiral Kean, and Capt. Pratt.

Very respectfully,

JOSEPHUS DANIELS.

Hon. FREDERICK HALE,
United States Senate, Washington, D. C.

NAVY DEPARTMENT,
Washington, April 16, 1920.

From: Secretary of the Navy.

To: Capt. W. V. Pratt, United States Navy.

Subject: Request of Hon. Frederick Hale, chairman subcommittee Senate Naval Affairs Committee, for certain copies of official documents and certain statements in regard to same.

Enclosures: (A) Copy of letter from Hon. Frederick Hale, chairman subcommittee Senate Naval Affairs Committee, to the Secretary of the Navy, dated April 13, 1920.
